cents; fifty copies, \$1.40; one hundred
copies, \$2.65.Entered at the Post-office at Boston, Mass.,
as second-class matter, October 1, 1891.

...erly Com-
... Army of the
Republic, says of the encampment at Boston
that it was the most successful meeting of
the organization that had ever been held.

"Beyond a doubt," said he, "there was
never anything like it in the history of the
G. A. R. encampments. Taken from every
point of view, it was a remarkable success.
It is scarcely too much to say that, from
the northernmost border of Massachusetts
to the tip of Cape Cod, the people came to
see us. There were a million and a half of
them in Boston, and the cheering, the wai-
ing of flags, the music of bands, and the
welcome extended to us wherever a blue
uniform was seen (and it was ubiquitous)
were the most entrancing sounds and sights
that ever greeted the old boys.

"We can never say too much of this en-
campment or in praise of the hospitality of
the people of the metropolis of New Eng-
land. There have been more soldiers in line
in other parades, but there never was the
tumultuous enthusiasm, never the magnif-
icent jollification, that we had this year, and
every man was impressed with the meeting
and the people of the section which gave us
such a glorious welcome."

Lawrence Leatherman of Malden, post-of-
fice inspector in charge of the New England
district, who was commissioned by the
United States Government about two months
ago to go to Panama and establish a
postal service in the canal zone, has com-
pleted his work and made at least a partial
report to the Washington authorities. As a
result of this work the service is now in
operation. A string of ten offices stretches
across the Isthmus, from Panama to Colon,
a distance of about forty-six miles, following
the route of the railroad. The post-offices
are located in the railroad stations. Be-
cause of these offices domestic postage rates
are now applicable to the mail service be-
tween the United States and the canal zone
in Panama, provided the mail be properly
addressed. Panama mail should be ad-
dressed "Ancon," which is the name of the
American office in that city, and the Colon
mail should be addressed "Christoval," in
order to be entitled to domestic rates.

Nearly two years ago considerable interest
was aroused in the United States by the re-
port of a commission on the regulation of the
sale of opium in the Philippine Islands. It
recommended that the sale be made a strict
monopoly and be farmed out to the highest
bidder, who would then, of course, seek to
force the sale to its highest possible point.
Such strong protests were made against this
policy that the recommendation was never
adopted. A committee appointed by Governor
Taft has now recommended that the sale of
opium in the islands be made a strict
government monopoly at once and that at
the end of two years the importation of
opium into the islands be absolutely prohib-
ited, with the exception of that for medical
purposes; that the penalty for importation
be deportation from the islands; that the use
of opium be prohibited to all persons under
twenty-one years of age; that licenses to
smoke opium be granted only to those who
have become confirmed in the habit and are
more than twenty-one.

After exhaustive experiments with a pro-
cess to make paper money of velvety soft-
ness, treasury officials have decided to retain
the method producing the "crisp" variety.
The experiments were conducted with a
chemical process and demonstrated that a
soft condition of bills could be produced.
The discoverers of the chemical urged that it
would save much time and trouble in print-
ing money. Paper now used in the printing
of paper money has to be thoroughly soaked
in water. While damp one side of the paper
is printed; the sheet is then placed in a
steam room and kept under a high pressure
for from fifteen to thirty days while the ink
dries, then the sheet is again soaked and
the reverse side printed. It was claimed
that all this wetting and drying would be un-
necessary and that a great deal of time
would be saved.

The report of the receipts and expendi-
tures of the Post-office Department for the
fiscal year ending June 30, shows a deficit
of about \$8,000,000. During the year the
sum of \$12,000,000 was spent in extending
the rural mail delivery routes. The Post-
office Department has not been self-sustain-
ing in any year since 1884. In 1882, in 1883,
and in 1884 it yielded a nominal excess of
receipts above expenditures, but since then
the deficit each year has ranged from \$3,000,-
000 to \$11,500,000, during a large part of
which period the rural delivery system was
not in operation. In the mean time the num-
ber of post-offices has increased from 50,017
in 1884 to 74,169 in 1903, and the receipts in
these offices have increased from \$43,300,000
to \$134,200,000. Expenditures in the same
period have increased from \$46,400,000 to
\$138,800,000.

Minister Bowen has made strong repre-
sentations to President Castro relative to
the seizure of the properties of the New
York and Bermudez Asphalt Company. He
has demanded that the properties be released
from the custody of the Venezuelan receiver
until the case may be adjudicated by the
courts.

The Filipino Commissioners, after a tour
of the United States lasting eleven weeks,
sailed for home from San Francisco, August
30. Nine members of the original party are
returning to Manila by way of Europe.

Foreign.

Emperor William, before formally renew-
ing his offer of a cup to be competed for in
a transatlantic yacht race, awaits the con-
clusion of the correspondence now pending
between his representative and the New
York Yacht Club respecting the rules.

It is the expectation of the British Foreign
Office that the treaty of arbitration on the
same lines as that negotiated with other
great Powers will be signed shortly between
Great Britain and Austria.

It is rumored at the Canadian capital
that the Duke of Marlborough will be the
next Governor General of the Dominion, suc-
ceeding Lord Minto. He is now Under-Sec-
retary in the Colonial Office.

Industrial and Commercial.

Thirty-seven patents have just been issued
to John S. Stone of Cambridge, an electrical
engineer and also a lecturer on electrical
subjects at the Massachusetts Institute of
Technology, covering inventions that com-
pletely prevent, it is claimed, any inter-
ferences with wireless messages. These
preventions include the "selectivity" of the
system, whereby the signals are received
only by apparatus attuned to the sending
station, to the exclusion of all other stations
not thus attuned; the ability to converse with
stations surrounded or crossed by conflicting
electric currents such as are used by street
car lines and the automatic feature of the
system by which a message is automatically
transmitted from intermediary stations to
the terminal without the necessity of opera-
tors to relay the message.

The Allan Line Steamer *Victorian*, the
largest turbine vessel yet built, was launched
at Belfast last week. It is expected that she
will be ready for service before the end of
the year. She is 540 feet long, has 60 feet
beam, and her depth is 40 feet 6 inches. The
Victorian is to be fitted to carry fifteen hun-
dred passengers. The enormous propelling,
stopping, backing, and steering power re-
quired by the Atlantic service is understood
to have been overcome by Charles A. Par-
sons, the engineer who has developed the
steam turbine. Her reversing power is equal
to that of her forward propelling power.
Her propellers are three in number, each on
a single length of shafting. Her tonnage is
about twelve thousand, and she is expected
to develop about ten thousand horse power.

"There are some controversies that will not
down, and one of the most persistent of
these is that relating to the relative speed
of railroad travel here and in Europe," says
the *Scientific American*. "We have been in
receipt lately of several letters asking us
for an expression of opinion on the subject,
and we therefore think it well to state, for
the benefit of those who are interested in
the question, that in respect of the number
and speed of fast express trains, our railway
service in this country simply cannot com-
pare with that of France and England. We
say this with the full knowledge that there
are a few fast expresses that maintain a
high average speed for long distances in
this country."

The completion of the Galveston sea wall
was celebrated last week. The wall stands
seventeen feet above mean low tide. The
grade of the city is now to be raised to slope
gradually from the top of the sea wall. This
will necessitate a raising of the grade from
one to fifteen feet, according to location.
For this purpose the State has donated all
State taxes collected in Galveston county
for a period of eighteen years. Bonds to
the amount of \$1,500,000 are to be issued for
this purpose.

At Pisa, Italy, will be completed this
month the largest station for wireless tele-
graphy yet erected. From there it is designed
to establish wireless telegraph communica-
tion with Great Britain, Holland, the United
States, Canada, and also with vessels in the
Mediterranean, the Baltic Sea, the Red Sea,
and the Atlantic and Indian Oceans. There
are already two Marconi stations in working
order on the coast of Montenegro.

The Great Northern Steamship Com-
pany's new steamship, *Minnesota*, recently
launched by the Eastern Shipbuilding Com-
pany of New London, Conn., arrived at New
York last week. The *Minnesota* is the larg-
est steamship ever built by an American
ship building concern, and, with a few ex-
ceptions, the largest afloat. She is designed
for the transpacific trade.

The number of furnaces in blast in the
United Kingdom for the quarter ended June
30 last, was 329, and the estimated make of
pig iron for the half-year is 4,218,000 tons.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH!*" *Jesus.*

From our Contributors.

"Old Home Week" at Bow, N. H.

LAST week was "Old Home Week" in New Hampshire, and this very pleasant custom, which originated in the Granite State, was very generally observed.

Among the many observances, none were of more interest to Christian Scientists than those of the town of Bow, the birthplace of our revered Leader. The president of the day was Mrs. Eddy's cousin, the Hon. Henry M. Baker, one of New Hampshire's foremost citizens, who won an enviable reputation in Congress as representative from the Granite State. The orator of the day was the Hon. Sherman E. Burroughs, also of Mrs. Eddy's family. Of his able historical address the *Concord Monitor* says, "His paper was a valuable contribution to historical literature."

The following excerpts are from the *Concord Daily Patriot's* account of this interesting occasion.

The Old Home Day celebration of Bow was held at the beautiful Hammond's Grove on that slightly eminence, Wood Hill. There was a large attendance and the day was a success in every particular.

The morning hours were devoted to a happy reunion of old friends, and at eleven o'clock a fine concert was given by Runnell's band. A bountiful collation was provided by the ladies and served from twelve to half past one o'clock.

The following were the officers of the day: President, Hon. Henry M. Baker; vice presidents, Walter Putney, Charles B. Rogers; secretary, Edwin A. Colby; treasurer, Frank A. White. The efficient reception committee were as follows: Walter Putney, D. Waldo White, Edwin A. Colby, Byron W. Clough, Walter J. Gray, Samuel E. Elliott, Warren C. Saltmarsh, John B. Baker, Charles B. Rogers, Frank A. White, D. Norris Morgan, Frank E. Woodbury, Betton F. Smith, John H. Burroughs, Frank E. Colby.

The literary exercises of the day were held at 1.30 P.M. The addresses were of a high order and the program was as follows: Invocation; Welcome Song, the choir; remarks, the president; addresses, Rev. Mr. Larramour and Rev. Mr. Lawrence; selection, the band; historical address, Sherman E. Burroughs; poem, Maud Putney; selection, the band; address, Rev. C. L. Page; addresses by former residents of the town and others; election of officers, and miscellaneous business; "America," choir and band; national airs, etc., the band.

In addition to the very general attendance of the people of Bow, there were present a goodly number of former residents and visiting friends.

The president of the day, Hon. Henry M. Baker, said,—Visiting daughters and sons of Bow and other invited guests,

Ladies and Gentlemen:—With pleasure I extend to you the greetings of the citizens of Bow, and in their behalf bid you a hearty welcome back to the old town which they confidently hope you still love.

Around the ancestral home many memories are entwined which are the dearest of all those which the heart loves.

There are no more sacred words than those of father and mother, and if perchance, from a neighbor's house is added the sweet word wife or husband, and children have prattled in the old home, the affections linger there, however we may roam. No later home can efface the dear memories of childhood and that early married life which brought heaven so near the earth that the song of the angels was distinctly heard.

Those of us who have remained in the old town have had our share of the world's prosperity and joys, and we do not envy you the greater experience and the broader horizon which have enriched your lives, and added grace and dignity to your demeanor. We rejoice in your prosperity and honors, and assure you we are proud of them. If you are seeking fitting objects for generosity, permit me to suggest that our town is yet without a free public library, and that our churches would not decline an addition to their special or invested funds.

But whether you are rich or poor, our welcome to you is the same. The bright sunlight, the gentle rain, and the pure air of our hills are yours as of old.

Our hearts are in the right place and of the same affectionate nature as those of our ancestors. They are no colder than in the years gone by when they beat the faster at the sound of your footsteps.

We thank you for your presence to-day and urge you to come again and again, and always when our loved town shall bid her children return to her. We shall be glad if you conclude to abide with us and renew for the remainder of your lives the old home ties. Again, in the name of the people of Bow, I bid you welcome.

The principal duty of a presiding officer is to fill the hour with wise and witty words from others. To that duty I now turn with pleasure, and first of all will present to you the clergy of the town, who will briefly address you.

At Pembroke, N. H.

WE clip the following from the *Concord Evening Monitor's* report of the Old Home Week exercises at Pembroke, August 23. Those of our readers who are acquainted with the history of New Hampshire will recall that the town of Pembroke was given to Mrs. Eddy's ancestor, Captain John Lovewell and his soldiers for their services in defeating the Indians.

"The Hon. Henry M. Baker of Bow came with a surprise for the people of this town, as he was called upon to make a few remarks. He expressed the good wishes of the Rev. Mary Baker G. Eddy of Concord to the trustees of Pembroke Academy, who are erecting a new academy, by placing in the hands of Prof. Isaac Walker a check for \$1,000. Mr. Baker is president of the trustee board."

Are we Inconsistent?

WILLARD S. MATTOX.

AMONG the many indictments named against Christian Science by its critics, one that we most frequently come upon is that of inconsistency in the practical application of its

faith. The iconoclast, who has set for himself the task of breaking down the structure of Christian Science, seems to take especial delight in finding fault with its representatives because they eat, clothe themselves, build material edifices, and enjoy the beauties of art, music, and the best in literature. We are told that such practice is not what is to be expected, logically, from those who deny the very existence of matter and assert that Spirit is the only substance.

The casual observer of this religious movement may think that in the disparity between the statements of the Christian Science text-book, and the present experience of those who are its students, he has discovered grave inconsistencies. What he has really observed is the difference between the thing itself, and the individual apprehension of that thing; the difference between the whole and a part. It is the difference we find between mathematics, and the individual demonstration of mathematics. It is the same difference observable between philosophy in the abstract, and in practice. We find, too, the same difference between any theology and the disciple's effort to live that theology in his daily life. There is, in fact, no inconsistency. If the Christian, of whatever creed, were to be judged by the same unreasonable standard, he would be obliged to plead guilty to the charge. The Christian Scientist does not pretend to be able to prove now, in his experiences, the ultimate of Christian Science, because he is only a student and not a master, and he should not be judged as though he did make such a claim.

In this connection, we may mark well what our Leader says, in "Unity of Good." After referring to the demonstration over death, she says, page 55, "The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth.

"I have by no means spoken of myself, I *can* not speak of myself, as 'sufficient for these things.' I insist only upon the fact, as it exists in Divine Science, that man dies not, and on the words of the Master in support of this verity,—words which can never 'pass away till all be fulfilled.'"

It is probable that every Christian Scientist has, at one time or another, struggled with the depressing thought that the contrast between his ideal and his demonstration, may awaken the thought of inconsistency in those about him; that he is not good enough to call himself really a Christian Scientist, because he is conscious of falling far short of the exalted state described in Science and Health. I dare say that many have writhed under the sting of self-accusation, when, upon uttering the "scientific statement of being," they have heard the ugly word "Hypocrite!" whispered into consciousness, and have been harassed by the suggestion that they were utter failures. If you who read these words have ever given heed to this diabolical plot to rob you of peace and health, and stay your normal progress, you may know now that such a suggestion is conceived in iniquity, and born of the evil one, or one evil. You may hold up your head, if conscious that you are doing your best, and you need never fear again because your feeble steps are not giant strides. There is a wealth of comfort in the tender promise, "The Lord shall guide thee continually."

The ingenuous argument runs somewhat like this: "You say that there is no life in matter, and yet you act continually as though there were life in matter. You say there is no death for man, and yet we see death taking place all about us. Now it is not unreasonable to demand of you either that you prove all you say, and at once, or else forever abandon your theory, and give yourself up to a life in and of matter, and take the consequences." It is the cross of the reformer, that he must meet and dispose of this lie. Jesus met it at the very outset of his career: "Then the devil taketh him up into the holy city, and setteth him on a pinnacle of the temple, and saith unto him, If thou be the Son of God, cast thyself down: for it is written, He shall give his angels charge concerning thee: and in their hands they

shall bear thee up, lest at any time thou dash thy foot against a stone." Our Leader, patiently following in the footsteps of the Christ, has put aside the same suggestion, and all who follow Christ must drink of his cup and be baptized with his baptism.

Mrs. Eddy says in Miscellaneous Writings, page 309, "Scientists sometimes take things too intensely." We need to guard against that tense human effort to compel others to demonstrate Truth, which is nothing else than mesmerism. When we refuse to assume a position we have not demonstrated, we shall be more free in our work. We shall then discriminate between the God-given impulse to overcome and "rise daily into higher and holier consciousness" (Science and Health, p. 419) and escape the prodding of mortal mind which insists that we must at once occupy advanced positions, and that rails at us, because we do not meet its demands. To listen to these evil whisperings, begets a nervous state of self-condemnation which is far from scientific; it induces a feverish haste to accomplish what we are not normally ready to accomplish, and opens the way for a sad reaction and consequent discouragement. If we give to evil the same answer that Jesus did, when we are tempted to act as though we had already attained, then the result will be for us as it was for him, for the devil will leave us, and behold, angels will come and minister unto us, and bring us peace.

All Disease Unreal.

W.

An expression very often heard at Christian Science experience meetings, and elsewhere, is that all diseases are alike to God. Of course those who have carefully studied the Bible and Science and Health understand the sense in which this statement is made, while those who have not made such a study, and those who come to the meetings to learn what the teachings of Christian Science are, naturally infer that by this expression is meant that it is just as easy to heal one disease as another, which, although true, is by no means the experience of the average practitioner.

From such an inference, people, almost of necessity, come to the conclusion that Christian Scientists must claim that it is as easy to heal a person in the last stages of consumption as to heal one with only a cold, and they say reason and common sense are agreed that such cannot be true. Thus at the very outset of their investigations many people are biased against Christian Science, if not altogether turned from further investigation; whereas, if they had understood the true meaning of the expression, it would probably have appealed to them.

The sense in which all diseases are alike to God is that each and every disease is contrary to the law of God and therefore unreal; that the law of God insures health and happiness, and destroys disease. Probably the true meaning of this statement can best be illustrated by reference to simple examples in arithmetic, as 2 plus 2 equals 5, and 5 minus 2 equals 2, each of which is alike to the basic law of mathematics, that is, contrary to its law. Without any knowledge of arithmetic, the child would necessarily have to learn first how to detect and correct the first error, later how to detect and correct the second, and so on, until, possibly, the pupil, grown to maturity, might be able to point out and correct errors in the most difficult problems in the higher branches of mathematics. All mistakes, from the simplest example in addition up to and including the most difficult astronomical calculations, would be alike to mathematics, in that each would be opposed to its fundamental law; but no one would contend that it was quite as easy to point out and correct a mistake in an astronomical calculation as to point out and correct a mistake in addition.

A few references from the Gospels will show that the disciples, and even Jesus, with all his great understanding and power, found it more difficult to heal in some instances

than in others. It is related that when Jesus, Peter, James, and John came down from the mount of transfiguration they found that the other disciples had failed to heal the "lunatic" boy; yet these same disciples had certainly healed many others that were sick, else the father of the boy would not have appealed to them for help, neither would they have attempted to heal the boy; their question to Jesus, asking why they failed also shows that they had succeeded in other cases. Jesus healed the boy, apparently, with the greatest ease.

"Then came the disciples to Jesus apart, and said, Why could not we cast him out? And Jesus said unto them, Because of your unbelief" (want of understanding). And he added, "This kind goeth not out but by prayer and fasting." This account of an experience of the disciples shows clearly that, although they had healed other cases of disease, this one was beyond their understanding. Jesus' answer is a clear statement that in human experience some cases are harder to heal than others; that it was the want of sufficient understanding on the part of the disciples,—not a lack of power in God,—that caused the failure; and his act in healing the child proved that his understanding was so great that what was beyond the understanding of those disciples was not at all difficult for him. His act proved that God's power was sufficient to meet the case. The words used by Jesus on this occasion certainly indicate that in his opinion the power of God is sufficient to meet all cases of disease, but the practitioner must have attained sufficient understanding to apply it. Hence whenever there is a failure to heal a case in Christian Science, it may be because of the want of an adequate understanding on the part of the practitioner, just as Jesus said to his disciples in the above instance, "Because of your unbelief." The sufferer, of course, admits he has not the requisite understanding to heal himself when he appeals to another person for help.

However, we find instances related in the Gospels which show that there were cases which taxed even Jesus' great understanding. Take two instances from Mark. Jesus took the mute "aside from the multitude" and then healed him (7 : 33-35), and led the blind man out of town before healing him, and then had to repeat his treatment (8 : 22-25). This latter is the only instance recorded where Jesus had to repeat his treatment in order to heal. There are many other acts and sayings of Jesus which will recur to the minds of all who have carefully studied the four Gospels, and which indicate that some cases were more difficult for Jesus to heal than others; but the foregoing instances are sufficient to make the distinction clear.

In closing his gospel, John expressly says he has related only a small portion of the acts and sayings of Jesus; and a comparison of the four Gospels shows that each differs from all the others in stating some cases of healings and in explanatory statements connected with Jesus' works. Hence it would seem that each Gospel writer selected those cases of healing which appealed most to him, and gave such statements of Jesus in explanation thereof, and of his teachings, as to him seemed best suited to show the universal adaptability of those teachings to the needs of humanity.

It seems very clear to the writer, from a number of statements in Science and Health, that Mrs. Eddy recognizes and teaches that in human experience it is more difficult to heal some diseases than others; as for illustration, after naming a number of very serious diseases as having been healed through Christian Science, she says, "Christian Science heals organic disease as surely as it heals what is called functional; for it only requires a fuller understanding of its divine Principle to demonstrate the higher rule" (p. 162). Again, "When the unthinking lobster loses his claw, it grows again. If the Science of Life were understood, it would be found that the senses of Mind are never lost, and that matter has no sensation. Then the human limb would be replaced as readily as the lobster's claw,—not with an artificial limb,

but with the genuine one" (p. 489). This is a statement of what the Principle is capable of doing, but it is not claimed that this has yet been accomplished. There are many other passages in Science and Health in which the same thought is conveyed.

The habit of coldly and flatly contradicting a sufferer when an unscientific statement is forced from him by his condition, is most unfortunate. Most people are kind-hearted and do not wish to wound others, and this habit must be due to either thoughtlessness or ignorance. Christian Scientists understand that God does not cause suffering, and at an opportune time they should explain to the sufferer the teaching that God does not send suffering, and that it is possible through Christian Science to heal all sickness. No one unasked has a right to interfere with another's thought, and least of all by audibly and coldly contradicting him. Such contradictions tend to arouse antagonism and resentment, and thus do harm instead of good.

It would be hard to condemn anything in stronger language than that used by Mrs. Eddy in referring to this practice, "If Christian healing is abused by mere smatterers in Science, it becomes a tedious mischief-maker. Instead of scientifically effecting a cure, it starts a petty crossfire over every cripple and invalid, buffeting him with the superficial and cold assertion, 'nothing ails you'" (Science and Health, p. 460).

To the writer, it seems that much of the misunderstanding of Christian Science and opposition to it, might have been avoided if, whenever a word was used to express a special or technical meaning,—a meaning different from its ordinary, accepted sense, and yet authorized by the best dictionaries,—it had been followed up then and there with an explanation, so that hearers could not have misunderstood what was meant. There are a number of terms used in Christian Science which have special significance, and in all instances where such words are used, and not followed by an explanation of the special meaning attached thereto, as given in Mrs. Eddy's writings, there is danger that the hearer may misunderstand the speaker and be thereby prejudiced against Christian Science; when if such hearer had understood the real and authorized meaning attached to such words he would have been favorably inclined toward it.

A Helpful Lesson.

MABEL A. BIRDNO.

HAVING some stitching to do one afternoon, and wishing it to be done perfectly, I attached a guide to the machine, and began the task. My duty consisted in keeping the work close to the guide, but anxiety made me constantly look for results, and the outcome was that the work slipped away from the guide, and had to be repeated. I did not obtain perfect results until I steadily watched the guide.

We, as Christian Scientists, desire perfect results in our work of healing and uplifting mankind. Our duty, clearly, is to keep thought fixed steadfastly upon Principle; our work close to the guide Christ, Truth, and to have no anxiety or doubt concerning results, but simply to *know* the work is being done perfectly.

Cards in the German Periodical.

Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their cards inserted in the directory of *Der Christian Science Herold*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be the same as now prevails for the *Journal*. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language.

Selected Articles.

Would it be fair to assume that an orthodox church was unsound in its teachings because some of its members failed to conform to the tenets of that church and did not live the life of an orthodox Christian? Although it is claimed for Christian Science that it is the truth, none will assert that Christian Scientists as individuals have reached the full understanding of that truth. Even our doctors and ministers do not claim to be infallible, although they are striving to do their utmost in the ministration of their respective professions.

On the other hand, would it not be fair to judge Christian Science not so much by what Christian Scientists do not, but rather by what they do? An acquaintance with Christian Scientists shows that they are good, reliable, public-spirited citizens, and above the average in integrity and morals. Should not a tree be known by its fruits?

RICHARD P. VERRALL.
The New York Times.

happiness? How could we have sick people in God, drawing "life, and breath, and all things" from God? It is this gospel of the supremacy of God, on earth as in heaven, based on His omnipresence, His omnipotence, and His omniscience, which the Master proclaimed, and he commanded his followers to "preach the kingdom of God" and to "heal the sick;" preach to the sick and to the sin-sick the good news that God is everywhere, and that wherever God is He is God and governor, whether mortals call the place where the preaching is done heaven, or earth, or hell. Because God is everywhere, then if we are anywhere, we are in God; and since we live in God, under divine law and order, we do not live under the law of sin, disease, and death. And so Paul says, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Whenever and wherever the gospel of the universal and eternal reign of God is preached and accepted; then and there the glorious liberty of the sons of God, the citizens of the kingdom of heaven, will appear, with its consequent freedom from bondage to disease and to degrading habits.

WILLIAM H. JENNINGS.
Nebraska State Journal.

As a student of the sect for fifteen years, I must say in all candor that I feel drawn more to the Christian Scientists than to any other body of professed Christians, for the following reasons:—

1. They take a deeper and more rational view of the Bible.
2. They have eliminated the devil and all the horrible theology deduced therefrom.
3. They have taken God more as Christ presented Him—a Being of perfect love; and they see in Christ an Elder Brother, a true master Teacher.
4. They centre their belief in love to God and to all mankind.
5. They are honest in declaring that the Christian Science movement is yet in its infancy.
6. They have begun to learn and to demonstrate the gifts, especially the gift of healing sickness and disease, that Christ declared should be given his disciples.
7. The more advanced among them discern an impending and coming change in society for the betterment of all humanity, and they see that Christian Science, with its Principle and Christ-love, may help forward such change.
8. They are a growing people, having in their mind's eye the words of the Master: "Be ye therefore perfect."

PROF. M. L. BLOOM.
The Globe (N. Y.)

The critic lays down the proposition that "the acceptance of Truth from another's vision is a species of hypnotism," and then proceeds to say that Christian Scientists are hypnotized because they daily read Science and Health. The absurdity of this proposition is clearly apparent. All our educational development is received from those who have progressed beyond us. The wise teacher in the school, the skilled mechanic who guides the apprentice, the prophet with clear vision who warns and guides a nation, the great Master himself, who came to earth that we through him might know the truth and be free; all these show that truth comes through the vision of the worthy, to those who are ready to receive it. This receiving of truth is not hypnotism, and no amount of specious reasoning can make it so. Hypnotism implies bondage, control of one mortal by another. The truth never binds any one; truth frees, and he who grasps the truth as understood by another whose vision is clear, is himself helped.

Would our critic say that the study of a text-book on astronomy or natural science or mathematics, when understood, would produce hypnotism? Certainly not. Then why make an exception and charge Christian Scientists with being hypnotized, since they universally declare the great freedom, peace, and harmony which have come to them from the reading and understanding of Science and Health in connection with the Bible?

EZRA W. PALMER.
Business Woman's Magazine.

In the fatherhood of God and the sonship of Christ, Christian Scientists find a basis for the brotherhood of man, and they maintain with Paul that Christians are joint-heirs with Jesus Christ, and with John that "now are we the sons of God." If we are the sons of God *now*, we have a right to health and happiness *now* and here, for it surely would not be "God's way" to have a world full of sick and miserable children. And as "joint-heirs with Christ," we have an equal and joint right to the ability to live a healthy life and the power to help and to heal those who, in ignorance of their divine right to life, liberty, and happiness, are all their lifetime subject to sin and disease.

Jesus himself said of his ministry, the Father "doeth the works," so that we are in perfect accord with the Master on this point. With us, God is the only power, hence it follows that God is the only healing, saving, and life-giving power. It is our understanding that in God, the infinite Life, "we live, and move, and have our being." Should it seem incredible that the royal family of the "King of kings," and "Lord of heaven and earth" can enjoy life and health and

Until "Science and Health with Key to the Scriptures" was written by Mrs. Eddy, the wonderful healing works of Jesus, his immaculate conception, resurrection, and ascension, his walking the water and stilling the storm, together with the prison experiences of Peter and Paul, were utterly unexplainable. These acts have been looked upon as marvelous or spectacular contraventions of the natural laws of Deity, to exemplify some inscrutable power with which men were to have no part except as bewildered beholders. But, when understood, Mrs. Eddy's explanation of Spirit or Mind, and what is called matter, gathered wholly from a spiritual discernment of the Scriptures, unlocks the whole mystery whereby the so-called marvels are discovered to be the natural manifestation of divine or spiritual law, operative in human consciousness through the understanding of God. This discernment elevates the Scriptures above and beyond the realm of faith into visible demonstration.

JOHN CARVETH.
Maple Rapids (Mich.) Dispatch.

The Lectures.

Marysville, Kan.

Bicknell Young of Chicago lectured on Christian Science, June 3. He was introduced by Senator E. R. Fulton, who said in part:—

We do not all think alike, but we sometimes reach the same conclusions by reasoning along different lines. The supreme desire of all good people is to do that which will benefit humanity, which will elevate the human race and make better men and women. I am not a Christian Scientist, yet I believe many things which they believe and approve many things which they do. They believe that anything that will strengthen and encourage the weak, that will sustain and cheer those who are less fortunate than we, is one of the high and noble things of life. So do I. They believe that in doing that which will uplift and uphold a person and make him stronger physically, mentally, and morally, they do something that is noble and good. So do I. I know but little of their doctrine and of their creed, but I do know that by their words and by their deeds they have brought hope and joy to many a heart, and comfort and peace and rest to many a soul. They have accomplished great things and done a world of good, and wherever you find them, you will find honest, earnest, and conscientious workers, whose sole purpose is the betterment of their fellow-man.—*Correspondence.*

Oak Park, Ill.

Mr. Edward A. Kimball lectured for First Church of Christ, Scientist, Oak Park, June 24, at the Warrington Opera House. He was introduced by Mr. E. V. Day, Second Reader, who said in part:—

Friends:—First Church of Christ, Scientist, of Oak Park, extends a cordial welcome to you to-night in a spirit of broad friendship and true brotherliness, taking it for granted that if you are not in accord with the doctrines of Christian Science, from your presence here you are at least desirous of discovering what those doctrines are. After many years' experience, Scientists are forced to the conclusion that most of the opposition to and disbelief in Christian Science comes from a lack of knowledge of what it really teaches. The unwise man gaining his information from unauthorized sources and from hearsay, says, "I don't believe," and goes his way; the wise man before avowing his disbelief says, "I don't know," and going to the fountain-head, says, "Tell me."—*Correspondence.*

Lockport, Ill.

There was a fine audience at Norton's Opera House on Tuesday evening, June 28, to listen to a lecture on Christian Science by Judge Septimus J. Hanna. The speaker was introduced by Rev. J. S. Bayne of the Congregational Church, who said in part,—

The last day of the northward voyage of the *Advance* in the second Grinnell expedition was extremely perilous. Great ice fields were running furiously before the tides. Huge masses of ice bore down upon the staunch little vessel threatening to engulf her brave commander and gallant crew.

Suddenly a great glistening iceberg came driving up from the south. The brig was made fast to its huge bulk by well secured anchors. On moved this strange ship of the Arctic, plowing up the furrows of that icy sea, until it came to anchor in an open pool beside a lofty cave, having borne the brig full fifty miles toward the pole.

Even so it is in the voyage of truth poleward, Christ-

ward, God-ward, heaven-ward. Ofttimes amid the darkness and the storm it encounters the drifting flocks of worldly schemes that would drag it hopelessly from its desired haven. Ofttimes it is well-nigh borne down by the accumulated pack of Satanic foes that rush tumultuously upon it, but grappling to some huge berg of principle that feels the deeper currents of God's seas, and catches the winds of His upper ether, it is borne along secure and triumphant toward the pole-star of its faith.

In the stillness of that solemn midnight hour, as our divine Master and Saviour wended his way with the disciple band from the supper room, down across the brook Kedron, up to Gethsemane's Garden, walking in the light of the full Paschal moon, he looked heavenward and thus prayed for his disciples: "Sanctify them through thy truth: thy word is truth." Eighteen full, overflowing Christian centuries with seven hundred million followers, the number ever waxing and never waning, fully attest the validity and truthfulness of the Master's words.

Standing this evening in the presence of that divine One who said, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life:" in the presence of him who says, "Lo, I am with you always," all the days, hours, and moments; in the presence of him to whom Paul looked when he exclaimed, "I can do all things through Christ which strengtheneth me;" fully believing that he interprets to us the mind and heart of the great God, Father, and Friend, and that he is the immediate source of all light and life and healing and inspiration; resting with confidence upon this central Christological truth of Scripture, it gives me great pleasure, in his name, to welcome and introduce to this large, intelligent, and appreciative audience Judge Septimus J. Hanna.

A New Pamphlet.

The Christian Science Church, Its Organization and Polity. By Carol Norton.

This pamphlet, in which the history of the Apostolic Church and the Christian Science Church are compared, is now on sale. Price, prepaid, single copy, 20 cents; twelve copies to one address, \$1.75.

Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Index to Volume VI.

All those wishing the *Sentinel* index for Vol. VI. (September, 1903—August, 1904), can have it on application.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

As to Diagnosis.

SOME of those opponents of Christian Science who have criticised the healing accomplished by this system have done so upon the supposition that the persons who have been healed were victims of their own imagination, and that the serious nature of the ailments from which they suffered was not substantiated by the diagnoses of physicians. As a matter of fact, the greater portion of those who have been healed through Christian Science have adopted this system only after having been under the care of a number of physicians, and the diagnoses in all such cases, as they are reported in our columns, are those of physicians, and in some cases, of several physicians.

In this issue we present the testimony of a man who for many years "was actively engaged in the practice of medicine,—being a graduate from a leading medical university of the regular school," and who had also taken two post-graduate courses. This gentleman tells of the healing of his wife through Christian Science of an affection of the bronchial tubes which had baffled the efforts of eminent men in the medical profession. He tells, also, of his own healing of chronic malaria with which he had suffered for twenty years, as well as of frequent attacks of acute laryngitis.

There seems to be no question as to the correctness of the diagnosis in these cases, and this testimony is sufficient answer to the criticism to which we have referred, especially as it comes from a man who, before the healing power of Christian Science was made manifest to him, was "strongly prejudiced against Christian Science, and a firm believer in medical practice."

That this man was "strongly prejudiced against Christian Science," might reasonably be surmised from his training and profession, but prejudice and opposition will eventually fall before proof and demonstration. Therefore it is most important that Christian Scientists prove their faith by their works. We doubt whether this physician would have been influenced by preaching; practical demonstration is required in such cases, and Christian Scientists cannot afford to let anything interfere with this healing work. Mrs. Eddy says, "If the Scientist has enough Christly affection to win his own pardon, and such commendation as the Magdalen won from Jesus, then he is Christian enough to practise scientifically, and deal with his patients compassionately; and the result will correspond with the spiritual intent" (Science and Health, p. 365).

M.

In last week's issue of the *Sentinel*, we referred editorially to a circular, recently sent to Christian Scientists, which purported to quote from the first edition of Science and Health, published in 1875. The words quoted in this circular were entirely contrary to Mrs. Eddy's teachings, and as we were unable to find them in the first edition of Science and Health, or any other edition to which we had access, we wrote the author of the circular asking him to refer us to the page from which he quoted. His answer

disclosed the fact that the quotation was not from Mrs. Eddy's writings at all, but from an article written by a contributor to a paper called *The Marconigram*.

It is just to the author of the circular to quote from his letter as follows:—

"I was reliably informed, as I thought, that this quotation was from the 1875 edition of Science and Health. If it does not appear therein I have been grossly misinformed. I endeavored in every way possible to obtain a copy of the 1875 edition but was unable to do so."

It is proper to state also that he is not a Christian Scientist.

M.

Witnessing to Facts.

It is possible to conceive of a type of man that would be prompted by pride to exaggerate his own faults, but it would be difficult to think that a person of this character could be found occupying a position of religious prominence. When, therefore, an honored minister states in earnest, unreserving words the facts which evidence to him weakness and incapacity in the religious body of which he is a conspicuous representative, we can but conclude that, though possibly overstated in a moment of depression, the grounds of his appeal must be saddeningly true.

In a late issue of one of the leading denominational weeklies, the editor takes a very pessimistic view of the religious condition and outlook, and presents an impressive array of evidence in support of this contention that "the world is stranded on the rocks of sin, and in imminent danger of appalling disaster." Public corruption and private greed, social and political contempt for ethical standards, the frequent sacrifice of honor and patriotism for vulgar wealth or distinction, the indifference of might to honesty and justice in its economic and political dominion, and the consequent spirit of bitterness and anarchy which are rife among the masses,—all these are pictured with startling force, and this "carnival of sin" is further declared to be not the *cause* but the *result* of spiritual deadness in the church. "The decadence of the church," says he, "is not so much due to these conditions as these conditions are due to the decadence of the church." It is like the voice of Tolstoi crying in the wilderness, "The evil from which men are suffering is produced by the fact that the majority live without that which alone affords a rational guidance for human activity,—without religion, and without which people stand on the plane of animals, and even lower than they!"

This recognition of the causal relation between the failure of Christian people to apprehend and utilize the spiritual resources of their religion, and the "appalling" human conditions referred to, is most significant. He alone who is entirely sure of the adequacy and availability of spiritual truth can enter upon the struggle against the asserted forces of evil with confidence and true courage, and it is clear that an awakening of the dormant religionists of every denomination and faith to this fact must precede their successful labor for the world's redemption. Christian Science declares that in the absence of a satisfying evidence of the present supremacy of revealed truth, Christian effort can but be nerveless and ineffective, and hence its insistence that there is continuous and imperative need of those demonstrations of healing which characterized our Lord's ministry, and which, as he declared, were to be the convincing proofs that should abide, with all believers and throughout all time, to establish faith and inspire endeavor.

This brother's pessimism is not unique; its discouraging note is echoed in the columns of well-nigh every Christian periodical that comes to our table. His thought that "the current of life is sweeping away from the church and not towards it," is constantly expressed, and it seems quite inexplicable that those who thus perceive and openly declare the inefficacy of their own "hold upon God," should

not be able to rejoice in the faith and achievement of those who can bear witness to better things.

Christian ministers are constantly deploring the fact of empty pews, despite painstaking and expensive effort to make the services attractive. They constantly refer to the lapse of interest in the prayer-meeting, the neglect of Bible study and of the cultivation of the spiritual life. They speak of the increasing difficulty in raising money for church support and religious work, and of the growing indifference of the people to the ends for which the church exists. In an entirely different vein, Christian Scientists are privileged to speak of churches and other assembly rooms that are always crowded, though without "attractions;" of deep and abiding interest in the prayer and experience meetings; of the devotion of the people to Bible study, and to the spiritual overcoming of every sickness and sin; of large and continuous giving for church needs and beneficent work, and of a great awakening to the spiritual life and all that it means for humanity.

The contrast between these two lines of testimony, is very marked and full of meaning, and in view of the unquestioned facts, it seems to us entirely in keeping with Christian propriety and expectation that only kind and brotherly things will be said by Christian ministers of a movement which is giving so creditable an account of itself, and which is attaining results whose impressive absence from his own parish prompts many a pastor to write for his church paper in terms that are no less frank than regrettable and suggestive.

W.

The Mental Remedy.

THE all-important consideration for humanity is how to reach the moral and intellectual stature which ever marks the Christ-man, and thus to realize the fulfilment of the Divine purpose. That this is the ultimate of all true and purposeful endeavor, none would deny, though perhaps but few have recognized it as a constant demand resting upon all alike.

Before the advent of the world's great Teacher many had striven for that intellectual supremacy which can never be separated from progress, even in its purely human sense. Paul, commenting upon this, said, "The Greeks seek after wisdom;" he also said that the preaching of the Christ,—the Christ-doctrine,—was, to the Greek thought, "foolishness." The same may be said to-day with respect to many who, to their very great loss, reject the mental healing of Christian Science which identifies its teaching with that of Jesus and the apostles. Christian Science finds its justification, however, in the character of its appeal, as well as in its effects.

Nearly all those who accept this teaching have been led to do so by their observation, or by their own experience, of its value, as a remedial agent, to the sick and suffering. Prior to such experiences, these people had believed in material methods of healing, but when Christian Science was brought to their notice they were quickly led to see the very important fact that these methods have no relation whatever to man's moral and intellectual needs, to say nothing of his spiritual nature as the child of God. They also began to comprehend, in some degree, what is meant by the dominion which is man's divine inheritance; and that material methods of dealing with error fail entirely to recognize this dominion.

The study of Christian Science makes it clear that all who are afflicted "in mind, body, or estate" are really suffering from their belief in the cruel despotism of a supposed material law, and that dependence upon material remedies only intensifies this bondage. In witnessing the struggles of these sufferers, Shakespeare's words become very significant,—

Our deeds are fetters that we forge ourselves.

Aye, truly; yet methinks it is the world that brings the iron.

Because "the world of error is ignorant of the world of

Truth" (Science and Health, p. 13), it brings to every poor sufferer the "iron"—material theories of pain and pleasure, of disease and its cure, from which are forged the fetters of sin and sickness. These theories, one and all, ignore the dignity and the infinite spiritual possibilities of man as the representative of divine Mind. When this healing truth is revealed to the sufferer, he turns away from the belief in narcotics and opiates which dull his senses, and which stupefy and becloud intellect and morals alike, at the moment when he needs to be most awake to work out his own salvation through Christ, whom the Bible declares to be "the power of God and the wisdom of God."

In his teaching and healing Christ Jesus made much of *knowing*. He declared that to know God is eternal life, and that to know the truth shall make free. What more can be asked or desired than eternal life and freedom? It is this knowing and its glorious results which constitute the theory and practice of Christian Science, wherein the remedy for every human woe contains a quickening appeal to man's highest nature; and "body, intellect, and morals" respond, in fulfilment of Christ's promise, "The water that I shall give him shall be in him a well of water springing up into everlasting life." K.

Letters to our Leader.

New York, July 27, 1904.

My dear Mrs. Eddy:—In reading the last *Sentinel* containing letters to you I thought of those who never write to you and yet are "living epistles" of the truth you teach. I knew one who demonstrated this Christian Science, and I never heard him mention your name but twice, yet he loved and revered you (so do I, but I am not worthy).

I asked this man, after seeing the wonderful works that he did, and the still more wonderful change in his character, "Where did you get this?" and he answered: "I read Science and Health for two years." He was never tired and the good that he did lives after him. The people who came under his care know from his demonstration of the teachings of Science and Health that it is true. Such men (may the lord of the vineyard send more of them) help to have your noble character and your selfless work appreciated at their true value.

Sincerely yours,

F. S. BELLEVUE.

Galveston, Texas, August, 1904.

Dear Teacher and Leader:—As we eat of the "bread which cometh down from heaven," it is but just that we return thanks to the hand that breaks the bread.

Monday afternoon while I was away from home two calls came over the telephone for help. This was the message sent: that the four-year-old boy of a patient had fallen down stairs, and that a doctor and nurse were in attendance. The last call said that the child had been unconscious three hours, and that the body and limbs were cold. The doctor had pronounced the condition, concussion of brain, and had told the mother there was no hope of recovery. In her call for help she had said, "Ask your mother to get me over the telephone as soon as possible, and to help my child if she can."

When I reached home at five, I entered my room with a request that I be not disturbed. I had three hours of sweet communion with Truth. Once I went to the telephone and was told that the child seemed resting. At eight o'clock, when the father reached home from business, the child recognized him. In the morning the boy sat up in bed and drank milk, at which time the doctor gave slight hope of recovery. During the next twenty-four hours the mother telephoned me, "The child is well. The doctor and nurse do not know what to make of it, but I know what has saved my child."

I knew the little fellow was very obedient, and the thought came that an idea is always obedient to the Mind

that formed it; and that restful action is never disturbed. I found one statement after another from Science and Health coming to me as facts, then such a glow of love to you; of thankfulness for your bravery that made it possible for this wonderful revealing of Love in its healing power to appear to humanity now. This is, I think, the fullest proof that has come in my work, and I had least to do in it. I felt that it would give you joy.

Ever your loving student,

MARY E. HARDY, C.S.B.

First Church of Christ, Scientist, London, S. W., England.

Rev. Mary Baker G. Eddy.

Beloved Leader:—On behalf of the Board of Directors of this Church, I beg to thank you most heartily for your cable received June 21 and also for the letter sent through your secretary, Mr. George H. Kinter, in answer to mine of June 10 on the question of rotation in office of the Readers. This correspondence was read at our Semi-Annual Church Meeting, and it was resolved by a majority vote "that the time has now come for this Church to conform to the rule of rotation in office of its Readers." In consequence of this resolution the Readers then in office resigned and new Readers have been elected to fill the vacancies thus caused.

Thanking you again for the unvarying love and interest you have always manifested towards this Field, I subscribe myself, on behalf of the Board of Directors of First Church of Christ, Scientist, London,

With deepest gratitude,

GODFREY R. PEARSE, *President*.

London, S. W., August 7, 1904.

Beloved Leader:—I feel that I must trespass on your time, though as briefly as possible, to tell you that, owing to the recent decision of First Church of Christ, Scientist, London, to adopt the plan of rotation in office as regards its Readers, it has become my duty to fill the place of First Reader for a time. I feel so grateful that we have been able to take this step, as it not only brings us into closer touch with all the other branch churches and with the Mother Church in thought, but I see also how it must bring a wholesome current of vigor and fresh thought to this work. I can only say that it is my most earnest desire that I may be able to keep the post of First Reader free from any sense of personality, or love of personal influence, and to be quick to hear and obey the voice of divine Love. My strongest feeling so far has been, that if the word of absolute Truth is given out from the desk, with a conviction of its truth, there must be the lifting up of the Christ who "will draw all men" unto him. I am sure that St. Peter had a knowledge of the peculiar snares that would beset the path of First Readers when he addressed to his flock those admirable words of counsel contained in his first epistle, chapter 5, verses 1-4.

Of my own gratitude to Christian Science and its Discoverer, I can never adequately speak, but "To obey is better than sacrifice."

Most gratefully and lovingly yours,

(MRS.) MABEL S. THOMSON.

Glamis, Cal., August 6, 1904.

Mrs. Mary B. G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—I was sitting in my car here in the desert last night, thinking what Christian Science had done for me, and I said, all is gone, I have no soul, no body, nor any mind; Oh, the complete sense of annihilation and then,—the babe in Christ was born, whose Father-Mother is God, surely God's limitless Love waked "a white-winged angel throng." I am over three thousand miles away from you, in one direction at least, but I know that no harm can befall you, nor can "any plague come nigh thy dwelling."

With affection,

BURWELL O. GRIFFIN, a Desert Telegrapher.

Testimonies of Healing.

For many years before coming West, I was actively engaged in the practice of medicine,—being a graduate from a leading medical university of the regular school, having also taken two post-graduate courses in New York City. My wife had an affection of the bronchial tubes, which had resisted the treatment of the best physicians both East and West, and the change of climate which we made for her health, availed nothing. Thoroughly discouraged, she went to a Christian Science practitioner for treatment, and in a remarkably short time was entirely well and has remained so. Formerly she took cold on exposure to the slightest drafts; now she never does. Seeing that Christian Science had done for her what I, and the most eminent men in the medical profession, had failed to accomplish, I went myself to the practitioner for treatment for chronic malaria. I had taken nearly every known and accepted remedy for this trouble during the past twenty years, and had been in the hospital unable to arise from my bed for weeks at a time. After a short course of treatment, my old trouble disappeared; it has failed to return at its accustomed season, and I am cured. I also had had frequent attacks of acute laryngitis, and at the time I began treatment could not speak above a whisper. It yielded almost in a day, and has never returned.

Both my wife and myself have since had the benefit of class instruction, and have so grasped this wonderful Science that we have both been able to make some most remarkable demonstrations. The medicine chest, which had so long been one of the necessary fixtures of our home, and from which we regularly took our doses, has been emptied of its former contents and put to a more acceptable use.

I am sure that Christian Science will meet every human need and every mortal ill. The aim of every honest physician is to prevent and cure disease. If he will only investigate Christian Science, he will find a way to accomplish this noble purpose far superior to anything he now has. I was strongly prejudiced against Christian Science and a firm believer in medical practice, but I am glad I investigated, for it has revealed an ever-present power, which is able to cope with every unhappy condition and every disease.

DR. C.

For nearly seven years I have had the benefits of Christian Science, not the least of which has come to me through our periodicals. To-night, as I read the *Sentinel* with deepest pleasure and profit, I felt that I could no longer be satisfied with receiving, but must do my part in the generous outpouring of gratitude and of love to God and to our revered Leader.

My way into Christian Science was a thorny one. Barriers of prejudice and misconceptions manifold kept me from reaching my home and claiming my rightful inheritance. During many years I had known of this new-old religious thought, for one of our family had studied it, and Science and Health was on our bookshelves. But "something better than Science" was presented to this relative,—a something that left Mrs. Eddy out of the proposition, and made the human mind and will mighty factors in the solution of life's problem. Science and Health was taken out occasionally to point a jest or to be criticised and condemned as absurd and impossible. Whether this thought was likely to produce harmony and joy in our family may be imagined. My own condition at that time sufficiently indicated the result of living in such a mental atmosphere. I was suffering from chronic asthma, and had tried every remedy I had ever heard of, with no permanent relief. No physician gave me the slightest hope of cure. I spent sixteen months on the Continent, and wherever other people seemed to find immunity from this disease, I was always worse. Annual attacks of rose-cold added to my misery.

had been wearing glasses for six years because of a severe case of astigmatism. I also had a most distressing functional difficulty, which the doctors told me might possibly be helped by means of an operation. No material remedies succeeded in alleviating the intense suffering from that source. I was nervous, unhappy, without any faith in God. During attacks of asthma, when I was often obliged to sit all night long and breathing was so painful as to bring anguish, I longed with all my heart to die.

I had just returned from Europe when the Mother Church in Boston was dedicated. As I lived in the neighborhood of the church, I proposed to some friends on the afternoon of the dedicatory services, to visit the edifice, and with the idea of deriding all that we might see. I well recall our comments, and the pity we felt for the people we saw there who seemed to be happy about something—condemned mortals, we thought them. We came away from the church with such a sense of superiority, although none of us had anything in his thought that he could have offered to a starving soul,—anything helpful, hopeful, or comforting!

The next time I entered that church, three years later, I was with a swelling heart, and eyes full of tears,—tears of repentance and gratitude for the great gift that had come to me in the revelation of Christian Science as it really is. Those three years had brought me very low, and when I was ready to turn to God for help it was because nothing in the world promised the slightest aid. In the first treatment I received the astigmatism was healed, and I have never worn glasses since. There was more of a struggle with the other difficulties. I had only a few treatments for these, and then began to work things out alone with God. The victories, when they finally came, were worth infinitely more because I had proved my rule every step of the way.

In these seven years Christian Science has never failed me, and wonderful tests have been given it. My little boy, nearly five years old, has never known any other physician or medicine.

So great, then, is my own personal debt, and so deep my gratitude for help given to the many who are dear to me, that my heart turns, with love and reverence beyond all words to express, to the selfless, pure, and patient woman who has brought us this rich blessing.—our Leader, Mary Baker Eddy.—M. B. M., Stamford, Conn.

It is now nearly three years since I first learned that Christian Science is only another term for "The Science of Christianity" or "Christianity applied." I had known that there was a sect of that name, that it was of sufficient prominence to evoke a good deal of criticism, and I am ashamed to admit that I was looking upon the criticism as probably true though I did not feel called upon to take a hand in it.

A friend who had become interested, loaned me the textbook, but after glancing through it, I returned it with the pertinent remark, that I knew much less than before, of what it all meant, and my friend dropped the subject. Christian Science unexpectedly broke upon me years later, not through relief from any physical suffering of my own, but through the healing of my daughter of various ailments, which physicians had failed to relieve, and which were fast growing more troublesome and real. When first I knew that she had turned to Christian Science and found, as I supposed, a longed-for relief, it was a sad day for me. Our home was in Canada, but she had married the son of the friend referred to, and had gone to a far western territory to reside. To be sure, he was not tainted by Christian Science, but remained faithful to the orthodox church. He could see nothing in his mother's and his father's faith. So far, so good, we thought, and we had no fears when his parents journeyed far to visit the young couple, not, however, with the expectation that Christian Science would be accepted, especially

by my daughter, who had flippantly rejected it in former days. But Truth is mighty and must prevail in time. The news of her acceptance of Christian Science cast a gloom over my mind for days, but as I received frequent letters telling me of her changed ideas of God, Love, and Life; and how her former discordant and clouded ideas of religion were gradually giving way to peace and harmony, mental and physical, what could I do but rejoice with her. Soon she began sending me copies of the *Sentinel* with marked articles, and I had only read a few when it dawned upon me, that this was the truth for which my heart had long been hungering. Now I knew why I had never been able to reconcile many of the old theories with my sense of right and justice,—they were unreconcilable. Slowly but surely the last vestige of prejudice disappeared, and with it the fear that Christian Science was a misleading and dangerous doctrine disappeared also; and better still I did not have to contend with opposition, for my husband realized from the first that it was good and not evil. Many times the testimonies and teachings seemed strange and wonderful, yet we never doubted or disputed, though we might not fully comprehend.

Hearing by chance that a former friend in whom I had much confidence, was a believer in this doctrine, I at once wrote to her for information and encouragement, and received both. In September, 1902, a physical ailment which I never expected to be rid of was entirely removed by the positive realization of the old truth which the Psalmist referred to, and which Christians in all ages have rejoiced in, that "underneath are the everlasting arms." If this is so, if it is anything but a beautiful figure, why wear a truss? If God can keep in perfect peace the one whose mind is stayed on Him, why not trust Him fully? and yet I hesitated to lay aside material support lest it seem like a challenge to the God I was beginning to understand. But all things work together for good when we are willing to be obedient, and when I left the truss off one morning by mistake, and only knew it when the usual sensations of pain and weakness began to warn me of danger, I felt that the time had come to demonstrate the power of Truth over error, and fearlessly went on with my housework. I literally leaned upon that promise, and for weeks was kept in perfect peace and safety. Then something obscured the light, and I found myself wavering and fearing that I had made an unnecessary trial and deserved failure. The dreaded symptoms, brought on by my doubts and fears, hovered near me, and I wrote to a Scientist in Montreal to ask if he thought I had done right or wrong. His reply had in it so much of the spirit of the healing Christ that I doubted no longer, and my new-found freedom returned to stay.

I could relate many instances where the understanding that mortal mind is all there is to suffer has saved me from the old-time fears and their disastrous consequences.

I have had the satisfaction of seeing several of my friends who were formerly prejudiced against Christian Science or who were ignorant of its teachings, arrive at a better understanding of it and admit some of its truths, and some indeed are ready to "follow all the rugged way" (*Miscellaneous Writings*, p. 398), while others have failed as yet to see its beauty and Christliness. Through the kindness of friends I have had access to all the literature and have corresponded with several whose testimonies have been particularly convincing and I have always received prompt and helpful answers. If there has been unfavorable comment among the members of the church to which I belonged for nearly twenty years, it has passed lightly over me. They know not what they do, when they reject this "key" that has unlocked the Holy Bible to the gaze of sick and sinful humanity and brought so many hopeless ones within its saving and healing influence.

To me it has brought such a flood of light that the former darkness can never reassert itself. Every day brings its own

work in the overcoming of the beliefs of the flesh which "profiteth nothing," and in declaring the Truth of being, we have not "received the spirit of bondage again to fear;" but we have "received the Spirit of adoption, whereby we cry, Abba, Father."

Being on a visit to this same daughter just at present, I find her rejoicing in the daily unfolding beauties of Christian Science and her husband gladly assenting to it.

HELEN M. EMERY, East Hatley, Can.

It is now over two years since I first heard about Christian Science. At that time I was very ill, with a complication of troubles, and had been in bed for three months. I had a terrible pain in my side, and the doctor did not seem to know what caused it. He gave me powders to take which made me worse and caused ulcerated bowels, and after trying different remedies without effect, he thought it must proceed from an operation I had undergone three years before, for a movable kidney. He therefore put me through a chloroform examination, and finding it to be an abscess, he performed another operation, which left me very weak.

About that time, my daughter brought home a *Christian Science Journal* which she got from a friend who was interested in this teaching; but as I always thought it was impossible for me to get along without material means, I kept taking my medicines. As time went on, I was able to sit up part of the day, but still had the pain in my side. I got a few more *Journals* and *Sentinels*, and as I kept on reading I became more interested in Christian Science, a new light shone out of the darkness, and my continual prayer was that I might touch the hem of the Saviour's garment and be healed. I began to see that I must give up my stimulants and my medicine, and trust in God, alone; from that time, I got better every day. At the end of a fortnight I knew I was healed, and I have never had a relapse of the old trouble. I bought a copy of "Science and Health with Key to the Scriptures," which makes the Bible a new book to me. I know that the truth has made me free, old things are passed away and all things are become new. I have had many demonstrations in my family, and I must express my sincere love and gratitude to God, also to Mrs. Eddy, for the truth revealed in Christian Science.

MRS. DALRYMPLE, Dunfermline, Scotland.

I did not come to Christian Science for physical healing. I always felt a dislike for being thought an invalid, and generally kept my ailments mostly to myself; but I partook of the beliefs that are so common, that sickness and death are necessary to bring man into immortality beyond the grave. About six years ago, however, a Christian Science student who was visiting in our neighborhood read the Lesson-Sermon for the benefit of a few who met together to hear it, and I found there was something which would satisfy the desire I had for a better understanding of the Scriptures.

I had studied the Bible in connection with the International Sunday School lessons, and had a vague idea of its sacredness; but when I commenced to study it systematically, as Christian Science teaches, I found how little I understood it. About the first discovery I made was that the promises the Bible contains were but half believed, because it was supposed that they were to be fulfilled in some future, far-off place, called heaven. But when I began to study Science and Health, it was truly a Key to the Scriptures, and a revelation of what Life is, and where and what is heaven. The Bible is becoming more sacred to me as I learn to read it with its spiritual meaning which God is revealing to us through the teaching of our text-book, and the daily study of the Bible, and Science and Health is to me indeed a feast. I find, too, that the ailments which troubled me are slowly but surely dropping into nothingness as spirit-

ual truth is apprehended, and a sense of joy and peace : taking the place of the unrest of former times.

I feel humbly thankful that God has led me into Christian Science. I receive great help from the articles and testimonies in our periodicals, for which I am very grateful. Nearly a year ago I received class instruction from a student of Mrs. Eddy, and I am very thankful. My greatest desire is so to reflect Truth and Love that I may thus make manifest my gratitude to God and to our Leader.

HELEN M. PALMER, Mansfield, Pa.

In a moment of discouragement, I once expressed my regret that Christian Science had come into my life. Within twenty-four hours after this speech, three instantaneous healings had taken place in our family,—one of nettle rash, one of sore throat, and one of bronchial cold. Properly rebuked, I make this public acknowledgment of my gratitude for Christian Science as revealed through Mrs. Eddy. My own healing of bronchitis (pronounced incurable) is also a great cause for thanksgiving. In my two and a half years' experience in Christian Science, I have seen this truth applied to many forms of disease, with unfailing good results. With but few exceptions, the healings were instantaneous, and in even these exceptions, the realization of the omnipotence of God set at naught the limit prescribed by *materia medica*.

Especially beautiful has been my experience with children. Only mothers who, like myself, are Christian Scientists, realize of what inestimable advantage to their children is the child's application of the truth that "Perfect love casteth out fear."—LUCILLE JOCELYN, New York, N. Y.

I have been studying Christian Science for about eight years, and the farther I go the brighter grows the way. I did not come to Science for physical healing, though I have received it many times; but far greater than all else has been my healing of sin in nearly all its seeming forms of hate, anger, revenge, jealousy, falsehood and so on; now thanks be to God, I can say, that in place of hate there is love in place of a lie there is truth, and I find myself always happy when I live up to my understanding. My path has not been through flowers but thorns, and yet all has been for my good, for as Paul says they that are without chastisements are bastards and not sons, so I rejoice in tribulations. I am the only Christian Scientist here, but some are interested. One young man reads the Lesson-Sermon with me every Sunday.

I have had so many proofs of God's care that I feel like saying with David "how wonderful are thy works, O God." I find much comfort in the *Journal* and *Sentinel*. My daily prayer is that I may be more worthy of the name, Christian Scientist.—WM. GALVIN, Prineville, Oregon.

It is with a very grateful heart that I write of my healing through Christian Science. From a very timid child I grew to be a more timid woman, until I suffered from fear more than one can imagine. I often thought that bodily suffering would be easier to bear. My healing has been slow, until at times I have almost given up in despair, but I am thankful that I kept on, thankful for the peace of the past two years. It is my earnest desire to grow more and more in the understanding of Truth.—E. M., Dorchester, Mass.

[Translation.]

A few months ago I was taken with pain in my back, but did not give it much attention. The pain increased from day to day and finally affected the thigh so that I could walk only in a stooping position. I applied several remedies which were recommended to me, but in vain.

At that time my brother from America was visiting here, and frequently spoke of Christian Science, yet I could not decide to turn to a practitioner. One day my brother re-

turned from a journey to find me no better, and he said, "Are you still afflicted with your rheumatism? You might have been free long ago." I wrote immediately to a practitioner, asking for treatment. After several treatments the pain was less intense; in a week I could walk upright, and after three weeks' treatment I was well, for which I cannot be grateful enough to God and to the Discoverer of Christian Science.—C. J., Barby, Germany.

Most gratefully indeed do I testify for Christian Science. As I look back over the past twelve months and see the improved condition in every line, domestic and financial as well as physical, and even in my social intercourse among friends, and know that I owe all to Christian Science, I have great cause for thankfulness. I am thankful for Mrs. Eddy's book, *Science and Health*, and for all her works, whereby we are enabled to know that sin is not eternal, hence not real, and that only the good and the true are real. We know that all the beautiful promises in the Bible can be depended upon for "He is faithful that promised," and how can we help loving Mrs. Eddy who has made this understanding possible? She has trod the path before us and we are thrice blessed, indeed, in the privilege of reaping from her toil and her consecration to God, and shall we, then, hesitate to honor her behests?

MRS. H. F. JACKSON, Seattle, Wash.

[Translation.]

My sister in America recommended Christian Science to me and I have attended the services for the last three years. At first I went simply to please my sister, because I had no confidence in this good teaching, but my opinion was entirely changed after I had spoken with a Scientist. All doubt and lack of confidence disappeared through the Word of divine Truth.

I thank God with all my heart for all the benefits I have received through Christian Science. Before I heard of it, the happiness of our family was marred through the death of our two dear daughters, and the sorrow was increased through the frequent illness of our only son, who was almost constantly under medical treatment. I had hardly recovered from one shock, before I was overtaken by another. Under such conditions I felt like a creature which the hunter pursues.

Thus I spent several years of my life like one without comfort or hope, until Christian Science came to me. In it I have found all I need, for "perfect love casteth out fear." Our Redeemer says, "When he, the Spirit of truth, is come, he will guide you into all truth."

I now feel better and happier than ever before. I have been healed of weakness of sight: formerly I had to wear glasses when reading, writing, or sewing. I shall strive to become perfect through Christian Science and a good follower of Christ and our revered Leader, Mrs. Eddy. I joyfully welcomed the Bible Lessons in our *Christian Science Herald*, for which we Germans all feel very grateful.—M. H., Potsdam, Germany.

When I first heard about Christian Science, three years ago, I felt that it must be the truth, and I accepted it willingly, but many errors of sense had to be removed before my thought was aroused to the need of active work. I have had many proofs of God's loving care, and wish to give one which occurred last January, in which a case of typhoid fever was overcome for our eight-year-old boy. I had been declaring the truth for him for several days, without recognizing the error which was keeping me from calling upon a practitioner, when one evening, through fears expressed regarding his condition, I became alarmed and telephoned at once for assistance.

The practitioner upon whom I called, gave me the following from *Science and Health*, p. 420: "If students do not readily restore themselves, they should early call an

experienced Christian Scientist to aid them." The word of Truth was spoken again and again before I realized that there was nothing to fear, but with the loving help given me the work was done and the boy was healed. This experience brought to me a better understanding of these lines in *Science and Health*, p. 574: "The very circumstance which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares."

I am very grateful to our dear Leader for the truth which she has given us, but know that gratitude can be better expressed in deeds than in words. Divine Love opened the way for me to unite with Third Church of Christ, Scientist, of this city, last June, and later with the Mother Church of Boston.—W. J. M., Minneapolis, Minn.

Having received so much help from the testimonies in the *Sentinel* and *Journal*, I feel led to send a few lines to express thanks for the many blessings that have come to me and my family. We have had no other help for ten years, and have had three children with no other help but the truth as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures." I was all alone at the birth of our little boy, now four years old. We lived on an island, and my husband had to cross the river for my aunt. He had only been gone a few minutes when the birth took place without any pain. It was an hour from the time he went, till they came back. I had no fear whatever, and did all that was necessary myself. As I had to meet the fear of my aunt, my mother came the next day. She said she had never seen a baby get along so nicely. I stayed in bed one day to quiet the fear that was expressed. The second day being Sunday, we read the Lesson-Sermon as usual. I never went to bed after the second day, and in a week I was doing the work for all the family. I could fill a book in telling of the many demonstrations of truth we have had in our family.—M. A. LOAN, Masena, N. Y.

Ever since I became interested in Christian Science, it has been a struggle at home and abroad for me to do or say anything in regard to this subject, but constant work and a never doubting or wavering trust in Christ's words, have won many a battle for me. There were hard battles between the flesh and Spirit, but had I understood the first commandment, the war would have ended sooner and not have been so severe. I had always been interested in religion, but I now see that I knew but little on that subject till Mrs. Eddy's book explained the Bible to me, and then I realized that I had seen "through a glass darkly." Now I see face to face,—with understanding.

In addition to the great spiritual uplifting I have received, I could mention innumerable other benefits. Severe stomach troubles, headaches, backaches, colds, sore throats, and almost all the ills that flesh is heir to, including a very serious case of despondency and grief, have been cured, and I have had cause to see how "all things work together for good to them that love God." Words cannot express the gratitude I feel to God, to our beloved Leader, and to my teacher for the understanding of Truth which has also enabled me to help others. My daily prayer is to become more worthy of the name I bear.

E. S., Washington, D. C.

I am very grateful to Mrs. Eddy for showing us how to know God as perfect and eternal, and man as His image and likeness. I am also grateful to all those who help me to know about Truth.

Although I am only twelve years old, I am learning more and more about Science each day and am trying to live it.

God has showed each one in our family that He is All in all in healing us many, many times of sickness, and I want to return thanks to Him with all my heart.

HELEN HAMLIN, Detroit, Mich.

From our Exchanges.

A Christian minister ought to know how to teach the way in which spiritual truth can find its material embodiment in home life, in social life, in business methods, and in commercial transactions; and also in national affairs and in international relations. He should not be the partisan of one class against another class, of labor against capital, or of capital against labor; but he should bring home a sense of living responsibility to individuals of all classes, of their duty to carry out in practice the principles of Christian ethics in all the ordinary relations of their daily lives. This sense of personal obligation should be insisted upon in the Christianization of business. Our music, painting, architecture, and literature have all been largely Christianized; while manufacture and commerce and industry in general are to-day more pagan than Christian. If a preacher could demonstrate to the unbelieving world that the Golden Rule of the Gospel is practicable in business, he would do more for the kingdom than if he were to preach, with all the eloquence of a Chrysostom, about a spiritual life that ignored our duties of social service.

JOSIAH STRONG, D.D., LL.D.
Homiletic Review.

To banish one's self to the Devil's Island of soul solitude, to be as much alone in the crowded street as Robinson Crusoe was when cast away from the world and the faces of men, to rise up in the morning and to lie down at night with the perpetual consciousness that every man's hands are against us, and to look forward to death knowing that we shall go down to the grave unregretted by men, what worse fate could one wish for one's worst enemy? And this is the catastrophe which awaits those who live only for themselves. In piling up they have left themselves empty. In gathering they have scattered. In seeking life they have lost it. There is no use of going outside of the plain facts and experiences of life to discover a Nemesis which will overtake those who disobey the laws of God written in our hearts.—*The Universalist Leader.*

We make a capital mistake when, in seeking to commend Christianity, we do not present Christianity. The Gospel is adulterated, to use Paul's image, when additions are made to the substance of the faith, and when subtractions are made from it. If the Gospel, as we believe, answers to the needs of man as the unruffled surface of the river reflects the waving foliage on its banks, or as the key fits the lock, or as the light fits the eye, in the long run we do not gain anything by not being absolutely faithful to the revelation. Too many of our accommodations of the Gospel to the assumed conditions of men betray not our wisdom, but our distrust of the sufficiency of the Christian message.

The Watchman.

If we really live with God we shall certainly learn how He would have us live with men. Of what avail will it be that we pass through the forms of Christian service and repeatedly affirm our love for Christ and our determination to follow him, if we are tricky and unforgiving and uncharitable in judgment as we have to do with our fellows in every-day relation? Our religion finds its ultimate test not in what we assume to feel toward God and men, but in what we show ourselves to be in the daily round of our common life.—*The Standard.*

The adoption, in all their fulness, of the teachings of Jesus Christ would undoubtedly revolutionize society. But the attempt to make them the basis of the social order must inevitably fail until men are first revolutionized by spiritual regeneration. So long as the springs that feed the lake are foul, the lake itself cannot be pure.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Because of the great increase in the appropriations for rural delivery, post-office officials say that the idea of one-cent letter postage in the United States must be put aside for many years. According to figures which have just been prepared by Fourth Assistant Postmaster General Bristow, the rural free delivery in operation on June 30, 1905, will cost approximately \$20,000,000 a year. The department has also plans for the extension next year which will increase the cost \$6,000,000. The entire scheme of free rural delivery is to increase the system gradually each year until the entire country is covered. It is believed that such a complete service will cost at least \$40,000,000.

Twenty-five thousand gold pieces of the denomination of \$1, intended as souvenirs of the Lewis and Clarke Exposition, have been completed at the Philadelphia Mint. The Exposition Company expects to sell the coins to collectors and others at a premium of \$1 each. The new gold piece has a profile of Lewis on one side and of Clarke on the other. It is probably the first coin issued in this country having a portrait on both sides.

Chicago has now 680,692 persons under twenty-one years of age, as against 627,262 in 1902.

Foreign.

The custom of the Sen Nin Riki is one that has arisen in Japan during the present war. Ever since the war began, at all times of the day, and even night, small groups of women can be seen gathering in the streets; one or more of the women will have a piece of cotton cloth with 1,000 marked in dots or stamped upon it. "Sen" is the Japanese word for one thousand. "Nin" is the word for human being—either man or woman. "Riki" is, in the Japanese language, strength. In combination the words mean "the strength of 1,000 people."

Each one of these one thousand dots or marks in the cloth is to indicate the place where a stitch or knot is to be made by a woman, who, while making this knot, gives her best thought, wish, or prayer for the safety and protection of the soldier who will

wear this piece of cotton cloth as an "obi" or belt while fighting for his country. The prayers of one thousand women for one man are believed to protect him from all dangers and to give him strength to overcome and conquer the enemies of his beloved Japan.

Postmaster General Payne's suggestion that the time is at hand for a two-cent postage between the United States, Germany, and Great Britain, although the subject of favorable comment in the press, is not regarded at the Ministry of Posts at Berlin as feasible.

Mt. Vesuvius is again in activity. Flames, ashes, and stones are arising from it to a great height, and a wide stream of lava is issuing from the crater.

Toronto exceeds all Canadian post-offices in amount of business done, closely followed by Montreal and Quebec in the order named.

King Edward has approved the appointment of Earl Grey as Governor General of Canada, in succession to the Earl of Minto.

Industrial and Commercial.

A big ocean steamship will sail from Seattle, Wash., November 15, carrying a diminutive exposition which the merchants and merchant princes of the Orient are to be urged to visit while it lingers at their doors.

The exposition ship will visit Yokohama, Kobe, Nagasaki (Port Arthur and Vladivostok, war conditions permitting), Shanghai, Hong Kong, Manila, Singapore, Colombo, Mauritius, Delagoa Bay, Johannesburg and Pretoria, Cape Town, Adelaide, Melbourne, Sydney, Honolulu, and, on the return, Santiago, Valparaiso, and Callao, South America.

At each of these ports it will remain from two days to ten days, a total of about six months having been assigned for the voyage. American consuls in all of the cities will be informed in advance of the arrival of the floating exhibition, announcements will be made (in the newspapers of the ports) of the names of the firms represented on board the vessel, their lines of business, and the consuls will be requested to see that importing and exporting merchants in the interior and adjacent cities are fully advised. In short, every possible effort will be made to create a keen and general interest.

Four thousand women are now engaged in the telephone service of the German Empire, it is stated; one thousand of them being in Berlin. The hours are light, ranging from six to eight hours a day. The highest pay which a woman can draw in German telephone offices is \$357, which is said to afford a comfortable living in Germany, but it is a low wage compared to that to be obtained in England, where experienced telephone clerks get \$600, and the chief supervisors are paid as high as \$2,550. In Germany, however, it must be noted that women on their withdrawal from active labor after the prescribed number of years of faithful work, are awarded a Government pension on the same plane with the men.

Because of high prices, caused by American speculation, Spain is going to try to grow her own cotton supply under a government subsidy.

Present conditions have been discussed freely and widely in the Spanish press, and in order to avoid a repetition of recent occurrences, committees were appointed to study the question. It is known that in certain parts of Spain cotton thrives, and in view of this fact, the Council of State has passed and the King has approved decrees subsidizing the growing of this very important article.

A trial was recently made in Austria to decide in how short a space of time living trees could be converted into newspapers. At Elsenthal, at 7.35 in the morning, three trees were sawn down; at 9.30 the wood, having been stripped of bark, cut up, and converted into pulp, became paper, and passed from the factory to the press, whence the first printed and folded copy was issued

at ten o'clock. So that in 145 minutes the trees had become newspapers.

One of the most difficult and expensive problems that railway companies in tropical countries have to contend with is keeping down the rank growth of tropical foliage, weeds, etc., along the road bed. The weeds are kept down by frequent spraying from specially arranged tank cars with a solution composed largely of arsenic and nitre. But for this the rails would be so badly clogged in a few weeks that all traffic would be stopped.

The olive industry of Southern California shows a great yearly increase. There are now growing in the State more than 2,500,000 trees, whose yield is estimated to be four hundred thousand barrels of fifty gallons each of the pickled and dried fruit, or about six thousand car loads, and one million cases of oil of twelve bottles each, enough to make two thousand car loads.

What is declared to be the largest boom of cedar logs ever moved on Puget Sound was towed in Ballard, Wash., recently by the tug Tillicum, Captain Charles Worth. It contained thirty-eight sections of from sixty to one hundred cedar logs each, or the estimated equivalent of 1,330,000 feet.

Canada has imposed a duty of seven dollars per ton on steel rails and bars.

General.

A German traveler claims to have discovered in the forests of Borneo a people who still wear the tail of our primitive ancestors. He does not write from hearsay; he has seen the tail. It belonged to a child about six years old, sprung from the tribe of Poenans. As nobody could speak the Poenan tongue, the youngster could not be questioned, but there was his tail, sure enough, not very long, but flexible, hairless, and about the thickness of one's little finger. The Poenans are reported to be very simple, honest folk, with a child-like system of barter. They deposit in public places the goods they wish to exchange, and a few days later they find there the equivalents they desire. Nobody dreams of stealing.

A sum approximating \$50,000,000 is sent from the United States in small sums each year to assist those left behind in the Old World, or to enable them to emigrate. It has been predicted that the number of emigrants would soon decrease by reason of the exhaustion of the supply, but no such promise is warranted by the facts. Last year 230,622 Italians, 206,011 Austrians, and 136,093 Russians successfully passed the immigration barriers of the United States.

A few years ago the reading of the Bible and Protestant worship were both forbidden in the Philippine Islands. Now Methodists, Baptists, Presbyterians, Congregationalists, and Episcopalians have churches and missions in the island, and many thousand copies of the Scriptures are distributed.

Some of the lumbermen of Maine say that beaver are a great nuisance, flooding the timberlands by constructing dams in countless places, and they demand that the laws be amended so that the beaver shall have less protection than now.

A chimney three hundred feet high is to be built for the New York Steam Company. The chimney is Manhattan's second tallest chimney, that of the Manhattan trolley power house being 353 feet high.

Juliana De Kol, a short horn cow owned in California, at two and one-half years old, returned 92 pounds 7 ounces of butter in thirty days. In one hundred days she gave five times her own weight in milk.

The Sixth International Zoölogical Congress, in session at Berne, Switzerland, has accepted an invitation to hold the next Congress, in 1907, at Boston.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Trust in God.

M. B.

EXPERIENCE proves that self-reliance and self-distrust are the double-faced lie of belief which ever defrauds us. When I saw our Leader at Communion time my sense of her utter self-abnegation was clearer than ever before, and I thought, It is in absolute reliance upon God, in the daily, hourly walk with Him, that she has been able to do this work for humanity; and there is like work for every one of us to do. Her word to us last year, "Trust in God, and have no other trusts," and her added word this year, "Trust in God and 'He will direct thy paths'" (Dedication of the Church in Concord), these are the epitome of her teaching. Who of us unaided is equal to the demonstrations which in our individual experiences have proved the ever-presence of divine Love? It is by no desert of ours, not through human understanding, but by the grace of God, that these things have come to pass in our lives. And the greater things than these,—the work for all humanity,—will be shown to us when we finally learn to lean, not upon our own understanding, but to trust in God with all our hearts.

"Fear not" is the first word of the angel who announces the coming of spiritual life to human consciousness. Soon after I had heard of Christian Science there came the first experience which proved the providence of God, and showed me that fear is overcome by trust in Him. The steps in the demonstration are of great interest to me now, though at the time I did not see their significance.

I did not then understand Christian Science clearly, but in a time of great fear and confusion of thought over the first financial problems I had ever been called upon to solve, I turned to its wondrous promises, and was enabled to commit my cause to God. I did not know what step to take, where to turn, and there was no one ready to advise or guide me. The answer to my prayer dawned in a sense of peace. It was as if some strong friend had said to me that if to earn money was a duty, nothing could hinder me from doing it. If I were honestly willing that my lines should be laid in any places where duty should lead, there must be a place for me, a work for me to do. Then it came over me, with an indescribable sense of relief, that all the world's fear and worry over money matters is nothing but a fear of starvation and death! To look that thing squarely in the face took away all sense of confusion and trouble.

My experience at that time showed me that to recognize this lurking fear of death under all its forms, to face it squarely, realizing as an actual fact that death, at worst, cannot really harm us,—this is a step toward the scientific understanding of the unreality of death. The putting aside of fear is everywhere the first step to that quiet of mind which enables us to receive Truth. "Always begin your treatment by allaying the fear of patients" is our Leader's rule. (Science and Health, p. 411.)

All the unreasoning terrors of the business world fell away from me. I saw that God could not have sent us

forth to live without giving us the means whereby to live; that He could not have created a universe on a plan so illogical as to include demands for which there was no supply. I clung to the thought of eternal wisdom, justice, love, and power, and it did bring the good and true into my experience, as Science and Health promises. (p. 261.)

I went to a large city to begin the study of music. My only friend there was a business man, who discouraged the plan I laid before him. He said that it was absurd to think of finding work to do at my residence, as the city was full of educated women seeking such opportunities, and that it was even more absurd to think of beginning a musical career without money. I should be lucky to find a humble office position within six months. With so slight a knowledge of Science I do not now know how I was able to withstand these arguments; but I actually had no fear. I made various applications, and in two weeks three positions were offered me. Then by a seeming chance I went to one of the chief publishing houses, where after a brief talk, the editor handed me, though an utter stranger, the manuscript of an important book and asked me to revise the English. It fairly took my breath away, and I was almost afraid to try. After the work was done and handed in, I waited ten days with no word from the publishers. Faith is often tested. Then the author of the book appeared and engaged all the time I could give to assist him. The pay was twice what I had expected to receive, and it enabled me to meet the whole cost of music lessons and living. It proved to be so successful a book that a long series was demanded, and so I had for years well paid and interesting work to do at home, at my own convenience.

Human love could not have hoped to meet every detail of my need so perfectly. Trust in God, as my sole reliance, brought it to pass. And it was because I was driven to trust Him alone that faith was able to rise to demonstration. "Man's extremity is God's opportunity." I have never lost sight of that lesson, never ceased since then to know that in God is our abundant supply.

Another interesting experience of this kind came in connection with my work for the Building Fund of the Mother Church. I wanted to send a certain sum which seemed larger than my income would allow. I resolved to send all those sums of money that often come from sources outside one's regular work. This resolve was honest and right so far as it went, and divine Love met it half way. The next day a bit of newspaper work was suggested,—the first of the kind I had tried. To my surprise it was accepted and given a place as a special feature of the paper. After an interval, however, I saw that I must go higher. Divine Love demands progress. There is no reason why every Scientist should not stand for so much good work in the world that his regular income will meet all demands generously. God gives abundance of intelligence and of opportunity. I saw that selfishness, greed, and fear were suggesting that I look to extraordinary sources for this money, instead of assuming the obligation to the fund as a part of daily duty. I sent a check out of my regular income, and began to work in Science to realize progress in business

affairs. I had hitherto felt that I was earning all I was worth. Now I saw that this was limiting the gift of God,—denying, not self, but the power of Love. Since the church organization as a whole must go on and build a church which would be the visible sign of progress, Christian Scientists must find the same signs of progress in individual experience. I had long wished that my daily work might show more unity; that instead of working in literature, geography, etc., as well as teaching music, I could drop everything unrelated to music. I began to declare against the sense of limitation and to realize that nothing could hinder my progress in music and my efficient work for the building fund.

In a few days both these forward steps were taken, and I was working in musical lines only, with a greatly advanced income. The editor had learned, apparently by chance, that I was prepared in music. He gave me, in connection with a new series of music books of which I had not even heard, editorial work of more authority and interest than had come to me before, and which was also directly in line with my musical training. Again fear tried to tell me that the work was too difficult for me, but again the conviction came that God was leading me. I was enabled to meet the new responsibilities successfully, and the editor said that I could have had the work months earlier if he had known my qualifications. Thus it was clear that the forward step was already prepared. If I had more quickly begun to realize what the gifts of God are, the way to advance would have more quickly opened. At all times good is at hand, beside us in our daily walk, waiting till we recognize that our inheritance as the children of God is freedom, power, abundant joy, and good.

I know that in both these instances there had been some conquest over selfishness. The work was not done from the sense of personal desire for some special material good, but in the realization of the great fact of being, that there is nothing to hinder progress. God "expressed in man the infinite idea, forever developing itself, broadening, and rising higher and higher from a boundless basis" (Science and Health, p. 258). In the first demonstration related, I was honestly ready to see what God wanted me to do, and to do it; in the second it was the new responsibility, the great and wonderful privilege, of helping to build the new church, which prompted the effort for advancement.

Soon after this came another longed-for privilege,—that of singing in a Christian Science church service,—the joy and blessing of which was beyond words. And now there has been put into my hands work which takes me abroad for a year of musical study, an opportunity I have hardly thought of as possible to me, and every detail of the financial arrangement is made for me. These things I know are the gifts of God, together with the increased intelligence which enables me to do the higher tasks.

There have often been battles to fight with fear; often the way has seemed dark, and the enemy has said that I had made a mistake in the plan of my work; but step by step the path has grown brighter. The wonderful Providence that has guided my experience, even as a loving parent would plan and choose for a child,—this is ever-present Love.

Reviewing these events, I realize as never before how much is done for us by the mere fact of membership in this Church, built upon the Rock. We can never be grateful enough for the work of our Leader and her fellow-laborers. We have been helped, healed, held when in weakness, doubt, and fear, often by personal words of hope, but more often through the impersonal relationship to this great work for humanity, in which we are humbly glad to partake. With these demonstrations of harmony in our daily life comes the assurance that the larger work of bringing harmony to other lives will be ours just so fast as we prove our fitness. We are patient, then, to do the little things of every day, looking to God to bring to pass what human will

cannot achieve, and knowing that these lesser demonstrations prove the present efficacy of trust in God, the actuality of His ever-presence.

This I have written with a deep conviction that all I am or have of good to-day has come from God, and has been demonstrated in individual experience through the work that our Leader and her faithful followers in Christian Science have so long been doing in human consciousness.

The Wednesday Evening Meeting.

J. A. H.

WHILE Christian Scientists maintain, and rightly so, that the Master's command to heal the sick is just as binding now as it was when given, it is well to remember that his command to preach the gospel has lost none of its force, and is also just as binding upon his followers to-day as in the past. This command when given, however, had a widely different meaning from that generally attributed to it to-day. Regardless of how others may construe it, the definition accepted by Christian Scientists is, to make public announcement of the good news, or news about God, good. It is, therefore, incumbent upon us as obedient servants, not only to heal the sick but to make public announcement of the good news—news of what Christian Science has done and is doing for us and others.

We may not all have reached the understanding that enables us to heal the sick, but it is surely within the power of those of us who have been healed and reclaimed by Christian Science to testify to these facts. It is our duty as well as our privilege to do this; and in doing so, we are fulfilling our Lord's command to preach the gospel, in a most practical and effective way. Our Wednesday evening testimonial meetings offer abundant opportunity to those who are willing to obey the command, and there is no place where a recital of what Christian Science has done for us will accomplish more for our fellow-man than in those meetings. A large majority of those who are students of Christian Science to-day, at first became interested in the subject through the healing of their physical infirmities; and quite a number of those who come to our Wednesday evening meetings for the first time, come because of the need of physical healing and their desire to hear the testimonies of those who have been liberated from the bondage of sickness and sin through the operation of Christian Science.

For the help and encouragement, therefore, of those who are seeking the freedom which this gospel of Love brings to humanity, we should not allow fear nor any other form of error to prevent us from testifying at these meetings. If, in giving our testimonies, we are willing to forget self, and are prompted by love for God and our fellow-man, the result in each instance will be a blessing conferred, not only on others but also upon ourselves. Our Leader says, "A just acknowledgment of Truth, and what it has done for us, is an effectual help. If pride, superstition, or any error, prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student" (Science and Health, p. 372). Many of us refrain from testifying, for the reason that we are not fluent speakers, but we are not justified in remaining silent on this account. Persons who come to our meetings seeking proofs of the efficacy of Christian Science, come to hear facts, not speeches; and a simple statement of facts under any circumstance is far more convincing than the most eloquent speech.

The writer will always hold in grateful remembrance the occasion of his first attendance at a Wednesday evening meeting in a Christian Science church. For a number of years prior to that time he had been a hopeless sufferer from a number of severe bodily ailments from which *materia*

medica gave no relief. He went to the meeting, quite doubtful regarding the efficacy of Christian Science, but hoping, nevertheless, that there might be some truth in the claims made for it, and he was not disappointed. He there heard men and women testify to the fact that they had been healed, uplifted, and made happy through the study and practice of Christian Science, after all known material remedies had failed to help them. It is hardly necessary to add that the needed encouragement was received; and as a result of the simple, straightforward recitals of what Christian Science had done for the speakers, the writer became a student of Christian Science, and to-day enjoys not only perfect health but a degree of happiness and contentment that were previously unknown to him. If, however, instead of the testimonies given, the speakers had devoted their time to discourses on the beauties of their religion, what they or some other persons thought of Christian Science or believed regarding it; in telling of the healing of animals, the locating of lost property, etc., or in efforts to entertain or amuse those present, the writer would probably have left the meeting with a keen sense of disappointment and, perhaps, a firm resolve to have nothing more to do with Christian Science or those who believed in it.

As Christian Scientists, we know that Truth is not limited in its scope or operation, and that the healing of animals or the locating of lost property through its application is natural and therefore possible and proper. As a rule, however, a recital of these experiences is neither interesting nor encouraging to the individual who comes to our meetings seeking proofs of the power of divine Love, as revealed in Christian Science, to heal and save mankind; and in giving our testimonies, would it not be well to remember the admonition of the Master: "Be ye therefore wise as serpents, and harmless as doves"? When John, in a moment of doubt, sought proof regarding the divinity of Jesus' origin and mission, the Master sent him the proofs which he knew would be convincing: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised." Following his example, therefore, let us be ready and willing on every occasion to give the testimonies that cannot fail to convince honest truth-seekers that Christian Science does heal the sick and reform the sinner, and that it is both Christian and scientific.

A Bright Dawn.

EBBA V. KREBS.

It was my duty a few winters ago to get up very early in the morning to see my son off to work. After he had finished breakfast and had left, it was still dark, and quite a time before daylight. I then loved to go up in an eastern room for my morning meditation and to have the privilege of seeing the sunrise.

My home being situated almost at the top of a hill, the view from this room is grand; down over the city, built on the sloping hills, and with its many church-spires pointing heavenward; over the Delaware River, as it broadens out toward the bay, while beyond lies New Jersey, with its white, sandy coast, its villages half hidden in groves of trees, and then a magnificent sweep of the horizon from northeast to south. It sometimes seemed that I waited long for the coming of the light, but by-and-by there was the faint dawning at a point in the earth, and I knew that there the sun would rise.

I remember one morning especially. The city lay in darkness; the sky was clear but for some heavy black clouds low down toward the horizon. I waited long, but at last there was that faint dawn, and the dark clouds shifted from black to brown, then to deep purple, to violet, and in a little while to pink, the palest pink, and then, suddenly,

they were as molten gold; and the sun, like a brilliant star, shot, as it seemed, out of the very earth, and moved slowly and majestically up the sky, and it was morning, bright morning.

I likened that sunrise to my experiences in Christian Science. I was born in Denmark, in a Lutheran home, as the state church is Lutheran. I never had the slightest doubt that this church alone held the truth, yet I dared openly and in contradiction to orthodox opinion to believe that all humanity would at last be saved, all be Lutherans, for did I not read, "There shall be one fold, and one shepherd"?

In 1880 I came here to America. I went first to a Lutheran church, but it was not like my Danish one; it lacked the dignity of our old established church at home. I never went there again, but finding good, dear people in all denominations, I outgrew the conviction that all must become Lutherans to be saved. The different churches that I visited, however, did not appeal to me. I then took my seat in a church which was indeed different in every respect from that of my youth. I found I could stay there honestly, as no one ever asked me what I believed or why I was there. I spent many helpful hours in that church and among my friends there, but was at all times scanning the horizon, if possible to catch a glimpse of dawn, of the sunrise of Truth.

As I watched I saw the first faint light, but not in the direction I had looked; I saw it in Christian Science, and I held my gaze upon it, knowing that where the dawn was, there the sun would rise. I waited long, and at last I saw that it was obscured by the clouds that had hung so heavily for years over my heart; waiting on I saw these dark clouds change their hue, even from black to bright golden. I am still waiting to see the sun, Truth, rise to its zenith, as it must, and as the dawning has been so beautiful, what will be the full rising!

I give thanks to our faithful Leader, who has taught us to draw lessons of truth from everything on which our eyes may rest.

Success.

WM. ORDWAY PARTRIDGE.

If thou hast struck one blow for liberty,
Be it of slave or shackled intellect,
Thou hast not failed. If into some lone life
The light of holier days has come through thee,
Flooding the shadowed years with sympathy;
Or if some soul of mortal vision dim
Has, through thy love, been led to clearer things,
Thou hast not failed. If thou hast given a meaning
To flowers that yesterday were set aside,
And clothed them with the beauty of thy thought;
If to hard-handed labor thou hast made
Sweet the enduring rest the twilight hour,
Or shown the beauty of the field and sky
Unto the peasant, or across the wave
Unto some brother thou hast stretched a hand
Amid the oft-deceiving tides of life,
Thou hast not failed. Or if alone thy lot
To find thine own deep faults and feel the need,
The ever-present need of prayer, and faith
In men and things divine, thy life has been
Of more enduring worth than that of kings,
Princes, and prophets of the earth. The world,
Alas, is but the world. Hold it at naught,
And do not soil thy sandals with its dust,
Or leave them still without the temple gate!
Undaunted, yet with calm humility;
Thy sympathy still deepening with thy years—
And past the bourne of failure or success—
Enter in peace the kingdoms of thy soul.

Exchange.

Selected Articles.

The problem of human life and man's relation to his Creator has certainly been an enigma to thinking men in all ages, and it is generally conceded that what appears to be perfectly rational to one section of the community often seems quite incredible to another. In the knowledge of this fact the great Nazarene Healer said to his grateful beneficiaries, "Tell no man," and again he admonished his students not to cast their pearls before those who were unprepared to receive them. St. Paul, also, said, "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

The religious history of the world points to a constitutional resistance of the human race to spirituality, an element which is indispensable to health and happiness. Since the beginning of time, there has been opposition to both material and spiritual progress, and even in our day we have abundant illustrations of this tendency. Less than a century ago it was considered a thing incredible that iron could be made to float upon water, and an Englishman named Jonathan Hull, who attempted to build an iron steamboat, was considered a fit inmate for a lunatic asylum.

When we think of the tremendous revolutions which have taken place in industry, mechanics, and literature during the brief period of the Victorian era, are we not compelled to be at least hospitable toward the optimism of those who are successfully striving to advance the standard of Christian ethics and scientific religion? Why should not Christianity be capable of practical demonstration, and why should not science have a recognized relation to the Divine intelligence which launched the earth in its orbit, and maintains the order and motion of the vast Copernican system?

A correspondent says truly, "Christian Science is in its youth; but its adherents should remember that the youth always knows infinitely more than the man."

True, there are many beginners in Christian Science, most of whom are so intensely grateful for their emancipation from the bondage of disease that their first impulse is to proclaim the good tidings from the housetops. In due time, however, this youthful enthusiasm becomes tempered with more deliberate judgment, and they step down from the housetop and pursue the more practical method of letting their daily lives bear testimony to the hope which is in them.

Christian Science must eventually win its way by the good it is doing, and, although there is no reason to recede from the position taken by some of its younger adherents, it is nevertheless true that the wiser and more experienced exponents are inclined to labor and to wait, in the confident expectation that its great merits will some day be universally recognized.

RICHARD P. VERRALL.

New York Commercial Advertiser.

A critic objects to the practice of charging a moderate price for the time spent directly for others in the redemptive work of Christian Science, and says in support of this objection, "We have no record of the Divine teacher accepting the slightest remuneration for what he wrought or taught." Superficially this may appear true, but a careful study of the Scriptures will prove it untenable. At any rate, Jesus' recorded instructions must be taken as the standard from which he worked. When sending out the twelve to preach and heal they were told to take no money or extra clothing whatever on the journey. The explanation lies in the concluding significant sentence, "For the workman is worthy of his meat." We are also told that Judas was the treasurer of the company and carried the bag. Our critic should take into account the different modes of life prevailing at the time when Jesus preached and healed among the hills of Judæa, and in the twentieth

century. Life was then a very simple affair as compared with the complexities of our modern civilization.

Paul, who proved his apostleship by works second only to those of his Master, gives us clear and decisive instructions on this point in his first letter to the Corinthians, where he says, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things? . . . Even so hath the Lord ordained that they which preach the gospel should live of the gospel." And here let me say that the Christian Scientist's ministry is the work of the gospel, the legitimate results of the "prayer of faith," the "effectual prayer" mentioned by James and the other New Testament writers. It may be true that many of those now engaged in religious labors suffer from the claims of poverty, but in the light of reason and the promises of Scripture should this be so? Jesus says, "Verily I say unto you, There is no man that hath left house, or parents, or brethren, or wife, or children, for the kingdom of God's sake, who shall not receive manifold more in this present time, and in the world to come life everlasting." The custom of Christian Scientists in this regard is the result of their interpretation of Scripture. It places their churches and members upon a sound basis of equity, at the same time working hardships upon none. Christian Scientists have a religion which gives "value received,"—pressed down and running over. The law of right insists that they do not "take something for nothing" or encourage others in this questionable and selfish fashion, which dwarfs the better nature and even leads to downright dishonesty. It is but just, however, to state that very much gratuitous work is done for those who cannot or do not recompense them. The maximum charge of a Christian Scientist is small indeed compared with the charge of physicians, and is always lessened according to the needs of the patient. The writer has yet to know of one instance where help has been denied because of the patient's inability to pay.

E. T. GEORGESON.

The Californian.

The revelation of every torch-bearer of Truth has been opposed, but the light never went out during the long, lingering centuries. To-day, the names of Isaiah, St. Paul, Luther, Wesley, and Calvin are far above the breath of persecution, because the truths they bore aloft were too resplendent to die out in the darkness. The living, loving revelation of Jesus Christ, as caught up along the flashing hilltops of human history, is a deathless light, a kindling, saving power. The world is infinitely better for such Divine revelations. Mrs. Eddy has discovered the healing, helping methods employed by Jesus. The system she has formulated is simply applied Christianity, nothing more, nothing less. The proof of the Divine origin of Christianity is the demonstration, in Christian Science, of the healing of the sick and sinful, and such a system is mountain-high above misrepresentation, criticism, or persecution.

EDWARD C. BUTLER.

Mexican Herald.

Christian Science healing comes only through a realizing sense of God's divine love and power, and he who is healed through this Science must be morally and spiritually regenerated. To become a Christian Scientist is to obey Jesus' injunction to love God with all your mind, might, and strength, and to love your neighbor as yourself.

A. WILLIS PAINE.

Los Angeles (Cal.) Herald.

Christian Science stands at all times for the highest and purest in religious teaching. It has proven its right to be regarded as worthy of the highest consideration by healing the sick and reclaiming the sinner in thousands of instances.

ALBERT E. MILLER.

The (Pa.) Scrantonian.

Among the Churches.

The Sunday School children of First Church of Christ, Scientist, of Winchester, Ky., have contributed twenty-seven dollars, as a love offering to the Building Fund of the Mother Church.

Santa Ana and Orange, Cal.

The lecture delivered by Mr. E. A. Kimball in April last marked the beginning of a new era in the Christian Science work in this field. "If ye be willing and obedient, ye shall eat the good of the land," surely this was proven on Communion Sunday when thirteen names were added to the church roll. We are looking for yet grander results because of the strong sense of unity and brother love in this field.

The collection on Communion Sunday was devoted to the Mother Church Building Fund and made our present contribution the largest we have sent in. The Sunday services are held in Santa Ana at 11 A.M., and in Orange at 3.30 P.M.—MRS. EUGENIA A. COUTTS, *Clerk*.

Key West, Fla.

We are glad to report that on July 8 our application for a charter as "First Church of Christ, Scientist," was duly granted under the state laws of Florida. Our first service as a church organization was held on July 10, Communion Sunday, and the presence of divine Love was manifested; none present will ever forget this first Communion as a church. Our hearts go out in grateful acknowledgment to our Leader, who has taught us through her life and works, how to love and how to avail ourselves of divine Love which supplies every want. Except during July and August, when only morning service is held, we have Sunday services morning and evening.

T. S. KINSEY, *Clerk*.

Dillon, Mont.

A little more than two years ago a company of three Christian Scientists began meetings at this place. The number has steadily grown, so that we now have two large rooms which are nicely furnished and which serve as reading rooms and for services; the doors are thrown open and we have a hall that is always well filled by those who are seeking the truth.

The first service held in these new quarters was on Easter Sunday, and it was an occasion of much rejoicing.

The Sunday School which was instituted at that time is also growing.

Divine Love has met our every need.—*Correspondence*.

Syracuse, N. Y.

The formal opening of the new auditorium, reading, and Sunday School rooms of First Church of Christ, Scientist, in East Fayette Street, was celebrated yesterday morning [August 14]. Besides the society membership, many friends were present, and the auditorium was entirely filled.

The entire services held the close attention of every person present. Preceding the regular service, Mr. Ohrenstein, the First Reader, read a brief history of the church and its work in Syracuse since its organization in 1889, when the membership numbered twelve. When the present property was purchased in 1898, the membership had increased to fifty, and the steady increase in the congregation since made it necessary to erect the present auditorium. In his address Mr. Ohrenstein gave some attractive historical data relative to the movement and the work of its Leader, Rev. Mary Baker G. Eddy.

The organ was presented by two persons, whose names are not made public, as a testimonial of their being healed. It was used for a short time in Christian Science Hall, Con-

cord, and was purchased by the donors at the time the hall was torn down to make room for the Concord church.

Syracuse Post-Standard.

Following, are excerpts from the First Reader's address:

The Christian Science movement is educational, and it teaches men the purpose of their existence; namely, to make the God of all, who is the only good of all, manifest in their lives; to displace carnal mindedness, which produces sin, sickness, suffering, want, woe, and their resultant—death—with the Mind which was also in Christ Jesus, or spiritual mindedness, the result of which is virtue, health, happiness, and eternal life.

It must be self-evident that such education is eliminative of all that does not manifest God; consequently, its very first result is and must be the healing of all manner of sickness, out of which humanity is indeed most willing to be educated. This is what Jesus Christ did; this is what Christian Science must do.

In the Churches of Christ, Scientist, people learn to know Truth, and this heals them. It does more than this, it enables them to free others from bondage, to bring them "into the glorious liberty of the children of God." These services are therefore indeed divine services, and the Christian Science church what it is defined to be by its Founder, Mrs. Eddy; namely, "that institution which affords proof of its utility, and is found elevating the race, rousing the dormant understanding from material beliefs, to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick" (p. 583).

Christian Science Board of Lectureship.

The appointments for the year beginning June 13, 1904, are,—

Miss Mary Brookins, C.S.B., 925 N. Y. Life Building, Minneapolis, Minn.

Hon. Clarence A. Buskirk, C.S., 221 Monroe Street, Princeton, Ind.

Judge William G. Ewing, C.S., 2932 Indiana Avenue, Chicago, Ill.

F. J. Fluno, M.D., C.S.D., 1368 Franklin Street, Oakland, Cal.

Edward H. Hammond, C.S.D., 1901 Linden Avenue, Baltimore, Md.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

Edward A. Kimball, C.S.D., Post Office Box 518, Chicago, Ill.

Bliss Knapp, C.S., 4 Batavia Street, Boston, Mass.

Frank H. Leonard, C.S.B., 309 Temple Bar Building, Brooklyn, N. Y.

John F. Linscott, C.S.D., 321 Bond Building, Washington, D. C.

William D. McCrackan, C.S.B., 45 West 32nd Street, New York, N. Y.

A By-law of the Mother Church provides that each church "shall call on the Board of Lectureship annually for one or more lectures." No districts are assigned, and any church may invite any lecturer. Applications should in all cases be addressed to the lecturer whose services are desired.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Unselfish Loyalty.

THE action of the church at Colorado Springs, disclosed in the following letter to Mr. Chase, will appeal to every Christian Scientist as a truly unselfish manifestation of love and loyalty to The Mother Church and to our Leader.

Mrs. Eddy's reply expresses her appreciation of the Christian spirit shown by the members of this branch church, and it will have an important place in their history.

Colorado Springs, Col., August 18, 1904.
Mr. Stephen A. Chase, Treasurer,
Box 56, Fall River, Mass.

Dear Sir and Brother:—Enclosed please find four drafts aggregating \$1,650, being a further contribution towards The Mother Church Building Fund. This makes the total to date from First Church of Christ, Scientist, Colorado Springs, Col., \$4,000.

On July 6 last our building committee was in session. It had met to pass finally upon the plans selected for our local church, and which were to be submitted at our business meeting of July 7.

The *Sentinel* of July 2 had just been received. The condition of The Mother Church Building Fund as therein set forth was earnestly considered, and it did not seem right that we should build under such conditions,—conditions that were a complete surprise to us.

The result was a joint meeting with our Board of Directors and Trustees, when it was decided to submit the selected plan, blue prints, and report on our proposed building, then read the article in the *Sentinel* of July 2 already referred to, and leave the whole matter to the church.

This was done, with the result, that the members unanimously postponed our building, discharged the building committee, released all pledges to our fund, and earnestly advised that the sums so released be turned into The Mother Church Building Fund.

While under consideration many beautiful expressions of gratitude and loyalty to our dear Leader were voiced, and not one dissentient or disappointed word uttered or, we believe, thought.

As a church and individually, we are truly grateful for this opportunity,—we deem it a privilege of which we joyfully avail ourselves,—and we do want to be a branch bearing fruit meet for our Leader's approval and our true growth.

I am yours in Truth,

WILLIAM LLOYD, Treasurer.
First Church of Christ, Scientist, Colorado Springs, Col.

MRS. EDDY'S REPLY.

First Church of Christ, Scientist,
Colorado Springs, Col.

Beloved Brethren:—It is conceded, that our shadows follow us in the sunlight wherever we go,—but I ask for more, even this: That this dear church shall be pursued by her substance, the immortal fruition of her unselfed love, and that her charity, which "Seeketh not her own but another's good," shall reap richly the reward of goodness.

Those words of our holy Wayshower, vibrant through time and eternity with acknowledgment of exemplary giving;—no doubt, fill the memory and swell the hearts of the members of The Mother Church, because of that gift you so sacredly bestowed towards its Church Building Fund. Those applicable words: "Verily I say unto you, Whosoever this gospel shall be preached throughout the whole world, this also that she hath done shall be spoken of for a memorial of her" (St. Mark, 14 : 9).

Gratefully yours in Christ,

MARY B. G. EDDY.

Concord, N. H., September 1, 1904.

A Sign of the Times.

WE have been favored with a newspaper clipping which tells of a movement in England to form an association "within the Established Church to revive the teaching and practice of the early centuries concerning Divine healing." This clipping says that "a number of meetings have recently been held, and, as a result, a number of clergymen of all schools of thought, including Evangelists, like the Rector of Brompton and the Vicar of Potter's Bar, and those more closely connected with the High Church Party, such as the Revs. Percy Dearmer and Conrad Noel, have become sympathetic helpers." Mr. Noel, in an interview with the representative of the *London Daily News*, said that at present there is only an informal association of clergymen and doctors interested in the question, but that a guild is being formed. When asked, "Will there be any restriction as to membership?" he replied, "Yes, it will be for members of the Church of England, although we shall heartily welcome all Christians to our meetings." When asked to state the objects which this proposed association has in view, Mr. Noel answered, "We have two principal objects: First, to study sympathetically and critically the movements of mental and spiritual healing, and to examine alleged cases; and, secondly, to develop and extend the knowledge of Scripture and church tradition on the subject."

All this is very interesting because it points to a recognition in some measure of the all-embracing character of Jesus' teachings, and discloses a demand within the older denominations for the fulfilment of his entire gospel, but to those who can "discern the signs of the times," it has further interest, and this question presents itself: Would this effort to "revive the teaching and practice of the early centuries concerning Divine healing" have been made if Mrs. Eddy had not written and published *Science and Health*? We do not mean that this movement has anything to do with Christian Science: in fact, those having it in charge expressly disavow any intention of following Mrs. Eddy's teachings, but we do claim that the recognition of this need for healing within the church is but one of the manifestations which have followed our Leader's discovery. Whether this be recognized at the present time or not, the fact that Mrs. Eddy has discovered the Principle of true Christian healing must, in accordance with the law of divine justice, be seen and acknowledged by all, sooner or later.

M.

"Not by Might nor by Power."

THE subtlest temptations often seem reserved for those who entertain the noblest ideals and who strive the most faithfully and disinterestedly for their attainment. For the defeat of such worthies, error must align itself closely with a recognized truth, and thus present an appeal so seductive as to deceive the very elect.

The denial of the reality of the material world is a necessary sequence of the assertion of the allness of Spirit: it is therefore a fundamental requirement of spiritual apprehension, and yet one may lose his hold on well-nigh every

comfort and benefaction of faith, be cast into the very pit of discouragement and despair, and thus become a trial to himself and to all about him, by undertaking to realize a mistaken sense of the meaning of this denial.

Roused to the perception of the evil of materiality, one is naturally led to think that it should be promptly disposed of, and not having learned the scientific way of effecting this end, he may declare a war of his own for the extermination of the external world, including human personality, etc. Very heroically, perhaps, and with the most laudable purpose, he may undertake to free himself from his present material concepts, not by their transformation through progressive awakenings to the spiritual realities they counterfeit, but simply by throwing them over the fence. That such an effort to annihilate the bulk of human sense at a stroke, should be followed by disappointment and distrust of self, if not of Science, is inevitable. Error is not done away with by the hammering process, and for the reason that in such a procedure we are practically asserting the reality of the things at which we strike. A lie always maintains its claim and influence until the displacing truth is apprehended, and hence our false concepts can be parted with only as we become conscious of the right idea. Error is to be overcome *in the order* of Truth's unfoldment, not otherwise, and the effort to get rid of its wearisome, pain-inflicting phantasms in any other way than through the spiritual understanding of their unreality, will but add to the historic proofs of the unprofitableness of the ascetic idea.

The gentle and progressive emergence of that right consciousness which banishes material sense with its attendant ills, and which opens the door to freedom and to peace, is frequently emphasized by our Leader. In *Science and Health*, pp. 485, 552, 260, she says, "Emerge gently from matter into Spirit. Think not to thwart the spiritual ultimate of all things: but come naturally into Spirit, through better health and morals, and as the result of spiritual growth." "Mortals must emerge from this notion of material life as all-in-all. They must peck their shells open with Christian Science, and look upward." "Through many generations mortal beliefs will be attaining diviner conceptions, and the immortal and perfect model of God's creation will be seen as the only conception of being."

This thought is in entire harmony with St. Paul's philosophic counsel to the Ephesians, that they put off the old man, which is corrupt, and be renewed in the spirit of their mind, thus putting on the new man "which after God is created in righteousness." If God is the only Creator and His work is done, then things *are*, and the leading question has to do, not with the fact of being, but with the nature of being. Christian Science teaches that the world of God's creating is the immediate and continuous manifestation of omnipotent Spirit, and therefore perfect and harmonious. This is ours *to know*, as a necessity of logical thought; it is ours *to declare* as the truth which is to be demonstrated, and ours *to realize* as the transformation of consciousness proceeds.

Love would not take from us our flowers, or our friendships, nor any other human concept that is wholesome and for the present, helpful; our ideals are simply to be uplifted, day by day, so that present imperfect possessions shall become, ever more noble, more beautiful, and more true, because more spiritual, until we are at last "complete in Him." Resistance to this unfoldment of Love, alone brings catastrophe and the sense of loss.

Jesus did not say that the lily is a falsity whose appealing beauty and fragrance is to be ignored, he said, "Consider the lilies;" and this attitude of truth-seeking thoughtfulness respecting our human concepts of being, leads, in the light of Divine Science, to their continuous removal, as a veil which has been hiding from us the perfect and eternal creations of Spirit. Our every-day life is thus quickened and exalted, for we soon learn through experience, as we have already learned through revelation, that we are ever

in the presence of the glorious and unlimited possibilities of spiritual discovery. W.

The Value of Words.

WE may well question ourselves as to the importance and value of our daily and hourly utterances. What do our words accomplish, either for ourselves or others? Jesus once said, "By thy words thou shalt be justified, and by thy words thou shalt be condemned." A man's character, his culture, his social standing, his habits of thinking may all be gauged by his words, and they are so gauged by thoughtful people.

The fact that this is generally recognized has led some to use language beyond their means, so to speak, but mere fluency or floweriness of expression can never conceal poverty of thought or shallowness of character. While this is true, none need excuse themselves for speaking badly, since language is but one of the outward forms of thought, and if words express sincerity, simplicity, and purity they can never fail to accomplish some good. Solomon's tribute to the ideal woman: "She openeth her mouth with wisdom; and in her tongue is the law of kindness," should be applicable to all Christian Scientists, for they know that the "law of kindness"—the law of love—gives the true explanation of all words of wisdom.

One of the first lessons in Christian Science is that we must not voice error, and also that we must utter the truth with understanding and conviction in order to overcome error, whether sin, sickness, or any other form of inharmony. Christ illustrated this when he said, "The words that I speak unto you, they are spirit and they are life," and his followers should know, even as he did, the power of Truth's power declared.

At our experience meetings we all have an opportunity to testify to what we actually know of the availability of divine power for human need, as it has been revealed to us in Christian Science, and on these occasions we become, as Paul said, "A spectacle unto the world, and to angels, and to men." If, however, we rightly estimate our debt to divine Love, our words will find their way to the hearts of our fellow-men, and they will take knowledge of us, that, like the eloquent apostles, we, too, have "been with Jesus." In giving these testimonies we are really writing on the world's consciousness fresh pages of "the everlasting gospel," the gospel which, according to human opinion, closed with the days of apostolic healing, but which is again going out through our periodicals and our Wednesday meetings, laden with the truth, telling of the enlarged and ever-extending application of the Christ-cure.

When speaking, we should never forget the importance of clearness and brevity and that direct personal testimony is always the most impressive, however simply it may be given; the telling of another's experience is at best but indirect evidence. It is also well to consider that while we may have many minor proofs of the presence of divine Love which are precious to us, including the healing of animals, and even our children's little demonstrations, so dear to the parental thought, it does not follow that these appeal strongly to visitors, and if given in detail they may be tedious even to our brethren, especially if several are given at any one meeting.

If we are really carrying into our daily living the refining and uplifting influence of Christian Science, which finds such fitting expression in our Leader's forceful, eloquent, and original writings, we shall always have something to say, and we shall never be hindered, either by poverty of ideas or of words, when the opportunity is given us. Like the Psalmist we shall call upon the mountains and the great deeps: upon the sun, moon, and stars; upon fire, hail, and stormy winds, to aid us in proclaiming "the high praises of God," who has again sent forth His healing word. K.

Letters to our Leader.

Highland Park, Tenn., September 2, 1904.

Dear Mrs. Eddy:—You have written a book that will go down the centuries until the latest files of time; inspiring unborn millions to love and adore, not a mortal, but that immortal Principle, from which, and to which our aspirations tend, as the flame that struggles ever upward. I know I am not worthy to take one moment of your time, but I feel that you will understand "the love that overflows to-day." May God bless you for helping me up into the light.

Sincerely your student's student,

JAMES ERWIN.

Oneonta, N. Y., August 21, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—Five cases of instantaneous healing within two weeks, recently,—one of organic trouble of long-standing,—and the liberation of many from the bondage of sickness and sin, during the past three years, cause my thought to go out to God, and to you, in deepest gratitude and love. You have patiently borne criticism and censure, and it is surely right for your followers to express to you their appreciation. Single sentences in your address to the Concord church contain enough inspiration for a life work.

God bless you, is my daily prayer.

Lovingly yours,

FRANKLIN BLAKE.

Boston, September 4, 1904.

Mrs. M. B. G. Eddy,

Pleasant View, Concord, N. H.

My Dear Mrs. Eddy:—Little did I think as I first looked into that blessed book, "Science and Health with Key to the Scriptures," about seven years ago, that I would write you to try to express some of the love and gratitude that fills my heart for all the countless blessings I have received through you, its author. At that time I was without God, and had no hope of anything beyond the pleasures of this world. I had no use for the Bible or religion, I was a constant user of profane language, of liquor, and of tobacco, both smoking and chewing, and had been for over twenty-five years. After reading Science and Health for some few weeks, in conversation with a Scientist one day, without direct treatment, and without any effort on my part, these habits, with all desire for the same, left me and have never returned. Only those who are, or who have been subject to these habits, can understand what it means to be free from them. To understand and know God, here and now,—God who is Love, all powerful, ever-present, the only cause, the infinite source of good, and good only,—fills my heart too full for utterance. To be free from the false belief in more than one God, more than one power, gives me such joy as the world can neither give nor take away; and to be able to prove these truths by demonstration over sin and sickness is to know where the kingdom of heaven is.

To say that I thank you for all these blessings which have come into my life through Christian Science, is but a poor return, and it is my earnest prayer that by my life I may be able to prove in a small way, something of the gratitude and love which my heart holds for you.

Yours sincerely,

ALFRED MOORE.

Milwaukee, Wis., August 19, 1904.

Rev. Mary B. G. Eddy, Concord, N. H.

Dearly Beloved Leader:—Having demonstrated that "a just acknowledgment of Truth, and what it has done for us, is an effectual help" (Science and Health, p. 372), impels me to write these lines in the hope that it may prove to be a cup of cold water to some one athirst as I was before this glorious truth was brought to my attention.

Two years ago I spent one hundred and twenty-five dollars and a month's time to take the Keeley cure for drunkenness, but it did not cure me, so three months later I took the second cure of a similar kind and at the same expense, which also failed to cure me.

Shortly after I was afflicted with blood poisoning, which left me with two stiff fingers, and the doctor's opinion was that I would be unfit for work for the next six months.

Then, thanks to God, to Jesus Christ, and to Mrs. Eddy, Christian Science was brought to my attention. By attending services regularly and using the little understanding thereby obtained, I went to work in six weeks instead of six months, and my fingers are not stiff any more.

After this demonstration of the efficacy of this glorious truth I took treatments from a practitioner for the false appetites for liquor and tobacco of over twenty years' standing, with the result that the desire has entirely left me, and in its place is a desire to know more of Truth. Words cannot describe my gratitude for being freed from these false appetites, which almost drove me to suicide and were the cause of much suffering to my dear wife and children, all of whom have accepted this beautiful truth and have received innumerable blessings.

Since hearing of Christian Science we have not spent a cent for drugs or doctors, where before we spent more for drugs and doctors than for victuals. Among the innumerable benefits received I beg leave to mention the following:

Teeth extracted without pain; bowel trouble entirely relieved within a few minutes after practitioner was notified by telephone (when former attacks had necessitated two or more days in bed besides several doctor's visits and prescriptions), rheumatism, neuralgia, gout, bronchitis, fevers, all overcome by this omnipotent truth. Anger and doubt have been overcome, besides fear. My earnings are more than doubled; there is no more profanity; I have health, happiness, harmony, and better morals; a brother who was weak-minded and a paralytic was taken out of a charitable institution, cured in Christian Science, and will soon be earning his own living and that of his family, from whom he has been parted over three years.

I can say, in the words of the 103d Psalm, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies; who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's."

May I learn to wash the feet of him who first showed us the way to this truth, and may my striving be rewarded by learning better day by day how to walk the way our Saviour trod. Hoping that this feeble effort of mine may receive some recognition, and knowing you will forgive me for my verbosity, I beg to remain, gratefully and lovingly,

Your humble follower,

JOHN STANZ.

The General Association of Teachers.

The second annual meeting of this Association will be held at Chicago, October 24 and 25, 1904.

Notice.

The Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the Clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

Testimonies of Healing.

In view of the bitter experience and long-continued suffering through which I was led to Christian Science, the following statement from Science and Health has special meaning in my case:—

"It is essential to understand, instead of believe, what relates most nearly to the happiness of being. To seek Truth through belief in a human doctrine is not to understand the infinite" (Science and Health, p. 285).

It was the understanding of Christian Science that gave me back my life and my health, after physicians had said I never could be well again. I had suffered for years with a disease that medical authorities call incurable. I went from one physician to another seeking relief from pain that seemed unendurable, but instead of finding relief, I grew gradually worse until I felt that only a few more days were possible to me on earth. In addition to my other physical troubles, my stomach had become a wreck. To kill pain, I resorted to the use of cocaine, and in the few years that I used it the habit grew upon me to such an extent that I could not get enough to satisfy my longings. At the time I came to Christian Science, I was taking from forty to sixty grains a day. I finally became a complete wreck, mentally and physically. For several weeks I had scarcely slept at all and labored under the impression that something terrible was going to happen. I finally began to see bright spots in the sky, and when the final breakdown came, I began to see faces around me. I knew then that I was mentally ruined and that the end had come. A few days before this, Christian Science had been suggested to me by a friend. I rejected it with derision, saying I guessed I was not crazy yet. My only knowledge of Christian Scientists was what I had read against them in the newspapers, and I felt very much as the Jews did toward Jesus. I felt that death was too good for them, and that they ought to have some horrible punishment put upon them. On this night of my final breakdown, I grew as cold as ice. My family in their efforts to do something for me before the doctor, who lived three miles away, arrived, gave me coffee and whiskey. They poured the whiskey in me and on me and rubbed me with it. For the first time in my life I was drunk on whiskey; this, with the cocaine I had taken, produced a wild delirium, then mortal mind resistance was broken down and I decided to turn to Christian Science.

After the first treatment, I never touched cocaine again. My desire and use for it were gone. My sleep became natural, and in three days' time the unendurable pain for which I had vainly sought relief from one doctor after another, disappeared. My stomach must have been healed in the first treatment, for I could scarcely get enough to satisfy my hunger and ate whatever was set before me, without any bad effects, and that is the kind of stomach I have had ever since. As I continued under treatment, I became a stout, healthy man, able to go where I pleased without suffering; having had my body remodeled after the right understanding, in place of a belief in man-made theories of what constitutes health. I know now that with the understanding of Christian Science I never would have had to endure those long years of suffering and never would have broken down. Christian Science also healed me of malignant southern fever within a week after the family physician, who was called in by the family and whose help I refused, said it would continue for two or three weeks longer. My mother was healed of periodical sick headache of more than twenty years' duration, and after all medical skill had failed to give relief. For years the flow of saliva had been so great from her mouth that she was obliged to take cloths to bed at night. A few treatments in Christian Science healed her. I have seen a case of cancer healed through Christian Science. The cancer was so close to the eye that physicians told the gentleman it would be impossible to remove it with

surgery or medicine, as anything that would remove the cancer would destroy his eye.

In turning to Christian Science, I have never yet had my hopes turned to ashes. With this understanding, I am striving to work out my spiritual salvation. I am striving to reflect upon my household the power and presence of Love. I am working to know God as the source of all supply. Christian Science has taught me to love my neighbor as myself, and never to see evil as personal. It is my guide, my comforter, and I thank our heavenly Father that there was one good enough to receive this message of Truth and present it to mankind in this age.

W. F. SMITH, Tonganoxie, Kan.

I have been interested in Christian Science for about five years and it has been a wonderful help to me both physically and spiritually. I often wonder how I ever lived in the old thought, and as I look back I realize that it was just existing, and that was all.

When I turned to Christian Science I had been sick most of the time for two years, not confined to my bed, but miserable, and I had worn glasses for several years. I left my glasses off upon going to learn of the teachings of Christian Science and have never worn them since, having been completely healed of that trouble. The teachings of Christian Science were all very new to me, but from the first I was convinced that it was the truth, and I began to drink in every word, for I was hungering and thirsting for something, I knew not what, but since then it has grown very plain to me. I devoted all the time I could possibly take from my business to the reading of Science and Health, and through the earnest efforts of the practitioner I was healed of my worst ailments in two weeks' treatment, and was so lifted up and out of the old thought that I was free as a bird.

I had tried some of the best physicians and taken a great many kinds of medicine, until nothing seemed to help me but for a short time. I had always prayed from a little child, and would ask God each night for health, and for light that I might lead a purer, better life and do some good in the world, and I feel that I was led into Christian Science through my earnest desire to know God, good, and it has been such a blessing to me. Never before did I find the rest and peace that I have found in this truth, which frees from pain and suffering as well.

I have had many seeming struggles, but by clinging to God and the true spiritual idea of man, the way grows bright. I am very grateful to our Leader for Science and Health and for her earnest efforts to help us to understand Truth, and also for the privilege of having class instruction.—MRS. EMMA RUSSELL SCOTT, Charleston, Ill.

Six years ago last month I was healed instantly after suffering for five years. This occurred one Saturday, and on Sunday I attended Second Church of Christ, Scientist, and for three years thereafter never missed a single service. The next day after I was healed I borrowed a copy of Science and Health and studied it every night, giving myself very little time for sleep, as I worked at my trade in the daytime. After three weeks of diligent study I had demonstrations in my own family over membranous croup, pneumonia, fever, and many other ills. Since then I have seen the power of Truth demonstrated over many so-called incurable diseases.

I am a student of Science and Health and am grateful to God and to Mrs. Eddy for removing the mist from before my eyes so that I can see God as Love and man as His idea, governed by Principle instead of personality. The good I obtain from our periodicals is more than I can express.—S. I. VAN DERSLICE, St. Joseph, Mo.

Like many others, I first came to Christian Science for physical healing, and it was the last resort. Several years before, my right wrist gave out and I was told it was from excessive piano practice. I gave up the piano practice but my wrist did not improve, on the contrary, it gradually grew worse and extended over the entire right arm and right side, and finally to my head. My right arm became almost useless, and at times it was difficult to work. I was forced to learn to write with my left hand, and even learned to use the baton with my left hand. In my work as a teacher of singing, my piano playing was confined almost entirely to my left hand. All this time I had the best medical aid obtainable, but continued to grow worse until I broke down completely and gave up teaching. After a rest of some months, without improvement, I was urged to try Christian Science.

I went to it in an antagonistic state of mind. My early religious teaching was of a strenuous variety which left the impression on my mind that in order to be religious one must be miserable. I was raised on the doctrine of total depravity, and listening to a recital of the awful judgments of God was almost a daily incident. I was taught that I was the chief of sinners and that God was eternally angry at the sinner and likely to strike him dead at any time. I grew up with an awful sense of fear which never left me. My mind rebelled against such a God, and I hated him and everything religious. This, I was told, was the devil tempting me. In this state of mind I joined an orthodox church, hoping for relief, but it never came. Then I began searching for the truth and read everything, from works on esoteric Buddhism to that of a pronounced pessimist, and it was with my mind filled with rubbish of that sort that I went for Christian Science treatment. I combated everything until the good woman who was treating me told me if I expected to derive any benefit from Christian Science I must give up that attitude. I did so and began to improve. The doctors had prescribed a diet of dry toast and hot water, but the Scientist told me that had nothing whatever to do with the healing, and to eat whatever I wanted. I have been doing so ever since.

I began teaching again and have not had to stop a day since. My strength has been unlimited. My healing was not instantaneous,—it was at least a year before I felt entirely well. Since that time I have never felt the necessity of favoring myself in any way for fear my arm would fail. It was absolutely restored, and along with the physical healing came the knowledge of God as ever-present good, and a sense of love, the meaning of which I never knew before. It has changed my conception of God from that of infinite wrath to infinite Love. Christian Science heals not only the body but the mind, and destroys all discord. For the wonderful truth which has reappeared to this generation I am indeed grateful to God, and to His Revelator.

D. A. CLIPPINGER, Chicago, Ill.

It was over six years ago, that I found myself, after some weeks of untold suffering, at death's door with "organic tumor." Medical aid failed to give relief, and an operation was said to be the only way of escape, with small hope of success. I, however, refused to submit to it, and "cried unto God in my trouble and he heard me," and sent a good lady to me who offered me Christian Science, which I gladly accepted, although I had hardly ever heard of it. I began treatment at once and was so much benefited by the first treatment that the intense fear was almost wholly removed. In a few days I was so changed that I hardly recognized myself. I began reading the "little book," Science and Health, the first day, and I hardly left it until I had devoured its contents. I was so hungry for what I found therein. As the thought was changed the body responded until I was healed so sweetly and surely that I knew there could never be a return of the old trouble. Only

those who have had a similar experience can know what it means; the peace, joy, and sweetness cannot be told.

I want to express my deep gratitude for the way shown us by our Leader, for all the words she has given in Science and Health and her other writings. I am also grateful to the dear one who so patiently and wisely led me out of bondage and into freedom.

Mrs. M. E. CARR, Logansport, Ind.

I was healed some nine years ago of severe nervous prostration and insomnia. As I look back to the marvelous spiritual uplifting that came to me then, and remember how I had to go back to the foot of the mountain and begin the ascent, step by step, my progress since seems very slow. We have had many wonderful proofs of the power of Truth over error in our family, some of which I would like to mention. My little girl was taken violently ill, with what turned out to be scarlet fever, and finding I could not meet the conditions myself, I sent for my teacher. In the mean time the second child was stricken down with the same symptoms. My husband (who is not with me in the Science yet) went to business with a heavy heart that morning, expecting to find a small hospital on his return. I shall never forget his look of surprise and relief that evening. The home seemed filled with harmony and peace. In place of fear and dread, there was hope and assurance. The eldest child was sitting up eating supper, and the second one showed no sign of any disturbance; in fact, the trouble was met so quickly that the manifestation never appeared at all on the body of the second child. The baby was healed almost immediately. About an hour after the first alarming symptoms had shown themselves, he was running around as happy as ever. I can never be thankful enough for these wonderful demonstrations. I have also seen a sprained ankle healed in three treatments, and typhoid fever, mumps, and severe headaches overcome speedily with the truth. I find that it is not enough to sit still and long for the light to become clearer to our consciousness. There is a great work to be done first in striving to cast out the errors that prevent the light from shining,—envy, anger, selfishness, malice, etc.,—and in proportion as this is done, the way surely grows brighter and brighter, unto the perfect day.

A. M. J., Denver, Col.

In May, 1899, Christian Science was brought to my notice through the healing of my aunt. I began to read Science and Health, and had a few treatments. Though I was not perfectly healed of my troubles, which were all said to be hereditary, still I was helped enough to prove to my own satisfaction that Christian Science was what I needed. At this time I was an active member of an orthodox church, an interested worker in the Christian Endeavor Society, and had charge of the infant department in the Sunday School. Though I was perfectly satisfied with my church and its teachings, I was not at all satisfied with my own progress in spiritual things, and longed for more light.

Surely, "the desire which goeth forth hungering after righteousness is blessed of our Father, and it does not return unto us void" (Science and Health, p. 2). As I read Science and Health, the Bible became plainer, and divine Love seemed nearer and dearer than ever before.

Since then I have been learning to apply the understanding of God which I have gained from Science and Health. Divine Love enabled me to overcome, with one treatment, a case of whooping-cough which, after six months of doctors and medicines, seemed no better. I have been healed of the grip in one treatment. Rheumatism, chronic catarrh, and constipation have been entirely overcome, and a very uncomfortable disposition greatly improved.

I feel very grateful to God, to Mrs. Eddy, and to all who in any way have helped me to know the Truth which makes us free. It is my desire to "prove" by my daily life

"what the understanding of God brings to man" (Science and Health, p. 496).

MISS ETHEL B. RIDLEY, Topsham, Me.

I am so uplifted and happy to-day because of the manifold demonstrations of God's love which I have had since coming into the blessed understanding of Christian Science, that I feel I ought to send in my mite of thanksgiving. It is five years since I first heard of this great truth, and during that time I have been alternately in the valley and on the mountain top.

Fear in all its myriad forms has disappeared from our little family. We have had evil of all kinds to combat, but with the sweet assurance that God is an ever-present help in time of trouble, and knowing that "in him we live, and move, and have our being," all have been met and overcome. Twice have we seen the power of God made manifest in the healing of a broken bone without the aid of splints. The broken arm was completely healed in ten days and the collar bone in less than a week. "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

Many times have I stumbled and fallen and felt weary and discouraged, but ever and anon have I felt the warm grasp of the brotherly hand, and heard the kind voices of brother Scientists full of hope and cheer. I could write all day telling of the wonders and beauties of Christian Science and what it has done for me. "Who is so great a God as our God?"

May the blessed day soon dawn when all those who are now wasting precious time in deriding, censuring, and criticising Science and Health will see the folly of their ways, and will unite with all the grateful hearts to-day in giving thanks to God for sending us a messenger in this age who has been able to open the eyes of the blind and set at liberty them that were bound.

MRS. L. C. MORLEY, Chester, Pa.

Four years ago I was healed of typhoid fever so that I went to work in about three weeks, and for this I was very thankful. During the same year I was healed of the grip in a violent form by reading Science and Health for about half an hour. I got up from reading and told the people I was staying with, that I was well. I went to work the next day. Two years ago last July I met with a very severe accident on the railroad. I was firing a locomotive when it exploded, killing instantly the engineer and hurting the brakeman so that he died in a few hours. I was picked up and taken to the hospital, and when I got there the doctors said I was so badly burned and scalded that I could not live long. Under Christian Science treatment I was healed with no scars except where the coal was blown into my flesh, and some of that came out. I went to work in a little over three weeks. I believe that if it had not been for Christian Science I should have passed on. I feel very grateful to the practitioner through whose untiring efforts to realize the truth I was healed.

It was my privilege to be among the number who went to Boston and Concord last year, and as I gazed upon her who had made it possible for so much good to come to suffering humanity, my heart went out in gratitude to her.

BURTON J. CRONK, Scranton, Pa.

I have lately had a very beautiful demonstration of the power of Divine healing as revealed to us through Christian Science, and it has been such a strong proof to me of the nearness and reality of God that I want to tell it to every one. One day, about noon, I slipped and sprained my ankle, and though the pain was severe at first it soon stopped

and I did not feel it again until the evening. Then the pain became so great and I suffered such acute agony that I simply had to scream. I could not rest my foot on the floor, nor in fact hold it in any position that would give me any relief from the intense pain. I suffered in that way for several hours, then finally decided to send word to a Christian Science practitioner who lives near us, and ask her to help me. She did not come but sent a loving message and said she would treat me absently. In about an hour I felt the pain beginning to leave my ankle, and in a few minutes I put my foot on the floor and to my amazement there was no pain. I walked about the house and carried my baby, and except for a little stiffness and soreness my ankle was entirely well.

Although I have been interested in Christian Science for nearly a year and have had demonstrations in our family, I never fully realized until this time how real and true is the power of divine Love.

MRS. F. T. MIX, Burlingame, Cal.

One day a few weeks ago I entered the street car in a very sad state of mind. It seemed I had worked and preached all in vain to dull ears. I felt as if I could have cried out as Jesus did, "Oh Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not."

As I entered the car I passed a lady who was holding a baby on her lap, and beside her was a little girl with a wide brimmed hat. I sat down next to the little girl, taking no notice of any one in the car. I glanced up, however, and noticed the baby who was stretching its little neck to get a glimpse of me. The broad-brimmed hat of the little girl hid me from the little one's view, so I also leaned forward to look at the dear sweet face. I saw a face of heavenly beauty, beaming with sunny smiles into mine. The whole car, it seemed to me, was changed into a holy place; so pure and inspiring was the atmosphere every one felt it, and there was a smile on every face. Sorrow fled from my thought when the little one's message of love reached me. God had sent it to me, it was this, "And infinite Love is reflected in love" (Science and Health, p. 17). I then saw that my labors were not in vain, and I needed to learn that I could "hardly afford to be miserable for the faults of others" (Miscellaneous Writings, p. 224).—E. H., Cleveland, O.

Let your religion be seen. Lamps do not talk, but they do shine. A light-house sounds no drum, it beats no gong, yet far over the waters its friendly light is seen by the mariner.—C. H. SPURGEON.

Requirement.

We live by Faith; but Faith is not the slave
Of text and legend. Reason's voice and God's,
Nature's and duty's, never are at odds.
What asks our Father of His children, save
Justice and mercy and humility,
A reasoning service of good deeds,
Pure living, tenderness to human needs,
Reverence and trust, and prayer for light to see
The Master's footprints in our daily ways?
No knotted scourge nor sacrificial knife,
But the calm beauty of an ordered life
Whose very breathing is unworded praise!
A life that stands as all true lives have stood,
Firm rooted in the faith that God is good.

J. G. WHITTIER.

From our Exchanges.

Welcome another recruit to the real Army of the Lord which is growing among the ministers and laymen to such proportions that eventually the whole Christian Church will be recalled to its senses, and perceive that its divine mission is not to patch up pleasing and easy conditions under the delusion that they will develop high types of manhood, but to transform individual characters, and through them transform the world. The Honorable John D. Long is the latest preacher of this Gospel we have been urging for years.

He arraigns modern society in scathing terms and points out the only remedy. He says,—

"These brutalities and crimes are not confined, drunkenness and debauchery are not confined, to the lower classes, but they break out among young men and women who have had the opportunities of our boasted education. There are corruption, bribery, and embezzlement by our public servants. The sacred ties of domestic life are polluted. The temple of the Lord is invaded by mere birds of prey who should be whipped out of it with lashes of scorn.

"In all this festering mass of sores lies our labor. The remedy is not in the efforts of labor or capital to promote their material interests; it is not in the efforts men make to better their condition by theories of social organization. These things will, under natural laws in a free country, work out their own salvation. *The vital need is the religion of Jesus. It is Christ in the individual man; reverence for the great fundamental precepts of the Master—their incorporation into actual daily life as controlling springs of action.*"—*The Universalist Leader.*

The only reformers who do much good in the world and the only workers who get ample return for their toil are those who go forward to their appointed tasks with a cheerful shout, who do not stop to criticise the laggards and evil-doers, of whom they are mostly unconscious (because they are out of sight behind their backs), nor even to count the number of those who are going with them. They are at the head of the column, with their eyes set toward the prize of the high calling. Others follow because they are quickened to like enthusiasm, and they also put a cheerful courage on. "He, for the joy that was set before him, endured the cross,"—the joy not of any selfish gain, but the joy of achievement, the accomplishment of that whereunto he was sent.—*The Christian Register.*

Our readers will bear us witness that we have never been among the assailants of creed. On the contrary, we believe in them. They serve great uses in the economy of the Kingdom of God. But they are never a finality. They are always subject to revision that they may conform more closely to the best understanding of the teaching of the Bible. No creed is lord of the Scriptures. The primacy belongs to the Scriptures. And historically, as a matter of fact, the exaggerated importance given to the creeds has operated like "the traditions of the Scribes," in the days of Jesus. It has barred the access of men to the truth.

The Watchman.

To live near to God is the privilege of every believer. But this involves some personal negations which are not always easy of acceptance. We cannot live near to God and entertain unhallowed desires, or low ambitions, or un-Christlike animosities, or devote ourselves to worldly pleasures. To be sure, all these are incompatible with the Christian life at any stage of its development; but how large a place they have in the lives of many who profess to be disciples of the Lord! If we want our walk to be close with God we must let His thoughts, His desires, His purposes take possession of us, and His will control our lives. Then we shall abide in Him and He in us, in a oneness sweet beyond the power of thought to conceive.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SELFDENIAL AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Boston University has issued a circular inviting opinions on the proposal to hold an international conference for the purpose of adopting a "universal alphabet" by which to indicate the pronunciation of words in the leading European languages. The twenty-six letters of the Roman alphabet are known the world over and furnish the "universal alphabet," representing, for the most part, the same sounds in all languages, but as the value of the letters is not quite the same in different languages or even within one language, it becomes necessary for dictionaries and language manuals to use what is called a key to pronunciation. It is now proposed to replace the multiplicity of keys by a single key, as perfect as it can be made through the amplest possible discussion and experimentation by a commission composed of the foremost experts in this line of research. By slight modifications, such as will not interfere with legibility, it is thought that the number of letters can be increased from twenty-six till it suffices to represent all the sounds of the leading languages. In English, about forty letters would be required.

The Panama Canal Commission has adopted the lock system for the canal instead of the sea level system favored by De Lesseps. It will be less expensive and take much less time to complete, and it also allows of a more feasible method of taking care of the waters of the Chagres River, which sometimes rises twenty-three feet in six hours, and once rose thirty-four feet. There is an average rainfall of 130 inches in the Chagres Valley, and it is proposed to take care of these torrential downpours, as well as provide water for the dry seasons, by constructing dams, reservoirs, spillways, etc. Estimates on the cost of the canal according to present plans are about \$145,000,000, and Admiral Walker figures that the work may be completed in eight years. There is a vast amount of work to be done, and outside of the Culebra cut most of the digging done by the French companies avails nothing. Rank vegetation and earth fillings have made it necessary to begin all over again in most of the seventeen districts into which the work was divided by the French company.

Forest fires have been raging in many of the principal timber sections in the northern districts of California and in the vicinity of San Francisco. In the Santa Cruz mountains the situation is serious, and it is believed that the State park in the big basin, which contains some of the finest redwood timber in the State, is doomed. The fire in Martin County devastated an area of fourteen thousand acres.

Those who have visited the Chicago and St. Louis Expositions declare that the designs for the Government Building at the Lewis and Clark Exposition indicate that it will surpass in beauty anything hitherto attempted by the Government, and that the main exhibit building will establish a precedent in architectural elegance.

The circulation statement for September 1 shows that a new record for amount of money in circulation in the United States has been established; the figures per capita being \$31.16, the highest ever reached.

The Klondike output for the year will be about \$10,000,000.

Foreign.

Colonel Younghusband, head of the British mission, and the Tibetan officials have signed a formal treaty. The proceedings closed with a short speech by Colonel Younghusband, who pointed out that the British had avoided interfering in the smallest degree with the internal affairs of the country. They had not annexed any territory, and had fully recognized the continued suzerainty of China. They had merely sought to insure the observance of the treaty of 1890, that trade relations between India and Tibet should be established, and that Tibet should not depart from her traditional policy in regard to political relations with other countries. The dalai lama is now supposed to be on his way into Mongolia, and the officials insist that his action amounts to abdication. The administration is now carried on by a council of regency. It is believed that the tashi lama eventually will be recognized as the supreme religious head. The arrangements for the return of the British mission are complete.

The Canadian Government is building the largest fish hatchery on the Pacific coast on Trout Creek near Harrison Hot Springs, B. C. The station will have a capacity of fifty million fry, and will be almost entirely devoted to salmon propagation. This should be of great benefit to the Puget Sound salmon fisheries, as many of the fish hatched at the Canadian station will go into its waters and be taken by American fishermen. The news of the new hatchery will be particularly pleasing to the far coast this year, as the salmon pack in Washington will be less than one hundred thousand cases.

There have been no recent developments in the asphalt controversy, and the State Department is awaiting the arrival in Washington of Minister Bowen, now en route to the United States from Caracas. It is expected that the Department will wait a reasonable time for some action by the Venezuelan High Court, which assembles September 15, upon the Bermudez Company's appeal and application for the removal of the Government's receiver and the restoration of its property.

According to unofficial advices received at Washington, there is a reasonable prospect of a continuation for some time of the present peaceful conditions in San Domingo. The advices record the departure from the island of General Jimenez with his political aspirations. It is understood that before departing for New York he publicly announced himself tired of revolutions and without intention again to connect himself with one.

An international congress, at the instigation of France, will be convened at The Hague, probably in November, with the object of regulating the neutrality and the free movement of hospital ships in naval war-

fare. Other marine problems also are likely to be discussed.

Mexico will shortly establish a legation at Peking. Don Carlos Lara, now Mexican minister to Japan, will also be minister to China.

A law has been gazetted in St. Petersburg providing that henceforth only ships owned by Russians shall be allowed to fly the Russian flag.

Industrial and Commercial.

A Swiss engineer has undertaken for a Franco-Swiss company to construct a system of transmission for electric power which will deliver in Lyons several thousand horsepower daily, in the form of electricity. The source of the power is to be found in the waterfalls of the Alps, about 125 miles from the great center of silk manufacture in France. The French are depending more and more on the "white coal" of the mountain streams, as they express it.

Work on the Simplon Tunnel, which it was expected would be completed by the beginning of next month, has been suddenly stopped, owing to the discovery of a hot spring flowing 1,500 gallons a minute. The temperature in the tunnel reached 112 degrees. The Simplon Tunnel, which is being cut through Simplon Mountain, will be 21,374 yards long, and it already has been pierced for a distance of 21,142 yards.

The pack of all varieties of salmon in southeastern Alaska up to September 1 is reported to be 333,800 cases. Very few of the canneries have equalled their pack of last year, and many establishments were closed up entirely. The total shortage in the Alaska salmon pack is placed at 400,000 cases.

A certificate for the incorporation of the United States Battleship Maine Salvage Company has been filed at Washington. The capital stock named is \$600,000. The incorporators hold a concession from the Cuban Republic for removing the wreck from Havana harbor.

The German Admiralty has ordered two new tank steamers to be built at Kiel to supply petroleum as fuel to German warships. Oil as a subsidiary fuel has already been used so successfully on battleships that the Government proposes to use it in larger quantities.

The apple shipments from Boston for the week ending September 3 were 3,158 barrels, against 2,463 in the same week of 1903, and 13,020 in the same week of 1902. The total shipment for the season so far has been 63,632, against 8,652 last year, and 21,800 in 1902.

The deposits in the savings banks in the country closely approximate \$3,000,000,000, which would be about \$37 for every man, woman, and child in the United States.

There are about 44,000 hotels in this country representing a capital of \$6,000,000,000, and giving employment to 3,500,000 people.

General.

The Statue of Liberty, erected on Bedloe's Island in 1886, is to be repaired. It has begun to show the effects of the weather, which detracts much from its appearance. The War Department, which now has control of the island, will have the statue thoroughly cleaned, the bronze tablets repaired, the masonry renovated, and an electric passenger elevator installed to replace the wooden stairway running to the observation tower.

From many points along the southern coast of California come reports of damage by great billows which are rolling in from the sea, occasioned by some phenomenon, possibly volcanic disturbances. While there is scarcely a capful of wind, enormous waves, in some instances forty feet high, roll ceaselessly against the shores.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"For we be brethren."

SAMUEL GREENWOOD.

"Let there be no strife, I pray thee, between me and thee, . . . for we be brethren."

THE human race is torn by the dissensions of hatred and the strifes of personal ambition. It writhes in the self-inflicted tortures of jealousy, revenge, and greed. The kindly and gentle qualities of human nature are trodden under the heel of a passion for personal gain. Those of common kindred, impelled by the same hopes and fears, and with the same interests at stake, who should live and love as brethren, are biting and devouring one another in the insanity of their self-love. What but divine Love can deliver mortals from this awful bondage? What but Christian Science, the rejected religion of Jesus, has ever made possible to men the demonstration of this divine Principle, destroying the pleasure of sin and the desire to hate or defraud each other? What but Christian Science has ever proclaimed man's independence of evil, of all selfishness and suffering?

The human mind is yet in its kindergarten stage regarding the real truth of man's being and his place in the universe. It must have object-lessons to teach what is real and right, true and good. It needs to see the operation of the law of Love in the healing not only of disease physical, but of ill-will, enmity, pride, bitterness, unforgiveness, all that prevents men from loving their brethren. Christian Scientists must realize that it is their task to furnish these object-lessons by living "beyond the reach of evil" themselves, by destroying all malice and selfishness in their intercourse with their fellow-men. If Christian Science is what is needed to give mortals rest from strife and bring peace and good-will to earth, the evidence thereof will be looked for in the lives and conduct of its adherents.

There is so much of hatred in the mental atmosphere of mortals that Christian Scientists must daily be loving more in order to antidote this "miasma," and make earth a heavenly place in which to dwell. To fulfil the sacred promise we have subscribed to in the last tenet of our Church (see *Science and Health*, p. 497) involves the constant denial of self through the generous and selfless loving of our brethren and our Cause. It is God who demands perfect love of us. Our past good thoughts and good deeds will not suffice for present needs. The divine and perfect Principle of man does not respect person or position, does not extend favor or protection simply because we have taken the name of Christian Scientists. We may have had good results in healing the sick and in leading others to seek and find the truth, but this will not save us from condemnation if we reach a point in our experience when we hate our brother, or turn from him in bitterness, when we should love him.

The Cause of Christian Science was established and exists impartially for the whole human race. In it there is no personal "my church" nor "your church," but the one Church of Christ, Scientist, embodying the idea and practice of

universal Love. A Christian Scientist must love his Church unselfishly for his own spiritual good and the salvation of mankind. To love self more than Science, to entrench ourselves in our own wisdom and self-will, is to make of our egotism an obstruction to the success of the Cause we have outwardly espoused. It is wisdomless conceit to suppose that the ark of God in Christian Science depends upon us to guide it aright. What are we individually compared with the great work of establishing a Christianity that is to fulfil Jesus' words and repeat his works; that is, to be in deed and in truth a religion of love and good-will and peace? What concern should we have as to our place or influence in this movement if our whole desire is for God's will to be done in the salvation of mortals from all sin and evil?

Our Church stands for nothing if not for the loving of our neighbors as ourselves. What could be more fatal to our growth towards divine Love than enmity of any kind or degree, for that means hatred; and hatred stands for the opposite of all that Christian Science teaches. What do we expect to accomplish by declaring that man is the image and likeness of God, of infinite Love, if we do not believe it of our brother and live it for ourselves? What will God give us for words however sweet and true if their import is lacking in our life? When we remember that it is the spirit and not the letter that is to waken ourselves and others out of the dream of error, we should be careful, even in our hearts, not to offend one of God's little ones, nor be a drag upon the wheels of human progress towards the divine ideal. If love of Christ and not love of self be our ruling motive, our gatherings will be feasts of love, whose gathered fragments will feed the famine of the world. But if selfish interests govern us in our relation to our Cause, are we not trying "to seem what we have not lifted ourselves to be, namely, a Christian"? (*Miscellaneous Writings* p. 234).

As those who have enlisted under the banner of Christian Science, we should meet this question by loving so truly and constantly that no opposite quality shall have the opportunity to mesmerize or mislead us. We must do this before we can overcome in our conflict with evil. The world is watching us; it has a right to watch us. It has a right to expect of us some evidence of the power of Love, of which we speak so much. It has proof plenty of the evil effects of hatred and wrath and strife; what it needs is proof that Love is the saviour of mankind; that it does still the storms of human passion and bring peace; that it does enable men to literally live above their selfishness and to do unto others what they would have done to them. Let us not shrink from this scrutiny nor from this demand, but let us so live that our lives shall show the world that infinite Love reflected in love (*Science and Health*, p. 17) does not give place to any unkind, uncharitable, unlovable thing in man.

God is giving each his own place according to his fitness, and will beckon him higher as he grows more God-like. It is neither wise nor honest to desire what rightfully belongs to others. If we believe that Divine wisdom led Mrs. Eddy to the discovery of Christian Science, and through her has been guarding and guiding this great Cause all through the years of its establishment, can we not trust the same infinite wisdom to carry on this work in the best and wisest way,

irrespective of personal ambition or desire? It is our part to be true to our trust by demonstrating Christian Science in its truth and beauty and loveliness, so that erring and suffering mortals seeing, may believe. Christ's wandering sheep need to be fed and gathered into the one fold. It is the hireling, he who works for personal gain and not for love, that leaves the sheep to be scattered and devoured by the wolves.

May God grant that as the years of this wonderful new century pass into history, and the world comes more and more to look into the lives of Christian Scientists for the evidence of God's goodness to man and the fruits of the spirit of love, that there will be less and less cause for disappointment and rebuke. May the growth of Christian love speedily unite the hearts and hands of all true Christian Scientists so that with one accord they shall reap the ripened harvest of the world.

"The faith that will not shrink."

J. A. BARRIS.

A SHORT time ago, while visiting a town in a western state on business, I noticed in the hotel at which I was stopping, a modest sign, "Christian Science Meetings held at the home of Mrs. —." As it was Wednesday, I decided to attend the meeting, and inquired the way to the street named on the sign. No number was given, so I asked a small boy where Mrs. — lived, and was told, "at the end of the next block." I made my way in the direction indicated, and came to the house, which proved to be a very small one-story cottage in the middle of a large lot. A sign on the outside, evidently by an amateur painter, told of Christian Science meetings held there. In the yard were two boys, one cutting the grass. I glanced at the place, and as it did not look very inviting in the growing twilight, I decided not to go in.

I walked on a short distance and then stopped, and the thought came, "If you do not go in on your own account, why not on theirs. No doubt that visitors are few, and they will be glad to see you." After hesitating a while, I went back, and the boy who had been cutting the grass opened the gate for me. When I asked him if there was a meeting to be held there, he smiled and running ahead ushered me into the house. The house was evidently the home of very humble people. A well-worn carpet covered the floor of the main room, in which were a few pieces of furniture.

A woman and a young girl, evidently neighbors, greeted me, and by-and-by, six children, ranging in age, I should judge, from five to fourteen years, came in. They were neatly dressed, with shining faces, and among them were the two boys whom I had seen in the yard. Finally the Reader, a sweet-faced woman, the mother of the family, came in. She greeted me very warmly and introduced me to the others. When the meeting opened, it consisted of the mother, six children, the neighbor woman, two young girls, and myself. It began in the usual way, then the mother read from the Bible and Science and Health. We sang, "God is present everywhere," and the words never seemed more beautiful and appropriate. When the time came to give testimonies, no one for a moment responded. Then the mother said, "What, children, a whole week gone by, and no blessings of which to tell?" Thereupon each of the four oldest got up and told of some demonstration made during the week. One had been unloading ties from a car and had injured his foot, but through his understanding of Science had been able to overcome it so as to continue his work. Another worked as messenger in a telegraph office, and told of being able to overcome loneliness and sleepiness.

When the children were through, each of us added a

testimony, and then the mother's turn came. She spoke of the lesson she had learned from the violets the children had gathered in the woods. They blossomed just where they found themselves, and gave forth their sweetness, no matter what their surroundings. So should it be with Scientists. We should not wait until our surroundings change, but make the most of what we have. She told of being left several years before to face the world alone, with ill-health, a family of six small children, few worldly possessions, and nothing to depend upon but a small understanding of Truth. She told how, through her trust in God, she had been restored to health and her needs had been met. The antagonism of her friends and neighbors had been turned at least to tolerance, and some of them, knowing the circumstances, were becoming interested in Science.

Her evident sincerity and her gratitude for the blessings received through this truth, impressed me deeply. I had come to give, but had received an hundred-fold. I learned that this little band, together with a few others who were absent, were trying to raise twelve dollars per month for the rent of a public hall, and were very joyful over the near prospect of success, and that they had already given two public lectures. I wish I could share with others a part of the spiritual uplifting I received through going to this meeting. I am sure that divine Love led me to it. I came away with a great desire to work more earnestly and courageously for Truth. I have since learned that the hall has been secured.

Example.

J. A. B.

It is surely appropriate for us to acknowledge the good received through others which has aided the birth of the Christ-idea in our individual consciousness.

What is it in others that has influenced us most at the critical periods of our experience? What has turned us in the right direction? I have often tried to analyze what it was that influenced me most when I came to Christian Science, and I have concluded that it was the example I saw. Very little permanent good is accomplished by preaching or argument. How much good would the teachings of the New Testament bring to us were it not for the example of the Master? How much slower we should be to accept the truths of Christian Science if it could not be truly said that our Leader, Mrs. Eddy, lives up to her highest teachings.

Many of us can look back over our past lives and see that we have been won by example in many instances where preaching and argument would have defeated their own object. For this reason I am thankful for the example of a loving wife who let her light so shine that I was unconsciously, I think, led to a desire to know something about Christian Science. I am also thankful for the example of a patient teacher who, perhaps more than she is aware, has led me to an appreciation of what Christian Science is, and that by the example of her life and work even more than by the verbal instruction she gave me. Her example is still an inspiration to me and is a proof of her love and desire to accomplish the most good for others.

I am thankful for the example of our beloved Leader in the meekness and love with which she meets every calumny, and the wisdom with which she anticipates and meets every need of our Cause. Surely she is led by divine Love. I am thankful for the many examples of Christian Science given us every day, proving that it is the truth,—that it is a very present help in time of need.

Every good man and woman who is living a life consistent with his highest ideals is daily preaching the best of sermons and his influence is often felt in the most unexpected places.

Misconceptions.

CHARLES F. BROWN.

SOME people oppose Christian Science on the ground that "it is so difficult to understand, or to reconcile with the existing order of things." They argue, "It requires a great stretch of imagination to say, There is no matter, and thus wipe one's self out of existence in the body." "If all is Mind, where did this body originate?"

It is generally believed that the material body dies, and with all the analyses and learned research of the ages, life has never been found in the body. Then why continue seeking for the secret of Life in this direction? If we acknowledge that God is Life, and that we are His children,—created "in His image and likeness,"—we must be spiritual, since God is Spirit. To accept mentally the idea of one's self as flesh, blood, and bones, with material delights and sensations, severs the connection with Spirit—God—for His image and likeness can only be expressed in the beauty of character, and in conscious harmony with God. If we seek to discover, and to bring into demonstration our relation to Truth and Love, this will reveal the harmony of Life through Christian Science, and in no other way can death be conquered. If we are expressing imperfection or inharmony, it must be the result of wrong thinking, and thought must be inspired by right motives and ideas to produce harmonious results.

As God's creation is seen only in ideas spiritual, perfect, and eternal, so the hand, foot, body, or object should reflect a divine idea, and in proportion as one realizes that its reality or substance is in idea, the fear of loss or of death is eliminated from human consciousness, and the kingdom of heaven on earth dawns for the individual.

Any one can prove this truth by lighting the lamp of understanding in his consciousness through the study of "Science and Health with Key to the Scriptures," for "the inspired Word of the Bible" (Science and Health, p. 497), will reveal a new world of activity, joy, and peace in proportion to his application of the "Christ element" in daily life.

Gratitude to Mrs. Eddy, the Discoverer of this Divine possibility, can be evidenced only as in sincerity and fidelity, we follow the example of Christ Jesus the Wayshower.

"Spiritual Co-operation."

LIDA S. STONE.

IN our Leader's Dedictory Address to the Concord church this satisfying definition of unity occurs: "Unity is spiritual co-operation, heart to heart." Christian Scientists stand face to face with a requirement which, like all others in Christian Science is immovable and waits, pointing upward, until each individual conforms to its sweet constraining, for it is based on Love. "Spiritual co-operation!" it is like a great mountain peak, high above mortal motives and aims.

In mortal affairs the governing motive is self-interest, mine and thine, greatest and least in the kingdom of the flesh. Everything is made to bend before it, people and things are swept aside, tempests visit the home, the business, and even disturb personal pleasures. In sickness, the interest in self is so absorbing that loving sacrifice and attendance on the part of others is not recognized. Even the little child is frequently taught the aggressive warfare of self-interest until his natural unselfish interest in others is supplanted by the thought of what can be done to make him "healthy, wealthy, and wise," regardless of the interests of others.

Self-interest, then, is clearly not the motive, in the exercise of which we shall reach our Leader's ideal of unity. That there must be a central point, a vital interest upon which all Christian Scientists can unite for the cure of self-interest,

is certain,—something so near and dear to them that no sacrifice of self can be considered too great if this great something be forwarded thereby. This can only be the Cause of Christian Science. When Pilate asked Jesus, "Art thou a king?" Jesus answered, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." The cause, then, for which he yielded up the material sense of life was that of revealed truth, and this truth is brought us to-day through Christian Science. It is this Cause for which all must yield up their material and personal concepts of one another.

Love continually tests our avowals of love for Christian Science by the willingness with which we give up these erroneous concepts of our fellow-men. It is no easy task which our Father has given us by the hands of our dear Leader.

In the mortal concept it often seems easy to believe that another's egotism is much more than our own, that another's pride is more unreasonable than our own; that another's impatience is more unlike the ideal given us in Christian Science than our own; but our text-book, Science and Health tells us that all error is wrong and "is neither person, place, nor thing" (p. 71). To retain our old views of either good or evil, being or person, and realize spiritual co-operation is simply impossible; but to lay down the mortal concept of ourselves and others for the cause of Truth in Christian Science will enable us to step together, face the foe of mortal mind, and be more than conquerors, while the "powers of earth" will melt like mist before the unity which is based on the love of good.

In our endeavor to gain the spiritual concept of each other, wherein we can co-operate one with another, it is helpful to remember that the "true Light," the light of Truth, "lighteth every man that cometh into the world;" that if I know a little of honesty, the same may be known of my brother; that if I have learned a little how to love, how to be longsuffering, patient, meek, pure, how to exercise self-control which is temperance, the same light lighteth my brother. Men and women have burned at the stake rather than give up the Christianity which was their only life, and while we are not at the present time called upon to suffer in that way, the requirement is still that of old,—to pluck out the right eye and cut off the right hand, rather than to allow the Cause which is redeeming mankind from sin, sickness, and death, to suffer.

Our beloved Leader is constantly telling us what she sees from the mount of vision, where self-interest can never come. We all long for the vision, but are we the "real and consecrated warriors" (Miscellaneous Writings, p. 177), which she bids us be? If so, then the vision will be ours, and no claim of error can hide from us what our Leader means by "Spiritual co-operation, heart to heart."

[Written for the Sentinel.]

Hold Fast.

W. D. MC CRACKAN.

THE cause of good shall win,
The side of right shall gain,
For Love must blot out sin,
And health will laugh at pain.

The Lord of hosts has heard,
The hand of God will mend,
Far back He gave His word,
He'll keep it to the end.

He'll check the fever's throb,
He'll stop the sinful whim,
He'll stay the hands that rob,
Lose not your faith in Him.

Selected Articles.

Do Christian Scientists Ignore the Material Universe?

Scarcely a criticism appears on the subject of Christian Science which does not include an allegation to the effect that Christian Science teaches that all creation is an illusion, and that man has no body.

This erroneous belief regarding the premise of Christian Science leads to ridiculous conclusions. This Science does not teach the unreality of any perceptible thing, but raises the question as to what it really is. It is not the phenomena of nature which are denied by Christian Science, but the humanized, material sense of them. Christian Science interprets the nature and consistency of creation from a spiritual view-point and teaches one to know it as God made it, and as it appears to Him. No one can deny that the human mind falls short of a true conception of things in proportion as it lacks development and perfection.

Some have said, "Do you mean to tell me that the body, with all its wonderful organism, and the beauties of nature are unreal?" We answer, "If one could see them as they really are they would appear as much more wonderful and beautiful than they now seem as infinitude is greater than our present degree of comprehension. If in our present blinded material condition, we are able to recognize to a degree the wonders of God and His manifestation, what must we behold in them when the veil of ignorance, superstition, mystification, false sense has all disappeared and we are able to perceive with the clear and perfect spiritual vision characteristic of the image and likeness of God?"

As a matter of fact, a Christian Scientist, having some insight into the spirituality of God's creation, beholds in nature a new beauty and satisfaction. As one grows spiritually, the things on earth will not disappear, but will become more vivid, even as an object beheld through a veil presents fairer and stronger outlines when the covering is lifted. The perishable, imperfect things which we now view will be discerned in all their spirituality, beauty, and perfection as our erroneous, human concepts disappear. Nature will be seen bearing the imprint of the divine Mind, the Supreme Being. Paul seems to have had this idea when he said, "For if that which was done away was glorious, much more that which remaineth is glorious."

Following the erroneous belief that Christian Scientists ignore the universe, comes the accusation that they ignore sin and disease, the natural accompaniments of the human concept of creation. Such a charge, however, is not based upon Christian Science, but upon the belief of the critic, that the universe is material. The Christian Scientist recognizes that materiality, sin, and disease must be overcome by spiritual growth. He is well aware that one cannot walk away from these, cannot dispose of them by simply denying their existence save when this denial includes a refusal to think or act them. They are mental conditions, temptations of the human mind which must be battled down and overcome by the activity of Truth; hence the practice and endeavor of the Christian Scientist to rid himself of these by grappling with them and eliminating them from his own life.

Again, on the basis of Christian Science, one would not remain in filth, because he knows that the law of Spirit is more conducive to health than sanitary measures. One who is elevated in mind could not be contented with anything less than cleanliness of body. If the entire population of the world were thoroughly imbued with the exalted teaching of Christian Science, a condition of cleanliness would prevail far superior to anything which the earth has ever known; and our friends who, together with Christian Scientists, are extremely interested in sanitary improvements, will do well to inspire mankind with the pure teaching of this Science. A Christian Scien-

tist does not need to be urged to keep clean; he cannot retain his exalted consciousness of the spiritual reality without practising accordingly and therefore departing from all evil and uncleanness; moreover, a clean condition is nearer the spiritual than a filthy state and is therefore more in accord with true Christian Science practice.

Critics should patiently wait until they are able to perceive that which Christian Science gives in place of that which it repudiates. Then they would be pleased and satisfied, rather than provoked by its teaching. This Science gives back to us the very thing which it takes away, but presents it in a more glorified form.

ALFRED FARLOW.
Greensburg (Pa.) Star.

Christian Science can hardly be considered outside the pale of other religions, because it contains all that is good in each of them, and in addition it includes the portions of our Saviour's teachings which they do not comprise. Christian Scientists consider the commands to preach and to heal of equal importance as they are always mentioned together; this is one of the features which distinguishes this from other denominations, and it is the chief cause of its phenomenal growth.

The present, when compared with preceding ages, might be called the age of science, for first of all it demands that a system be practical; a religion, therefore, which meets this requirement and can, nay must, be taken into the minutest details of every-day life, is bound to supersede the merely theoretical. The thought of Christian Science is leavening the theology of the world, and our foremost preachers are beginning to realize that material attractions are not sufficient to insure the growth of a church; it depends, rather, upon the earnest search after spiritual life, and its application to the daily problems of human existence.

EVELYN SYLVESTER KNOWLES.
Worcester (Mass.) Telegram.

Mrs. Eddy does not claim that she has discovered something which Jesus the Christ did not know and teach, but rather that she has perceived the Principle of his teaching, which had been more or less obscured in the centuries succeeding his life work. The application of truth made by Jesus and his disciples, which healed the sick in connection with preaching the gospel, is the demand laid upon all followers, and Christian Scientists are finding the way thereto in the teaching contained in Mrs. Eddy's book.

It has become fairly well known that Christian Science does not deny the individuality of man, nor his embodiment, nor the reality of the universe. The discernment that man and the universe exist mentally, as the creation of an all-knowing divine Mind, gives satisfactory explanation as to why man is eternal and indestructible, for it lifts his existence above the supposed laws of the temporal and perishing material structure. There is a sun in the heavens, but the material senses misconstrue its movements. In like manner, according to the teaching of Christian Science, there is a man who really exists, but the same material senses mistake his existence and nature. An enlightened understanding of this basic teaching of Christian Science reconciles all the questions of mind and matter, life and death, over which there has been such widespread discussion, and does not depart from Jesus's statement, "It is the spirit that quickeneth; the flesh profiteth nothing."

A critic says that Christian Science teaches, "Free the mind of the belief in sin and you will be sinless. This is a task that all would like to perform, but it is utterly impossible." Is it not the mission of the Christian Church to aid man in this very work of erasing sin from his mind and life? If a man's mind could be set entirely free from believing in, loving, or fearing sin, could he be a sinner? Should there be condemnation for a teaching which encourages its adherents to make every possible effort in this direction, when

the Founder of Christianity said, "Be ye therefore perfect, even as your Father which is in heaven is perfect"? And would Jesus have required anything utterly impossible from his followers?

DAVID B. OGDEN.
Portland (Ore.) Journal.

It must be remembered that Mrs. Eddy is one of the busiest and most faithful of workers; that she is the Leader of a great and growing movement; that thousands of people whom she would have give their time and energies to the worship of God and to the service of man are more curious to see her than to do the work she would have them do, and that Mrs. Eddy is constantly at work to turn the thoughts of her followers away from her personality to God and to the divine Christ as "the way, the truth, and the life."

J. R. MOSLEY.
Atlanta (Ga.) Constitution.

The Lectures.

Denver, Col.

Judge William G. Ewing, of Chicago, delivered a lecture at First Church of Christ, Scientist, July 17. Every seat in the large new church was occupied and the earnest and attentive listeners showed the interest Christian Science has for many.

Mrs. Emily L. Cameron, First Reader of the church, in introducing Judge Ewing, said in part:—

The love of God has always been manifested to man in the form of a covenant or contract, which has promised him life, protection from evil, and abundance of good, if man would keep his part of the covenant, which was to obey God; that is, have one God, choose the good, and reject the evil.

The great mass of mankind have been unmindful of this covenant through their proclivities to have many gods and their insistence upon knowing evil. But down through the ages there have always been a few faithful ones who have obeyed God—kept the covenant—and these have been the light-bearers of the world. The light they have reflected has been in proportion to their knowledge of God, and each one has prophesied of one that should come who would reflect the perfect light "which lighteth every man that cometh into the world." That light came through Jesus the Christ, but the world was not ready to receive it. If it had received it there never would have been any more darkness in the world from the time of the Christian era. Knowing that his teachings would not be received, Jesus said that in time, the Father would send the "Comforter"—"the Spirit of truth"—who would bring to their remembrance all things whatsoever he had said to them.

There are now many thousands of people bearing witness to the fact that "the Comforter" has come to this age through the truth of Christian Science, discovered and founded by our Leader, Rev. Mary Baker G. Eddy. Others have caught glimpses of this truth, but it rested with Mrs. Eddy, by her obedience to God and His covenant—her unselfish, pure life—to become an avenue for the appearance of "the Comforter" which Jesus promised.

We are happy to-day in having one with us—a light-bearer—who will tell us of this "Comforter" that is healing the sick, binding up the broken hearted, casting out evils,—doing the works that Jesus did, which proves that it is of God; for when John sent to Jesus asking if he was the Christ, the Messiah, Jesus did not mention his words, but recounted the works, which would prove his words, saying, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk."

Correspondence.

St. Thomas, Ont.

Edward A. Kimball lectured here in the Duncombe Opera House, Friday evening July 22. There were about four hundred present. The lecturer was introduced by Mr. D. S. Robb who spoke partly as follows:—

I am sure that you will not be disappointed at what the lecturer has to give you to-night, and that he will thoroughly convince you before he is through that we believe in the one who was born in Bethlehem, who preached in the Temple in Jerusalem, stayed the storm on the Sea of Galilee, and healed the sick as well as the sinful.

A German whose sense of sound was exceedingly acute was passing by a church a few days after his arrival in this country, and the sound of music induced him to enter, although he had no knowledge of our language. The music was sung in most discordant fashion, and the sensitive German would fain have covered his ears; but as this might not appear well, his next impulse was to rush out into the open air and leave the sounds behind him, but this he feared to do, lest offence might thus be given, so he resolved to endure the torture with the best fortitude he could assume, when lo, amid the din, he heard the soft, sweet voice of a woman singing in perfect tune. She made no effort to drown the voices of her companions, nor was she disturbed by their noisy discords, but patiently and gently, as she sang in full, rich tone, one by one yielded to the gentle influence and before the piece was finished all were in perfect concord. This incident brought very forcibly to me the experience of our great Leader, the Discoverer and Founder of Christian Science. We are told that there are about fifteen hundred million people on this planet. So if we have anything special to enlighten and brighten, strengthen and heal the mind of man, it must come through some one of this great number. In 1866, the Rev. Mary Baker Eddy struck the right chord, and notwithstanding the fact that carnal minds have screamed loudly to drown her sweet voice she has kept right on, singing in perfect harmony. One by one others have yielded to her gentle influence, until thousands upon thousands have joined in the grand chorus that "All is infinite Mind and its infinite manifestation, for God is All in all" (Science and Health, p. 468).

The moral must be the measure of health. If your eye is on the eternal, your intellect will grow, and your opinions and actions will have a beauty which no learning or combined advantages of other men can rival.—EMERSON.

Cards in the German Periodical.

Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their cards inserted in the directory of *Der Christian Science Herald*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be the same as now prevails for the *Journal*. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Fruits Demanded.

THE general extension and rapid growth of the Christian Science movement has been such that we are always surprised when attention is called to some community wherein this truth has been known five, ten, or even fifteen years, but nevertheless the work is not found firmly established, and no perceptible gain is being made. Perhaps the few who maintain a church organization are meeting every Sunday and every Wednesday at the home of one of their number, or possibly they are meeting in a rented hall. Nothing is left undone in the way of signs on the building in which the services are held, and announcement of the time and place is never omitted from the newspapers, but the organization does not grow; the staid and decorous character of the services is not disturbed by the intrusion of an inquiring public, nor are there any additions to the little flock unless by the advent of some newcomer to the city, who has previously been identified with the movement in some other field. These additions are, however, usually more than offset by the withdrawal of those who move away, and, as a consequence, the church or society is in a languishing condition and eventually the work is abandoned unless some one from another field is prevailed upon to come and save it.

Fortunately cases such as we have described are rare, and this occasional ineffectiveness is more than offset by the activity of other communities which, so far as natural conditions are concerned, present no better field for Christian labor than do those wherein the work is at a standstill.

The explanation of the controlling conditions is not difficult. The work of healing the sick is not given the prominence which is invariably the forerunner of a vigorous and growing organization of Christian Scientists. If this healing work is not done, there is no basis upon which to organize a Christian Science church. If there are no "signs following," this is sufficient evidence that there is nothing present but the letter of Christian Science, "its dead body,—pulseless, cold, inanimate" (Science and Health, p. 113). "But," say these good people, "what can we do? We are not practitioners." "Then," we are almost tempted to answer, "you are not Christian Scientists. 'By their fruits ye shall know them.'" It would be no more inconsistent for one man to say, "I am a mathematician, but I can't do a sum in addition," than it is for another to say, "I am a Christian Scientist, but I can't heal the sick."

Christian Science churches can be successfully established on no other basis than that of Christ-healing. Jesus' teachings, in practical operation, inevitably result in the healing of the sick, and it is only through demonstration of the healing and redemptive power of his gospel that one can know that Christian Science is the Comforter, come to save a waiting and suffering world.

The Cause of Christian Science is not advanced, nor is humanity benefited by the formation of weak and struggling churches, having no one connected with them who is competent to undertake the healing of the sick; but every case of genuine healing through Christian Science does give evidence that the system discovered and taught by Mrs. Eddy

is true, and that it can save the race. When this is made clear in any community by the healing of the sick, there will be no dearth of accessions to our ranks, and every church founded upon this basis will prosper.

The demand upon every Christian Scientist is to "heal the sick," and those who entertain any doubt of their ability to do this should so apply themselves to the study of the Scriptures in the light of Science and Health, as to become certain that they understand the Principle and practice of this new-old gospel; then they will have no occasion to say, "I don't know enough about Science to heal the sick."

M.

Confirmed by Culture.

STUDENTS of English history are not surprised to learn that the chief political leader of the British empire is President of the Association for the Advancement of Science, and so intelligent in this field of thought as to deliver, at the late meeting of the Association, in Cambridge, an address which "exhibited a splendid grasp of an exceedingly difficult as well as novel scientific subject."

Mr. Gladstone was a conspicuous representative of a large number of British statesmen and Parliamentary leaders who have been no less distinguished for their literary or scientific attainments than for their political sagacity. No one, surely, would venture to say that the ability to wield the facile pen of a Disraeli, to think in Greek hexameters with a Gladstone, or to find recreation in solving the problems of the physical laboratory with a Salisbury, is essential to fitness for governmental leadership, but it is equally true that no one can question the significant relation of this breadth of culture in English statesmen, to those larger events of English history which have materially benefited many nations, and sensibly advanced the civilization of the world's thought.

The more vital interest of Mr. Balfour's address inheres, however, in the fact that he discussed, in what a prominent review has termed a "highly suggestive" way the theme which is just now engrossing the attention of the world: viz., the nature of matter. The latest investigation of the Curies, Professor Thomson, and others, which go to prove that "Matter is but a condition of energy" and wholly phenomenal, are accepted as the basis of his very pertinent and paradoxical declaration that to-day "Matter is explained, and is explained away." Phenomenal manifestations are reported to us only through the physical senses, which are being more and more generally discredited; and hence the distinguished speaker's far-reaching conviction that there is in the situation a suggestion of a "certain inevitable incoherence in any general scheme of thought which is built out of the material provided by natural Science alone," and that in the course of time such a scheme must be grounded in "an idealistic interpretation of the universe." This perception of the inadequacy and unsatisfactoriness of any attempted materialistic interpretation of nature, which physical Scientists are now so generally reaching, and the recognition that the only true and satisfying philosophy of things must be based on the proposition that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), came more than a generation ago to one who was not possessed of expert scientific learning, but who sought and found light upon the world's deepest problems in the study of the Word, and in prayer. That Mrs. Eddy should have thus reached an apprehension of Truth which in healing the sick has met the test of practical demonstrability that Jesus imposed, and that she should have presented to the world a philosophy of things and of experience which the most expert and scholarly authorities are being compelled to endorse,—these facts confirm yet more fully the truth of her simple explanation of her discovery; viz., that in her seeking she was divinely led and illumined.

W.

The Dignity of Labor.

THE ceaseless movement of the wheel of time brings our annual Labor Day with its appeal to all who think deeply of the welfare of their fellow-men. If these anniversaries teach us lessons worth remembering, each successive year should find us more responsive to their higher meaning. When Labor Day comes we hear a good deal about the dignity of labor, and yet we may question how many there are who could satisfactorily tell us in what the dignity of labor consists.

In an address to her students, our Leader once said, "Your work, well done, would dignify angels" (Miscellaneous Writings, p. 111), and is this not true of all worthy labor, whether manual or mental? There is no labor which does not call for some exercise of thought, and the more the intelligence expressed in a given task, the less toilsome it is and the greater the dignity of the work and the workman. The true workman really serves and expresses divine Principle, whether he scientifically understands this or not; and he finds that perfection is the imperative demand of Principle,—perfection in work and workman alike.

Longfellow's lines on the Alpine climber picture most vividly the man who ever presses on toward his lofty ideal, undaunted by the indifference of others, heeding nothing but the inspiration which urges his steps.

His brow was sad; his eye beneath
Flashed like a falchion from its sheath,
And like a silver clarion rung
The accents of that unknown tongue,
Excelsior!

How little is the demand expressed by this word recognized in the "endless toil and endeavor" of human existence.

The true end of all labor is the unfoldment of character, and if the Truth of being is kept in view the "workman of God" will never lose sight of his identification with the Divine purpose, and his work, whatever it be, can never be separated from a lofty concept of God and man.

Jesus' parable of the talents is a perpetual inspiration to all noble effort. We undoubtedly receive from divine Love in the ratio of our capacity, which should ever be enlarging. Why, then, should any man decide that he has but one "talent" and hasten to bury it in discontent, fear, or indolence? If our ideal is that of the highest service we may carry our talent into the world's great mart, and knowing that God reigns there and everywhere, we may prove that Christ's teaching respecting the reward of all honest labor, is true and demonstrable, whatever the material conditions surrounding us.

Like the Hebrew leaders of old, our Leader has shown "a genius for religion." She has also shown a genius for work. She has ever kept before her followers, both by precept and example, the divine demand for perfection which can only be met by expressing excellence in every least thing that we do. If her followers always keep these things in view, their hearts and hands will be strengthened by the inspiring promise of the Christ. "Behold, I come quickly; and my reward is with me, to give every man according as his work shall be." K.

Notice.

The Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the Clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

Letters to our Leader.

Littleton, N. H., August 19, 1904.

My Dear Mrs. Eddy:—While spending the summer in this your native state, I want to thank you for the recent By-law on refraining from membership in organizations which exclude either sex. It would be difficult to state accurately the far-seeing wisdom of this By-law. It reaches forth with loving justice beyond the present ranks of Christian Scientists to meet a mighty need. It points to the near future when the women of this land will cease to be the taxed, wage-earning, but unrepresented portion of this justice-loving American people. Then will the educated intelligence among men and women govern this land, as at present it does the churches of our movement, all over the world. The wisdom that spake through you to ordain that the Sunday Lesson-Sermon should be delivered by man and woman, should be recognized as having again uttered her voice in this By-law. It rejoices the hearts of all Christian Scientists that such a by-law is possible, for it gives proof that your ability to lead this movement is vigorous with spiritual and physical well-being, and that your foresight is undimmed; that your counsel is not for your own benefit, nor yet only for the good of the Christian Scientist of to-day, but for those of the morrow,—for it is evident that you obey this command, "Trust in the Lord with all thine heart; and lean not unto thine own understanding."

Much love and grateful appreciation fill this letter, and I know that you will find them.

Faithfully yours,

JULIA RUGGLES.

Fairhaven, Richmond, Surrey, August 18, 1904.

Dear Leader:—Thinking that if perhaps you can spare a few moments to glance through them, I am enclosing two cuttings from the *Morning Post*, one of our leading English newspapers, which I know will interest you. One is from its correspondent at Tokio giving an account of the Japanese treatment of their wounded, wherein material remedies are practically unused, the wounds being simply washed with a disinfectant, and then, as an American army surgeon remarked to the correspondent, "They let the Lord do the rest, and he is doing it." Truly the "whole creation" which has been groaning and travailing in pain until now, is pausing, and lending a listening ear to the great truth which you first had the courage to voice, and are continuing to voice, clearly and distinctly above "error's awful din;" viz., that "All is infinite Mind and its infinite manifestation, for God is All in all."

The other cutting is a report of our Prime Minister's speech as president of the British Association, in which he states that matter is not merely explained but is explained away!

I cannot close this letter without expressing my grateful and most sincere thanks to you as the Discoverer of Christian Science,—the beautiful truth which has lifted me, and has enabled me to help several of my dear ones out of the slough of despair, on to the Rock "'gainst which the winds and waves can shock, oh, never more!"

Lovingly yours,

MARGARET J. BISHOP.

Dayton, O., September 2, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Perhaps the following will be of interest to you. A minister of the Christian church who has preached for fifty years, after reading your book, *Science and Health*, stated that it presented the clearest thought of Jesus and Christ he ever heard in all the fifty years of his ministerial work.

In our marriage ceremony, of which I mailed you an announcement, this same minister, at our request, read from the Bible and Science and Health. He spoke of Paul as the greatest Bible character of his day. His entire remarks were based upon the high sense of purity found in all your writings.

Affectionately, your student,

LLOYD B. COATE.

New York, August 20, 1904.

Dear Leader:—I am sending you by American Express a picture of "Jesus Blessing Bread," which is considered from an artist's standpoint very valuable. You are breaking (explaining) the *same bread* for this age in the same meek and humble way. The lesson this week, subject, "Christ Jesus," has helped to unfold a clearer sense of the true bread.

I want to express my love and gratitude to you,—God's messenger,—for all that Christian Science has done for me,—the physical healing as well as the spiritual uplifting.

A student of a faithful student of yours,

MISS HARRIET M. MARTIN.

San Francisco, July 16, 1904.

Dearly beloved Leader:—The little poem I enclose came to me in a very dark hour some three years ago. After writing it, my thought was cleared and a great demonstration of Truth made manifest. The dark clouds of fear and doubt were cleared away, and those applying for help were healed of their ailments. Words are inadequate to express the great love and gratitude I owe you for making plain to the world the glorious truth, as you have done in your various works and writings. I realize to a small extent the trials you have encountered in your ascent up the mount, making the way clear for all who will, to follow.

Nineteen years ago I was almost instantly healed and raised from a bed of suffering and pain, where I had been confined for several months, the trouble being ovarian tumor. I only escaped the surgeon's knife from the fact that they thought me too weak to survive the operation. The truth of this blessed Science was shown to me by a friend who called one morning, and arranged to send me a practitioner that afternoon. One hour after receiving the treatment I arose from my bed healed,—the so-called tumor had disappeared. I now know that it was never there, although then it seemed very real. My nurse declared me out of my head when I asked her for my clothes and proceeded to dress myself. While dressing, my body presented itself to my thought as very sore and tender, from the innumerable liniments and hot applications that had been used, and that I could not wear my clothes, but the thought came to me that the God who had awakened me from the hideous nightmare I had been in could take care of this false dream and dispel it. I discarded all bandages and dressed as usual, and never recollect when the soreness passed away. The next morning I went to Oakland, across the bay, to see the practitioner, making four changes from cars to boat and back again without any fatigue or inconvenience whatever. I immediately purchased Science and Health, and it has been my daily guide ever since, for it makes plain to me that blessed book, the Bible, whereas before it seemed vague and unintelligible.

While a great sense of gratitude goes out for the healing of the many claims of sin and sickness which flesh seems heir to, yet I am most grateful for the spiritual awakening which has come to me through the understanding of this blessed new old Truth. My husband, formerly a regular physician, is with me in this glorious work. God has been and is blessing our efforts, for which we are more thankful each day.

Yours in love,

ALICE E. LYONS.

Testimonies of Healing.

In December, 1899, I saw for the first time a copy of Science and Health, and took my first treatment for consumption. I had tried the best physicians in this province, including a specialist in Montreal, together with change of climate, but without success. My healing was slow, I was antagonistic, having no faith in Christian Science, and following a couple of weeks' treatment I would purchase and study all the books, pamphlets, etc., I could find that were against it. In this way I had to prove over and over again the power of Truth to destroy doubts and unbelief. However, I had nothing else to fall back upon, and this kept me at the investigation. After two years of this kind of work I decided to go to Boston and settle the question once and for all, whether or not Christian Science had a foundation of truth.

The town in which I live, although it has a population of twelve thousand, had not a single Scientist at that time, or any one who knew anything about it. My work, therefore, was all through reading. I became acquainted with a patient and loving practitioner in Cambridge, Mass., and arranged for treatment, and also to meet him for an hour every other day. I was honest in my desire to get at the truth, but it took over three weeks of incessant questioning before a slight glimmer of the truth in Christian Science was opened up to me. It came like a beam of light one morning. I had my questions all answered. I did not reach physical healing so quickly, but as the understanding has come slowly, and only by my coming out of and above tribulation, so has the healing. Still, from that day, I have not lost fifteen minutes from my business as publisher of a daily paper, on account of illness.

I can now see, with what has been met, that it was all only a belief, and could have been got rid of long ago, if I had only grasped the real and let go of the unreal. The physical healing is but a small part of the many blessings received. Harmony now prevails in both my home and my business, where previously there was irritation and trouble. Though a member of a church for fifteen years, Christian Science has provided the peace, and the assurance of God as all Love, which I had failed to find elsewhere.

I am beginning to understand a few of the trials and difficulties our dear Leader has passed through, and know that only through divine Love has she been able to see their nothingness. My love goes out to her for what she has suffered in demonstrating the Christ way by which I can help others as well as myself.

L. S. CHANNELL, Sherbrooke, Can.

Four years ago, one very dear to me came to Boston for the Communion service. I had a long talk with him, and he told me of Christian Science. It made very little impression at the time, although during the following year I heard of Christian Science in all directions, and felt there must be something in it, as it appealed to all sorts and conditions of men. I thought the ideas I had heard were beautiful, but the healing seemed so absurd that I could not possibly admit it to my common-sense intellect.

The following June I again met and talked with my father. I had worn glasses for several years, as I was supposed to have a very bad case of astigmatism. The glasses seemed to trouble my father and he talked a long time about Christian Science, and how it could and would make them unnecessary for me. The next morning, when I dressed, I thought, "Father talked so much about my glasses not being necessary. I will leave them off just to please him by trying, but I know I will soon need them, and of course it will give me a severe headache, as usual." Night came and I suddenly remembered I had not needed my glasses all day, and great was my surprise. That evening I lay down while reading and so put on the glasses again, since according to the belief of mortal mind law, that

was the greatest trial I could give my eyes. The next morning I thought, "I got along so well yesterday, I will try it again; of course I know it is foolishness, but I will do it just to please father."

Wonderful as it seems, I never wore my glasses again. I was entirely healed and yet I was ashamed of it, and for a while would not admit it.

I finally wrote my father, and I can now realize his joy and his later happiness when I was healed of other physical and moral ailments through a dear and loving friend. He can say, "I have no greater joy than to hear that my children walk in truth."

If a father feels this joy over his daughter's healing, her finding of Truth, how much greater must be Mrs. Eddy's joy and happiness that she has been able to show the way to so many. "I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a stranger and ye took me in." "And the king will answer and say unto them, Verily I say unto you, Inasmuch as ye have done it unto the least of these my brethren, ye have done it unto me." "Rejoice and be exceeding glad: for great is your reward in heaven."—M. S. MERRICK, Brookline, Mass.

Many years ago, when I first heard of Christian Science, my attitude toward what I thought it to be, was one of strong antagonism. I understood that it was only a method of healing disease, and that without material means. As time went on, I learned that several people whom I knew, and who were acknowledged to be intelligent and sensible, believed in it and claimed to have been healed by it, and though I had to admit that they were healed and by something that did not belong to medicine, yet I felt some disgust and a great deal of pity for any one who could be so deluded. But the time came when I too was in great need of something to help me. Although I had adhered faithfully to medicine for several years and had even resorted to surgery, I did not receive the health and strength so much desired, and was practically a nervous wreck with no hope of ever being well again. It was at this time that a dear friend who had been healed by Christian Science, urged me to try it.

I purchased a copy of Science and Health and began to read, hoping that as it had helped her it might help me, but I could not understand it in the least. Sometimes after reading, the book would be put aside with the thought that there was no use in trying to understand it. A copy of "Miscellaneous Writings" by Mrs. Eddy was loaned to me. That seemed a little clearer and I kept on reading, and finally decided to consult a practitioner. I applied to one of Mrs. Eddy's students and arranged to take Christian Science treatments. From the very beginning I began to realize that instead of being merely a physical remedy, it was a most beautiful new, yet old, religion, so full of hope and comfort that all things became new. It was indeed a revelation. Here surely was the "pearl of great price" I had been longing for all my life. I began to improve right away and in about five months was healed. Within a year, with the little understanding I then had, I was able to lay aside my glasses, which I had worn for over five years, and although that was five years ago I have not needed them since. This is only a very small part of the physical help received, for all of which I feel very grateful indeed, but, as every Christian Scientist knows, the physical help is only one of the many blessings this beautiful understanding of the Bible brings to us. Words are indeed inadequate to express my gratitude for a religion that is so practical that through the understanding it gives us of God and our relation to Him, we are enabled to overcome the difficulties of every kind that enter into our daily experiences. We learn how to live instead of how to die; that Life, not death, is the real, and that the teaching and example of Jesus are just as practical to-day as they ever were. He said, "the

Son of man is not come to destroy men's lives, but to save them," "I am come that they might have life, and that they might have it more abundantly," and Science and Health tells us that "Not death, but the understanding of Life, makes man immortal" (p. 485).

ADA C. MERRILL, Toledo, O.

God's protection, as revealed through the teachings of Christian Science, is proven to us every day. I would like to relate one incident which happened in our family not long ago. Our little daughter was leaning over the back veranda railing, when in some way she lost her balance and was plunged headlong to the ground, a distance of about ten feet, right into a rose-bed. She struck on her head, making quite a hole in the earth. A maid who saw her go down rushed to her assistance, but found her scrambling to her feet and exclaiming, "I am not hurt one bit." She was brought into the house, continuing to exclaim, "I am not hurt," as much as her mouth, filled with dirt, would allow. She was not harmed or even scratched in any way. After I had read to her from Science and Health at her request, she went to bed and slept soundly as usual until morning.

The next day she said to me, "Mamma, if I hadn't known Christian Science I might have been badly hurt yesterday," and when asked as to what she thought when falling, she replied, "I *knew* it couldn't hurt me." Those words from our text-book, found on page 14, are recalled: "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints."

I have seen many ills overcome in our family, and I am thankful for both the physical healing and the spiritual uplifting. Words fail to express my gratitude to our dear Leader, who so patiently and lovingly guides us. I am also grateful for the periodicals which are so helpful to us.

IDA M. NORTON, New Britain, Conn.

It is eight years since I first began to investigate Christian Science. The first truth I grasped was that God is good and that He is all; hence all that is real is good (Science and Health, p. 113), and with that I began to demonstrate over sickness. It is still the foundation of my understanding, and becomes clearer with time. I have been helped so much by reading the demonstrations of others that I have often thought I would like to tell the Field some of the blessings which have occurred to me through Christian Science. Not long ago it was suggested, that if our problem seemed hard to demonstrate, we review our experiences of the past and gain courage thereby.

I soon had an opportunity to test this plan. I was awakened in the night by that unmistakable croup cough. My first sense was terror, but instantly it came to me to recall, as David did, how many times I had been delivered from the paw of the lion and the bear, and I was able to say, I have no fear, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." I heard no more of the error, for the demonstration was made in less time than it takes me to write it. I fell asleep rejoicing in the truth that makes us free. I will speak of one more experience. I was reading in "Retrospection and Introspection," and came to this statement: "If you fall asleep, actually conscious of the Truth of Christian Science,—namely, that man's harmony is no more to be invaded than the rhythm of the universe,—you cannot awake in fear or suffering of any sort" (p. 84). "That is wonderful," I said, "and I must get the exact words fixed in my mind." A few nights later, I retired with a sense of pain in my right lung, so that I was unable to draw a long breath. I thought of the children sleeping upstairs, and to satisfy myself of their perfect safety, I recalled that which I had learned from "Retrospection and Introspection," and it then seemed to me the most remarkable statement our Leader had ever

made. I instantly noticed that the pain was entirely gone and I knew it was Truth that had healed me, for I was not thinking of a demonstration. I desire to live and reflect this truth so that others may be attracted to it.

MRS. J. A. R., Howell, Mich.

It is over a year ago that I met a Christian Scientist in the street and she stopped me and asked if the doctors were helping me. I told her that I had been under the doctor's care four years and they had not given any permanent benefit. I had what the doctors called paralysis, which left my legs so weak that I was unable to walk very far without the help of a stick. This lady told me that I could be healed, as hundreds of such cases as mine had been cured. I was delighted with her cheering words, and I consented to be treated. I knew that as God was the great Physician He could heal me. In a few months' time I began to improve, and could walk without a stick a distance of four miles. Friends of my parents began to discourage me and to talk against the treatment, and although my healing is slow they have not been able to do that, for I believe the work will be completed. I have bought Science and Health and am getting a beautiful understanding for myself. I have been uplifted with this glorious truth, and have felt and do feel the peace that passeth understanding, which I never before experienced, and I know, as it says in Science and Health, p. 254, "When we wait patiently on God, and seek Truth righteously, He directs our path."

My sister also has been greatly benefited by Christian Science, in the healing of what the doctors said was lung trouble. She was a regular attendant at an orthodox church, and used to believe in everything the clergyman said, until he preached against Christian Science and declared it was from the devil. Both of us are interested in Christian Science and attend the services. I am sure we cannot thank God enough nor be too grateful to Mrs. Eddy for this glorious truth, and we know the work will be done as it has been to others.

MISS A. WRAGG, Norwich, Eng.

Nearly a year ago my little boy was brought home from school by his teacher, who said that he was badly hurt, and as she undid the bandages on his hand I saw that one finger hung by a tiny piece of skin. I immediately sent for a physician, who dressed the finger, taking two stitches, but without the use of chloroform which he brought, and intended to use. That night the boy used both hands and was very happy through it all, never suffering or complaining. The finger is not stiff and he has perfect use of it. We had our trial, however, for the doctor said the bone was not uniting and that it would not unite, but it did. My oldest daughter was also lifted from death's door through Christian Science. I might mention many other instances of healing,—such as sprains, burns, and mumps. These have all been overcome by that same sweet assurance and calm trust in Truth that Mrs. Eddy has made possible through the teachings of "Science and Health with Key to the Scriptures." I feel very grateful to her, and also to those who stood by me so lovingly through all my trials, and hope that some day I may be able to do as much for others.

CARRIE R. PECK, Ludington, Mich.

I feel like a prodigal coming forward to acknowledge a father's blessing, so tardy have I been in expressing, through our periodicals, my gratitude for what Christian Science has done for me and my family; nevertheless, not a day, scarcely an hour, goes by, that my heart does not go out in gratitude to Truth, and to our dear Leader, through whom this healing revelation has come. Prior to being healed, there were conditions that confined me to my bed for days, unable to bear even the walking of any one across

the floor, sick with headaches that were a terror to me by day and night, and with acute stomach trouble. All this has passed away under the treatments of Christian Science. Is not this a proof of God's omnipotent care? I can never forget the patient, loving, tender attitude of the one who did the work for me. It has been an example for me in all these years of work for others. She was never discouraged, and so happy, when I finally realized that I was healed. I can never be grateful enough to our Leader, who is pointing the way, day by day, out of this wilderness of belief in evil.

MATTIE S. RICHARDSON, Oak Park, Ill.

I came to Christian Science for the healing of two ailments, one of which, according to mortal belief, was wearing out my very existence. I had been treated by the best physicians for years. Some of them would help me for a while, but would always say, "You must not lift, or your trouble will come back." Finally I was placed in a position where I had to lift an old grandmother who was bed-ridden, from one to six or seven times a day. I then turned to Christian Science and in three weeks I was entirely healed, so that I took care of her for two years, and I have never had the least return of my complaint. I have also been healed of a cancer on the liver, which had been growing for a year. One other ailment has been very slow of healing, but for what has been accomplished I can say I am truly thankful. I cannot express my love and gratitude to our Leader, Mrs. Eddy, through whom this wonderful truth has been revealed to the world. I am also grateful to my practitioner, who has kindly shown me the way.

MRS. MOLLIE BUCKMAN, Topeka, Kan.

Ten years ago my sister came to the college town where I had been studying to take me home, because my health had failed and I could no longer do any of my work. A distressing ailment—falling in unconscious spasms—had been growing upon me and coming at more and more frequent intervals, and I was nervously very much broken down. My twin sister at home had begun to learn of Christian Science, so I turned to it for help. I found, from the first, that it met my lifelong need of spiritual and mental guidance and support, and that the want of it had led me into the hard ways of mortal sense, and to ill health. Christian Science has truly given me the key to God's word, which is "a lamp unto my feet, and a light unto my path."

Gradually I grew stronger and better in all ways, too many to tell of, until the old troubles have been forgotten.

I am very thankful to Mrs. Eddy for the wonderful teaching of Christian Science and all she has done to establish the many ways through which its divine light comes to us.

I wish to point others who are in any kind of need, to Christian Science, which teaches of God and how to find Him as "our refuge and strength, a very present help in trouble."—MABEL CLARA ROBBINS, Marcy, N. Y.

It is now almost two years since the glorious healing rays of Christian Science dispelled for me the darkness of a depressed mental condition. Without God and without hope in the world, I was beginning to despair of ever having this chaotic condition unraveled; but, thanks for the blessed sunlight of truth as revealed to us in Science and Health by our beloved Leader, Mary Baker G. Eddy,—the very truth that Jesus spoke of when he said, "Ye shall know the truth, and the truth shall make you free,"—one treatment in Christian Science not only relieved me of a tobacco habit of sixteen years, but revealed to me a new heaven and a new earth,—a new understanding of the facts of being. The Bible, which I had practically discarded many years ago, has become my spiritual revelator and my guide to eternal life.

I have nothing but thoughts of gratitude for all who

helped to break the dam of mortal mind which seemingly surrounded me, and which kept from me the water of which if any man drink he shall never thirst again.

All honor, praise, and glory to our heavenly Father for the flood of truth that is breaking through and overflowing the Adam consciousness, for ere long "the day breaketh" and the watchman of the night shall enter into his rest.—W. A. HAY, Cleveland, O.

Within the last week three ailments have been met, and after this demonstration, trust in God as Love is perfect. It is a happy moment when we know that we have prayed aright in little things, and were heard as well as in the larger things. Years ago I used to be perplexed as to how one could find a remedy for all the ills in a growing family. I had observed that those who ran to a doctor every time, had more sickness than those who relied on their own resources. Now, thanks be to God as revealed in Christian Science, and to our Leader, we have a remedy for every ill.—MRS. A. K., Cortland, Neb.

For the benefit of those who are looking for rest and health, I am glad to testify to the great benefit I have received through Christian Science. For many years, as far back as I can remember, I had been a sufferer. The doctor was a frequent visitor in our home, and I took medicine constantly, feeling that I could not live without it. I am thankful to know that God takes care of me, and that I do not need medicine to be well. I am stronger and feel better than I ever did in my life before. I love Mrs. Eddy for all she has done for this suffering world. My greatest wish now is to help others to find this blessed truth which will make them free.

I. T. S., New Haven, Conn.

I would like to express my gratitude for what Christian Science has done for me in the past five and a half years. Before this time I was under a doctor's care for ear trouble with but temporary relief, and at times I could hardly hear at all. At this time a dear friend invited me to attend a Christian Science Sunday service, which I gladly did, and after attending several services I was entirely healed of the ear trouble, and not alone of this, but I was also healed of blood poisoning in a very short time, with the help of a practitioner. I am thankful for all the blessings that we have received. And although the way seemed very difficult at times, yet through divine Love,—the omnipresent God, we have always won the crown of rejoicing. For this we are very grateful to God, to Christian Science, to our beloved Leader, Mrs. Eddy, and to our teacher.

F. C. NIEMANN, Milwaukee, Wis.

I have long desired to express my gratitude for what Christian Science has done for me and my family by reading "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. I was healed of profanity, the tobacco habit, and a bad temper, through the understanding that man is the image and likeness of God. I was also healed of kidney disease, rheumatism, dyspepsia of long standing, and weak eyes. What surprised me most, however, was this. I had had one finger thrown out of place some fifteen years before. It was crooked, but it became straight and useful. A bone in my foot had also been broken, leaving a bunch, which disappeared after I studied Christian Science and received class instruction. I am an entirely well man and for this I am very grateful. I am also glad that I have learned enough of Truth and Love to be able to heal others. I wish to express my thankful appreciation of our dear Leader, also of the *Sentinel* and *Journal*.—NEWTON R. FULLER, Salina, Kan.

I would like to join my voice with the others in praising God for His goodness, for His wonderful love "to the children of men." I have been a little over two years in Christian Science, and the peace of these years has been past all understanding. I can remember nothing but fear and dread most of my life, that grew instead of lessening as the years passed on,—grew until sickness and great heartache followed and death seemed fast treading upon their heels, when I was led to Christian Science. I knew it was the truth that I was looking for, and I never have doubted since the loving Scientist told again, "the old, old story of Jesus and his love." Before a week passed the joy and hope in my heart were unspeakable, the sickness driven out, and the fears so shown in their true colors, that I gladly buckled on the armor of God, ready to war with them. Some have been routed forever, others try at times to be heard, but I know who wars with me and I am not afraid. Most of my immediate family have come into Science, and I am trying to show my gratitude to God and to our Leader by my obedience to Him. He alone knows the darkness and suffering which her faithfulness, devotion, and self-sacrifice have brought me out of, and there is deep joy in my heart, knowing that her reward is with Him.

MAUD R. HARTZ, New York, N. Y.

While I am a Christian Scientist and have been a class student for some time, and have read all of Mrs. Eddy's books, I had never thought of treating against the tobacco habit. I was so deeply impressed with the prayer in the Manual beginning, "Thy kingdom come" (Church Manual, p. 57), that for days my consciousness was permeated with it.

One morning with tobacco in my mouth, a strange sensation came over me; for a few moments I could not understand it. The tobacco became distasteful and I threw it away, and soon after I realized the meaning of this experience. It was the passing of the desire for tobacco. It was an answer to the prayer, "rule out of me all sin."

I began the use of tobacco,—chewing and smoking,—at seven years of age. I was a slave to it for forty-two years. It has been nearly three months since this healing, and I have not had the least desire for tobacco since. I feel a great deal better, and have gained fifteen pounds in weight.

I am truly thankful for Christian Science and all its teachings, for I know it is the truth I have so long desired.

JESSE H. LOCKHART, Atlanta, Ga.

In a recent article in the *Sentinel* some one reminded us of the healing grace in all the words of our Leader, citing among others of her beautiful sayings "not matter but Mind satisfieth." This has always been very dear to me. The little lad in our house always repeats it for grace before eating. I would like to tell of my instantaneous healing one day last fall. I had been struggling for more than a day with a sense of defeat and despair, when the *Sentinel* came. I opened it and turned at once to find a word from our Leader. I found it in the "Card," "My beloved Students:—If your right hand is not to know what your left hand doeth, may I ask you to change hands." That was enough, the uplift came like a flash, the first joyous laugh for days found voice, and I was all well. The delicious humor and sweetness of it cast out the gloom, and I arose ready to lend a hand.

KATRINE KRUDOP, Manhattan, Kan.

We must make men realize that there is a God, that they are in His presence and His power. The more we make men feel that God is in the world, the more justice and righteousness there will be.—GEORGE A. GORDON.

From our Exchanges.

If God is holy, and this world and man are His creation, very evidently the world is not in a state answering to God's idea of it, or His desire for it. Something has gone wrong. There has emerged something which is not according to God's will, which ought never to have been there, which our deepest moral instincts tell us God can only look on with condemnation and abhorrence. Our own hearts condemn us, and God is greater than our hearts, and knoweth all things. This something which is wrong we are wont to call by the dark and terrible name of Sin. We dare not make light of it, or weaken it down into some transitory but necessary stage of human development, or tamper with the condemning testimony of our consciences regarding it. But if the world is in such a state of sin, a new problem arises which unaided reason can never solve or even guess at the true solution of. It is the old problem.—on the one hand, What is God's relation to sinners? and on the other, How is man to regain his right relations to God? How is he to get out of his wrong relations to God? And to these questions man can never from his own resources find an answer; it is God who must speak, man who must listen.

PROF. JAMES ORR, D.D.
The Watchman.

Man has within him a mysterious power which thinks of God, desires God, reaches out after God, seeks after God, enters into fellowship with God, feels the presence of God, and rejoices in His presence and love. Man is a physical being, an intellectual being, a social being, and a religious being. The religious power may be impaired, as the imagination or memory may be impaired. Those who refuse to hear the voice of God, and turn away from Him, will lose the power of faith if they persist in this course. That faculty which goes out after God and is so sensitive and quick in childhood may be obliterated. The inner light may become darkness. The tender heart may become hard as a stone. The eyes, once so keen to discern spiritual things, may be put out.

The dreadful thing about this spiritual suicide is that it is in the power of every one. No one can permanently injure us except ourselves. "All things work together for good to them that love God." Whatever others may do unto us will be mustered into our service. It is only the blow which we strike with our own hand that can harm.

The Christian Advocate.

It is a principle of sound ethics that to do right leads to clearer perception of the truth. Spiritual perception is developed by the practice of righteousness. The love of God for men is the pledge of the sinner's moral renewal. The possibilities are unlimited. Life is full of parables. Nature is rich in medicinal and remedial forces. The discoveries of science are mastering the causes and the evils of bodily disease. The sewage of a city may be treated in such a way as to produce a pure and innocuous water out of unspeakable vileness. God is teaching us that the sinner may be saved, not merely from a future hell, but from that which makes hell,—sin and ignorance and folly. But underlying the fact and process of salvation are these two fundamental principles: trust in the righteous and benevolent God and obedience to His righteous and beneficent will. These are essential to our peace and the fulfilment of our highest life.

PHILIP S. MOXOM, D.D.
The Homiletic Review.

Those who think that business and religion are incompatible would do well to consider what sort of business they are in, and how they are carrying it on. By-and-by they will be required to give an account of their stewardship.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDIT, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year,
each copy, ninety-five cents.Twenty-five copies or more to one address,
one year, each copy, ninety cents.Fifty copies or more to one address, one
year, each copy, eighty cents.For Foreign subscriptions add, for postage,
fifty cents per copy to rates given.Six months' subscriptions received at half
the above rates.No subscription received for less than six
months.Subscriptions to the *Sentinel* will be entered
to begin with the first of the month.The date of expiration may be found on the
address. Nother notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any ad-
dress; twenty-five copies, fifty cents; fifty
copies, ninety cents; one hundred copies,
\$1.65.Foreign: Four cents a copy, postpaid, to
any address; twenty-five copies, seventy-five
cents; fifty copies, \$1.40; one hundred
copies, \$2.65.*Entered at the Boston, Mass., post-office as
second-class mail matter.*

Items of Interest.

National.

The great Packers' Strike, which began July 12, involved almost seventy-five thousand men in various cities, and has cost in round numbers, to the packers in damage, lost business to the railroads, and to the men in wages about fourteen million dollars, was declared off on the 8th. Those for whom places can be found are to be taken back at the wages prevailing before the strike was called. Otherwise there are no terms. The union stewards are to be abolished, the yards will remain "open" and the packers will reduce forces so that all employees can be given a full week's work. Nearly twenty thousand of the former striking butcher workmen and allied tradesmen have already been reemployed and are at work. Only some of the skilled men brought there to break the strike, and those who have acquired proficiency, will be retained by the packers.

Orders for the purchase of a large quantity of material necessary for carrying on the work at Panama have been given by the Isthmian Canal Commission. Proposals will be asked for supplying a very large quantity of cement; for one thousand steel dump cars to be used on the work now under way at the Culebra cut; for vitrified sewer pipe required in the sewer construction at Panama. By the terms of the treaty the Commission is given charge of the water supply and sewerage system of Panama and Colon, the work upon which has begun. A complete code of laws for the government of the canal strip has been prepared by the Commission and only awaits the approval of the Secretary of War to become effective.

The attendance at the St. Louis Exposition during the last week broke all records since the opening. There were 874,954 admissions, being almost 100,000 more than in any previous week. Altogether a total of 9,994,510 admissions have been recorded since the opening of the Exposition.

A very careful investigation conducted by the *Boston Transcript*, shows that the num-

ber of American buffaloes has increased from 1,024 in 1900 to at least 1,233 in 1904.

Foreign.

According to information obtained at Pekin the interests of Great Britain are well protected in the treaty with the Tibetans. The treaty binds them to agree to grant trading facilities, to demolish all forts between the Indian frontier and Gyantse, and repair all dangerous passes on the existing routes of travel, also to pay an indemnity of 7,500,000 rupees in three annual payments. British troops are to occupy the Chumbi Valley until the indemnity is paid and all other agreements fulfilled. In addition, the Tibetans agree not to sell, lease, or mortgage any Tibetan territory without Great Britain's consent, nor permit any foreign power to be concerned in the administration of the government.

Not less than ninety-three fortified places of modern type, some of them being nearly impregnable, guard at present the French frontier from Dunkirk to Nice. Most of them have been built since the Franco-Prussian war at a cost of \$400,000,000. France has to appropriate annually about \$1,000,000 for the maintenance of these fortresses. Recently not a few military men have expressed grave doubts as to the value of this chain of fortifications in time of war.

Owing to seizure of American vessels in 1834, Spain had many claims presented against her and agreed to submit these to arbitration. A court gave verdicts for about \$500,000 to American citizens. Spain has never paid anything on the principal, but has paid the interest every year since then. This Government simply agrees to transmit the money to the proper claimants or to their heirs. The annual check amounts to \$28,000 and has just been received at Washington.

Industrial and Commercial.

The commerce of the United States with its non-contiguous territories aggregated more than \$100,000,000 in the fiscal year just ended. The term non-contiguous territory includes Porto Rico, the Hawaiian Islands, the Philippine Islands, Guam, Tutula, and Alaska. To Porto Rico shipments of breadstuffs amounted to \$1,084,634, of which \$983,151 was flour; cotton shipments to \$1,670,005, of which \$1,090,076 was cotton cloths; iron and steel manufactures to \$1,013,061, and provisions \$1,192,016 while the total value of domestic merchandise shipped from the United States to Porto Rico was \$10,727,015, and of foreign merchandise, \$483,045.

The principal articles received from Porto Rico were sugar, valued at \$8,997,066; tobacco, \$1,721,062; fruits and nuts, \$426,979; coffee, \$279,461. Foreign goods to the value of \$145,914 were also shipped from Porto Rico to the United States. In addition to this, the exports from Porto Rico to foreign countries were \$4,436,478, and the imports from foreign countries amounted to \$1,958,969.

The shipments of domestic merchandise to Hawaii amounted to \$11,602,080, of which \$1,512,311 was breadstuffs, \$1,020,125 cotton manufactures, \$1,453,150 manufactures of iron and steel, \$962,763 mineral oil, and the remaining miscellaneous merchandise of all descriptions, chiefly manufactures. The merchandise received into the United States from the Hawaiian Islands during the year amounted to \$25,133,533 in value, of which sugar amounted to \$24,359,385, representing 736,491,992 pounds.

To the Philippine Islands the shipments of domestic merchandise from the United States amounted to \$4,831,860, of which \$778,767 was manufactures of iron and steel, \$322,259 cotton manufactures, \$268,575 manufactures of leather, \$418,883 refined mineral oil, \$311,191 provisions, and \$621,171 wood and manufactures thereof. From the Philippines the value of merchandise received from the United States was \$12,066,934, of which \$11,044,789 was manila hemp and \$884,160 sugar.

To Alaska the shipments from the United

States amounted to \$9,869,721 of domestic merchandise and \$295,389 of foreign goods. The principal shipments consisted of provisions, \$1,163,271 in value; manufactures of iron and steel, \$2,126,951, and wood and manufactures thereof, \$657,566. Canned salmon to the value of \$8,552,985 was shipped from Alaska to the United States. The shipments to the United States of gold produced from mines in Alaska amounted to \$6328,524. To Guam, the Midway Islands, and Tutula the shipments of domestic merchandise from the United States amounted to \$199,095, against \$39,614 in the preceding year.

One of the most notable works of modern engineering has recently been completed in Canada. It is a canal liftlock, the only one of its kind on the continent. It gives direct connection between Lake Huron and Lake Ontario. A natural system of navigable rivers and lakes provides a basis for such a connection, making possible a short cut across the country of about 200 miles, a saving of 250 miles as compared with the present route by way of Lake Erie. Of this total distance of 200 miles, about 20 miles will be canals.

The lakes making up this central section are of varying heights, the highest point, about midway, being 600 feet above the level of Lake Ontario. To overcome these differences in level a series of locks has been constructed. The largest of these locks is at Peterboro, where a drop of 66 feet has been overcome by the construction of an immense double hydraulic lift. This consists of two watertight steel boxes, in which vessels are raised or lowered from one reach to the other. These pontoons are each 150 feet long, 9 feet deep, and 38 feet wide, and the pistons on which they are supported are five feet in diameter. The change from one level to the other is made in twelve minutes, though the actual time of vertical motion is only one and one-half minutes. The lock is automatic, the gates and capstans being worked by hydraulic power. During operation there is a pressure of 600 pounds to the square inch, and the approximate weight of water in each pontoon is 1,300 tons. There are several locks of similar principle in Europe, but the Peterboro lock is the largest in the world, with the greatest presses, cylinders, and working stroke ever built.

The shipment of five thousand tons of Cape Breton coal to Vera Cruz, Mexico, to be tested by one of the great railways of that country, marks an important step in the development of the Nova Scotia coal trade. If the coal is found satisfactory by the railway authorities, it is likely that a regular trade will be opened up between Sydney and Vera Cruz.

Last year the vessels engaged in fishing in the West of England numbered 8,254 and afforded employment to some 41,539 men; their tonnage was 160,096 tons. The fisheries of Devon and Cornwall accounted for 1,097 vessels of 23,010 tons and the employment of 8,059 men.

The imports of foreign pig iron, scrap iron, old iron rails, structural iron, steel blooms, steel billets, steel wire rods, scrap steel, etc., which, during some months within the past two years have aggregated close on to 100,000 tons, fell to 4,928 tons in August.

Negotiations have been practically concluded whereby the Harriman railway interests will place orders with the United States Steel Corporation and other steel companies for 100,000 tons of steel rails at \$28 a ton.

General.

The rails of the Mexican Gulf Railway in many places are laid on mahogany sleepers, and the bridges built of white marble. In West Mexico is a line with ebony sleepers, and the ballast of silver ore drawn from old mines beside the track. The engineers constructing these railways had no other material on the route, and found it cheaper to use these seeming extravagances than to import the ordinary material.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Ministry of Bitter Herbs.

KATHARINE J. SMITH.

TO-DAY, I drew from the grass a slender, benighted dandelion blossom, ripe and ready for its sowing, and watched the tiny unnumbered seeds floating so gaily away. Gently and steadily they journeyed outward and upward, glistening like silver motes in the rain-washed air.

"Why are they thus fashioned, and what keeps them from falling?" I questioned, and the response to my thought proved an interesting lesson in physics, and gave an enriched conception of the manifestations of Truth.

Catching one of the drifting atoms I saw that the seed was provided with an airy filament of down, forming a perfectly proportioned parachute which sustained and guided a seed many times its weight. All my life I had watched these midget airships of nature come and go, bearing abroad their freight of fruit from the parent granary; yet I had never in this wise even endeavored to apprehend that infinite Principle which governs what we call physics as well as metaphysics. Many outstripped my sense of sight, for "the wind bloweth where it listeth;" some traveled in fairy squadrons, noiseless in their contact, unharmed in their collisions, till, lingeringly, each tiny craft found anchor in the long grasses, in thickets of field daisies, and under the dark leaves of fern and phlox.

I still held the gaunt, bald stem of what I had thought a benighted blossom, and I had been reminded that truth is infinitely prolific. The seed goes out, a seeming wanderer, but never a vagabond. Its gossamer rigging silvered with light, gives it gentle descent through the rarefied air, and its dissemination is broad. Respecting neither roadside, field, nor garden, stony ground nor reeking marsh, rugged, invincible, bitter, but wholesome, the little plant is found everywhere rising in fealty to the light above, a springtide glory of yellow blossoms.

Is any manifestation of Truth ever benighted? As I thought upon the course of these little mariners, I found the answer to my query.

Startled into humility by the lesson I had already learned, I thought yet further of the flavor of this golden-bloom, and was reminded how often I had been surprised and exasperated by the bitter experience which, to the novice in Christian Science, so frequently attends the simple yet sublime disclosures of Truth. How often in the weakness of spiritual famine, have I fallen with avidity upon these wholesome herbs, to rebel later, because I found their "digestion bitter."

Our revered Leader says, "When you approach nearer and nearer to this divine Principle, when you eat the divine body thereof, thus partaking of the nature, or primal elements, of Truth and Love, do not be surprised nor discontented because you must share the hemlock cup and eat the bitter herbs, for the Israelites of old, at the Paschal meal, thus prefigured this perilous passage out of bondage into the El Dorado of faith and hope" (Science and Health, p. 559).

All too early and too often we forget the noontide glory that shines above the bitter experience,—forget the gentle dissemination of divine Love; how noiselessly and with what healing it fell upon our own arid acres, fields which only Truth could reclaim and grace with green and gold.

Only when our thought has grown transparent enough to see that which is clear, clearly, shall we be possessed of the God-like ability to know, and the God-like power to do. With what gratitude and obedience then should we acknowledge the salutary ministry of bitter herbs, and strive to silence our questionings in the activities of quest. Trusting Truth with the afterwhile, experience shall grow sweet and we shall more fittingly render love unto her whose pure and fertile thought came forth from God's granary in witness of His word: "And I will make the place of my feet glorious."

O, beautiful, mellowed thought, which came to silver our own with the white light of measureless Love, and strew His gold at our unsandalled feet.

A Word Concerning Discouragement.

BLANCHE H. HOGUE.

THE feeling of discouragement is a phase of human experience with which every mortal is more or less familiar. It besets almost every effort which is not immediately successful, and claims to be the natural accompaniment of all anxiety and disappointment in human affairs. It makes its inroads, in varying degrees, upon every life, because of the very nature of the daily problems; and every man desires to be rid of it.

While Christian Science opens an unfailing way of escape from this condition of thought, nevertheless, many students have found that they are at times just as heavily discouraged as they were before becoming Christian Scientists. The one great difference between the two mental situations, however, is that, in the old pathways, one submitted more or less to the arguments of discouragement until time or experience, changing the circumstance, revived hope, whereas Christian Science offers an intelligent, effectual way of dealing with all discouragement. The teaching of Christian Science does not promise immediate release from all trial, temptation, and cross-bearing, nor does it assure complete immunity, at once, from the many adversities which tend to dishearten and dismay mankind. But from the moment the revelation and logic of Christian Science penetrates the mind and heart of a student, that man or that woman is better equipped for the battle against adverse conditions, and is fortified, in growing measure, against the suggestions of discouragement accompanying such conditions. And this, because encouragement is not dependent upon outward circumstances, but upon the ever-present indwelling expectation of the triumph of righteousness which Christian Science fosters in its adherents.

One reason why the student of Christian Science is tempted to be discouraged, perhaps more sorely discouraged than ever before in his life, is because his first knowledge of Christian Science unveils to him a perfect model, sets

it before him as *his* model, and insists that, as speedily as possible, he mould his thoughts and deeds to conform to its exalted requirements. This ideal once in his heart, nothing short of his best effort contents him, and the results, even of the best he can accomplish, are often so far from the perfection perceived, that the comparison, in itself, would argue for discouragement. Often the student is prone to overlook the fact that the recognition of his own failure, coupled with the clear understanding of the reasons therefor, is the greatest possible cause for encouragement. In the old way, he may have been accustomed to excuse his shortcomings under the common belief that "human nature is not expected to be perfect." In the new way, the same imperfections cause him more pain, because he is more keenly alive to the demand for perfection. With the divine command "Be ye therefore perfect" standing as the continual monitor of each hour and each day, it is not unnatural that the old inclinations and habits of thought should, by sharp contrast, seem disheartening. The perfect standard causes thought to condemn more swiftly than before, the inherent traits of the human nature; and the quickened desire for righteousness, exposing more clearly the nature of error, seems at times to exaggerate the sense of error's stubbornness. The means by which to redeem this situation, however, come in the same hour which demands the redemption, because the knowledge that the way of escape from evil has been found, stimulates hope and supplies the quality of courage which silences all possible arguments for discouragement.

The young students in Christian Science are prone to believe that other students, and particularly the more experienced ones, have less to discourage them and more to rejoice them than does the beginner. This may be true in some ways, but in no way is any Christian Scientist released from the attack of that argument which would discourage if it could, until he has learned *why* he need not be discouraged. The older student may have one advantage over the beginner, in that he has learned, in greater measure, how to refuse to be discouraged when the temptation does confront him. For he has acquired, in the degree of his growth, a larger view of the question of salvation, which shows him that many of the things which seem discouraging are, if handled rightly, stepping-stones to greater strength and deeper joy. A limited vision may see reasons for discouragement in many elements which are really instrumental in pushing a problem to a happy solution, while that clear faith which sees to the end, or trusts if it does not see, bends all untoward circumstances to prove Paul's statement that "All things work together for good to them that love God." Each Christian Scientist has but to look back upon past experiences, to admit that much which discouraged him might well have encouraged him had he retained his broad outlook and remained upon his loftiest pinnacles of thought instead of going down into the valleys of false evidence. He thus learns to guard his mental position, in the midst of trying or disappointing experience, that he may not lose the vision which trusts to the end, and is never robbed of its joy.

In *Science and Health*, page 450, we find, "The Christian Scientist has enlisted to lessen evil, disease, and death." There is no discharge from this warfare until all error shall be overcome, and at every stage of the battle error will lift what voice it has, in the attempt to stay the righteous effort toward its destruction. It rests with the individual student, whether he shall entertain or silence these suggestions. The way can be one of discouragement and complaint, or it can be one of encouragement and gratitude. Two students may go through the same kind of experience: one will lament because of it, and wonder why he has so much to meet, while the other rejoices in spite of it, and is thankful that he has a knowledge of the truth with which he meets it. One burdens himself and others by listening to the

error, the other cheers and inspires all about him by refusing to listen to anything but the truth.

Richard Chevenix Trench has said,—

Some murmur when their sky is clear
And wholly bright to view,
If one small speck of dark appear
In their great heaven of blue;
And some with thankful love are filled,
If but one streak of light,
One ray of God's good mercy gold
The darkness of their night.

In palaces are hearts that ask,
In discontent and pride,
Why life is such a dreary task
And all good things denied;
And hearts in poorest huts admire
How love has in their aid,
Love that not ever seems to tire,
Such rich provision made.

Surely those hearts which "with thankful love are filled," cannot suffer discouragement. The mental attitude, not the external situation, decides the question.

The mental refusal to listen to error, is the one scientific way to exclude discouragement from experience. It is self-evident that the undestroyed error remaining to-day in the life of any Christian Scientist could well discourage him, had he not learned to shut out the voice which argues against the success of righteousness. And on the other hand, no Christian Scientist has any excuse for discouragement, if he will measure justly his Christian progress, and adjust his reason to the necessary lessons of his spiritual growth. Mrs. Eddy has written (page 389, *Miscellaneous Writings*).—

Oh! make me glad for every scalding tear,
For hope deferred, ingratitude, disdain!
Wait, and love more for every hate, and fear
No ill,—since God is good, and loss is gain.

Those students of Christian Science who can honestly join their Leader in this prayer, wield a mighty battle-axe against all that would dishearten or discourage. They have a God-given control over every situation, and "renew their strength" from day to day.

Mrs. Eddy's book, "Science and Health with Key to the Scriptures," teaches its student why evil is not real; why it has no power; why it is not to be honored nor feared. Can one who is growing into the possession of such knowledge, consistently yield to discouragement? The student can deal intelligently with each argument of discouragement when he knows that the evidence about which error is saying, "You are discouraged," is unreal, untrue, and powerless; for he can give enlightened reasons for not believing it, and thus demolish its claims. That one knows enough about the "eternal Right," to be discouraged with ways and conditions that are wrong, is, paradoxical as it may seem, reason for encouragement, and should lead thought at once into the ways of activity and gladness; for it means that the worthless and unsatisfactory nature of evil has become more apparent, and a hope is aroused, and an effort made, in the right direction.

Christian Science promises so much more than any system of religion or therapeutics, that impatience for an immediate fruition often leads to needless discouragements. But those who are tempted, in looking at the instantaneous healing of others, to be downcast because their own victories over sin and disease seem delayed, need to remember that this growth in righteousness is an individual work, and the blessing comes no sooner than room has been made to receive it. The instantaneous healing may be the fruit of many hours of purifying suffering, before the hem of Christ's garment had been discerned, while another man may need to learn these same purifying lessons *after* he has recognized the way in which he must walk. This is one of the lessons which may be learned from the Master's parable recorded in the twentieth chapter of Matthew's Gospel.

It may have seemed to him who had toiled all day in the vineyard that those who came in at the eleventh hour and received the same penny, were unfairly rewarded for a less service. But such an one must remember that while he was privileged to work in the shelter and protection of the vineyard, under the loving guidance and care of the husbandman, his brother, in those same hours, may have been toiling painfully, or waiting miserably, in the loneliness and bitterness outside the gates, and thus have earned an instantaneous healing in that eleventh hour when he did seek and find the vineyard. Each had lived and served the measure of his twelve hours somewhere, in some way, else his reward had not been assured, for the Lord of the vineyard is just. And shall that man who has the comfort and inspiration of working *within* the knowledge of God, for a wage which can come only when the twelve hours are fulfilled, be discouraged because his hours seem long, or because he sees the twelfth-hour healing of one whose service and preparation have, perhaps, been made unseen in the eleven hours of mortal mind's market-place outside the vineyard? Rather should he know that each one who receives his "penny," has performed his appointed task, whether his actual entrance to the vineyard were early or late; and that the Master of the vineyard alone knows what those empty hours of waiting without Christian Science have earned for the one who at last finds its shelter. This one thing, however, all can know: that whatever may have been the individual experiences of these twelve hours, there was not one moment when discouragement was entitled to place or power, for the honest effort to seek and serve the Lord of the vineyard had been leading thought upward at every step, and the blessing had been assured from the first hour of right desire.

Gratitude.

MARTHA KEEP SINCLAIR.

IN the Wednesday evening meetings we often hear the expression of a deep sense of gratitude for what Christian Science has done for the speaker. It is natural for all to feel thankful when they have come out of a sense of bondage into a glorious realization of freedom. There is, however, a still deeper feeling, and it is that which every practitioner realizes when a patient is lifted out of sin and disease into a life of purity and health.

Men and women often come to Christian Science for help when all material remedies have failed. It is inspiring to see the step daily growing stronger, the eyes growing brighter, to see their efforts to understand, when you point out to them the lessons they must learn, and then some day to see them bound into your presence and tell you that they feel they now realize the meaning of the spiritual birth and that they are not mystified as was Nicodemus when Jesus told him he must be born again to enter into the kingdom of heaven. What joy it also brings to see their early demonstrations growing larger as time goes on, and finally, when they bid you good-bye and start out on their career, depending upon God, divine Principle, as revealed to them in the Bible and Science and Health, for their daily manna,—to see all this brings to the heart a feeling of gratitude which words cannot express and God alone can know,—a psalm of thanksgiving for the privilege of having demonstrated for some one the deep truths of this beautiful Science,—this must be experienced to be understood.

No matter for how short a period one may be treated, when that patient leaves the practitioner he should know something of the Science which has healed him. If a patient become discouraged because he is not quickly healed, and ceases to be treated, even then he can take with him such seeds of truth that in spite of error those seeds will spring up and bear fruit. Christian Scientists are and should be the most grateful people in the world, for they are daily proving that, as God's children, they do not need medicine;

that they do not need great wealth for great happiness; that they do not need worldly pleasures; that they are listening for the still, small voice, and that what they hear keeps them happily employed about their Father's business.

The Harmony of Life.

C. L. E.

THE need of the hour, what is it? It is love. Is there aught else that can effect a lasting healing of earth's woes? Our life-work should be to discover the infinite character of divine Love in its multifarious manifestations. In Love are infolded and unfolded all the virtues known in heaven.

No Christian Scientist asserts that only Christian Scientists can love, but they have learned, in all humility, that Christian Science alone reveals the true concept of divine Love. Each individual must discover for himself his true and only selfhood, his selfhood of spirituality, of love. As each one does this, infinity will resound with unnumbered chords at-one. Then does one God, one Mind appear as All in all, and known. The loving heart can but think rightly, and thinking rightly, is ever beholding the perfect manifestation of Spirit.

In her deeply inspiring work, "Retrospection and Introspection," Mrs. Eddy has written, "The rare bequests of Christian Science are costly, and they have won fields of battle, from which the dainty borrower would have fled. Ceaseless toil, self-renunciation, and love, have cleared its pathway" (p. 46). Do we appreciate sufficiently what unselfed love in one individual can do, has done for mankind, and thus gain the inspiration which it affords? We should ever and anon feel that wellspring of Truth and Love flowing out from within us, of which Christ speaks.

It is an unselfed love that we need. In her message of 1902 our Leader said, "Kindle the watchfires of unselfed love, and they throw a light upon the uncomplaining agony in the life of our Lord" (p. 28). The atmosphere of a loving life glows in the dark places of mortal mind, melts its hatred, quells its doubts, breaks its inactivity. We can only love as we have lived, and only really live in proportion as we love. All through our Leader's works, which bespeak her life, we catch the rhythm of a love-song, such as earth has not known till now. We may echo the strain, blending with it our own drawn from God,—the infinite Soul and Principle thereof,—and thus swell the anthems of heavenly harmony. For there is infinite variety in Love's manifestations; each individual can draw from this sourceless source and so verify the first commandment and the interpretation thereof in Science and Health (p. 340.)

Self-forgetfulness, self-renunciation, then, voice love as their Principle. 'Tis ours, the restfulness born from the realization that every good thought is omnipotent and always has been; that nothing erroneous can ever strut in triumph or even exist, because it has no part in Life or omnipotence. We know that we need never look for a present reward; for to do this, would show a lack of faith in the power of Truth. We should just live a life that reflects God as Life, each doing his own work, each realizing the nothingness of material selfhood, the reality of spiritual being.

Hungering for good, we shall ceaselessly be filled, as we have been so far, only more abundantly, because Truth's hour is come. The claims of material sense fade into oblivion "like wrecks of a dissolving dream." The mellow chimes of Truth's church universal, awaken the good in man. The glory of being is unfolding. Christ's kingdom is come.

Aimighty God, grant me Thy grace to be faithful in action, and not anxious about success. My only concern is to do Thy will and to lose myself in Thee, when engaged in duty.—FENELON.

Selected Articles.

We are informed that "each self has a distinct state of consciousness," and that "each human being is thus an individual with two distinct phases of existence." If it be supposed that "each self" is as real as the other, using the word "real" in its metaphysical sense to mean that which is eternal and indestructible, then Christian Science is unalterably opposed to such teaching. There can be but one real individual, any other being a pretence or belief of self.

That our critic has not grasped the vital distinction made by Mrs. Eddy between the term "Mind" used as a synonym for God and "mind" used by her as equivalent to the general human consciousness, appears from his reference to a supposed "contradiction" in her use of the word mind. If he will scan her works closely he will find the distinction carefully defined and scrupulously indicated by capitalizing the term Mind when synonymous with God. Thus when Mrs. Eddy refers to matter as a product of mind, she means by the latter the carnal mind of which St. Paul speaks. Has any one ever defined matter more satisfactorily? Can a definition of matter be given except in terms of mind?

The futile speculations of the schools may be of interest to those who have not tried them and found them wanting, but after a test of the certainties and proofs of the Christ knowledge, the former shrink into insignificance. Not all the learning of the ages can weigh in the balance against a word which fell from the lips of Jesus, the Christ. His chosen disciples were modest men, untaught and unlearned, mostly fishermen, but they proved that they had more real knowledge than all the physicians and priests of their day when they healed the sick and saved the sinner.

In rejecting the advice of the critic to return to the barren fields and dry husks of human theory, I am reminded of that passage of the Scriptures, full of profound meaning to all who may have yielded to pride of intellect.—

"Verily I say unto you, Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein."

W. D. McCrackan.

New York Advertiser-Gazette.

After returning from Capernaum, where he did not many mighty works because of their unbelief, Jesus stood up in the synagogue at Nazareth and read that memorable and dramatic passage from Isaiah's prophecy which foretold the very incident which he was then bringing about. After closing the book, as if to anticipate the criticism of his audience, he said, "Ye will surely say unto me this proverb, Physician, heal thyself: whatsoever we have heard done in Capernaum, do also here in thy country. And he said, Verily I say unto you, No prophet is accepted in his own country."

Does not this passage plainly indicate our Saviour's recognition of the need of a proper condition of receptivity in the minds of the people before he could demonstrate the spiritual power with which he was endowed without measure? To the woman who was healed of an issue of blood, he said, "Thy faith hath made thee whole."

The majority of cases healed in Christian Science have come from the large class who had previously suffered many things of many physicians, and were nothing better, but rather grew worse. The writer has now before him a letter from a lady who testifies that she was restored to health in Christian Science after an invalidism of more than ten years, resulting from an accident which had injured the spine. This case had been under the treatment of well-known specialists in New York City, and had been pronounced beyond the scope of material aid. The patient was under Christian Science treatment for some months

prior to her recovery, which shows that patience and perseverance may be demanded in dealing with tenacious cases.

Although it is claimed for Christian Science that it is the true method of healing the sick, and is a rediscovery of the Principle by which Jesus wrought so many wonderful works, its practitioners have not yet gained sufficient knowledge of the subject to guarantee immediate results in all cases.

RICHARD P. VERRALL.

New York Globe.

Frequently a truth may be driven home by clothing it under another name, whereas if left without such garnishments, it would be held in disdain and doors would be barricaded against it. A striking example of this is set forth by an editorial in the magazine *Madame* for August, in which the lofty optimism to which utterance is given bears a striking resemblance to the doctrine preached by Mrs. Eddy in her Science and Health. Among other things, the editorial says,—

"The way to avoid contagion is to keep the mind pure and sweet, having due regard also for the body. Cultivate optimism and hopefulness and avoid gloomy thoughts and forebodings. Seek the society of those who are buoyant and helpful, and if at any time you are overtaken with the realization that your lot is not what it should be, think of the condition of many who are not so fortunate as yourself and who are suffering from actual want. The woman who would avoid microbes will not fear them. Courage and the consciousness of right living and high thinking are the enemies of disease."

Editorial Copper County (Mich.) News.

If Christian Science is illogical because it heals a man through his mind rather than through his stomach, then Jesus was illogical, because this is the precise manner in which he healed and taught his followers to heal.

Proceeding from the standpoint of common sense, we should at all times strive to deal with cause rather than with effect, and this is the reason why Christian Science strives to correct a man's sinful thoughts in order to enable him to enjoy better health. It is a fact generally recognized that suffering results from sin, therefore in directing its hardest blows at sin Christian Science tends to correct the inclination to be sick and to suffer.

If there is one thing above all others which the Christian Scientist strives to accomplish, it is the overcoming of evil and selfishness in himself. The hostility which the Christian Scientist may arouse through being misunderstood does not deter him from pressing forward, confident that the time is rapidly approaching when Christian Science will be better understood and appreciated, and until then he is willing to bear with those who may not fully understand his motives and aims.

ALBERT E. MILLER.

Greensburg (Pa.) Star.

Simple Trust.

No picture to my aid I call,
I shape no image in my prayer;
I only know in Him is all
Of life, light, beauty, everywhere,
Eternal goodness here and there!

I know He is, and what He is
Whose one great purpose is the good
Of all. I rest my soul on His
Immortal Love and Fatherhood;
And trust Him as His children should.

J. G. WHITTIER.

Among the Churches.

A Shining Light.

Perhaps it would be helpful to the Field to know what one church, with a membership of about two hundred and twenty-five, has done and is doing in response to the resolution, unanimously adopted at the annual meeting of The Mother Church held June 18, 1902, pledging to contribute, in behalf of the members present and the Christian Scientists of the world, any portion of two million dollars necessary for the completion of an auditorium for The Mother Church.

Within two weeks of the time the call went forth, members of this church assembled with hearts filled with gratitude for the inestimable blessings that had come into the lives of each through Christian Science, and, united in the desire to express that gratitude by an immediate response to the above resolution, voted to withdraw from the Building Fund of the church the sum of twenty-five hundred dollars and forward it to the Treasurer of the Building Fund of The Mother Church, which was accordingly done. The members at this meeting expressed a great sense of joy at the opportunity presented to co-operate in the glorious work in hand,—the erection of a temple to stand as a fitting symbol of the strength and grandeur of the Cause of Christian Science and a testimonial worthy the life and labor of our revered and honored Leader. As a result of this united thought and earnest desire, over fifteen thousand dollars has been sent to the treasurer of the fund at this date. Realizing the need of continued effort toward systematic and regular giving until the work is complete, it was unanimously voted at a recent meeting that monthly contributions be made, and to this end envelopes have been distributed to each member with the words "Building Fund of The Mother Church" plainly printed thereon. These are now coming in steadily, each bearing its message of love and loyalty, and testifying to the inexhaustible nature of its Source.

The Psalmist David said, "All this store that we have prepared to build thee an house . . . cometh of thine hand, and is all thine own," knowing this, we can willingly, cheerfully give, rejoicing in the opportunity thus presented to show forth the praises of him who hath called us out of darkness into his marvelous light.

GEORGE S. HADDOCK, *Treas.*

First Church of Christ, Scientist, Roxbury, Mass.

Faithful Children.

It is with real pleasure that I testify to the practical help of the children in our little Sunday School of sixty members. They give so lovingly, work so faithfully, when there is a call for larger giving than usual, that I feel they are a beautiful example to the members of the church in that regard.

With their Sunday offerings they provide flowers, and palms for the services of the church each week. They have given this year eighty dollars toward our lot fund, a copy of Science and Health to the West Duluth Library, a year's subscription for the *Journal* to be placed in the same library, also a renewal for the *Journal* and *Sentinel* for the public library of our own city. They also pay for the distribution of Christian Science literature under the direction of one of the officers of the church. At Christmas time they decided that their gift should go toward the building of the new Mother Church, recognizing it as the greatest avenue of growth to our Cause, also that the opportunity to obey this call is *now*, that possibly before another Christmas came the privilege of giving to it would be closed. In the six or eight weeks of preparation for it, they had one hundred dollars ready, which was sent on with loving greetings soon after Christmas. The responsiveness and the love

of the "little ones" is a constant inspiration, and surely they are leading us on to larger apprehensions of the truth that makes free.—MARY E. HUNTER, *Superintendent*.

Duluth, January 20, 1904.

Reading Room Work in Oklahoma City.

The Reading Room Association in Oklahoma City was organized June 26, 1901, with fifteen charter members, and forty-seven names have been enrolled in all.

The Association began with a literature fund of twenty-one dollars. The value of stock on hand June, 1904, is one hundred and twenty-five dollars, and four hundred dollars was handled during the year just passed. During the year, there have been sold through the reading room 41 copies of Science and Health, 125 *Journals*, 371 *Sentinels*, and 225 *Quarterlies*.

The Literature Committee has supplied the railway stations from time to time; a copy of Science and Health was placed on the Y. M. C. A. reading table at the secretary's request, and a year ago two copies of Science and Health and one of "Miscellaneous Writings," together with the *Sentinel* and *Journal*, were placed in the Carnegie Public Library. Recently the librarian stated to the Literature Committee that the supply did not meet the demand, and expressed the desire that more copies of Science and Health be supplied, and any other of Mrs. Eddy's works as well. Accordingly, two more copies of Science and Health, one for reference and one for the circulatory department, were furnished by the reading room, and other works of our Leader have been furnished by individual donation. The librarian of the public library stated that the *Journals* and *Sentinels* are being preserved, and will be bound at the end of each year.

On the afternoon of March 12, 1904, regular services were begun at the jail and have been continued each Sunday since, with good attendance and marked interest on the part of the prisoners. Literature is furnished them from time to time, while a Bible, Science and Health, *Quarterly*, and Hymnal have been provided for their use, and several are interested enough to go over the lesson during the week. We have always had the respectful attention of the prisoners, as well as the kindly co-operation of the jailer, and feel that good work is being done there, while the Scientists who are engaged in this work are not losing anything by the effort; for as Will Carleton has said,—

He who leads his brother toward the sky,
Will in the journey bring himself more nigh.

J. N. L., *Secretary*.

First Church of Christ, Scientist, of Galveston, Texas, has presented to the New Rosenberg Library, thirteen of the published works of our Leader, together with one year's subscription to each of our periodicals. A very kind letter of thanks and appreciation was received from the librarian.

—*Correspondence*.

God's plans, like lilies pure and white unfold;
We must not tear the close-shut leaves apart,—
Time will reveal the calyxes of gold.

Anon.

Notice.

THE Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the Clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Testimonies of Healing."

WE are in receipt of a letter from a friend, a Christian Scientist, who calls attention to the unsatisfactory nature of the subject-matter and character of some of the testimonies given at our Wednesday evening meetings; "testimonies" which do not conform in any manner to the rules of evidence, and which fail to carry conviction to the sincere seeker for truth who, for the first time, upon the solicitation of some friend, has attended one of these meetings. We regret to say that there is considerable justification for this complaint.

The chief trouble with such talks as our friend refers to, is that they are what lawyers call hearsay testimony, and as such they would be ruled out of any court. What the inquirer wishes to know is that some person with whom he is brought into personal contact has been healed. A statement that some person of whom the speaker has heard through some other person has been healed by Christian Science, does not carry much weight with the man who is investigating, neither does the account of cases in which the speaker has acted as practitioner. The most valuable and helpful testimony is that of the persons who have been healed, and if those who speak at the Wednesday evening meetings will bear this in mind and express themselves accordingly, much will be added to the usefulness of the meetings, and the reasonable demands of the investigator will be met.

In this connection, we recall the case of a prominent lawyer who was almost persuaded in his own mind to take Christian Science treatment, but prior to doing so attended a testimony meeting in one of the large cities. It so happened that not one of the persons who spoke at this meeting told of his own healing; one told of the healing of a person living in another city, others told of remarkable cases which they had heard of, still others preached and exhorted, but during the entire time devoted to testimonies no one made a statement which he could accept as conclusive, or within that definition of evidence which he had been taught to use in the practice of his profession. Next day in recounting this experience to a practitioner he said that so far as the meeting was concerned not one word had been spoken which proved to him that any one in that great congregation had been healed by Christian Science, but fortunately, he had entered into conversation with a gentleman who was in attendance at the meeting, and who, during their conversation, gave the particulars of his own perfect healing through Christian Science treatment of the effects of a wound which several years of medical treatment had failed to reach. This conversation had done the work which the meeting had entirely failed to do, and the lawyer was willing to trust his case to Christian Science.

In conclusion, let us urge upon those who wish to benefit their fellow-mortals at these meetings, that the best thing any one can do is to give a concise and conservative account of his own healing. This is something which every Christian Scientist may do, and in the doing of it, more will be accomplished for humanity than is possible by recounting the experience of others, or by the utterance of words unsupported by works.

M.

"Moral Obligations."

It is very clear that one of the most important religious movements of modern times has resulted from the study of the Bible in connection with the passages from Science and Health which, together with Scriptural selections, constitute their Lesson-Sermons. A number of years ago it became very apparent that uniformity in our Sunday services was the need of the hour, and to meet this need, our Leader, divinely directed, as we believe, ordained the Bible and Science and Health as the only pastor in all the churches of this denomination. The wisdom of this step was the more evident to all honest truth-seekers, because it compelled them to "search the Scriptures" for themselves and not leave to another the work of gaining that true understanding of God which is life eternal.

In the Manual of The Mother Church, the duties of Readers are clearly defined. The section "Moral Obligations," reads in part, "The Readers must devote a suitable portion of their time to preparation for reading the Sunday lesson,—a lesson on which the prosperity of Christian Science largely depends" (Art. IV., page 31). From this we see the high estimate which our Leader places upon the importance of the Lesson-Sermon to our Cause; also the obligation which rests upon every Reader to study it properly. Surely no Christian Scientist, whether Reader or lay member can be misled by subtle error to believe he has "grown so spiritual" that the daily study of God's word is no longer a necessity for him. No one is exempt from this requirement. Mrs. Eddy says in "Miscellaneous Writings," p. 264, "Unity is the essential nature of Christian Science. Its Principle is One, and to demonstrate the divine One, demands oneness of thought and action." She also says, "The Bible is the learned man's masterpiece, the ignorant man's dictionary, the wise man's directory" (Miscellaneous Writings, p. 364). All who faithfully study the Bible as illuminated by the truth contained in Science and Health gladly acknowledge that they are more than compensated for the time thus spent. By this means they are healed, enlightened, uplifted, and so fitted to feed the hungry with that bread which satisfies and heals.

Jesus once said, "If any man will come after me, let him deny himself, and take up his cross daily, and follow me." Christian Science re-enforces his words in teaching the necessity for a constant denial of self, with all it implies. Above all, it emphasizes the necessity for following Christ. There are many who ostentatiously display some "cross" they are carrying, but who quite forget to deny self, and follow where Christ, Truth, leads. If it be a cross to deny the vain desires of self in order to study faithfully and intelligently our Lesson-Sermons, let us take it up; for by it we shall assuredly gain our crown, and while on our way to this consummation we shall be far more conscious of the joy of "following" than of the effort and sacrifice required in cross-bearing, and in the denial of self, for "When the Word is made flesh,—that is, rendered practical, this eternal truth will be understood; and sickness, sin, and death, will yield to it, even as they did more than eighteen centuries ago" (Miscellaneous Writings, p. 182).

K.

The Equipment of Experience.

THE web of human life is of so involved a pattern, and the countless threads which enter into its composition are thrown by so many hands, that much of it may remain a meaningless and unintelligible tangle for most of us until that hour of spiritual awakening which illumines not only the path of the future but the experiences of the past.

Nothing more surely saps energy and interdicts progress in any line of endeavor than the depressing confusion which results from the inability to perceive the value and true relations of whole chapters, perchance, of our life history; and one of the earliest satisfactions of those who have received the light of Christian Science is realized in the dis-

covery that many an experience which has hitherto meant nothing more than disappointment and defeat, now assumes new and significant relations to their spiritual life and usefulness. They perceive that things which they had always regarded as valueless, in fact as disabilities, when analyzed and understood through Christian Science, yield them a distinct gain,—add sensibly to their equipment for effective ministry to others.

Shorn of its deceptiveness by "the sword of Spirit," the most regrettable incident of our history may thus add to the intelligence of our diagnosis of those abnormal mental conditions which Jesus has said we should heal. The personal advantage is therefore doubled; we find an interpretation of the medley of our own past life, and this in turn furnishes us the wisdom by which we may penetrate the citadel of other lives; for it is thus that we acquire the sympathetic touch, the quick discernment, the authoritative judgment which render it possible for us to serve at once, when otherwise we could only stand and wait.

Our equipment for usefulness is enriched furthermore by the incidental acquirement of general information, that intelligent embrace of human life and conditions which places us upon common ground with men, and which enables us to approach them in ways that allay prejudice and awaken interest. "Academics of the right sort are requisite. Observation, invention, study, and original thought are expansive and should promote the growth of mortal mind out of itself" (Science and Health, p. 195). To possess the Mind and motives that were in Christ Jesus,—this is the fundamental requirement of all those who would serve God and help their fellow-men; but we may not forget how constantly and how tactfully our Lord utilized his acquaintance with every-day matters as the illustrative means of lifting the thought and awaking that spirit of inquiry which leads to self-disclosure and true teachableness. The teacher's largest serviceability lies in what he knows of truth, but his success will depend in no small degree upon his knowledge of the present intelligence, disposition, tastes, aspirations, prejudices, surrounding conditions, etc., of his pupils, for these furnish the basis of effective illustration and tactful approach. Next to our spiritual furnishing, breadth and versatility of intelligence with winsomeness of address, best equip us to instruct and inspire others.

If one wanted to reach the ear, and influence the opinions of a husbandman, he would find it to his advantage if he were so familiar with farming as to be able to talk in an interesting way upon that subject, and if in speaking to such a man regarding spiritual things he could happily elucidate his thought by references to the facts and experiences of farm life, his vantage would be distinct and immediate. The ministry of Jesus and of Paul give much evidence that their consideration for forms of presentation was secondary only to their consideration for the truths presented; and, impelled by their example, those who covet the largest usefulness as exponents of Christian truth, will not only seek to apprehend that truth and embody it in their lives, but they will be alert to profit by every incidental means of enlarging their practical availability as channels through which the divine Wisdom is to be communicated to every condition and aspect of human need. All the experiences and acquirements of the past, and all the gains of wholesome knowledge in the present, are to "work together for good," when apprehended and utilized in the light of Truth.

W.

Meeting of General Association of Teachers.

THE annual meeting of the General Association of Teachers will be held in First Church of Christ, Scientist, Chicago, at 9 A.M., Monday and Tuesday, October 24 and 25. Admission to these meetings will be by card only. The Secretary will mail cards to all members now enrolled.

All non-members, including those who were not present

at the meeting of 1903, who are eligible according to Section 1, Article XXXIII., of The Mother Church By-laws, and who desire to become members of this Association should apply by letter to WILLIAM B. JOHNSON, C.S.D., Secretary of the Executive Board, 239 Huntington Avenue, Boston, Mass. These applications must be in his hands on or before October 10.

The Needy Benefited.

MRS. EDDY'S KIND OFFER OF FREE SHOES TO THE POOR
MADE THE MOST OF.

Mr. William A. Thompson has been a very busy man for the last few days, supervising the distribution of free shoes to needy children, in accordance with the kind offer and liberal provision therefor made by Mrs. Mary B. G. Eddy. Mr. Thompson's store was kept open until eleven o'clock Thursday night to accommodate the boys and girls who asked for shoes, and many more applications were received yesterday.—*Concord (N. H.) Monitor*.

Letters to our Leader.

The following letter recently received by Mrs. Eddy was accompanied by a gift of \$101 in gold, and sent in a silver box.—EDS.

Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Revered Leader, Pastor Emeritus, and Benefactor:— Only gratitude and love can make return for the priceless benefits which, through the blessing of divine Love, you have freely and impersonally bestowed upon me, in common with all humanity, by your Christ-like work, life, and published writings. When sick, and broken in heart, overwhelmed with debts and a cruel sense of human injustice, of wrongs, the shadow of death around me and my fatherless children, I was delivered from the depths and healed while reading your volume,—the book of God and man.—"Science and Health with Key to the Scriptures." O, that my poor pen could give a true thought of all that these simple words mean to me,—love yearning Godward,—brotherly love toward humanity.

The gratitude and love which this offering conveys, are but a tithe of that which is yours, as the direct result of your labor. The "love currency" (Now and Then by Mary Baker G. Eddy) came to me, from the sick who were healed, the aged, sorrowing, who were comforted through your ministry, wherein you are forever blessing and blessed in giving the Science of Christian healing (as did our Master, Christ Jesus) to the world through Christian Science,—the holy Comforter. Immanuel, "coming now again, as was promised aforetime, 'to preach deliverance to the captives [of sense]'" (Science and Health, Pref. p. xi.).

I earnestly desire not to impose upon our Leader's time, so valued, so treasured by every student of Divine Science. I hope to send a moment of cheer for "love's labor," not lost, and with the silent blessing of love, in just acknowledgment of more enlightened faith and joy and hope in untold unfoldings, which have come to me, through you, the Discoverer and Founder of Christian Science. The searching of the Scriptures, and the continued study of your works, Science and Health, "Miscellaneous Writings," "Unity of Good," "Retrospection and Introspection" (although I am not an instructed student), have enabled me to draw nearer to God in times of need. Love has sheltered me from the "noisome pestilence" in flying to the Rock that is higher than I. "Exalted thoughts" have borne me up, and God has provided me a "table in the wilderness." Cases of healing have resulted, faults been overcome through your "Messages" and poems, and your "Crumbs" have fed me with the bread of Life, and cast out fear. The wisdom

of your life and work is the result of your love to God and man, and it is blessing and enlightening the thought of this age beyond estimate. God has indeed poured "the riches of His love into the understanding and affections" of you, His child, "And infinite Love is reflected in love" (*Science and Health*, p. 17).

Day by day I earnestly look to our Father-Mother God, to know His will, and strive for a more Christ-like life; to prove what is that pure and perfect will of God.

With reverent love, yours in Truth,

MARY H. NOOE.

Concord, N. H.

Dear Leader and Teacher:—While visiting in your home city, I feel like a little child who has found its long-looked-for home, and ask if I may take a few moments of your precious time to express my heartfelt love and gratitude to you for what your book, *Science and Health*, has done for me. Through the reading of this divinely inspired volume, I was healed of an internal physical trouble, and for the last five years this sacred book, with your other writings, has been my only healer and teacher, "a pillar of cloud by day and of fire by night, leading up to divine heights" (*Science and Health*, p. 566), and showing me how to help and heal others. Your own words express what is in my heart,—“my book is not all you know of me—but your knowledge with its magnitude of meaning uncovers my life, and your heart has discovered it” (Letter to The Mother Church, June, 1903).

Dear Teacher, I want to sit down at your feet and hear these words of the great Master, "Follow me; and let the dead bury their dead." Will you accept these little flowers as the sign of those I have gathered for you on my journey "from sense to Soul." I am striving each day to be obedient to what you have given me that I may be your true, loving follower.

GRACE MERIAM COLBY, Orange, N. J.

Hartford, Conn., August 8, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Dear Leader:—I was traveling recently, from the West, on one of the luxurious trains of the New York Central Railroad, made up entirely of sleeping cars, observation and library car. This latter is fitted up with a small library for the use of passengers. I picked up the catalogue of contents and read the announcement that the library contained only twenty books, especially selected for that train by one of the best-known libraries in the country, The Booklover's, and there, in the list, appeared *Science and Health* by Mary Baker G. Eddy.

I don't know why I was surprised, but I certainly was very pleased, and felt just as if I had suddenly met an old friend. And so I had. You may already know that your book is thus circulated and recommended to the traveling public on one of our greatest trunk systems, but I thought that if you did not, it would be interesting news. It was significant, to me, that the utterance of Truth has found its way into at least one of the country's great arteries, where thought is pulsating in constant circulation, and I was happy to think it was thus doing its kindly and healing work.

My meeting with Truth's impartation that day, was a benediction, and there must be many others who have been similarly blessed, and who thank you, as I do, for all that you are doing, without ever knowing it.

Faithfully and lovingly yours,

WILLARD S. MATTOX.

It is not necessary to interpret life, it is only necessary to live.—*The Outlook*.

Testimonies of Healing.

I will ransom them from the power of the grave; I will redeem them from death.—HOSEA.

The days of our pilgrimage will multiply instead of diminish, when God's kingdom comes on earth; for the true way leads to life instead of death.—*Science and Health*, p. 202.

About the year 1896 there appeared in *The Christian Science Journal*, in full detail, a beautiful testimony of healing in connection with the case of my father, a very aged gentleman, who, under the doctor's care, was dying. His case had been pronounced utterly hopeless on account of his extreme age and the malignant form of the disease. My sister, who is a Christian Scientist, sent word to her teacher in Toronto, Ont., asking her to take the case, which she did. Other members of the family were opposed to Christian Science treatment and argued in favor of the doctors, who continued to make their visits. The home was filled with confusion and conflicting thought; but the practitioner, not knowing of the disagreement in the family, continued treatment. The doctors were encouraged to keep the case in their own hands, while his daughters urged to have them dismissed and Christian Science given a fairer trial.

At last the instruments and all other material means ceased to give any relief, spells of unconsciousness were followed by the conscious agonizing struggle with death, and the doctors acknowledged that the case had passed beyond their skill. All this time the Scientist had been declaring that the truth would be victorious. Finally the family agreed to let the father decide for himself between Christian Science and *materia medica*. During an interval of consciousness his daughter whispered, "Father, will you take Christian Science treatment, or continue with the doctors?" Placing his hands in the attitude of prayer, the seemingly dying father moaned, "O give me Christian Science!"

With renewed courage the practitioner went on with the work; the beautiful promise in Hosea was fulfilled, and he was ransomed from the grave,—redeemed from death.

Years passed, and the aged pilgrim, whose days of earthly pilgrimage had multiplied instead of diminished, lived on until the one hundredth year came and went. When entering upon the second century the fear of death appeared again, and some weeks ago we received the message that our father was passing away. Before our arrival at home two local doctors and a physician from Jersey City had been called in. Each in turn said that under the circumstances he could not recover, and the rumor spread from place to place that death was expected momentarily. The neighbors expressed themselves as not surprised, seeing that he was a man of such great age. He was so weak that he could not raise his arms, and lay gasping for breath; his mind was wandering, and he was racked with spasms of pain; his feet were cold in death, while the perspiration was on his brow. The body which was in a state of mortification was a shocking sight. Over the abdomen and reaching as far as the heart, round the sides to the back, and extending in two long points up the shoulders, the body was black, and elsewhere the flesh was streaked and mottled with an angry red. The physicians said no one ever recovered after reaching such a stage; it was impossible; it had never been known. When the physician from Jersey City called he said, after seeing the body, "This is gangrene, he will never recover, his time is short," and left a prescription for a preparation designed to overcome the odor of mortification. The doctor in attendance left, saying all was over, that when the mortification touched the heart death would be instantaneous. Fear and gloom filled the home, but when the message was received that the end was near, the case was given once again into the care of the same faithful Christian Scientist, who so many years before had demonstrated so clearly that death was powerless. In a moment of sweet solemnity of thought and recognition of the infinite power of God to heal human sorrows, Isaiah's words, "And behold

at eventide trouble; and before morning he [the enemy] is not," were fulfilled in our home. As soon as the practitioner began the work a change for the better took place. At times error came up in different forms only to die away in the presence of the omnipotent. Gradually the healing went on. He grew strong and partook of food with his own hands, instead of depending upon others to help him. His thought ceased to wander and rested in divine Mind; the warm glow of life came into the icy feet; the mortified portions of the body assumed a mottled appearance, and finally all the discoloration disappeared, and he was healed. An indescribable holy hush, that told of the presence of One who is infinite, fell over the home; all was peace and quietness,—a foretaste of eternal repose.

Rumors of death had been widely circulated, and the people were astonished at his sudden recovery. One aged man, deeply impressed, remarked with gravity, "Strange, but there must be something in it." Another, a stranger passing through the place on business, was told of the case, and accepted some literature to take to his home many miles distant. As far as sixty miles away the story was told,—the story telling now of life instead of death. Men, unconsciously impressed by the influence of a holy presence, approached with unusual gentleness, and looked in silent respect at the beautiful, transfigured face, with the grey hair falling back from a brow smooth and fair, and the snow-white beard flowing from cheeks faintly tinged with the bloom of health. With grace he greeted them all, and with a strong voice and in a bright, intelligent way recounted anecdotes of the days of their fathers and grandfathers. The healing verified the promise in the book of Job, "And thine age shall be clearer than the noonday."

In the beautiful biographical sketch of our Leader, Mrs. Eddy, written by Hon. Henry Robinson, we find the following touching paragraph:—

"Nobody could have imagined then that to that free, sweet-faced, breeze-kissed, country girl it would be given to dispel superstitious ignorance, to awaken the world from the dreadful incubus of materiality, to teach the children of men that God and man are co-existent and inseparable, that He is the all-pervading divine Principle, and that death holds no mastery over Life."

Thousands are being liberated from that "dreadful incubus," and from the thought that death does hold mastery over life; and the healing of our father adds one more case to the already extended list. Born amid the density of the materialistic environments of war, rebellion, tyranny, and profligacy, in the dark, superstitious days of the reign of George III., he has lived to see the "guiding star of Truth" (Science and Health, Pref. p. vii.) "with healing in his wings" rising out of the wreckage of the ancient order of things, and flooding the earth with the clear, holy light in which God is revealed to man; all as the fulfilling of Mrs. Eddy's momentous mission. Having seen a hundred years of life's uncertainties, and the slow breaking up of theories, dogmas, and creeds, up to the ushering in of this bright day of peace and righteousness, this hoary centenarian's plain remark in recognition of Mrs. Eddy's labors, "She is a good woman doing God's will on earth," outweighs all the criticisms of those who do not understand her.

MILDRED R. BELL, Woodstock, Ont.

About two years ago I was taken very sick and a physician was called in who said I had cerebro-spinal meningitis in its worst form, but he thought he could help me. I began to get worse instead of better, and was not able to leave my bed for five months. I could not raise my head from my pillow without its causing me terrible pain, and ice was kept on the back of my neck day and night. After suffering for some time I was able to be up and around the house. I had not been up more than four weeks when I was stricken down again, and for three months more I lay

in bed suffering that dreadful pain. I was so nervous that I would almost scream if any one walked across the floor or talked to me. There were weeks at a time that I could not get any sleep. The doctors gave me some very powerful medicine, but it did no good. All they would allow me to eat was beef tea and milk, and I could not take that without its distressing me, so they said that I had an ulcer of the stomach. As I did not improve any, my physician said that he could do no more for me, and he would like to have a specialist see me. The specialist came, but he could not help me. I was discouraged and the way grew so dark that I seemed to see the shadow of death drawing nearer and nearer.

One day as I lay there in bed, God sent one of His children to me. She came and talked with me, and asked me if I would not like to be healed in Christian Science. I told her that I had not the faith to believe in it, and did not think it could help me. She then bade me good-by and left me. She had not been gone more than two hours when all that terrible pain from which I had been suffering for the past eight months left me. I felt so much better that the next day I sent for a practitioner. She came, gave me a treatment, and the next day I got out of bed, dressed myself, and ate dinner with the rest of the family. I had only four weeks' treatment and was healed.

It is over a year since I was healed, and I feel better than I ever did. My friends are pleased to see how I have gained, and I am thankful each day to God and to our Leader, Mrs. Eddy, also to the practitioner who led me to this bright and blessed path. I know that infinite Mind is all, and I read the Bible and Science and Health every day, and learn therefrom that God is ever present and ready to help, and I trust in Him. My faith is planted on a rock that is immovable.—ALICE DEITZ, Glenwood, N. Y.

In a recent article on "Modern Bible Study," I read as follows: "The genuinely scientific temper is by no means easily acquired, for it combines fine poise of mind, humility of intellect, indomitable courage, and exhaustless self-abnegation," and that as a resultant of earnest study "pursued with the single aim of learning the truth," we had a deeper reverence for the Bible. As I pondered, it seemed to me impossible for us fully to express our gratitude to our Leader for her self-abnegation and courage, which resulted in our being given "Science and Health with Key to the Scriptures." This book has brought to me more reverence for the Bible and a better understanding, how to apply its truths to all conditions that may arise in mortal thought; it has developed my sense, morally and physically, and proved "a very present help" in all problems that confront me in business or in the home.

I was led to Christian Science through curiosity as to what it taught, and through the reading of Science and Health I was healed of many troubles of long standing. I had been a sufferer for seventeen years, never knowing what it was to be free from pain in that time, and physicians had said that I could never be well unless I underwent an operation, though none could determine the nature of the trouble.

While reading Science and Health I learned of the Principle of being, and told my husband that if I was correct in my understanding of it, truth was applicable to my work and business as well as to my health; that I would commence applying it in the kitchen, and if I found that I possessed the right understanding I would also apply it to my sense of suffering. He gave his consent, though strongly opposed to what he conceived Christian Science to be. On Sunday I read the text-book and on Monday I commenced to work. The change in me was so marked, that all thought I had taken leave of my senses, and I had, for I knew that the testimony of the senses was not to be relied upon if Science and Health were true, and I believed

it was. I had always been subject to great distress while going up stairs, and could not lift anything heavy nor reach higher than my head without suffering severe pain. On Tuesday my husband noticed I was not asking for assistance in the heavy work, as had been my previous custom. He remonstrated with me, and I explained to him that while it had not occurred to me that I was not requesting help to perform the heavier duties, I knew I was able to do whatever was necessary for me to do, and so went right along without ever seeking human aid. On Wednesday afternoon I called to him and inquired if he had seen what I was doing. He answered, "I saw you run up stairs and thought you were a little careless." It was a fact that I had been running up those stairs since Monday morning and was so free from former ills that I had never noticed what I was doing. It is needless to say that I did not find it necessary to treat myself for the long-standing ailments which had burdened my existence for so many years,—they had disappeared at the recognition of God as divine Principle. Four years have passed since that first reading, and each day, yes, every hour, of those years has been full of the demonstration of omnipotent, omnipresent good.

A friend,—not a believer in Christian Science,—who had known me for years, remarked upon the improvement in me, and said, that if Mrs. Eddy had done nothing else than what had been done for me her work had not been in vain, and she was deserving of the love and gratitude of all who held me in esteem. Our family is only one of the thousands which have come into the realization of that peace "which passeth all understanding," through the courage and self-abnegation of one woman,—our beloved Leader.

We are a family of three living in the mountains four miles from the nearest neighbor, fourteen miles from a post-office, and thirty miles from a railroad. For six months of the year we are snow-bound and see no one, yet there is not a drop of medicine in our house, nor is there any liquor kept there. We employ no material remedies of any nature, but depend entirely upon the one Physician, as taught in Science and Health. We were told that we would not be able to receive our mail here during the winter. I knew the *Journal*, *Sentinel*, and *Quarterly* were requisite to our study. We go over a section of the Lesson-Sermon each evening, and the whole lesson each Sunday, so holding the thought that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). I was never anxious, and through the courtesy of our one neighbor,—four miles distant,—our mail was brought that far once a week and my husband went over for it on snow-shoes. The entire trip to the post-office was made on snow-shoes, the party meeting the stage there. Some weeks the stage was unable to reach the office, owing to the accumulation of snow between the town and the desert, and so the driver would carry the mail sacks in on his back, covering the distance on skis, and we missed not a single issue of the periodicals.

I have had the privilege of class instruction, am a member of The Mother Church, and have nearly all Mrs. Eddy's published works. They have been the gifts of my husband, he having ceased to oppose the truth when he saw it in its proper light. The Concordance to Science and Health has arrived recently, and is greatly appreciated.

I know that I am a better woman mentally, physically, and morally since acquiring the understanding of divine Principle, and I am thankful, to the "Father of lights" from whom cometh every good and perfect gift, and to our Leader, who tells us to follow her, "only so far as she follows Christ" (Message to The Mother Church, June, 1901, p. 51).—MRS. ADELAIDE F. FRYAR, Doble, Cal.

It is with a heart full of gratitude to God that I write of my healing through Christian Science. It is more than

five years since I was healed of an organic disease after having been told by the physician that I could not live a month without a surgical operation, and he gave no hope that I would live through it, for he said my heart was in a very weak state at this time. A friend who had been healed in Christian Science after many years of suffering, came to me in my trouble and told me that she knew I could be healed through that same agency. It did not seem possible, as I had suffered for more than thirteen years, had two slight operations, and had what was considered the best medical treatment both in the West and South, also in Philadelphia and New York, but with only temporary relief.

During my treatment in Christian Science for this trouble I was also healed of a great many minor ailments. I had worn glasses for twenty years, having had to put them on when only a child, but I have had no need of them for five years. It has been my privilege to see many cases of healing since I came to Christian Science, in many instances where just the spoken word did the work.

This passage in our dear text-book, "Science and Health with Key to the Scriptures," has always been a great help to me, "To those leaning on the sustaining infinite, to-day is big with blessings" (Preface, p. vii).

MRS. MAGGIE P. RAMSEY, Brooklyn, N. Y.

About seven years ago I was drawn to Christian Science by a relative whose many afflictions had given place to health and harmony, and whose loving gratitude was reflected in every word and deed. The thought came to me, God indeed healeth all our diseases.

My first reading of Science and Health was without understanding. I was full of darkness and gloom, and it was laid aside for a time. The good seed had been sown, however, and ere long the reading was resumed, and with such interest that my afflictions disappeared "like mist before the morning sun." Asthma (thought to be hereditary), neuralgia in an aggravated form, and besides these, the tobacco and liquor habit of many years' standing, left me. Bless the Lord, "He sent his word" and healed me,—for the reading of Science and Health brought to my consciousness the truth that makes free.

Day by day, I am striving to live nearer to God and to reflect more of Love. Words are inadequate to express my gratitude to God, to the great Wayshower, and to Mrs. Eddy for the many blessings that have come to me through the understanding gained from the reading of Science and Health in connection with the Bible.—S., Shellman, Ga.

I desire to express my gratitude for the wonderful blessings Christian Science has shown me, to express my love for our dear Leader, Mrs. Eddy, and to thank God that she was so well prepared to bring again to the world this beautiful truth, and that she has been so wonderfully led and supported in holding it up to the world so that we all might know it and be free.

Christian Science was first brought to me through the healing of my wife in three treatments, when beyond the aid of *materia medica*. Notwithstanding this wonderful blessing, I was not convinced, but suffered on six months longer with serious stomach trouble, nervous prostration, palpitation of the heart, piles, fistula, fistula abscess, and carbuncles which it seemed impossible to check, before I would even consent to accept treatment, and was seemingly driven to accept it on account of my wretched condition and terrible suffering. I was partially relieved after two or three treatments, and my lesser troubles were one by one lost sight of, but the full relief was not acquired until after six months of study and labor on the part of myself and my practitioner. Then the light came to me all at once. It was brought to me by a thought expressed in the *Sentinel*,

showing that now are we free, now are we healed, now are we the children of God,—a God of Love, who gives nothing but good, that all we have to do is to accept, to understand this; to know it continually; and that our work is to seek “first the kingdom of God, and his righteousness,” as commanded by Jesus, that all good may come to us. As I realized this truth I arose from my chair, went out into the open air and walked more than half an hour, thanking God, whereas I had walked very little in many months before, and that little at the expense of severe pain.

The trouble was met, at last I was free, and I remained free nearly a year, when by allowing business cares and hurry to take possession of me and keep me from my study, I forgot to seek first the kingdom of God, forgot to know continually that God is all Love. It then became hard for me to realize the allness of God and to deny the possibility of evil. I became unhappy, unsuccessful in my business, and this state was harder to overcome than the former, but, thank God, through the kindness of Christian Science friends, the help of study and a constant desire to know Truth, I am again set free. Again the peace that passeth all understanding is mine, again I am seeking first the kingdom of God and His righteousness, and all things good are being added unto me.—success in business and in all things else. I am very thankful.—FRANK E. WOODLEY, Los Angeles, Cal.

In Isaiah we read, “I will bring the blind by a way that they knew not; I will lead them in paths that they have not known: I will make darkness light before them, and crooked things straight. These things will I do unto them and not forsake them.” To me these promises are being fulfilled. For several years, I had been pursued by the fear of ultimate helplessness from rheumatism, and when all material remedies failed, I sought relief in Christian Science, not realizing how much greater was my need of spiritual healing.

As progress was made in the study of this Science, I found that all thought gives an account of itself,—is manifested or expressed,—the good after its kind, the evil after its kind, and that if I would banish pain, and have freedom of action, instead of looking to the body and outside agencies for relief, it must be sought in the mental realm, and that only as I learned to think aright could I hope for improved physical conditions. So, as I look back, I no longer wonder that an entire year went by before I could say, as did the Psalmist, “O Lord my God, I cried unto thee, and thou hast healed me,” for it was truth alone, that probed “the self-inflicted wounds of selfishness, malice, envy, and hate” (Science and Health, p. 462), that enabled me to realize that “sorrow is not the master of joy” (p. 304), and that in all God’s fair universe there is nothing to disturb or to make afraid. I am happy to express my gratitude for this healing truth which, in so far as we understand and apply it, does indeed replace discord with harmony.—A. S. W., Chicago, Ill.

When I look back over the last four years,—those blessed years in which God has proved Himself to us an ever-present help,—I do not know what special mercy to relate. Among the countless ones, I can hardly say which was the greatest, so I will go back to the beginning,—to the first dawning of the truth. One morning I was sitting with my baby, then three years old, in my lap, her little body all burning with fever and her little face so listless. In front of us stood the medicine chest, with its rows of little glass idols. I had given her some pellets of an old stand-by remedy, and had said to her, “Now God will make my baby better,” when, all of a sudden, her eyes grew bright and looking up at me with such a puzzled look, she said, “You are really playing you are God, aren’t you, mamma?” That was all, but how much there was to me in those words! How clear it all seemed. I had heard quite a little about

Christian Science from my sister, but had fought against it with might and main; but now, the scales had fallen from my eyes. No more should my children’s sweet trust be shaken. No more would I lead them astray. I had never known how much I could learn from them. “And a little child shall lead them.”—AIMEE YOUNG, Pasadena, Cal.

I had been a great sufferer for thirty years with pain in my left side, also dyspepsia. I nearly starved myself, living on graham bread in hopes to find relief, and tried various remedies, but received no benefit. Eight years ago a sister from the East visited me. She was a Christian Scientist and told me that it was not necessary for me to suffer, that God could make me well. I consented to take treatments; in two weeks I commenced getting better and in a month I was healed. Since then I have been studying the Bible and Science and Health, and have been able to help myself and others. I thank God every day for this great truth that has been brought to light for suffering humanity’s sake, through our dear Leader and Teacher, Mrs. Eddy, and I am striving with God’s help to gain a better understanding of the truth.—MRS. M. A. LEE, Alta, Cal.

The time has come when I can no longer withhold my expression of gratitude for the great gift of Christian Science. This blessed truth found me five years ago, sick, discouraged, despairing, and it has indeed been for me “the Sun of righteousness,” “with healing in his wings.” Through the realization of a dear faithful practitioner I was healed in a few weeks of two ailments from which I had suffered for years, and I have remained free ever since. Other ailments were more obstinate, and have only been met by the overcoming and healing of self, and I wish to testify to the help received in this battle from one who has been my guide since coming into this Science, whose unselfish patient life has been a constant inspiration to me.

As I go on in Christian Science, and find that “the way winds and widens in the valley,” and that “up the hill it is straight and narrow” (Miscellaneous Writings, p. 323), my heart turns often in wonder and reverence to our dear Leader, and my earnest daily prayer is that I may have grace to follow her “as she follows Christ” (Message, 1902).
CELIA E. MOXLEY, Montville, Conn.

Nearly five years ago, after trying *materia medica* in vain for relief, and after being told that there was no help for me, a dear friend of my sister told us of Christian Science, and that I could be healed. After talking it over a little, I asked her for treatment, and since that time Christian Science has been our only medicine. Error has often tried to tempt me to go back to material means, but I am glad to say that I have held firmly to Truth. For the encouragement of those who think their healing is slow, I would say, Keep right on, and the healing will surely come, if you are faithful. The road has been long and rough, and the battle with error very severe; but the light is breaking and I shall soon be free. I have had nearly four years’ treatment altogether, and to mortal sense, I do not manifest perfect health yet; but I am so much better in many ways, that I know that I shall be perfectly healed. Every day makes me more thankful for Christian Science; and I wish to express my gratitude to Mrs. Eddy for this blessed message of Truth that is healing so many, and to the many dear friends who have worked so faithfully for me, and helped me over the rough places. I also wish to say that I am thankful for the *Sentinel* and *Journal*. I always find something to help in them, and I hope my testimony will help some who may be tempted to feel discouraged.

J. F. W., Port Huron, Mich.

From Our Exchanges.

One's creed is not always the final test of one's religion. The widow who ostensibly worshiped Baal was better than her creed. She showed that by the beautiful trustfulness and generosity of her nature. God judges not by the detail of ceremonial observance, but by the essential spirit.

The Christian Advocate.

"The final expression of life," says a writer in *The New York Observer*, "is not a question-mark, but a spiritual affirmation. The true life is framed in positives, not negatives. The search must end in a finding. The truth of the whole matter was, with a fine moral and philosophical insight, divined by Augustine ages ago, when he said, 'Thou, O Lord, hast made the soul of man for thyself, and man's soul is fore'er restless until it rests in Thee.'"

It occurs to almost every one who takes pains to run over the main facts in the history of the Christian Church, that most of the heresies that, at various periods, have divided and weakened Christian forces, can be traced to a lack of a sense of proportion in the minds of devout men. They have seen one or two things so clearly that they have failed to see that other things were also true. Doubtless it is not given to any one mind to hold all the truth in exact poise and proportion, but the nearer the human mind can approach this ideal the nearer it comes to the truth. The Apostle Paul exhorts the believers at Rome to prophesy "according to the proportion of the faith." And that is a counsel which good men have often forgotten.

The Watchman.

The enemies of life are best conquered by facing them, and, though we go down like the sailor wrecked by a tempest, we can carry hence with us a spirit self-mastered and serene. There is no loss but moral loss. In the game of life no true man is ever beaten. He only is beaten who consents to defeat, and weakly runs from the field. Life is like a game in that it has many risks; and the widest and best life incurs most risks. He who risks most wins most, is the law of the spirit. For whether he wins or loses the immediate objects of his desire, he always gains in fulness of life and courage of heart.

REV. JOHN M. WILSON.
The Christian Register.

In the quiet hour, when we peer into the secret places of our hearts and take account of controlling motives, we shall be filled with shame and self-reproach if we detect the presence of such love for popular applause as renders us insensible to the claims of duty. Neither can we escape self-condemnation if a clear vision reveals that which we have called "laudable ambition" as nothing less than our selfishness decked out in the garments of worthy purpose. The church of Christ needs nothing more than men and women who will "count all things to be loss for the excellency of the knowledge of Christ Jesus."—*The Standard.*

On all questions relating to the fundamental doctrines of salvation, the evangelical denominations were never so nearly at one as they are to-day. The differences are mainly verbal; the spirit is essentially the same. There is no substantial reason why the Presbyterian, Reformed, Methodist, Congregationalist and other evangelical bodies should not come together as one body. Only man-made barriers keep them asunder.—*The Examiner.*

When we look at the world in a narrow way, how small it seems! When we look at it in a mean way, how mean it is! When we look at it selfishly, how selfish it is! But when we look at it with a broad, generous, and helpful spirit, what a beautiful world it is, and what wonderful people we find in it!—*The Christian Register.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . . \$5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

second-class mail matter.

Items of Interest.

National.

After experiments covering a period of twenty-eight months, the United States naval "liquid fuel" board announces that it regards the engineering and mechanical features of the liquid fuel problem practically and satisfactorily solved. The board says: "For mercantile purposes the commercial and transportation features of the problem are existing bars which limit the use of oil fuel in merchant ships. For naval purposes there is the additional and serious difficulty to be overcome of providing a satisfactory and safe structural arrangement for carrying an adequate 'bunker supply.'"

Fifty-five delegates of the Lower Austrian Trade Association of Vienna, who have just completed a tour of the United States to study the industrial and commercial methods of the country, were the guests last week of the Boston Chamber of Commerce.

About thirty-five of the forty-three young Americans who have won Rhodes Scholarships at Oxford sailed from Boston in the Cunarder Ivernia this week. The members of the party represent all sections of the United States, and a special reservation of twenty staterooms was set aside for their use on the promenade deck of the steamer. The making up of this party is due to one of the number, who early in the summer wrote to Oxford asking for the names and addresses of the American winners of scholarships. This obtained, he wrote to each suggesting their traveling together from Boston to Liverpool, and most of them signified their willingness to do so.

The armament and ammunition of the Russian transport *Lena*, which recently put in at San Francisco, has been removed. Admiral Goodrich, commanding the Pacific Station, has forwarded to the Navy Department a full report of the agreement he entered into with her captain for the parole of her officers and crew. This provides for their freedom of the city of San Francisco, but they may not go beyond the bounds of the city during the continuance of the present war.

Foreign.

Count Tisza, the Hungarian Minister of the Interior, has rendered a decision prohibiting a Mormon propaganda in Hungary on the ground that such a movement is undesirable for both state and religious reasons. The immediate occasion of the decision was the expulsion of two Mormon missionaries who came from Salt Lake City to Temesvar eighteen months ago and attempted to organize a Mormon community among Hungarians who had formerly resided in Utah. The two missionaries were promptly expelled, whereupon their Hungarian friends appealed to the Minister of the Interior, the result being the present decision.

The departure of the British Tibetan expedition was fixed for September 23. By the Emperor's orders the Chinese amban has proclaimed Tashi, lama of Shigatse, to succeed to the spiritual dignities of the Dalai-Lama. The Tashi Lama has been friendly to the British mission from the outset.

Peter Karageorgevitch was crowned King of Servia on the 21st ult. There were no hostile demonstrations, and no attempt to carry out the numerous threats which had been made against the King.

The Russian protest against the Anglo-Tibetan treaty has been presented at Peking. The Russian Minister is understood to have called the attention of the Chinese Foreign Board to the fact that China would abandon her suzerainty over Tibet if she ratified the treaty, thus creating a British protectorate. It is stated that Russia's representation to Great Britain in respect to Tibet is based on the apparent differences in the assurances given the Russian Ambassador to Great Britain, June 2, and the published terms of the Anglo-Tibetan treaty. It is not expected in diplomatic quarters that the incident will result in any complications, as Russia's interest in Tibet is to a large extent academic. It is stated that China objects to the Anglo-Tibetan treaty on the ground that it infringes Chinese sovereign rights.

The Cuban Senate has ratified a treaty of friendship and commerce with Italy, the first entered into with a European nation.

Industrial and Commercial.

According to statistics compiled by the Geological Survey, the United States last year produced 34,430 short tons of crude borax, valued at \$661,400. The production of 1902 was 17,404 short tons of refined borax, valued at \$2,447,614, and 2,600 short tons of crude borax, valued at \$91,000. In 1903 the United States consumed 37,758 short tons of graphite, valued at \$1,598,589. The value of the total home production was only \$225,554.

It is reported that Government contracts have been signed for fifty sub-marine signal bells to be placed for the protection of the Canadian coast. Signals also are being placed on the Portland lightship, Boston lightship, Pollock Rip shoals, Vineyard Sound, Nantucket shoals, Brenton's Reef, Cornfield shoals lightship, Fire Island, Sandy Hook, and Overfalls, Philadelphia.

In reviewing the tropical fruit trade for the last year, it is shown that New Orleans holds the record for being the largest receiving point for tropical fruits. This is by reason of its geographical position and its close proximity to Central and South America. The total importations of bananas and coconuts into United States ports during the fiscal year from July 1, 1903, to June 30, 1904, aggregate 27,000,000 bunches of bananas and 75,000,000 coconuts, of which New Orleans received 9,000,000 bunches of bananas, Mobile, 4,000,000; Baltimore, 3,000,000; Philadelphia, 2,500,000; New York, 4,500,000; Boston, 4,000,000.

The exports of manufactures from the United Kingdom grew from \$964,540,000 in 1880 to \$1,142,595,000 in 1903, an increase of 18.46 per cent; France, a growth from \$339,186,000 in 1880 to \$405,794,000 in 1903, a

gain of 19.64 per cent; Germany, an increase from \$460,279,000 in 1880 to \$780,926,000 in 1903, an increase of 69.66 per cent; while the United States shows a growth from \$102,856,015 in 1880 to \$452,445,629 in 1904, an increase of 339.85 per cent.

The President of the Missouri Pacific Immigration Bureau reports that while the bureau has been in operation only a year, the number of passengers given transportation during the past year was 4,700. To these 1,056,542 acres of land, aggregating in value \$15,057,944, have been sold. Thirty-seven factories and industries have been established through the direct efforts of 273 members of the bureau.

An overland railroad is to be built in Guatemala. It will be 270 miles long from ocean to ocean, and will be completed within twelve months. It is proposed to run a line of steamers connecting with New York on the Atlantic side and another line on the Pacific connecting with San Francisco.

General.

During the lifetime of the present generation the Alps have been pierced four times by tunnels. The first of these was the Mont Cenis tunnel in France, which is nearly eight miles long, and was fourteen years in construction, finished thirty-four years ago; next came the St. Gothard, nine and a quarter miles long, which was nine and a half years in construction, and was completed twenty-four years ago; then came the Aarberg, six and a half miles long, three and a half years in building, and completed twenty-one years ago. The Simplon, the latest and longest, is twelve and a half miles long, its greatest altitude above the level of the sea being 2,314 feet, while the altitude of Mont Cenis is 4,248 feet. The work has been done with artistic completeness. The entrance is approached by a series of smaller tunnels which extend all the way from Lake Maggiore. The greatest obstacles which the enterprise has been compelled to meet have been water and heat. During the first three months of 1902 the work on the Italian end advanced only fifty feet, so many were the springs that were met and so great was the volume of water which had to be cared for. The temperature in many places ranged from 95 to 107 degrees. The completion of this tunnel will give direct communication between Milan and Paris and London.

Boston ranks fourth in postal business, according to the annual report of the Boston Post Office. The report shows an increase in business of \$301,769 over last year, the gross receipts of the central office and stations amounting to \$4,185,508.30. The only cities which exceed Boston in gross receipts are New York, Chicago, and Philadelphia.

Miss Annie S. Peck, the well-known mountain climber, will attempt the ascent of Mt. Sorata, in the Andes, which is between twenty-one and twenty-five thousand feet high. It is her intention also to visit the crater of Sahama, the highest volcano in the world, and to climb Mt. Huascan, the altitude of which is said to be about twenty-five thousand feet.

Until recently it was almost universally believed that petroleum was, like coal, derived from fossil vegetation or possibly from animals or fishes of some long past age. Now it is asserted by many scientific men that it may not be of organic origin, but may be due to subterranean chemical action.

All of the five planetary satellites discovered since 1846 have been found by Americans. They include Hyperion, the seventh satellite of Saturn, Demos and Phobos, the little moons of Mars, and Phoebe, the ninth moon of Saturn.

A miniature portrait of Mary, Queen of Scots, by N. Hilliard, was sold in London the other day for \$4,305.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Views of a Clergyman.

We are pleased to publish the following letter from Rev. T. A. Goodwin, a prominent Methodist clergyman of Indianapolis, Ind., which appeared in *The Indianapolis News* of September 20. Dr. Goodwin's letter discloses great liberality of thought and true Christian fellowship. The justice of his plea should appeal to all who are seeking the Christ in the way of his appointing.

To the Editor of *The News*.

Sir:—I was greatly surprised at the tone of a paper in last Friday's *News* from Dr. Lucas. It does him great injustice in the opinion of those who do not know him personally, for whatever else he may lack, all who know him will write him a lover of his fellow-men; whereas, a stranger reading the paper is sure to classify him with the least lovable characters in all Bible stories, the coterie of Pharisees that surrounded the young man who was happy in his restored sight and who was recognizing and praising the Christ as the immediate instrument. They could not deny the fact, that was too palpable, but it seemed to afford them some comfort to shake his faith in the instrument and take away much of the joy of the new experience without benefiting any one thereby.

There are scores, if not hundreds, of men and women in Indianapolis of assured sincerity, culture, and social standing who are happy in having recovered from a wide range of diseases through Christian Science. And the healed are not the only witnesses, but their families and friends are cognizant of the facts. Indeed, Dr. Lucas does not deny that there are some such cases. He cannot; but he attributes them to hypnotism or suggestion or something of that sort, just as the Pharisees of the long ago tried to minify the work of the Man who went about doing good.

Unconsciously, I am sure, Dr. Lucas puts himself in another unenviable light. A long paragraph, epitomized, is a challenge to Christian Science healers to get together a lot of invalids and prove their profession by healing them. A similar challenge was made to the Christ when his revilers called upon Him to prove his Messiahship by coming down from the cross. There was no argument against the Christ in this challenge; neither is there any argument against Christian Science in the corresponding challenge of Dr. Lucas.

I was surprised that a man so well versed in Bible history should try to bring into contempt the fact that faith in the subject, if not also in the friends, is a necessary factor in the healing process. Does not Dr. Lucas recall that the Christ himself sometimes could not succeed, and that the historian records that it was for the want of faith on the part of the subjects? Christian Science cannot heal any one who does not in his heart resolve to live a pure life, following the commandments of the Master.

Personally I do not intend to try to suppress this cult, and unless Dr. Lucas has some better instrument than ridicule, I think he might as well give up the job.

One thing, however, I greatly deplore. I wish they could get along without organizing a distinct church. To my thinking, it would be vastly better if the believers in Christian Science could remain in the several churches in which they have had church homes. But this seems impossible unless they are willing to be sneered at from the pulpit whenever the preacher has nothing else at easy command to say.

So far as I know, there are but one or two Christian pulpits in this city that do not occasionally speak disparagingly, if not untruthfully, of Christian Science in the presence and to the grief of some of the most intelligent and religious of the congregation, who have been benefited, as they believe, through it in person or in some loved one. . . . Meanwhile, it would be a wholesome revelation for Dr. Lucas and other pastors to drop into their mid-week prayer meeting and see a crowded house of happy, intelligent men and women, while at their respective prayer meetings empty seats are conspicuous. T. A. GOODWIN.

The Value of Understanding.

MARY B. EASTON.

As we advance in Christian Science we begin to perceive the truth respecting every-day facts; with the poet we find—
tongues in trees, books in the running brooks,
Sermons in stones, and good in everything.

I was very much impressed by the lesson conveyed in a recent communication to the *Sentinel* respecting the removal of an ink spot from a counterpane. The possessor thought the stain irremovable because it had not yielded to her best effort, but another person's wise and more persistent application of the same means did the work. The law of limitation was broken and the owner learned the scientific fact that error has no power or tenacity.

A little household incident imparted to me a similar lesson lately, with the added truth that, upon investigation, we often find how small is the obstacle that seems to hinder demonstration.

I had allowed myself to accept the fact, that one of the clamps which held the pillows of a folding bed in place had gotten out of order and no longer worked freely. It seemed of little consequence in this case, and so, after several attempts to adjust it, I contented myself by deciding to put up with what seemed inevitable. Day by day, I submitted to an inconvenience, as I was not in my own house and did not care to make trouble.

I was greatly surprised, however, one morning, when the maid solved the difficulty by a gentle shove of the bed spring to one side. The clamp was all right, but there had been a slight encroachment upon its territory and action. I was much interested in the discovery, and in the spiritual truth thereby revealed to scientific thought. I had learned a vital lesson of the utter nothingness of human discord, however stubborn it seems, and of the simplicity of the remedy to one who understands, and I am tempted to send out the illustration as a possible help to others. How little a thing was needed to set right what

had been a trial to my unaided sense! The wrong was in my lack of perception, not in the clasp. May that not often be the hindrance in our daily work as Scientists for ourselves and others?

May we not live so honestly as to see clearly, knowing neither stress nor strain, haste nor waste, lack nor loss,—resting in a divine repose? We shall then have no room for error, and we shall perceive the remedy for every difficulty. How high the privilege, and yet how simple and natural the operation! Sublimity is ever akin to simplicity.

Seeing, accepting the discord, and nerving ourselves with strong endeavor to defeat it, we but add further complication to an already confused thought. How can we thus expect a clear discernment and detect hidden error? There is no room for dismay or toilsome effort in the reflection of Truth. Such effort belongs to the human concept only. If it creeps into our treatments, it must be ejected as an intruder. It is like a thief who climbs up some other way, and it will rob us of our demonstration if we are not alert.

After the Pentecostal illumination, we hear of no failures in apostolic healing. Thought had been lifted above material sense; the word was direct, to the point; the result swift, certain. In the new illumination of this latter-day understanding of Truth, we have not yet reached that perfect obedience which repeats the primitive days of inspired Christianity. We are told, however, that there are greater works yet to be done, and that we shall do them.

Every encouragement is ours to persevere and realize growth of understanding. We have a noteworthy example of what unswerving faithfulness can accomplish in the great work of her whose wise leadership has made it possible for us to stand upon the threshold of wondrous possibilities. May we prove worthy of the call, "Come up higher," voiced to-day through her life and work. The rapid growth and larger fruitage of that work is unparalleled in the world's history. What may we not expect from the future of a movement so sublimely inaugurated?

May God bless our dear Leader with ever-increasing power, and may He help each one of us to stand in our lot, girt about with high and holy purpose. Then will the gates be lifted up, "and the King of glory shall come in."

Seeking Aright.

C. SNOWDEN.

"SEEK, and ye shall find; knock, and it shall be opened unto you." This injunction by our Lord constitutes the only method whereby we may plainly discern spiritual truth.

Owing, perhaps, to a habit long formed of holding an attitude receptive rather than antagonistic to religious instruction, and always with a deep desire to know the truth rather than to accept creed or dogma, or mere belief, and aiming to have no opinion until the standpoint presented was clearly comprehended, I was enabled thus to receive more quickly the light that everywhere radiates in the teachings of Christian Science. Like many others, however, when Christian Science was first brought to my attention, I was inclined to regard it jocularly, and with a "mild degree of suspicion." It might be sound, I thought, but more likely it would prove to be a fad, a mystic's dream, or a mercenary scheme. But since the law supposes innocence until guilt is proven, and since evidence, pro and con, is necessary before a verdict is determined upon, I would form no opinion for or against until the case was clearly presented; moreover, I would allow no preconceived notions, or prejudices, to warp my judgment and cause a foregone conclusion, and so I was readily persuaded to listen to the evidence and consult the recognized authority, the Scientist's text-book.

The purchase of "Science and Health with Key to the

Scriptures" was suggested as the necessary first step to a clear understanding. Probably, thought I, this is the *summa summarum*, the why and the wherefore of the whole matter,—a publisher's scheme to sell books. My expectations as to the logical value of the work was not quite up to par; doubtless, it would be an easy matter to sift it and find naught but dross, glaring and illogical, but I had decided to "hear the evidence" fairly and impartially, and it was against my rule to pre-determine a verdict, or allow prejudice to direct my intelligence.

The book was purchased. I had not read three pages before I perceived that I was in the presence of a master mind. I was impressed with the high order of literary attainment therein displayed; of the fair and logical reasoning when the author was taken at her request to consider fairly the disadvantage she was at in writing on a purely spiritual subject in the language of physics. I found Science and Health not only a work to be respected for its noble, lofty purpose, but also for its erudition; its cogent, logical reasoning, and its correct deductions. From that moment I had tolerant respect for Christian Science, and a live interest in "hearing the evidence."

In my novitiate days, the period of my skepticism, I of course found many apparently contradictory statements,—the little leaven had not yet begun its work,—but as I also found most statements self-evident truths, I waived the doubtful ones, and awaited further light, further growth, and I did not have to wait long. Soon I found that I had not rightly comprehended,—that the apparent conflict of testimony was only my own darkened vision's interpretation,—in fact, there was no conflict, now that I had attained to the correct viewpoint. And right here let me say that, in seeking evidence on both sides of the question, I have read many criticisms adverse to Christian Science by scholarly writers, divines, and others, whose preconceived tenets and church dogmas had caused them to read amiss, even as I had done, and whose violent opposition to the man of straw which they so vigorously attacked was everywhere apparent. I have read from books and sermons which attempted to ridicule and disprove the teachings of Christian Science; but I have never yet failed to find that these critics had not reached the spiritual viewpoint so necessary for a clear, not even to say a fair, understanding of what Mrs. Eddy was striving to make apparent, and does make clearly apparent to all who approach her work with a proper spirit, free from preconceived notions and their resultant prejudices. Truly "eyes have they, but they see not: they have ears, but they hear not." I soon saw that even the system of capitalization used in the text-book has an all-important significance. Reared in the atmosphere of the publishing business, I early grasped this important fact. For instance: Life (God); life (the mortal dream of entity or being); Truth (God); truth (a divine idea, an actuality, or a correct statement of being); Mind (God); mortal mind (the false evolutions, or supposed thought-action of the material brain); Love (God); love (a sentiment of affection), etc.

I should like to speak of the fundamental truths of Christian Science as they appeared to me, but I cannot do more than cite these simple, self-evident propositions; namely, truth is the opposite of the false, or error; they cannot possibly co-exist. Truth alone is real. Likewise Spirit is the opposite of matter; both cannot exist in truth (or fact), hence, if Spirit is real, matter *must be* unreal. It cannot be otherwise, because truth and falsehood are opposites. To maintain the reality of the material creation, therefore, is incompatible with the maintenance of the truth of spiritual existence. God is omnipotent, and His power is shared with none other. Man, His image, cannot be material, because, if so, he would not reflect God, be His image.

I am young in Christian Science, but I have learned that its practice means steady growth; that its greatest blessing is spiritual uplifting, a sustaining grace, a "witnessing of the Spirit." Its teaching is purely spiritual, and he who

looks for aught else, or approaches it in any other attitude than that of an honest desire to discern Christ, will be disappointed, and will remain in darkness. I have learned that it is much easier to overcome human weaknesses in Christian Science than out of it; that, if you are a Christian Scientist you will strive to live it, and not merely talk of it. These things I know. "By their fruits ye shall know them," and of such are the fruits of Christian Science. Physical healing is a secondary consideration; but I have experienced in my family that "miracle" which is no miracle in the realm of Spirit.

Dear reader, if you truly desire to know these things, follow Jesus' admonition precisely and without deviation: "Seek, and ye shall find; knock, and it shall be opened unto you."

"The windows of heaven."

E. T. M.

To demonstrate that there is plenty, seems to be quite a hard problem, and we so often hear the remark, when another opportunity presents itself to help in a good work, "Well, I will have to dig up something."

It suddenly occurred to me after hearing this remark, that we were looking in the wrong direction for our resources; that we should look up, not down, that we should lift up clean hands, in childlike faith, and receive all that we may need from God, the giver of every good and perfect gift.

We must, however, remember that there is something for us to do before we can realize the promises, and it is this: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

We are required to bring "all the tithes into the storehouse," and prove God therewith. If we measured what we wish to receive by our pledges and contributions to the cause of Truth, the showers from heaven might not be very plentiful. Can we hope to realize the supply of our own need if we are withholding our liberal support from the Church and its work? We too often forget that "Ceasing to give, we cease to have; such is the law of love."

Surrounded on every side by evidences of divine Love, should we not try to give, even as we wish to receive? "Underneath are the everlasting arms," "He shall cover thee with his feathers, and under his wings shalt thou trust: his truth shall be thy shield and buckler." He is indeed our shelter from fear and distress, and He hides us in His pavilion.

It is surely clear that the hand which is ready to receive must give out in the same measure. The understanding given through Science and Health, has truly opened "the windows of heaven" for us, and from them have flowed such steady streams of good that we can hardly realize or receive it all.

We can most truly show our gratitude by being the "cheerful givers" loved of God, ever remembering that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

Relative Values.

F. B. HOMANS.

It seems strange that man clings to the frailty of human beliefs concerning health, strength, wealth, intelligence, and friends, and fears to trust God. One may think that he has health and yet believe that a draught from an open window will induce colds, consumption, and death. He boasts of his strength, and yet believes that a banana-peel may throw him down and paralyze the nerves until he cannot lift a cup of water to his lips. He believes that by a single turn of the wheel of fortune his wealth may be lost and he will be reduced to poverty; that friends are turned to

enemies by a slanderous report; that great intellect may be turned to drivelling idiocy by sudden news, or a blow on the head; yet men spend a lifetime striving to acquire material possessions, which at best can be held only for a few years and then yield to what is called death, while one successful effort to gain an understanding of divine Love will bring more pleasure, happiness, and contentment than all else combined; and this understanding can never be taken away or lost.

Mark Twain once said he was worth one million and fifty dollars. He said he had managed to make the fifty dollars out of lecturing and publishing his books; and his wife was worth the odd million.

I can also make the statement that I am worth one million and fifty dollars, having the fifty dollars in cash and being the happy possessor of a copy of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, which is worth the million. It has been proved to me many times that this little book, measured by its real value, is worth more than one million dollars. The amount named will buy a fine house, land, clothes, and food. It also brings care, worry, trouble, and it may be lost very easily. It cannot buy friends, nor does it bring health. It does not buy love, nor can it bring real happiness, contentment, joy, or peace; while a partial understanding of Christian Science brings friends, and real friends; it brings love, and the purest love; it brings health, happiness, contentment, peace, and joy; and incidentally it brings food and raiment, houses and lands. It never brings care and worry and it cannot be lost. What more can a man ask for? I can truthfully say that if I had to choose between the truth which Science and Health has revealed to me, and a million dollars, I should not hesitate for one moment in choosing the former.

When we learn to realize that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494), we can very readily speak of this dear little book as a priceless gem, and our love and gratitude to its author, our Leader, can be easily understood.

The Higher Motive.

ALLEN L. CLARK.

A DEAR friend once suggested that when we attended the Communion service of The Mother Church we should go with the idea of giving rather than receiving a blessing. It is needless to say that with this thought of manifesting love for all who crossed our pathway, uppermost in our consciousness, we in turn received a greater blessing. The love of giving brought its own reward.

In contributing to The Mother Church Building Fund it is well for us to cultivate a loving desire to give, rather than to give from a sense of duty. If we feel that we have done our duty we are apt to take in the suggestion that it is high time some one else was doing his before we do any more. If it is true that "the desire which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void" (Science and Health, p. 2), why should we not have reason to expect confidently that a loving desire to contribute toward this commendable enterprise will also be blessed?

Only recently an individual who desired to contribute, set aside all he had at the time for the fund. It was a mere pittance, ten cents, but before the day had passed he was able to add a dollar and a half to it, besides having his immediate needs supplied. Mortal mind appealed to his sense of pride and argued, "Do not hand it in yet, but wait until you can make a better showing on the subscription book. Pocketing pride, he tendered his contributions, and a few minutes later was able to give five dollars.

This loving desire to give prompted others to give also, so that from this small beginning the fund was largely increased. What would be the result if we all and always gave from a sense of loving to give?

Selected Articles.

Segregation of the Sexes.

The *Excelsior* has received the following communication from the Publication Committee of The First Church of Christ, Scientist, which it publishes with pleasure.

Boston, Mass., August 9, 1904.

Editor *Excelsior*, Omaha, Neb.

Dear Sir:—In responding to your request to write something on the much-mooted By-law of the Christian Science Church providing against the segregation of the sexes in fraternal organizations, I would say, that never having made this subject a special study, I am not sure my opinion is of much value. This By-law, as I understand it, has not been "principally aimed at membership in the woman's club;" indeed, it is not intended to interfere with any clubs or organizations, but simply to emphasize the attitude of Christian Scientists in regard to such organizations.

I have access to everything which appears in the public press, pro and con, on this subject, and I find that the majority favor Mrs. Eddy's action. It has long been noted that the growing interest in clubs and organizations outside the church and home, and especially those clubs which segregate the sexes, have supported rather than discouraged the growing tendency to disunion in the church and home. There seems to be an increase in the habit of evading the duty of making up any deficiency that may exist in the happiness of the home, and instead, an inclination to seek pleasure and satisfaction elsewhere. The action of the Christian Science Church is not intended to deprecate in any degree the good accomplished by fraternal orders, but simply points to another way of doing it. Charitable and philanthropic work could be done in the church quite as effectually as in other fraternal organizations, and the church should also supply all social needs.

The Christian Science Church, however, does not propose to dictate terms to other denominations nor to interfere in any way with the fraternal organizations and clubs; it only asks the privilege of accomplishing within itself the ends for which such organizations are instituted, thereby unifying the motives and efforts of its members.

We think Christian Scientists recognize the much good which is being accomplished by the fraternal organizations, and might even go so far as to admit that they are accomplishing what the church does not undertake; but that does not really affect the fact that the church might supply all of real value that is furnished by the clubs if she but recognized that as a part of her duty and tried to do it.

In any event, the Christian Science denomination may justly claim the privilege which it grants to all others; viz., that of choosing its own course, while it bids Godspeed to any organization which tends in any degree toward the welfare of mankind.

Thousands of clergymen have expressed themselves in accord with the advice of Mrs. Eddy regarding clubs and fraternal organizations, and the bold stand which she has taken commands the admiration of the general public.

Yours sincerely,

ALFRED FARLOW.

Christian Science does not rest upon psychological laws, as the critic surmises, but upon those very laws of God, which are properly described as "immutable, undeviating in their effects." Plainly, then, if the individual can avail himself of these changeless laws, he will be governed harmoniously, and such government will be scientific in the best and fullest sense of that term. Jesus healed according to law. His practice was scientific, because it was unerring and precise. He never failed. Therefore his practice was Christian practice, and the science of his prac-

tice was necessarily Christian Science. The effects produced to-day, in the beginning of the twentieth century, in the healing of disease by Christian Science, are traceable to the same undeviating laws which Jesus made use of. They are just as available to-day as they were in his day. The laws which heal are not new. Our individual understanding of them is new for us. The healing to-day is not perfect, simply because mortals have not the full understanding of God's eternal laws, as Jesus had. Christian Scientists are honestly striving for the same Mind which was in Christ Jesus, for we know that it is that Mind which heals.

WILLARD S. MATTOX.

Putnam (Conn.) *Patriot*.

A Letter to the Editor.

Editor of the *Sentinel*:—On a certain occasion, the writer was doing a piece of work wherein many people were interested, and he frequently wondered whether he was doing it to their satisfaction, when to his glad surprise he received a kindly letter from an editor, stating that his services were acceptable and were fully appreciated. Recalling this happy experience, he is prompted to indite this note commending the leading editorial in the current number of our *Sentinel*. It is fine, and well calculated to offset certain errors of method which are prevalent in the *Field* and which needed just such a kindly word of admonition from one whose vantage-point enables him to speak timely and wisely. No one will so misread the article as to suppose that none but the testimonies of those healed, and given by the individuals themselves, are suitable, or wanted, because the editorial says explicitly, "The subject-matter and character of *some* of the testimonies given," and the further remark that "there is considerable justification" shows unmistakably that the purpose is not to rule out *all* of the particular kind of testimony of which your friend complains.

The writer finds the editorial very helpful, and he thinks he but voices the sentiments of many. He has watched the progress of a given meeting, and when the element for which you call was noticeably lacking, he gave his own testimony over again, although he had given it several times in more places than one, and this, by the way, is a point he would urge; namely, that a good testimony will bear repeating. He would like to suggest an amendment to what you have so well said, and that is that more emphasis be put upon that portion of your article which refers to the recounting of cases healed by the person who tells about them. The writer has known of some instances where the entire time allotted for testimonies was taken up by practitioners, Wednesday after Wednesday, and this is positively hurtful. It is not apparent on such occasions, whether there are those in attendance who would spontaneously tell of their own healing, because certain persons take up all the time, they actually monopolize the hour, so that those who have recently been healed, and who are timid, are crowded out.

Thank you again for your timely words; let us have more of the same tenor, for we are greatly obliged to those in positions to decide fairly, who will thus give us out of their storehouses of valued information. Mutual co-operation bespeaks greater progress in all unselfish movements.

Fraternally,

G. H. K.

September 26, 1904.

Man cannot reach his full stature in the market-place, or in association with the excited throng. The wilderness must form the counterpart of the thoroughfare—great breadths of contemplation alternating with great breadths of service.—JOSEPH PARKER.

The Lectures.

Oneonta, N. Y.

On Sunday, September 11, Mr. Edward A. Kimball delivered a lecture at the theatre in Oneonta, on the subject, Christian Science. Mr. Kimball was introduced by Mr. Franklin Blake, First Reader of First Church of Christ, Scientist, of Oneonta, whose remarks were in part as follows:—

When asked the other day why I was a Christian Scientist, I replied that it was because I could not help being one. Like many of you, I was for several years an earnest worker in another church, but since I first heard of Christian Science it has had for me an irresistible attraction. I have found it a demonstrable, provable, every-day, working religion,—what I had searched for during many years, and you will find that to be the experience of every Christian Scientist.

We are very grateful for all the good and for all the help that has come to us through the other churches, but Christian Science has unfolded to us such a larger sense of God, such a deeper and fuller understanding of the Bible, such a truer sense of man and of our relation to each other, that we are impelled to follow its teachings so far as we can understand them.

To those who have not been attracted by the other churches, we offer a simple truth that is provable from its minutest detail to its largest problems. In proportion as it is understood it can be demonstrated.—*Correspondence.*

Battle Creek, Mich.

Christian Scientists held an unusually instructive and enjoyable session at Independent Congregational Church, Thursday evening, September 8. The speaker of the evening was introduced by Hon. Charles Austin in the following words:—

Ladies and Gentlemen:—We are assembled to hear an exposition of the doctrine of Christian Science which claims its right to respectful consideration. Its followers have healed the sick by tens of thousands, and it is useless to answer this by sneers and ridicule. It has brought cheer and religious hope to the hearts of hundreds of thousands, and this cannot be met by the anathemas of its opponents. It is meet that this gospel of hope should have had its inception in this sunny land of ours.

The gentleman who will expound this hopeful doctrine to us to-night is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, of Boston, Mass. Whatever our belief may be, he should command our respectful attention. I esteem it an honor and now have the pleasure to introduce to you Mr. Bicknell Young of Chicago.—*The Battle Creek Moon.*

Detroit, Mich.

Judge Septimus J. Hanna of Colorado Springs, delivered a lecture on Christian Science at Second Church of Christ, Scientist, Sunday afternoon, September 4. Judge Hanna was introduced by Mayor Maybury, who said among other things, "Never in my judgment in the history of the world has the Bible been more intelligently studied; the purpose and person of Christ Jesus more carefully noted, more broadly considered than in the day in which we live. It is very certain that in past ages his divine person was not comprehended as it is by the intelligent world of this later day. His coming and his person, as we all know, was the culmination of many truths which the world had long known in a fragmentary way. But the coming of the divine person was to be the culmination of all these truths in one."

Detroit Times.

Bradford, Pa.

Judge William G. Ewing of Chicago, lectured before an audience that nearly filled the church last evening [May 24]. His lecture was on Christian Science, and so interesting and plain spoken was the judge's presentation of the subject that every one present, not already familiar with Christian Science and its teachings went away with a clearer and better understanding of the new faith.—*Bradford Star.*

Judge Ewing was introduced by Hon. R. B. Stone, who spoke as follows:—

A personal friend, who is a believer in Christian Science, invited me to attend this meeting, and I shall be pleased to listen and learn what it is that my friend believes in. Several of my acquaintances have become disciples of this faith, and I am curious to know the secret which has added to their personal qualities a certain charm of placid good cheer, and enabled them complacently to withstand all sorts of misfortune. If they have, indeed, been taught the white art which the great poet scouted as unattainable,—the art to

minister to a mind diseased,
Pluck from the memory a rooted sorrow,
Raze out the written troubles of the brain,

then they have a message which the common people will hear gladly.

I am not an advocate of Christian Science, nor do I endorse beforehand what the speaker of the evening may say, but I do testify, not from statistical tables, but from my own observation in traveling over wide areas of this country, especially through the West,—that this religious movement is growing with marvelous rapidity. One of its accredited representatives is here to speak for it to-night. I have the pleasure of presenting Judge William G. Ewing, of Chicago, who is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Massachusetts.

Vinalhaven, Me.

A lecture on Christian Science was given in Vinalhaven by William D. McCrackan of New York, in Memorial Hall, August 23. The hall was well filled with an attentive and interested audience composed of representative citizens, the intelligent and thinking people of the town.

The lecturer was introduced by Professor T. L. Roberts, Director of Music in the schools of Utica, N. Y., a former resident of Vinalhaven. Professor Roberts spoke of himself as a living example of the power of Christian Science to heal the sick, and his own testimony made a very fitting introduction to the subject of the evening.

Notice.

The Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the Clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Take Notice.

ALL inquiries coming directly or indirectly from a member of The Mother Church, which relate in any manner to keeping or breaking one of its By-laws, shall be addressed to the Christian Science Board of Directors, and not to the Pastor Emeritus.

MARY BAKER EDDY.

A Notable Book.

THE following telegrams prefaced the delivery to Rev. Mary Baker Eddy at her home, Pleasant View, on Tuesday last, of four magnificently bound copies of the edition *de luxe* of "Bohemia," a notable book just published by the International League of Press Clubs.

Philadelphia, Pa., September 25, 1904.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Your especially made volumes "Bohemia" ready for delivery Monday. Shall we deliver them to your representatives here, or would it be more agreeable to have official presentation by League representative? We are more than anxious to have your wishes gratified. Answer.

JAMES S. MCCARTNEY.

Concord, N. H., September 25, 1904.

Mr. James S. McCartney,

Care of *Philadelphia Record*, Philadelphia, Pa.

I deeply appreciate your courtesy, kindness, veracity, but beg to be excused from further official favors bestowed on me by the honorable League's representative, however much I value the proposition thereof.

MARY BAKER EDDY.

The Journalist in its issue of August 6 says of this book, "It is the most novel and complete newspaper symposium of literature and art ever published. In its more than six hundred pages 'Bohemia' gives to the discriminating reading world the best efforts of the greatest writers, artists, and caricaturists identified with the American press, and with these contributions are published able articles expressly prepared by the President of the United States Theodore Roosevelt, ex-President Grover Cleveland, President Diaz of Mexico, King Leopold of Belgium, Admiral Dewey, Rear-Admiral Schley, Rear-Admiral Sigsbee, General Miles, Chief Justice Fuller, Cardinal Gibbons, Sir Henry Irving, Mrs. Mary Baker G. Eddy, Rev. Edward Everett Hale, Rabbi Joseph Krauskopf, Col. William Jennings Bryan, George B. Cortelyou, Secretary of State John Hay, and scores of the world's great men, all of whom have cheerfully joined in the great work under the general direction of the International League of Press Clubs. The book itself has intrinsic value almost equal to its literary worth, but it will be treasured forever because of its distinctively unique character, an imitation of which will never be attempted. 'Bohemia' stands alone."

Those who have seen the copies specially bound for Mrs. Eddy pronounce them the very acme of perfection, both from the printer's and the binder's point of view. These

books are bound in full levant, handsomely decorated with inlaid leathers, in various designs, and ornamented with letters stamped in gold. The covers differ in style, and on the back of each is the announcement that this volume has been "Made expressly for Rev. Mary Baker G. Eddy."

It is gratifying to learn that Mrs. Eddy has been selected by the representative newspaper men, who have compiled this book on behalf of the International League of Press Clubs, as the one woman, out of the great number whose names have been associated with religious achievement, to be represented in so great a work. This is evidence that true merit must command the attention and respect of those who have the widest opportunities to know and appreciate the world's great leaders,—those who have rendered the most important service to the cause of human progress.

The following is taken from the *Concord Monitor's* very interesting account of the delivery of these books to Mrs. Eddy.

"Mr. Albert E. Miller of Philadelphia, member of the Christian Science Publication Committee, was in Concord to-day as the personal messenger of the International League of Press Clubs, bearing to the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, four copies of 'Bohemia.'"

"'Bohemia' is a monumental work undertaken by the League on behalf of the proposed Journalists' Home, and has been issued under the managing-editorship of Colonel Alex K. McClure, one of America's best-known journalists. It is probably the most novel and complete symposium of literature and art ever published.

"Mrs. Eddy was one of the first women invited to contribute to 'Bohemia,' and she is the only writer of her sex who treats of a religious subject, her theme, 'Fundamental Christian Science,' being most compactly yet illuminatingly treated. Accompanying her article is a sketch of Mrs. Eddy by Judge William G. Ewing of Chicago.

"The League has expended great care in the making of the volumes which were to-day delivered to Mrs. Eddy, and of the special numbered autograph copies of the author's edition *de luxe*, hers are numbers one, two, three, and four. The four volumes are differently bound, one in royal blue levant, one in tan levant, one in green levant, and the fourth in crushed royal levant in a beautiful shade of green. The bindings are all richly tooled and ornamented with gold, with inlaid leather ornamentation in dainty flower designs. They are lined with leather inserted panels and faced with rich watered silk.

"Mrs. Eddy's volumes left the bindery yesterday, and were brought here by special messenger. The number succeeding hers is to go to the King of the Belgians, and will be taken to his majesty by the American minister at Brussels, Mr. Lawrence Townsend, who chanced to be at the bindery when Mrs. Eddy's volumes were delivered to the messenger.

"It is a notable fact that Mrs. Eddy's is the only contribution in the book which deals with other than a literary or personal theme, and this will be taken as another indication of the widening scope of her recognition and influences and will be hailed gladly by her thousands of students throughout the world. Certain it is that the jewels of her thought never lay in richer casket than is afforded them in the volumes of 'Bohemia.'"

M.

• A Better Way.

THE editor of a prominent daily voices a very general protest when he says that if things continue at their present pace, every man who hopes to retain a vestige of his strength and comfort will have to keep a scientific valet about him all the time to sterilize his toothpicks before he uses them, and perform a thousand other kindred services, in keeping with the petty requirements of modern medical dictation.

New theories respecting the material sources of disease are constantly being exploited, and they have not only brought into discredit the ideas which were so recently honored as scientific and authoritative, but they have imposed such an ever-increasing number and variety of exactions that a much-burdened and oft-befooled humanity is getting rather tired of the dance, though the pipers be ever so scientific and distinguished.

Even the devotees of *materia medica* are beginning to realize that, at their present rate of increase, the task of forestalling and defeating all the swarming enemies of health and happiness is not only a hopeless undertaking, but that the anxious and persistent care it demands speedily becomes in itself one of the most serious and menacing things in the way of our comfort and well-being. Experience is proving that incessant watchfulness for the body, the tireless endeavor to forefend hygienically all its possible ills, does not secure immunity from them; but, on the contrary, that it supplies the most favorable conditions for the encroachment of dreaded maladies.

Our editor declares that this "fussy foolishness" of medical requirement is making a great many people "disgusted with the whole business of scientific preservation of health," and he longs for the return of the reign of good-old-grandmother common-sense. He is in close sympathy with the prophet when he cried out, "They have healed the hurt of my people slightly, saying, Peace, peace; when there is no peace. Heal me, O Lord, and I shall be healed; save me, and I shall be saved."

As one considers the facts which have thus moved our brother, and remembers that all this inglorious and annoying subjection to materiality is discountenanced and condemned by the life and teaching of the great Wayshower, he cannot help wondering that thinking, Christian people should have allowed these colossal presumptions and impositions of error to remain so long unchallenged. The spiritual philosophy of the prevention and cure of sickness which Jesus taught does not authorize the conclusion that the seeds of disease are located in matter. He declared that here, as everywhere, causation is mental; that sin,—wrong thought and determination,—is the explanation of all disharmony, and that spiritual apprehension, the knowing of truth, is its one "divinely appointed" specific. "The divine Principle of Science, reversing the testimony of the physical senses, reveals man as harmoniously existent in Truth, which is the only basis of health; and thus Science denies error, heals the sick, overthrows false evidence, and refutes materialistic logic" (Science and Health, p. 120). This truth reasserted and demonstrated in Christian Science healing lifts thought from the vain *material* endeavor to prevent and overcome disease, to a restful realization of the immediate and eternal supremacy of Truth; it brings the comforting assurance of the constant protection and safety of him whose mind is stayed on God. The discouraging struggle to discover the occasion and remedy the effects of disease in and through matter, thus gives place to spiritual aspiration, an intelligent effort to acquire and maintain the Mind that was in Christ Jesus, that the law which made him superior to every temptation and assault of evil may be manifest in us. And in view of the abundant proofs of the present efficiency of this true faith, which Christian Science has given, it would seem that no one could doubt that it is the better way.

W.

Environment.

WHEN failure overtakes mortals, as it often does, they are apt to lay the blame for their misfortunes upon their environment, and they may fail to see that in so doing they are conceding the domination of matter, and practically admitting that mental capacity is the vassal of chance and change. Not only is the teaching of the Bible opposed to such a belief, the facts are against it. History shows

that true greatness is wholly independent of external circumstances; it not only exists in spite of them, but even finds occasion for mental unfoldment in what seem to be most adverse conditions. The poet evidently understood this who said,—

Do battle with the leagued world
If worthy, truly brave;
And make each adverse circumstance
A helper or a slave.

The record of those who have lived to advance the cause of freedom and right by proving that man represents mind, not matter; that he is superior to the mere accidents of time and place, may be found in every land. Moral and spiritual greatness finds its heaven everywhere; it recognizes the Divine presence and power as supreme over all the threatenings of error. This is finely illustrated in St. Paul's experience. When compelled by human injustice to spend over two years in the Roman garrison at Cæsarea, he employed his time in sowing the seeds of truth among the soldiers and in learning through their severe discipline the tactics and possible efficiency of a soldier of Jesus Christ. Later, when awaiting his trial in Rome, though living "in his own hired house," he was still a prisoner, guarded by a soldier to whom he was chained. These soldiers were members of the imperial guard, and a new one was detailed each month for this service. It would not be possible to conceive of a greater contrast than that which they must have discovered between Paul's pure and lofty discourse, his demonstrations of the Christ-power, and the nameless infamies of Nero's palace with which they were so familiar. It is clear, however, that through Paul's superiority to circumstances, the glorious light of Truth found its way to the hearts of many. One after another of these guards accepted the gospel of Christ and carried its healing message back to the palace and to far distant lands. No words can more eloquently tell the story of the triumph of good, than those of the letter to the Philippians in which Paul speaks of "the saints" that are of Cæsar's household. Was not this consummation worth all that he endured of persecution, distress, peril, and the sword? Does it not prove that a man inspired by Truth may find in every place and condition an opportunity to do noble things, achieve success, be truly great?

In the life of our Leader we may see that her seeming hindrances were but an incentive to heroic deeds, the fruit of which brings healing to all who are willing to accept the Christ method. Her years of suffering, her failure to find help in drugs or in mortal mind but prompted her to seek and find the truth which is now blessing the world.

As Truth is understood and obeyed, the material environment is mastered and ultimately changed. The wilderness of disappointed human hopes is cleared of its thorns and brambles, and instead we find the blossomings of spiritual promise, the proofs of truth and love.

K.

Letters to our Leader.

Philadelphia, September 17, 1904.

Mrs. M. B. G. Eddy.

Dear Leader:—I feel that this money belongs to you (for The Mother Church if you wish). It came from such pure love and gratitude, expressing such a complete change of thought toward you and the truth of which you have told us, that it seems consecrated to our Cause.

A lady suffering from extreme nervousness asked me about Science, but would not take treatment, as she could not see why her own prayers should not be as good as those I had learned from Christian Science. Some time after this her daughter came to me saying that her mother was past help in medicine, and beyond refusing or accepting treatment, so, though she seemed to feel bitterly toward Christian Science, she asked for help, as there was nothing else, and their doctor approved of it. She said, "It is

Mrs. Eddy I cannot accept." I talked to her, and realized how unnatural it was that God's honest children should be deceived into thinking they had something against His messenger of health and harmony, and that evil could not so deceive them, or rob them of the one Mind. The healing was beautiful. I had not felt like charging them anything, as they seemed to need what they had, and this gift was a surprise and joy, as it proved their understanding of the value of what they had received.

Yours with loving gratitude,

MARY J. MOORE.

[The check for twenty-five dollars which accompanied this letter was sent to Mr. Chase for the Building Fund of The Mother Church.—Eds.]

Chicago, Ill., July 27, 1904.

Dear Mrs. Eddy:—Though words can never say what your address to the Concord church means to me, yet my love and thanks demand expression. For what it means to me and to the world, my gratitude grows, as I realize that your words speak to each one according to the measure of his faithfulness and consecration to infinite Love, and his consequent understanding and ability to do "the works."

Since this last visit to Concord, the desire goes forth, more than ever before, for meekness, wisdom, love enough to enable me to follow steadfastly in the way of Truth; and more than ever before, goes forth love for you and thankfulness for your work. The appearance of every new By-law brings rejoicing in your wisdom; and yet, it brings grief that our eyes are so dull and our ears so hard of hearing and our steps so lagging, that we need them.

That I may follow more closely in the footsteps of Jesus the Christ, and so, lovingly, in yours, is my prayer.

With unspeakable love, sincerely yours,

ANNA T. ROBINSON.

Rev. Mary Baker Eddy.

Beloved Leader:—Last Sunday after the regular service our First Reader read your dedicatory address to the Concord Church, and I desire to express to you my love and gratitude for this added blessing. Every one in the congregation listened with rapt attention, and we feel that we cannot be too grateful for all you have done for us and for the whole world. We feel that each message sent out is not for one church but for all, for "whatever blesses one blesses all" (Science and Health, p. 206).

Yours gratefully and lovingly,

Atlanta, Ga., July 28, 1904.

MINNIE McLEOD.

Lecture of The Mother Church.

A lecture on Christian Science, under the auspices of The Mother Church, will be delivered by Rev. Arthur R. Vosburgh, C.S.B., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., in Symphony Hall, corner Huntington and Massachusetts Avenues, Thursday evening, October 13, 1904, at eight o'clock. The lecture is free and the public will be cordially welcomed.

Meeting of General Association of Teachers.

Reduced rates have been granted for this meeting by the railroads in the Central Traffic Association, the Trunk Line Association, the Western Passenger Association, and the New England Passenger Association, of one fare and a third on the certificate plan, provided one hundred or more of these certificates are presented at the meeting. Those who wish to avail themselves of this privilege must secure certificates when purchasing tickets to Chicago, and they should consult their local ticket agents for more detailed information.

Testimonies of Healing.

It has only been six months since I came into Christian Science, but in that time my life has taken such an entirely different direction that I feel strongly the desire to tell others about it. I did not come to the light through physical healing. The light came to me when it seemed as if every other avenue were cut off. I had just finished my college course, which had been obtained at the expenditure of great effort and not a little sacrifice; but before I was through my senior year I realized that I had not gotten out of my college experience what I had hoped might come. My life seemed just as barren, and happiness seemed farther away than when I entered. I was unhappy and discontented. Nothing that I had planned seemed likely to come to pass.

When I first heard of Christian Science it struck me as worse than foolish,—as hopelessly transcendental. I did not know what it was that I wanted, I only knew that, whatever it was, I did not have it. Then sorrow came to me and every promise of happiness was suddenly swept out of my reach and I was left stranded on the desolate sands of the utter failure of all my human endeavor. Then, through a faithful friend, the light was brought to me, and I followed it, largely because it was the only visible issue out of the darkness that had settled about me.

To-day, my life is a very different one. Contentment has taken the place of unrest, and faith has displaced distrust. I have had many demonstrations of the surety of my hope in the healing of sickness since then. A very sore finger that had every indication of blood-poisoning was overcome in a night. One experience in particular stands out very clearly. I was suffering from a backache that had, for years, invariably appeared whenever I sewed on a machine. I had planned to attend Judge Hanna's lecture, but concluded in the afternoon that I did not feel equal to the trip across the bay to San Francisco. I, however, finally decided to go in spite of the fact that I felt no better. During the first part of the lecture I found it difficult to follow the words of the speaker, because of my own discomfort. But when the Judge began to repeat the 91st Psalm, my pain dropped from me as gently and completely as if it had been a discarded garment, and it has never returned.

It is, of course, impossible to tell of the many blessings which have come through the realization that I am, in truth, a child of God. I am heartily grateful to Mrs. Eddy, whose faithful following of her spiritual guidance has resulted in giving to this generation "Science and Health with Key to the Scriptures."

MARTHA M. GODDIS, Eastland, Cal.

I desire to tell how thankful I am to God for sending the light to me, through our dear Leader, Mrs. Eddy; and to the dear practitioners who did so much for me.

About seventeen years ago, I was in a very critical condition, caused by constipation. I had tried everything that the doctors prescribed, but nothing did me any good. I learned that a Christian Science practitioner was in the city, and I thought I would send for her and see if there was any good in the treatments. Like many others, I doubted, but in a short time I was healed. I bought Science and Health, but laid it aside and paid little attention to it.

In a number of years I found myself once more an invalid, with a complication of diseases,—rheumatism, congestion of the blood, and stomach trouble. I was almost ready to pass out, and said to my family that I would not be with them long, as I found myself growing weaker each day. I then decided to try Christian Science, and my sister sent for a practitioner, who arrived at ten o'clock in the morning. After laying all my sorrows and troubles before her, she declared them to be unreal, and said I should eat my dinner. My sister looked at her in amazement, and

exclaimed, "She can't eat that, she has been living on a milk diet." I said, "I shall eat my dinner, and it will not hurt me; God has provided this meal for me," and my demonstration was made. It did not hurt me, and I began to improve from that minute. My healing was slow, but I never was discouraged, for some of my ailments were healed instantaneously. I had suffered all my life from sick headache. My family would not leave me alone when I had a severe attack of it, as I would faint away. At times I would have two or three of these severe attacks in a week. I was also a great sufferer from neuralgia,—did not dare to go out on windy days, or sit in a draft. I am now healed of all my complaints through Christian Science and am perfectly well.

I have not only been helped physically, but it has been a spiritual uplifting, and a benefit to me financially, as I take the truth into my business every day, knowing that all I have comes from God.

I have not taken a drop of medicine for four years, and I rely only on God's sustaining grace. Before this time we would not think of retiring without plenty of medicine in the house for fear I should get sick in the night. I had the privilege of class instruction a year ago, and am now able to make many beautiful demonstrations for myself and others. I am happy to be a member of The Mother Church.

MRS. CLARA E. LEE, Lancaster, O.

I count it a gracious privilege to give my experience in Christian Science. Divine Love found me wandering lonely and without hope for relief from sin and disease. Finally, a year ago last June, the thing that I most feared came upon me. I had to send for a physician who performed what he termed a minor operation, which was very painful, and he finally told me that I would have to go to the hospital and have a major operation performed. Fortunately for me, he had a more serious case to attend and put me off. At this juncture divine Love led me to seek Christian Science, and I found to my entire satisfaction that I could be healed and would be healed. I began treatment, and discharged my physician, who told me that I was foolish, and would have to return to him, and that his work would then be all the more painful for me and harder for him. I thank God that I did not listen to error and go back, but held to Christian Science, and great has been my reward. Through the help of my practitioner and the study of Science and Health, I have been completely and permanently healed of chills and fever, constipation, severe and regular spells of headache, and, above all else, I have gained a clearer understanding of the Holy Bible and my true relationship to God. I count my blessings daily, and I can see what God has done.

I desire to return thanks to God, and to our beloved Leader, also to the practitioner who has been so patient and earnest in her desire to help me and bring me into my inheritance.

I am looking forward with great joy to the blessing of having class instruction, and to pass on to my fellowman the crumbs I have gathered from our Father's table. I cannot close without saying that my wife has been healed of several ailments, and that we get great help from the *Sentinel* and *Journal*.—N. B. DAHL, Warren, Pa.

One day last October, while walking through the beautiful woods, I picked up a spray of poison ivy. When I saw what it was, I quickly threw it on the ground. On the following day I suffered from headache, and during the night the pain increased in severity. In the morning I could scarcely open my right eye, and on looking in the mirror, I saw two dark, swollen crimson streaks on my face under the affected eye; then I remembered touching the poison ivy, and I was overcome by fear. Nineteen years ago, I had been poisoned in the same way, and for some

years the eruption appeared annually. Though I suffered much during those periodical attacks, my suffering at this time was more acute, as blood-poisoning now affected my hand; all the right side of the face was swollen, and the inflammation was spreading to the other side of the face. In the morning, I telegraphed for help, which I received immediately. I felt like a little child in my dependence upon our Father-Mother God, and as I experienced this sweet relief I sang Mrs. Eddy's beautiful hymn, "O'er waiting harpstrings of the mind" (Miscellaneous Writings, p. 396).

In a few days every trace of the eruptive disfiguration had disappeared, and the place affected by blood-poisoning changed in hue from black to a natural flesh color.

From the age of ten I read the Bible, and always wished to understand Genesis and Revelation, but gave up the study in despair, until Christian Science shone as Love's sunlight into my heart and life. The Lesson-Sermons are a daily help and comfort. I realize that I am surrounded by the Love that casts out fear.

In December I had severe cold, mumps, and tonsillitis. I did not, however, miss an hour from my duties, but was able to overcome these ailments, powerful though they seemed to be, through the knowledge of their nothingness.

After such proofs of God's care and goodness, and in the realization of my many blessings since Christian Science came into my life, I was ready, as never before, to say, "I will praise the name of God with a song, and will magnify Him with thanksgiving."

I am thankful to God, to the great Wayshower, and to our dear Leader for the message she has given to suffering humanity through her book, *Science and Health*, also to the teacher from whom I had class instruction.

LOTTIE W. DOWE, Lanark, Ont.

It has been my great privilege to know of the blessings of Christian Science, to have learned a little of this Christ-truth that heals and saves.

When I first heard of Christian Science I had been deaf in the right ear for about seven years, but after a few months' study of this truth, the hearing came suddenly and permanently. At the birth of my little son I experienced no pain. A recent attack of grip yielded to treatment in a few hours, and so it is with every case of sickness; it no sooner appears than it begins to disappear. One evening during the summer my little son fell from an upper story on some rough boards that had just been laid into a platform, striking his head on the pedal of a bicycle. The error tried hard to make itself seen and felt, but in a short time he went soundly to sleep, awaking but once during the night. He was ready in the morning for his trip to the kindergarden.

I am grateful to Mrs. Eddy for this light and for her untiring efforts to make the way clear to us, and to my dear teacher and all those who have helped me to see this truth.

ANNIE E. FORRESTER, Thorold, Ont.

August 18, 1902, I was taken down with what three doctors pronounced Bright's disease, and they stated that I would not live a year, or if I did succeed in living longer, I would be mentally unbalanced. On December 6, 1902, my wife presented me with *Science and Health* as a birthday gift, and it was indeed the best present I ever received. Since that time I have been reading it and attending the Second Church here. I have not used any medicine since, nor has any one in our home. I am in the finest of health and have lost all my bad habits. This truth has brought a great spiritual uplifting to all of us, and words cannot express my gratitude to Mrs. Eddy and to all who have helped me to the same.—T. VOLLMER, Chicago, Ill.

Verily man's extremity is God's opportunity. This was proven to me when all material remedies had failed and I allowed myself to be healed through Christian Science.

About eighteen months ago I was taken down with a severe attack of appendicitis. For eight hours I suffered almost unbearable agony. I called in a physician who gave me medicine which relieved me, but I had to remain in my bed for three weeks on account of soreness, and after getting up there was always a weakness that never left me. I continued to try everything I could to relieve the soreness and weakness, changed my physician, took patent medicines, electricity, and whatever else I could hear of, but could not gain any more strength. Again I was attacked with another severe cramping spell, which made me much weaker. My physicians, after doing all that they could to relieve me of the pain, advised me to try a change of climate. I tried a change of climate for two months, and had to return home still worse, weaker, and having nervous spells. About every third day I was confined to my bed. At this point I began to lose all hope, having grown weary of the many failures to receive help. I asked my physicians if they could not help me any more, and they told me medicine could do no more for me, and the only thing that could save me was to undergo an operation, and that would be very dangerous, because I was so weak and had heart trouble, but that it was the only possible chance. Darkness seemed to prevail, but a dear friend who knew of my extremity told me of Christian Science, and asked me to give it at least a fair trial. Feeling that there was nothing more for me in *materia medica*, I accepted it very gladly. After the first treatment I never had another nervous spell, and in two weeks was able to attend to my work and improved rapidly every day. In six weeks I was perfectly well, having gained some fifteen pounds in flesh. Thus the verity of our Master's saying was proved to me, "Ye shall know the truth, and the truth shall make you free." We have had many demonstrations in our family since. I am glad to say that through my healing my wife and a number of relatives have been led to see the beauty and power of Christian Science, and have accepted its teachings.

I know all that I owe to Christian Science, and am deeply thankful to God for this blessed truth that we have received through the never-ceasing love and labor of our dear Leader. I am also very grateful to the practitioners who are so faithfully voicing this word of Truth.

T. W. G., Campbell, Cal.

Gratitude for the understanding of Christian Science which I have, and for the benefits I have received from it, impels me to give the Field a partial account of what Truth has done for me. I never could express all I have experienced of its blessings. I first heard of Christian Science fifteen years ago through a dear friend of the family. At this time I and my two small sons felt the healing power of Truth through this friend's work for us, and within the past seven years I have been healed of nervous prostration in its worst form by a practitioner, who afterwards became my teacher.

Through my own understanding I was healed of kidney trouble when an operation was said by the physician to be necessary, and because of which I had been refused by an insurance company. I was also healed of weak eyes, which rendered the wearing of glasses a necessity, and what seems to me most wonderful, of a chronic trouble that had seemed to be a part of my existence, and which caused me such agony that in childhood, when in the paroxysms, I would scream until the neighbors a long distance away would hear me. The pain, which came upon me at irregular but never-failing intervals, was with me through all my life until two years ago, so that I knew nothing of existence except accompanied by it. Physicians were consulted: gallons of medicine were taken, but nothing was ever found that made the trouble any less severe. One physician said, not many years ago, "Well, you say you always have had

it, and I guess you always will have it." At the time he made this remark I had drifted back to medicine after the first healing of myself and sons, nine years previous. This verdict served to arouse me, and I instantly thought, "I will not suffer from it always while the understanding of Christian Science is for us."

From that time I turned away entirely from medicine and came to Christian Science wholly and unreservedly; but it was five years later that this special trouble was destroyed. It had always seemed so real to me that I had not the courage to try to destroy it until at last I saw that it was disobedient and dishonest for a Christian Scientist to be harboring any such lie as this; so, the next time it manifested itself I calmly and obediently declared the truth. In an hour the pain had ceased and it has never appeared since. No one, who has not been freed from some life-long horror can understand my feeling of gratitude for deliverance from even this one evil.

When we failed to keep a dear one here with us, every feeling of sorrow and loss was destroyed through the loving help of friends. This last experience is wonderful. That what has seemed so real in the old way of thinking may be absolutely blotted out, is a great blessing.

For all this and much more I feel grateful that God revealed Himself to our Leader, that she was ready to receive the revelation, and that we are waiting and watching for more of the truth. I also have a deep sense of gratitude and love for all those who have helped me by treatments, teaching, and by the crumbs they have so generously let fall from their well-laden tables of understanding. Mrs. Eddy's writings, together with all the other Christian Science publications are a rich mine of wealth to me.

I am overwhelmed by a sense of gratitude for what I have and what I am through the understanding of Christian Science.—Mrs. G. M. H., Kansas City, Mo.

I first heard of Christian Science some twelve years ago, and was healed of a severe ailment while attending a morning service, that being the only service I ever attended till some four years later. I paid very little attention to it then, although suffering from many diseases, among them rheumatism, sick headache, chronic constipation, weak back, and neuralgia. I dared not eat what I wanted for fear of terrible distress in my stomach. At the birth of my fifth child, a little boy, the attending physician said there was no use in trying to dress the little one, for it could not live longer than a few hours at most. After he had left the house I insisted that the child be dressed and asked my mother if she would care for it, and with the help of a friend she succeeded in getting it cared for. The next day we called the physician and he treated it for some five or six weeks, then gave it up to die. We employed two other physicians, who gave the same verdict. The baby suffered terribly, did not grow, and we could get no food that seemed to agree with him.

After five months of weary watching, waiting, and praying for help in every way except the right way, I was convinced there was no help for him, and I was willing to seek God through Christian Science,—was willing to do anything required of me,—if only my child might be spared. I immediately called on a practitioner and asked her to take the case. She said she would not take it until she saw the child, and wanted me to bring him to her. I told her I could not do that as he had never been out of doors and was so feeble that he could not survive the journey.—two and a half miles. She immediately replied, "God is his life." I left her, believing her every word.

On arriving at my home I found that the child had been sleeping naturally for two hours,—the first natural sleep he had ever had. He slept quietly until four o'clock in the morning, when I awakened him to feed him and he was healed. He has remained healthy and strong, and we have had an-

other little son born to us; he has never taken any medicine, and is seven years old. We have six children, and from that day till this I have never taken any medicine nor used it for the five younger children.

I am thankful to God for every trial that I have had to undergo. It has given me a chance to prove Christian Science and to *know* that it is of God. I send these lines as a slight token of love and gratitude to divine Love.

ELLA V. CHENEY, Hart, Mich.

About sixteen months ago, when away from home on a visit, I was suddenly taken ill with what the physician called neuralgia of the heart. I was taken home, and day after day grew worse, becoming delirious and remaining in that condition for days at a time, not even recognizing members of the family. For three months I was under the constant care of physicians, three different doctors having attended me. Our family physician pronounced my trouble "nervous intoxication," brought on by hard work. The nervous system was overtaxed, bringing about a complication of troubles that all material means tried failed to relieve. Members of the family tell me that the spells I had were in many respects similar to those of delirium tremens in their hideous forms, all the symptoms of drunkenness, from its mild form to its very worst, often manifesting the disposition of a demon, instead of the Christian life I was striving to live when in normal condition. The family were afraid to leave me alone for fear that I would take my life. It was apparent to all that unless help from some source soon came it meant insanity.

Relatives suggested trying Christian Science, but some of the family very much opposed it, saying they would rather bury me than come in touch with it. My cousin had been wondrously healed in Christian Science. My condition grew still worse and it seemed almost impossible to govern me any longer. At times I was so wild that the family thought it dangerous to be with me. My mother, realizing this condition, consented to have a Christian Science practitioner called. I was in such a condition that I could not retain even broth in my stomach. The first treatment brought great relief, and in two weeks I could eat anything I wanted. The spells gradually grew less and became lighter until, at the expiration of a few weeks, I was entirely well, and I am now enjoying excellent health,—better health than I have had for several years. Words cannot express my love and gratitude to Christ and to our Leader, Mrs. Eddy, for bringing to us so great a salvation.

MRS. EDNA KEMP-SIDES, Dayton, O.

Four years ago my little boy had an abscess on his jaw, and for eight months he could not rest, night or day. We doctored constantly, but nothing seemed to have any effect upon it. I used every kind of poultice that could be made, he took bottle after bottle of medicine, but it kept growing worse all the time. There were twenty places open and discharging, and his neck was swollen to such an extent that the poor child looked frightful. The doctors called it a carious and ulcerated condition of the jaw-bone, and thought it would be necessary to remove a portion of the bone and insert a silver plate, but we would not consent to an operation. At last, when we had given up all hope of the child ever recovering, a friend told us of Christian Science, and gave us some literature to read. We read it over and over again, and wondered if it could be possible for our darling boy to be healed by this means. We made up our minds that there could be no harm in trying, and called on a practitioner in Dayton, O. This was on Wednesday, and the following Sunday, to the surprise of all who knew the child, the ulcers had entirely healed over. In a few more treatments he was entirely well, and has never taken any medicine since that time. Words cannot express

the gratitude I feel for what Christian Science has done for us.—MRS. ELLA THURSTON, Eaton, O.

I am a little boy ten years old. I wanted a copy of Science and Health, but I did not want to ask my papa for the money, so I went out to find some work. A man gave me some work on Saturday for a while, then I went and cleaned pavements until I made five dollars and got my book. I go to Sunday School every Sunday. I love to learn of the truth. I have been in Christian Science about two years. I thank Mrs. Eddy for telling us about Love and Truth.—HARRY JOHNSON, Marion, O.

My gratitude to Christian Science cannot be expressed in words. Before knowing about this truth which makes man free, I was always tired and never felt strong. Eight years before I had a severe attack of malarial fever, from which I did not seem to recover, as it would return every spring and fall, and always kept me in bed a few weeks. I am entirely free from it now, and have been for over five years. I have also laid aside glasses. I hardly know what it is to feel tired now, and I feel truly thankful to our dear Leader and all who have helped to show me the way.

M. A. K., Chicago, Ill.

I would like to express my gratitude for Christian Science. My papa, mamma, brother, and myself have been in Science a little over a year. We have been healed of many ailments which have come to us, and now we have almost perfect health in every way. One thing which had bothered me ever since I was a very small child, was that when I went out into the wind my hands would chap and bleed, but through the truth I have been able to make my own demonstration over that trouble and many others. We now have learned that God does not make sickness and is always ready to heal us. I am twelve years old.

With gratitude to God and to Mrs. Eddy, our dear Leader, and also to the good Christian Scientists of Walla Walla for leading us into the light of Truth, I will now close my testimony.—HAZEL J. MILLER, Walla Walla, Wash.

I was not an invalid when Christian Science found me, nevertheless, I was troubled with several physical ailments, chief among which was catarrh in one of its most annoying forms that had been my constant companion for twenty years. At this time I was visiting relatives in a town where a cousin was under Christian Science treatment. She knew little about its teachings, but was sure it was just the thing I needed to cure my catarrh. I thought otherwise, but in spite of my objections I was induced to take treatment.

During the first two treatments I felt belittled and thought I was permitting others to make a fool of me, until I realized that I had been healed of indigestion, which had troubled me for two years. I then became interested and commenced to study. Treatments were continued about six weeks during which time I received a number of benefits.

Shortly after this I moved to another country where I had no Christian Science associates. Alone in my studies and efforts to affect a cure, it was nearly two years before the catarrh finally and completely disappeared. Looking back over those years I find myself healthier, happier, and better than I ever was before, for which I feel very thankful and realize that the benefits that may be derived from a study of Christian Science are priceless. Even more than healing of physical ailments is the peace and freedom which it brings, in the proportion that we live the truth and demonstrate it in our lives.—J. E. STEFFINS, Tacoma, Wash.

From our Exchanges.

For the average man or woman, the easiest part of the Christian life is the assent to doctrinal statements and the observance of certain religious forms. The most difficult task is to reproduce, in ourselves, the spirit of our Master, and so show forth his spirit in home and community relations. The first is important, the second is absolutely essential to Christian influence. We meet people constantly who know little and care less about our theological views, but who are carefully noting the presence or the absence of the "mind which was in Christ Jesus." If they find us genuine, honest, kind, unselfish, helpful, the religious profession which we make commends itself to their judgment and gets a grip upon their hearts. If these personal qualities are conspicuous only because of their absence, we should not think it strange that on-lookers doubt the value, if not the reality, of the religious experience to which we lay claim.

If our testimony is to have any value it must be unmistakably genuine. A wooden smile, representing nothing deeper than our facial muscles, is only a cartoon of kindly feeling, and insults those for whose benefit it is assumed. A sham meekness deceives no one and disgusts the thoughtful. The graces which we assume to possess must be rooted in the heart or they are worse than vain. The world is quick to distinguish between the genuine and the counterfeit, and will accept the one and reject the other as quickly in conduct and character as in currency.

It is doubtless true that a man may be honest and kind and patient and yet not be a Christian. The trouble is that we seem to assume that one may be a Christian and refuse to give these graces a place in his life. There is a constant tendency on the part of many Christians to undervalue those qualities which are essential to every right character, and to live as if the possession of these virtues were a matter of indifference. Some people seem to say, "These are things that any man may have. I have something better. I have been born again, have been baptized, and am a member of the church. Therefore, I am under no obligation to give attention to the amenities of life, to control my temper or to show consideration for the feelings of others." Probably we do not consciously commit ourselves to any such proposition, but our attitude and actions often give people reason to suppose that such is our conviction.—*The Standard*.

To many readers of the Bible heaven is a remote realm and departed souls are aliens from all the scenes of this earth; but to others, the same volume seems to make the two worlds but one, with only a thin veil of sense lying between. They recognize but one family in heaven and earth, and learn that the beloved go forth, not to journey away forever, but to come back to sit with us in our solitudes and inspire us in our noble efforts to unite great love with love, and mingle thought with thought.

The Universalist Leader.

The multitude is waiting for leaders to-day. They want men who stand with earnestness for what men must and must not do. They are waiting for men and women to lead the way in a reasonable unworldliness. We want to hark back to the words, "What shall it profit a man if he gain the whole world and lose his own soul?" You cannot get beyond that, either in the first or the twentieth century.

W. S. RAINSFORD, D.D.
Homiletic Review.

It is by contrasts largely that men are convicted of sin, and led to cry out, "What must I do to be saved?" When the Christians whom worldly people know, try to be as much like the world as possible and not forfeit heaven, they are as useless as they can well be, as witnesses to the realities of Christianity.—*The Examiner*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckle edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckle edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

National.

An American engineer, with a party of young college graduates, has made discoveries about the Panama Canal which make it possible to solve the baffling problem of the Chagres River freshets by diverting the stream to the Pacific coast. The party spent four months in tracing the course and the source of this river, whose spring freshets, sometimes forty feet high, so far have proved an insuperable obstacle to a sea level canal project. By the use of the data collected it is found possible to divert the Chagres from the Caribbean slope to the Pacific side of the isthmus. This could be done at an approximate cost of \$16,000,000, releasing \$20,000,000 of the \$36,000,000 destined for the construction of locks.

When the American engineers made their survey it was planned to control the river by a dam and a series of locks. This dam would have produced an artificial lake some 14,000 acres in area. The Chagres, according to the plans, would bring to this dam the surface flow from nearly 500 square miles of high ground that the river drains. During the rainy season the Chagres rises with almost incredible rapidity. To control these risings it was intended to form the artificial lake, a gigantic easeway in the connecting dam, a smaller easeway around the locks at Pedro Miguel, and still another spillway on the western side of the artificial lake, which was to be named Lake Bohio. This spillway was to be a mile in length, and when the flow of the Chagres overtaxed the capacity of the lake the water would run over the top of the spillway down into the Pena Blanca swamp, and, flowing over the surface of the swamp would discharge into the Caribbean Sea. This, up to the present survey, was regarded as the best practical solution of this difficult problem.

The American Minister to Panama has sailed for New York to discuss with the President, it is said, the settlement of the question of sovereignty over the Canal Zone in connection with the opening of ports, the collection of duties, and the establishment of postoffices in the zone, the questions of exercising the good offices of the United

States in adjudicating the Costa-Rican-Panama boundary dispute, the resumption of relations with Colombia, the exclusion of the Panama Lottery from the Zone, the condemnation of property within the Zone belonging to Panama, the conflict between the concessions Panama has granted to wireless telegraph companies, and the regular payment or dismissal of the Colon fire claims. It is the wish of Panama to negotiate a new treaty covering points that were not settled by the Canal Convention.

Mr. Peary, the Arctic explorer, addressing the Eighth International Geographical Congress, announced that the new Arctic ship which is now being built for him at Portland, Me., is designed to break its way in a literal sense through a part of the fields of ice which have hitherto proven such a serious barrier to exploration. "My plan of campaign," said he, "is to force our ship to the north shores of Grant Land, taking on board at Whale Sound the pick and flower of the Eskimos with whom I worked and lived so long, to go into winter quarters on that shore, and to start with the earliest returning light on a sledge journey across the central Polar pack." It is the intention of the commander to break his way through the ice-encumbered channels extending northward from Cape Sabine to the Polar Basin.

The first Universal Congress of Lawyers and Jurists, held under the auspices of the American Bar Association, convened at St. Louis last week in Festival Hall, at the conclusion of the American Bar Association convention. Eminent lawyers and jurists from all over the world were in attendance. The following resolution, on which the committee of nations had favorably reported, was adopted by the congress:—

"Resolved, That the Universal Congress of Lawyers and Jurists sympathizing with all movements to bring about peace among nations by international friendly agreement, welcomes the announcement of the President of the United States that he proposes to call a new conference."

A party made up of members of the Society of Chemical Industry has been touring the United States. The party is made up of some of the most distinguished chemists in all parts of the world. This tour is made for the purpose of studying industrial development. They have traveled in a special private train.

Porto Rico's 1,007 public schools opened last week with 60,000 pupils enrolled. In the first school year during American occupation there were 800 schools, with 25,000 pupils.

Foreign.

The electric railroad between Lima and Callao, the second enterprise of its kind in Peru, is in operation. Like its predecessor, that between Lima, Chorillos, and the other near-by seaside resorts, the Lima-Callao road is equipped with American power machinery and American cars, both open and closed. The roadbed and track were laid by an American firm. The new road, which is run by the overhead trolley system, covers the 8.6 miles between Lima and Callao in a little over twenty minutes. It runs cars every fifteen minutes and has lowered by one-half the fares formerly existing on the steam railroad. The new railroad has thus far been unable to obtain permission to run through the principal streets of Lima, but it is believed that the obstacles to electric traction through the main streets of Lima will soon be removed. The road runs through the main streets of Callao, and has besides a prolongation of some mile and a half to La Punta, a seaside resort a short distance farther down the coast. The new road fills a long-felt want of frequent and cheap communication between the capital city and its port.

The eruption of Mount Vesuvius last week is said to have been more violent than at any time since 1872. Red hot stones were

hurled to a height of sixteen hundred feet, falling down on the flanks of the mountain with a deafening sound. The director of the observatory says that between five o'clock Sunday morning and six o'clock in the afternoon his instruments registered 1,844 violent explosions, and that one stone thrown out weighed about two tons. Lava flowing from the crater melted the metal of the Funicular Railway, destroyed the upper station, and burned the wooden huts in which the guides lived. All vegetation within a radius of one mile of the crater has disappeared. The eruption has now greatly diminished. The authorities have relaxed the restrictions, and people are permitted to ascend the mountain. The Funicular Railway, however, was so badly damaged by lava that three months will be required to repair it, while tourists and sightseers will go up in sedan chairs.

Tangshaoki, taotai of Tien-Tsin, has been commanded to proceed to Tibet to investigate and manage affairs there. He has been created a metropolitan officer of the third rank and promoted to the military rank of lieutenant-general. Tangshaoki was educated at Yale University, and formerly was secretary to Yuan-Shi Kai, viceroy of Pechili Province. He is known to be conversant with foreign affairs, and is not regarded as anti-foreign, although jealous of Chinese interests.

The British Tibet expedition left Lhasa September 23, and is now marching in the direction of the Chumbi Valley. In bidding farewell to Brigadier General Macdonald, commander of the British military force, the venerable regent invoked the blessing of heaven on his head for sparing the monasteries from violation, and presented him with a golden image of Buddha.

Industrial and Commercial.

Steam power is going out of fashion, says *The Scientific American*. Water power is coming in. Electrical transmission is working the change. Carried to its possible results, this utilization of water power means the extinction of the steam engine. Such a complete victory for water power in many cases is by no means improbable. As the cost of fuel goes up, the distance of profitable transmission for water power increases, but even very cheap fuel sometimes fails in competition with transmitted water power. As an example of the rates for transmitted energy from water falls that have enabled it to displace steam power, the flat charge of twenty-five dollars per horse power year may be mentioned. This charge for power, 24 hours per day and 365 days in the year, is made to large consumers by several transmission systems, and is constant for the number of horse-power covered by the contract without regard to the time during each day that it is actually consumed. If the purchaser of electric power on this basis can use it only 10 hours per day and 300 days per year, or 3,000 hours, his rate per horse-power hour amounts to 0.83 cent for the energy actually consumed. Where the power can be used 24 hours per day and every day in the year, the flat rate of \$25 per horse-power year amounts to only 0.29 cent per horse-power hour. Who would shovel coal for this money?

General.

The official figures showing the world's gold production for the calendar year 1903 will show that the principal gain in the world has been in South Africa, where the output of 1903 was in the neighborhood of \$28,000,000 greater than in 1902. The rate of increase there for seven months of this year would indicate an increase of \$22,000,000 for 1904. The world's yield for the current year will probably pass the \$350,000,000 mark. The United States shows a falling off in gold production for the calendar year 1903. Australia during this year shows an increase of nearly \$8,000,000 over 1902.

The population of Germany has increased 881,000 during the past year. It is now 59,495,000, and has increased forty-five per cent since the close of the Franco-Prussian War.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Summer Experience and its Lessons.

REV. JESSE L. FONDA.

ONE morning I was working in my garden and had a handkerchief about my neck in place of a collar. While handling some of the vines I suddenly, and without warning, felt a brisk buzzing in the kerchief's folds. From my boyhood memories I recognized an old acquaintance with some very penetrating peculiarities, and for a few seconds there was quite a vigorous and instinctive demonstration to free his majesty of the yellow and brown coat from the inclosing cloth. During this effort he made a move, quite natural to him, according to mortal belief, and which for an instant I felt very keenly. He was soon liberated, however, and went away, glad, apparently, as I, at the termination of the episode. With a denial of the power of poison to touch my real being, the discomfort ceased, and I proceeded with my work until breakfast was called.

When in the house I thoughtlessly put up my hand to feel what was there any way, and immediately, on thus turning my thought to it, the pain began again with the old-fashioned smart and irritation. I at once returned to my denial, and the pain ceased as quickly as it had begun. This proved the truth of the scientific teaching that pain is a thing of mortal mind, and that mortals can have it if they want it and dispose of it if they dare. After this, I had not the least sensation or inconvenience from the sting, but I did get a pointed hint which set me to thinking along scientific lines.

When Science comes to be the conscious law of our being, and when error shall have disappeared so that "the wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them," will the "bumble-bee" lose his sting, so that when he lights on the hand his touch will be as the falling of the petal of a rose? Why not! all these creatures belong to the same kingdom, and the prophet has added, "They shall not hurt nor destroy in all my holy mountain!"

There are many whose words can sting as surely as the wasp's little needle. There are those whose thoughts are as irritating as the poison of the bee; and so long as this is true of thinking mortals, who shall blame the unthinking insect? Paul says, "For the earnest expectation of the creature waiteth for the manifestation of the sons of God. . . . Because the creature itself also shall be delivered from the bondage of corruption into the glorious liberty of the children of God." The whole world then is waiting for us to bring the rule of Truth and Love into practical demonstration.

A few years ago the world stood aghast at the eruption of Mount Pelee on the Island of Martinique. It was dreadful, but there was not a hundredth part as much property destroyed, suffering caused, or lives lost as in the present eruption in the Orient. The fiery turmoil of that terrible

crater was as nothing, compared with the fierce fury of the thought behind the guns in Manchuria.

So long as these cruel conditions obtain in mortal minds what else can be expected from the material sense surrounding us? "The physical universe expresses the conscious and unconscious thoughts of mortals. Physical force and mortal mind are one" (Science and Health, p. 484). When love, peace, and harmony reign in our thoughts, the visible world around us will feel the divine impulse, and its evils will begin to disappear.

Paul's Thorn in the Flesh.

LEWIS C. STRANG.

And lest I should be exalted above measure through the abundance of the revelations, there was given to me a thorn in the flesh, the messenger of Satan to buffet me, lest I should be exalted above measure. For this thing I besought the Lord thrice, that it might depart from me. And he said unto me, My grace is sufficient for thee: for my strength is made perfect in weakness. Most gladly therefore will I rather glory in my infirmities, that the power of Christ may rest upon me. Therefore I take pleasure in infirmities, in reproaches, in necessities, in persecutions, in distresses for Christ's sake: for when I am weak, then am I strong.—II Corinthians, 12: 7-10.

THE important point in connection with this interesting statement by Paul is not, what was the thorn in the flesh, but did the apostle make his demonstration? Did he prove the omnipotence of good by overcoming the particular claim of evil which he designated as a thorn in the flesh?

We have been taught in the past that Paul failed in this instance to justify his faith by his works, and the argument has proceeded something after this fashion: God foresaw that Paul was likely to become exceedingly puffed up with pride because he had been considered worthy of a special revelation concerning the things of the Spirit. Consequently, to forestall this inevitable sin on Paul's part, God inflicted the apostle with a physical or mental irritant, which should serve the divine purpose of keeping the afflicted mortal properly humble by constantly reminding him that in spite of revelations he was only a worm. Paul, perceiving the divine wisdom of the infliction, rejoiced in it mightily, and welcomed all similar inflictions as a further means of spiritual salvation through the mortification of the flesh.

Examining the above passage in the light which Christian Science throws upon it, the first thing perceived is this, that Paul knew God did not send evil upon him, for he plainly states that it was "the messenger of Satan" which buffeted him. Indeed, if Paul had not recognized that it was a "messenger of Satan" which buffeted him, both his logic and his Christianity in beseeching the Lord thrice that the thorn might depart from him would have been open to question.

The answer which Paul received to this prayer is most suggestive. God said, "My grace is sufficient for thee," hence Paul could say, "My strength is made perfect in weakness." The power of Spirit is seen to be always adequate, when the errors (weaknesses) of material sense are made to disappear. "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

God speaks to all His children, when by relying on divine Principle they succeed in proving that the one Mind really does govern the universe. Love is shown to be sufficient when Love heals. Divine omnipotence "is made perfect in weakness" when trust in divine Principle proves the limitations of matter to be falsities.

Is it not apparent that Paul made his demonstration and was healed of the thorn in the flesh? Are not his gratitude and joy expressed in the ringing declaration, "Most gladly therefore will I rather glory in my infirmities, that the power of Christ may rest upon me," logical and natural and in direct line with the individual experience of every Christian Scientist who is somewhat acquainted with the workings of Truth? Moreover, when does one know positively and absolutely that the power of Christ has rested upon him? When he has been healed.

Paul did indeed take pleasure in infirmities, reproaches, necessities, persecutions, distresses—not because God sent them upon him, but because they gave him successive opportunities to prove that God was "a very present help in trouble." Paul knew that by overcoming infirmities he conformed again the great lesson, expressed in the words, "for when I am weak, then am I strong,"—the lesson that man of himself can do nothing, but that the Father who dwelleth in us, "He doeth the works."

A Blessing to All.

E. J.

I HAD occasion recently to realize what a benefit Christian Science is to members of the theatrical profession. Although not thus engaged myself, I occasionally join my husband when he is traveling with his company, and just before going to him recently I received a letter from a young woman in another company saying she had heard that I was a Christian Scientist, that she was one also, and begging me, when I joined my husband's company, to have a talk with her sister on the subject, as she had been helped by Christian Science and was almost convinced of its truth. I found the lady not only willing and almost eager to talk on the subject, but I also found another most faithful little Scientist in the company, who always had her Science and Health in the cars, and who traveled with her Bible and *Quarterly*, and upon my suggesting that we get the lesson together, both the ladies were only too happy to do so.

A day or two before I joined the company, the young Scientist had been able to demonstrate over what might have been a very bad illness, by her understanding of Truth. She had eaten some oysters for dinner, and soon after began to feel very ill, having chills and severe pain. She began to work for herself, and was able to get through the evening's work, although she had quite a fever. She slept but little that night, and the next day being Sunday she could rest, but her body and hands, which were very cold and numb, and also her tongue, were swollen. In fact, she had all the symptoms of ptomaine poisoning. The members of the company were much alarmed and insisted upon her having a physician. My husband especially felt the responsibility, but the brave little Scientist said she was not at all frightened, and that if they were she would have a practitioner come. None could be found, however, so she read Science and Health and continued to treat herself. The following morning she made an early start with the company for the next town, where she found a Christian Science practitioner, and in two treatments,—one present and one absent,—the good work she had herself begun, was completed.

I have received a letter recently from my brother, who is also a professional, and who not very long ago, begged me to have nothing to do with Christian Science. He says that since he has seen the wonderful recovery of

my daughter from nervous prostration through Christian Science, and has had to acknowledge all that he had seen it do for me, he is convinced of its truth. He asks to be shown the light that he and his dear wife may find the pathway together.

Think what it means to members of this profession who have been under the ban of unjust condemnation, and who have been made almost to feel the drawing aside of the skirt; now, to know themselves recognized as children of God,—co-heirs with Christ,—to see the establishment of the true brotherhood of man, to know that although their profession may take them from home, family, and friends, that their Father-Mother God is with them every step of the way,—"closer than breathing, nearer than hands or feet,"—that in Love there is no separation, and that many times they find their brothers and sisters right with them. Jesus said, "Who is my mother, or my brethren? . . . whosoever shall do the will of God." So when from all countries, and all conditions, are rising those who call our Leader blessed, shall the theatrical profession be silent?

Demonstration.

JOHN C. LATHROP.

PROBABLY no word is used more conspicuously by Christian Scientists than the word demonstration, and it is likewise probable that no word is more frequently misused.

A student of Christian Science is taught that Spirit does not produce matter, and therefore Christian Science cannot be used to "demonstrate" material things, as such. The distinct separation of Spirit and matter is a vital point in this teaching, one which it urges uncompromisingly. Did it not insist upon this cardinal discrimination, thought would inevitably be lost in the mazes of materialism, Science become confused with personal sense, and the problem of being again be left to the mercy of the human will.

To demonstrate is to prove, and what the Christian Scientist does demonstrate is divine Principle, divine Love, Life, and Truth, divine Science or Christian Science, harmony, etc. If he is scientific and wise he will keep no model in his consciousness other than the perfect and spiritual, he will seek this alone; then his false material and discordant sense will yield to the true or spiritual sense, and the practical outcome will be a natural and proportionate harmonizing of all physical conditions. "Christ, Truth, gives mortals temporary food and clothing until the material, transformed with the ideal, disappears; and man is clothed and fed spiritually" (Science and Health, p. 442). The harmony thus produced is the effect of a true demonstration, and can be called by this name. A hypnotist or a magician, might possibly assume to demonstrate material things; but the Christian Scientist seeks first the kingdom of God, and His righteousness; and all these things are added.

It is sometimes claimed that this promise of "all these things" signifies an affluence of material things, to which one should be justly entitled, the natural result of holding what has been called an "unlimited thought." At this point one is treading upon dangerous ground, and if not very cautious he will build upon the quicksands of vanity, which eventually engulf and destroy.

It is clear that an unlimited sense of Spirit does not manifest itself in unlimited matter, nor through it; but rather in unlimited goodness, love, truth, life, etc. In the proportion that one attains to this state of spiritual consciousness, his material desires will naturally become fewer, more simple, more plain, humble, and pure, as well as more honest and secure. "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling. For he shall give his angels charge

over thee, to keep thee in all thy ways." "He brought me forth also into a large place; he delivered me, because he delighted in me."

This "large place" is manifestly a spiritual place, an enlightened consciousness, and not anything material; instead, it is the glorious kingdom of heaven within, even the new Jerusalem, to be sought and found alone with God. Said Jesus, "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: but lay up for ourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: for where your treasure is, there will your heart be also."

Matter is not nor can it ever be the vestibule of Spirit, or its representative. Harmony is not reflected by nor through discord. Things absolutely opposite neither coalesce nor co-operate; hence one should greatly hesitate to proclaim any material thing a "creation of God," or a demonstration of Spirit. Much possible misapprehension and misapplication of the true sense of Science results from this human course. Our text-book says, "Beauty, as well as truth, is eternal; but the beauty of material things passes away, fading and fleeting as mortal belief. Custom, education, and fashion form the transient standards of mortals" (Science and Health, p. 247).

Christian Science teaches that the true beauty and harmony are never in matter, but in the eternal Mind, and its manifestation, to be discerned there, and to be understood and reflected mentally by each individual consciousness. Thus only will the true standard of beauty and harmony be found, and in this measure will the temperamental disagreement which traditionally exists among mortals, give place to a unity of sense and system in Soul, where division and discord is never found.

Thus it is seen that the useful term demonstration as employed in Science, is a sacred word, and that it is not to be trailed in the dust by making it a byword to credit experiences which are often but the forced result of some wilful desire. The spiritual signification of the term is an eminently practical one, and the fruit of a truly honest demonstration is the most gratifying and satisfying thing on earth. No human experience can equal it, and no one can measure or describe the real joy which follows the sense of having been an humble instrument in destroying disease and suffering, and above all in turning thought from despair to the understanding of true happiness and Life eternal!

Need we wonder, then, that, as the real significance of the term becomes apparent and its glorious fruits are realized, one is more inclined humbly to place the finger on the lips and give to God the "kingdom, and the power, and the glory, forever"? He has now come to understand better that paramount lesson of the apostle, in which he reveals the pathway to true demonstration, to happiness, and to heaven in these words:—

"Love not the world, neither the things that are in the world. If any man love the world, the love of the Father is not in him. For all that is in the world, the lust of the flesh, and the lust of the eyes, and the pride of life, is not of the Father, but is of the world. And the world passeth away, and the lust thereof: but he that doeth the will of God abideth for ever."

"Reflection."

W. A. BOSWELL.

THE idea of reflection, when illustrated by the dewdrops, each of which reflects the sun, always seemed to me to imply a good deal of monotony, and it was only when traveling through some very pretty, peaceful scenery that the idea of infinite variety in connection with reflection came to me.

Everything we see,—all the beauty of form, color, and texture,—the various shades of green, from the bluish tinge

of some kinds of fir, poplar, etc., to the vivid yellow green of the plane-tree; from the feathery lightness of the acacia to the sturdy strength of the oak, the myriad variations in color of the flowers in field and hedgerow, the rippling shadow and quiet pool,—all are known to us simply through reflection, and each flower and leaf selects from the white light that particular color which it reflects. We thus perceive the various effects and become conscious of the wonderful variety that is contained in that white light, and as the light fades so the color fades out of the landscape, and we know that all the beauty is really due to the light and so to the sun, the source of that light.

Mrs. Eddy often takes the sun as a symbol of God, and if we substitute the reality for the symbol we can see in the same way that all "the milk of human kindness"—the brotherly love and affection,—the sense of duty that nerves men to deeds of heroism, all the nobility of life,—all are reflections of the great white light emanating from that great "central sun of its own systems of ideas" (Science and Health, p. 209). All the works of the greatest thinkers, those who have led men up from the mere bestiality of life in matter, through its higher stratum, mortal mind, whether manifested in painting, music, literature, or physical science,—all these manifestations of intelligence, owe any approximation to truth which they may contain, to the reflection of that Light which must in time be recognized by all as coming only from the one Mind, God, omniscient and omnipotent.

The Glory of the Latter House.

DORA W. STEPHENS.

WHILE considering the building of the addition to The Mother Church, the foundation of which has been laid as the result of the demonstration of spiritual unity, I have been reminded of the building of the temple in the time of the kings Cyrus and Darius, an account of which may be found in Ezra and Haggai. Unlike those times, however, when work on the temple ceased for many years, because of the aggressive features of error arrayed against the Truth, that had to be met and overcome, we now rejoice in some apprehension of Christian Science, which reveals to us the true sense of God, as an ever-present help, and His law as the law of progress, for "the spiritual idea has given the understanding a foothold in Christian Science" (Science and Health, p. 534). We recognize that God's command to us to-day through our dear Leader, is as imperative, and the blessing as assured, as when given through Haggai the prophet, unto Zerubbabel, and it may be of advantage to us at the present time to consider the inspired words of this prophet.

"Who is left among you that saw this house in her first glory? and how do ye see it now? is it not in your eyes in comparison of it as nothing? Yet now be strong, O Zerubbabel, saith the Lord; and be strong, O Joshua, son of Josedech, the high priest; and be strong, all ye people of the land, saith the Lord, and work: for I am with you, saith the Lord of hosts: According to the word that I covenanted with you when ye came out of Egypt, so my spirit remaineth among you: fear ye not. For thus saith the Lord of hosts; yet once, it is a little while, and I will shake the heavens, and the earth, and the sea, and the dry land; and I will shake all nations, and the desire of all nations shall come: and I will fill this house with glory, saith the Lord of hosts. The silver is mine, and the gold is mine, saith the Lord of hosts. The glory of this latter house shall be greater than of the former, saith the Lord of hosts: and in this place will I give peace, saith the Lord of hosts" (Haggai, 2 : 3-9).

Who can begin to measure the results which must follow the erection of this "latter house," the glory of which, and the peace that shall rest upon it, being realized by each

individual in the degree that the spiritual idea of Church has already been established in his consciousness. For the visible structure is but the result of unity of thought and action, and the faithful performance of daily deeds, "according to the pattern shewed to thee in the mount." "There is a thought higher and deeper than the edifice. . . . Our true temple is no human fabrication, but the superstructure of Truth, reared on the foundation of Love, and pinnaled in Life" (Pulpit and Press, p. 4). Lest we fail to enter into a clear realization of this "greater glory," may we consecrate ourselves anew to the building of our spiritual temple. "Faith without works is dead," and the works can be accomplished only as we start from the correct point of observation; namely, "infinite Mind and its infinite manifestation" (Science and Health, p. 468).

By bringing out in our lives this high ideal, by keeping in close touch with the demands of the hour, that we may be ready for any needful sacrifice, we shall be awake to the fact that we, as individual Scientists and members of the Parent Vine, have a work to perform in bringing to completion the visible structure or temple, which is to stand as a perpetual symbol of the underlying Principle of Christian Science. "Heaven is my throne, and earth is my footstool: what house will ye build me? saith the Lord: or what is the place of my rest?"

Enrichment.

F. M. M.

THE picture of the poor widow with only a cruse of oil and a handful of meal raises the question, When did God supply the meal, and when did He furnish the oil? Did not the widow first have to make the handful of meal into a little cake and give it to Elijah before the meal was replenished from God's storehouse? Did she not have to trust all to God first and act upon that trust? She did not wait to see the barrel filled before she opened her hand and made the cake, but trustingly she put all the meal she had into that first little cake, and what was the result? If we will but heed this lesson we shall give all we can to-day, and when the to-morrow comes with another demand it will be another "to-day" in which we may again give all. Withholding impoverishes, but true giving enriches.

[Written for the *Sentinel*.]

"In Time of War and Tumult."

HARRY DOUGLAS ROBINS.

I SOUGHT to eat life's bread—and lo!
The loaf turned to a stone.
I thought to drink love's wine—the cup
Was empty save a moan!
Where once was spread a feast of dreams
I saw a board swept bare—
Not e'en a crust of hope was left
Or crumb to give me fare.

Grim desolation seized my soul,
Mine eyes dark doubt did close,
Rebellion like a tempest wild
Hot in my heart arose:
But when the storm had left me wan
A voice said, "Ask of me:
And whatso'er thou wilt, that thing
Shall be done unto thee."

To claim the promise all forgot
I humbly bent my knee
And prayed, "What is unlike Thyself
O God, cast out of me.
Make soft this hardened heart of mine,
Fill me with charity:
And no will let me know but Thine,
Give me no mind but Thee."

Selected Articles.

In Honor of the Swiss Republic.

The following letter from Mr. W. D. McCrackan, author of "The Rise of the Swiss Republic," and member of the Christian Science Board of Lectureship, was read at the "Swiss Day Festival" on the Exposition Grounds, St. Louis, August 19. In introducing it the president of the day, Mr. Martin Scherer said, "This letter breathes the warmest sympathy for our fatherland and its institutions; and we are impressed with the honor this distinguished American writer has conferred upon us in thus expressing his enthusiastic regard for the Swiss people."—Eds.

THE LETTER.

Dear Friends.

Greeting:—There is no national name which is nobler than the one you have met to honor to-day.

There is no country to which the world is more deeply indebted for great achievements in behalf of human freedom, self-government, and orderly progress.

Nor is there any land which has called forth more affection and enthusiasm, more admiration and gratitude than little Switzerland, adorned with the green of her valleys, and the blue of her lakes, and crowned with the perpetual snow of her summits.

As an American citizen, belonging to the greatest republic in the world, I send my tribute of respect and appreciation to Switzerland, the oldest republic in existence. Though ancient, she is ever youthful in endeavor and enterprise; though small in area, she is the genial hostess of many thousand visitors, and though surrounded with armed nations, she has not a single enemy to fear.

Therefore let us say hail to Switzerland, both for her lowly meekness and her grand magnificence.

May this Swiss day serve to set forth, emphasize, and publish to the world the beauties of Switzerland and the virtues of her people.

More than six hundred years have passed since a group of sturdy patriots on the Lake of Luzern bound themselves together by a written agreement, which they themselves prophetically styled a perpetual pact. Since then no foreign attack or internal disruption has ever been able to destroy their union. May this example live on through time to rejuvenate and rejoice the people, the disheartened and sorely pressed among men and nations.

Especially is this great Republic of the United States bound to Switzerland by many striking historical parallels and political precedents which make the two countries near neighbors in thought, though separated by thousands of miles of ocean.

Both countries have grown from loose aggregations of States into firm federal bodies, Switzerland spreading this task over nearly six centuries, and the United States compressing it into little more than two centuries and a half.

Both in Switzerland and America the various States and Colonies, known as Cantons or States, acquired local self-government before they united in federal bodies. Both at first remained in subjection to a distant sovereign power,—the Swiss States to the head of the German Empire, and the American Colonies to the King of England. In both countries there were charters issued by the distant sovereign power which formed the basis of later local constitutions. Both governments began their political life by drawing up perpetual leagues; in Switzerland it was the three communities of Uri, Schwiz, and Unterwalden in the year 1291, and in America it was the four Colonies of Connecticut, New Haven, Plymouth, and Massachusetts Bay in the Articles of Agreement of the year 1643.

For almost three hundred years the Swiss Confederation consisted of thirteen States, while in this country we had thirteen Colonies composing the thirteen original States.

There are at least two American institutions which have been directly copied into the Swiss constitution. The first is the American congressional system of two houses, one representing the people numerically and the other the States.

The second institution is that of the Supreme Court of the United States, called in Switzerland the Federal Tribunal, although these tribunals have proven somewhat different in their practice.

On the other hand, the United States has for some years been adopting from Switzerland the referendum for both state and municipal affairs, and there are indications that Switzerland's success with other institutions is having its effect upon the public opinion of the United States.

To-day the two countries stand shoulder to shoulder in generous emulation, seeking to perfect the highest and noblest types of governmental efficiency.

Rejoice then, my friends, in this day and its associations; may the purpose be strengthened in your hearts to serve with your unstinted loyalty these two countries, the Republic of your ancestry and the Republic of your adoption,—Switzerland and the United States.

St. Louis (Mo.) *Gruetliancr.*

In dealing its well-aimed blows at sin, Christian Science uncovers and destroys the cause of all disease. Upon investigation this is found to coincide entirely with the attitude which our Saviour maintained toward sin, disease, and death. On more than one occasion he pointed out the fact that indulgence in sin brings physical suffering. To the blind man he said, "Sin no more, lest a worse thing come unto thee." This clearly points out the fact that matter of itself has no intelligence wherewith to establish any code of physical laws, neither can the infringement of any such supposed laws bring suffering and sorrow to mankind, if God's law is rightly understood. The process through which mankind gains the true healing is entirely mental, and the recognition of this fact will open the way to the remedy of every human ill.

If drugs and other material remedies were instituted by God, then he who came to do the will of the Father would certainly have found much efficacy in them, and his intelligent handling of them would have constituted a rule or method whereby his followers throughout all time would have gained an accurate idea as to their use and application. Jesus said, "I am come that they might have life, and that they might have it more abundantly," and in showing his hearers how to gain life and to keep it, he healed without using material medicine of any kind. Absolute consecration to God brings out the understanding whereby the Christian can "heal the sick" and "cast out devils" in his name, and those who have learned this mighty truth have indeed found the "pearl of great price."

ALBERT E. MILLER.
Johnstown (Pa.) Journal.

A critic maintains that pain and disease "have a basis tremendously real." The Christian Scientist has discovered by actual experience that a protest against the reality of disease or its right to power and place, is a valuable aid toward achieving that harmonious estate for which the human race is eagerly reaching out. Let those who will, continue to insist, with fatal persistence, that sin and disease are real and indestructible. He who has proved somewhat the good effects of an opposite mental process will not be deprived of those benefits. Jesus said, "the flesh profiteth nothing," and Paul declared "henceforth know we no man after the flesh." The denial of the reality of sinful flesh, is not, as the critic says, a blow "at the very root of Christianity," but is rather confirmatory of Jesus' teaching. He said that his mission was to destroy the works of the devil. A good part of his time was taken

up in destroying disease, and we cannot escape the deduction that disease was the work of the devil and therefore worthy of destruction. Then Christian Science can but be true when it insists on adopting Jesus' attitude toward disease.

WILLARD S. MATTOX.
Norwich (Conn.) Bulletin.

It should be understood that it is the law of God operating in the human consciousness that destroys disease. This law acts through the human prayer that recognizes and knows the action and healing efficacy of this divine, spiritual force. As the cleanest and most transparent glass admits the most sunlight, so the prayer of the purest, most Christ consecrated, spiritual thought admits most of divine truth, to all within the receptive radius of prayer.

The prayer that denies the Christ healing for this day, cannot heal any more than the denial of the science of mathematics can solve or explain its problems. "But whosoever shall deny me [the Christ law of health and holiness] before men, him will I also deny before my Father which is in heaven." In other words, whoever denies the Christ healing before men, is denied this healing in his prayer before God. Few, but not many at this day, deny that Christian Science heals. Whoever reads the weekly and monthly periodicals published by The Christian Science Publishing Society in Boston, will find such numerous testimonies from men and women of every walk of life, including ministers, physicians, lawyers, and scholars of every profession, giving full particulars of time and circumstances, with names and addresses, that they cannot fail to accept the testimony as essentially true. These testimonies come from all parts of the globe, and in constantly increasing numbers. Whoever attends the Wednesday evening meetings of this denomination in our large cities, or even in the small ones, will not only be impressed with the sincerity and truthfulness of the statements of healing given, but he will be convinced by ocular and conclusive evidence of the truth of the facts stated. He will also discover that this healing embraces every known form of disease as well as sin. If he mingles with Christian Scientists to any extent, he will find them and their families quite as happy and healthy as those of any other denomination, although many of them have been recruited from the ranks of invalidism, and often from hopeless despondency and despair.

JOHN CARVETH.
Maple Rapids (Mich.) Dispatch.

Since we only hold and express the right thoughts as we think the thoughts of the divine Mind and deny the suggestions and false beliefs of the carnal, mortal mind, it is not only credible, but reasonable, natural, and scientific for right thoughts and right prayers to do all things that Jesus and the apostles taught and proved they are capable of doing. In fact, the significance that Christian Science attaches to right thinking is in perfect accord with the teachings of Jesus and a scientific revival of the teaching of St. Paul: "Let this mind be in you, which was also in Christ Jesus;" and we understand that as we think the thoughts of his Mind we shall be able to do the works of his life. J. R. MOSLEY.

Atlanta (Ga.) Constitution.

A Critic Answered.

Mr. Alfred Farlow's article, "A Critic Answered," which appeared in the June *Journal*, is now issued in pamphlet form in order to give it a wider circulation. It will have a very beneficial effect in removing prevalent misapprehensions of Christian Science. Price, 3 cents each, \$2.50 per hundred. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Another Favorable Decision.

THE case of *Spead versus Tomlinson*, which has been pending for some time in the courts of New Hampshire, has just been decided by the Supreme Court,—the court of last resort,—in favor of the defendant, Rev. Irving C. Tomlinson. This case has been watched with much interest, because it has involved the legality of Christian Science practice in New Hampshire, and it has been a matter of considerable satisfaction to Christian Scientists to note that in each stage of the proceedings, the decisions have sustained their right to practise their religion.

The opinion is quite long, and we cannot publish it in full at this time, but the following extracts will serve to show the general trend of the law as laid down by the court.

"There is no evidence from which it could be found that the plaintiff employed the defendant to advise her as to whether or not Christian Science could be successfully employed in the treatment of appendicitis, or to do anything except to treat her by that method. Under these circumstances, if she could legally employ him to give her such treatment, the duty the law imposed on him for her benefit was that of treating her as the ordinary man who treats the disease in that way would have done. For when persons are brought together by virtue of a contract as doctor and patient, or lawyer and client, the duty the law imposes on the doctor for the benefit of his patient and the lawyer for the benefit of his client, and in general on the person who undertakes to do anything for the benefit of his employer, is that of using ordinary care to do what he has agreed to do in the way he has agreed to do it. The reason for this is obvious. If there are different legal methods of treating a disease or of doing any other work, the employer has the right to decide which method shall be employed in his case. When a person has contracted to do a piece of work in a particular way, he is legally bound to do it in that way; so the duty the law imposes on him for his employer's benefit, is that of using ordinary care in doing it by the method he had agreed to employ. The test whether or not the defendant was negligent, is whether in his treatment of the plaintiff he failed to do anything which the ordinary man who treats appendicitis by Christian Science methods would have done. Evidence to be relevant to that issue must tend to prove that he did something which such a man would not have done. The plaintiff's claim that the defendant's statements that he could and would cure her is such evidence, cannot be sustained, for it is not a matter of common knowledge that Christian Science healers are not accustomed to encourage their patients by assuring them they can and will cure them; nor was there any evidence that such was not the fact. Neither is it enough to entitle the plaintiff to go to the jury, in the absence of all other evidence tending to prove the defendant was negligent, to show that a relation of trust existed between the parties. The fact that he was her pastor and physician at the time he gave her the treatment, has no tendency to prove how he treated her, and it is clear she cannot prove that he failed to do what he ought to have done without showing what he actually did.

"By public policy is intended the policy of the state as evidenced by its laws.

"If the plaintiff is to recover on the ground of public policy, she must establish (1) that it was illegal for the defendant to give her such treatment; (2) that the duty of not giving it was imposed on him for her benefit.

"The only question before this court is the sufficiency of the evidence laid before the jury by the plaintiff to authorize a verdict in her behalf. Her evidence tended to show that a very large number of people believe that Christian Science is the most effective curative agency known, and that it may be successfully applied to the treatment of all manner of diseases which afflict mankind. The sincerity with which this belief is held was conceded by the plaintiff in her testimony. She offered no evidence tending to show that the defendant did not in all sincerity entertain this belief.

"If she had offered evidence tending to show that Christian Science treatment had never been successfully applied, or that no attempt had ever been made to apply it to the treatment of chronic appendicitis, or that the defendant had never applied such treatment to any disease or to that disease with success, nor had never known of such a case being successfully so treated, there would have been evidence of negligence in the defendant's attempt to treat her in the way he did and in the advice which he gave her, or it could be found that he intended to deceive her, for there would then have been direct evidence that he told her what he did not know to be true.

"It is very clear that the plaintiff cannot stand upon the universal experience of mankind to be found by the jury from their knowledge of human affairs when her undisputed evidence and her own admissions tend to establish that a very large number of people honestly entertain the views which she contends are unsound and absurd. Whether the defendant exercised ordinary care and was honest, were questions vital to the plaintiff's case. Her admission of his sincerity does not tend to prove either proposition. Neither can the plaintiff justly complain that the defendant is not compelled to prove as matter of defence the existence of a system of Christian Science treatment applicable to her case when her own evidence admits the existence of such a system, the belief in and practice of it by large numbers of people in all diseases. The plaintiff fails in this case because of the insufficiency of her evidence to prove the facts necessary to maintain her case." M.

Our Thought of Man.

MANY of those who are led to speak discouragingly of the apparent inadequacy of Christian endeavor to stem the tides of sin, find the explanation of present conditions in the fact that the terrors of the law are no longer preached,—that the doctrine of human depravity and fitness for hell which incited the earnestness and eloquence of an Edwards and a Finney is practically ignored by Christian leaders. They would commend the thought of a late writer who says it is time for us to wake up to the fact that we are fallen by nature, poor, imperfect, despicable creatures of the dust.

This raises an important question. Admitting the apparent blend of good and evil in human nature, how shall we think of man in order that we may help him to establish the good and cast out the evil? Shall we interpret and declare the human at its highest or lowest estate? Shall we accept the testimony of aspiration and revelation, and, maintaining man's divine sonship, make our appeal thereto, regardless of the seeming? or shall we emphasize the testimony of sense phenomena, assert man's degradation and depravity, and mould our address accordingly?

It would seem that no one could disapprove of Paul's counsel to the early Christians, when he said, "Brethren,

whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things;" and yet how apparent it is that this thought is altogether opposed to the idea of trying to annul the power of evil by intensifying the consciousness of evil. His comprehensive injunction can but mean that at all times we should maintain our highest concept of the truth, the noblest idea about everything, including man; that his real and eternal nature should always be recognized,—held aloft in thought. This does not mean that the adventitious and abnormal incidents of human experience are to be ignored, but that they are to be rated and disposed of *for what they are*, and not honored and classified for what they are not. "If we say that we have no sin, we deceive ourselves, and the truth is not in us." To ignore evil is no less blameworthy than to make it real, *i.e.*, God-sustained; both these courses contribute to evil's firmer fixture, its more undisputed domination.

Even those who believe in the reality of the unideal,—who think that man, though made in the likeness of God, is, all the same, a compound of spirit and matter, of good and evil,—even they would concede it to be to a child's distinct advantage if, for years prior to and following his advent, he were constantly thought of in the assertions and expectations of good; if he were kept in a mental atmosphere from which all declaration of sinful nature and impulse is excluded, as in no way belonging to a child of God. No one could seriously question the gain of such conditions, and if this environment of spiritual sense and avowal contributes to the betterment of children, would it not as certainly contribute to the betterment of adults?

"If God constituted man both good and evil, man must remain thus" (Science and Health, p. 167). To assert the reality of the material is, of course, to declare the legitimacy and permanence of those appetites and impulses which spring from it, and yet our Lord never sought to save men by the assertion of the naturalness and inevitableness of the debasing manifestations of human nature; on the contrary, he ever explained these things by reference to the lie of evil; they were the works and workings of the devil, of whom he said, "there is no truth in him."

This separation of all evil from our thought of man is of the greatest significance in Christian Science, and in this it presents one of the strongest contrasts to much religious teaching. Recognizing the unreality of evil it would eliminate it from human consciousness, for the reason that there alone it has and can have even a semblance of being. Smitten by Truth, in spiritual apprehension, it ceases to be, and what the Christian Scientist may effect for himself by virtue of this law of the annihilation of error, he would effect for others by the same law. The only scientific thought, therefore, which he can entertain of his brother man is that which clothes him with the beauty of holiness.

It is this thought of man at his best which authorizes the faith of all great hearts in humanity. In his recent eulogy of the beloved Senator Hoar, Dr. Hale said, "I think that his faith in the American people, which expressed itself so magnificently once and again in his public utterances, may be traced directly to his faith in man, to his certainty that he is the child of God, that he inherits a divine nature."

Our hope of humanity must ever depend upon this recognition that the real, and therefore necessarily dominating, factor of humanity is not human, but divine. W.

The Extinction of Evil.

BELIEVERS in Christian Science are frequently asked to explain their continued adherence to its teaching after they have been healed by it. Outsiders fail to find a sufficient reason for the changed views of their friends or relatives

who have accepted Christian Science, and they argue that it is surely enough to make the usual return for the practitioner's services, and let the incident end there. The one who has been healed has, however, a very different view of the situation. If the spiritual sense has been awakened, which is usually the case as a result of Christian Science treatment, the beneficiary is impelled to inquire with the Psalmist, "What shall I render unto the Lord for all his benefits toward me?" He has a deep sense of gratitude to divine Love, a desire to atone for past wrongdoing, to aid others that they may gain an understanding of the truth which has healed him, and which offers to all mankind protection from sin and sickness. He has learned in this experience that wrong thinking was responsible for his past suffering, however much it may have been induced by current belief, and as he gains right views of God and man from the Bible and our text-book, he learns that he must put them into practice. He learns that obedience to spiritual law brings freedom, and he also finds that he is no longer compelled to obey the supposed laws of mortal belief which would restrict mental unfoldment, but can never advance it.

In "Miscellaneous Writings," page 33, our Leader briefly but forcefully explains some of the advantages of Christian Science healing over material methods, and we find in all her writings the inevitable inference that evil must finally disappear before a perfect understanding of Truth. It is seldom claimed that material remedies give immunity from disease, much less are we led to look for its entire extinction from human experience. This is, however, the hope of all Christian Scientists, who say with St. Paul, "and hope maketh not ashamed; because the love of God is shed abroad in our hearts by the Holy Ghost which is given unto us." What may not the "love of God" do for man?"

In one of the delicately suggestive essays of "Elia," we find the fairy queen, Titania, pleading with old Father Time who had threatened to obliterate her race. She is aware of an ancient prophecy that "the date of fairy existence should be *then* extinct when men should cease to believe in them." We smile at this as a pretty conceit, and yet from the days of the learned Greeks down to a comparatively recent time, superstition has peopled the groves and streams of every land with the embodiments of fancy which were to be supplicated or appeased in order to avert misfortune and secure health and prosperity. It is true that men have ceased to believe in such myths, but we may well ask whether the "scientific deductions" of the modern laboratory and dissecting room are helping to emancipate the race from the fearsome beliefs of sin, disease, and death, any more than did these superstitions of a bygone day?

This question is best answered in the consciousness of those who, through the revelation of Christian Science, have made the Lord their refuge. If faithful to the truth they will readily declare to all who ask the reason for their new-found hope, that they have ceased to believe in the reality of evil, or its necessity; and that its manifestations are disappearing before their unfolding spiritual sense. More than this, they look with ever-increasing confidence to the coming of the time, foretold by "a more sure word of prophecy" when sin, sorrow, sickness, and death will have vanished as a dream, because men no longer believe in them, but know and love the truth which forever sets free. K.

Letters to our Leader.

Philadelphia, July 30, 1904.

Beloved Leader:—With a deep sense of gratitude for the manifold blessings which God has bestowed upon His people through your willing and faithful hands, I write to-day to tell you of the joy and gladness which dwells with your followers in this grand old city of brotherly love. Since its recognition of the fact that God's children in truth dwell together in unity, the church here has been greatly pros-

pered and the awakening interest in our Cause in this city bids fair to fill rapidly the gaps which have heretofore existed in our ranks. The work is now moving steadily forward. The sick are being healed and the hungry fed. The demand for your books in the various public libraries throughout the city indicates an awakening public interest in this blessed healing truth, which promises much for our future growth.

At our last Communion service, when for the first time in seven years all your followers in this city gathered around *one* table to commune with *one* Father, the joy and strength which the glad sense of God's presence imparted to each one, brought to mind these beautiful lines from one of our favorite hymns, written by Samuel Longfellow:—

From hand to hand the greeting flows,

The seekers of the light are one.

One in the freedom of the truth,

One in the larger thought of God.

You alone, dear Leader, can know and appreciate what this demonstration of unity means for the Cause of Christ in our beloved city.

Gratefully yours,
ALBERT E. MILLER.

Concord, N. H., July 20, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—I trust this seemingly tardy acknowledgment of my high appreciation of your beautiful address to First Church of Christ, Scientist, of Concord, upon the occasion of its dedication, will not be construed to mean that I was slow to see the wonderful import of your words and what they convey to the world.

It would be useless for me to undertake to express in words my gratitude for this your latest gift of love to an hungry world, eager for every word that comes from you. Your consideration for humanity, as well as for this "new branch," is shown in the first paragraph of the address, where you so tenderly say, "Sitting at his feet, I send to you the throbbing of every pulse of my desire for the ripening and rich fruit of this branch of His vine; and thank God who hath sent forth His word to heal and to save." Why can't we all reciprocate this love you manifest for us, by ever guarding our thoughts towards you, so that nothing shall ever be admitted that does not harmonize with your own life purpose and desire. I trust that every Christian Scientist in the world will read and re-read your address until its full meaning is so deeply instilled into his thought that he will never again falter in his effort to demonstrate Life, Truth, Love, and unity, as revealed to the world through your writings. I shall always be thankful that I attended the dedication, and my only regret is that every Christian Scientist could not have had this pleasure. Before closing, I wish to say that it is a marvel to me how you accomplish the great amount of work that you do, as I learn again since coming here that there are no idle moments at Pleasant View, and if we could all learn this lesson,—to wit, activity and the putting into practice of what we know to be true as revealed to us by your every word and act, there would not be left any time for idle gossip about our neighbor, and we would be spared much sorrow.

Lovingly yours,

JOHN C. RYAN of Chicago, Ill.

Lecture of The Mother Church.

A lecture on Christian Science, under the auspices of The Mother Church, will be delivered by Rev. Arthur R. Vosburgh, C.S.B., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., in Symphony Hall, corner Huntington and Massachusetts Avenues, Thursday evening, October 13, 1904, at eight o'clock. The lecture is free and the public will be cordially welcomed.

Testimonies of Healing.

When Christian Science was first called to my attention, I cannot remember, but I now sincerely wish it had found me many years before. In the spring of 1890, one very dear to me was cured of what at least four excellent physicians had told me was lung trouble, commonly known as consumption. The symptoms became alarming, and it was decided to try Christian Science, which was, to my thought, quite in line with trying some patent medicine. In three weeks this dear one was in better health than for years previous, in fact cured, and has remained so all these fourteen years.

This remarkable case of healing (although not the first in my family), brought a clearer sense of the truth as presented by Christian Science than anything else had done, and I began to study with more earnestness. I had received a careful training from Christian parents and grandparents, and the statements in Science and Health aroused antagonistic thoughts. Often while studying I would make remarks to my wife something like this, "There are a great many beautiful thoughts expressed here, but they are so nearly lost in a mass of foolishness that it is quite tiresome to search them out;" still the book had an attraction for me which was irresistible. Slowly, one by one, the great lessons were learned, often only after stubborn resistance from "the traditions of the elders."—my early teachings,—and I saw that what I, in my pride, had called foolishness was the truth.

After some years I began attending Christian Science services. Some features attracted, others repelled me, but I soon found myself unwilling to miss any. The Wednesday evening service was a stumbling-block for quite a time, as now and then some zealous speaker would relate what to me seemed the most nonsensical tale of help, which would almost blast my budding hope that these people had found the truth, but the earnestness and unquestionable sincerity of the speakers would calm me after a struggle with what then seemed my common-sense. After Truth had cleared up my mentality somewhat there came an awful struggle with self. It seemed as if the dark shadows of doubt and despair would overwhelm me; depths of depravity were revealed by the light, quite beyond belief, and, strange as it may seem, I found I loved them. I could not turn back, for I had already learned as Peter so well expressed it, that there is nowhere else to go; and with Paul, I began to die daily and to know that I should find the truth which Jesus said would make us free.

Every demonstration of the truth gives me courage, a little clearer understanding, more love toward God and man, and I do not regret a single struggle, feeling that only by constant work can I attain. To all who have helped me, especially my faithful teacher, I am very grateful, and to our beloved Leader for her patient efforts through many years of self-denial.—F. R. KINSLEY, Baltimore, Md.

When I first sought Christian Science, it was for the physical healing alone; for when I was healed of an attack of appendicitis, it was the fear of the knife that impelled me to try this means of cure, as my kind physician had said I must resort to an operation. I was healed a few hours after treatment began, and having had two previous attacks I was amazed at the rapid cure, this time without the external weakness and after effects which had followed in former attacks. This physical healing, however, was to be the smallest of my blessings. The following year I read Science and Health and tried to realize the truth it contained and at the same time attend an orthodox church of which I had been an active member for seventeen years. During this period there came a time of need other and deeper than the physical, and never shall I forget the feeling of peace and assurance that came when the practitioner

who so patiently had been pointing the way all these months said, "You have come to the right source; Christian Science meets all our needs."

From this time on it has been a joy to feel I could say with Paul, "I know whom I have believed," and with Job, "I know that my redeemer liveth." Hitherto, I had read both the promises and the commands of the Bible in a vague way, hoping for their realization in a dim future, inasmuch as I could see no prospect of their fulfillment in the present, while through Christian Science I had found the promises demonstrable here and now. The words, "Lo, I am with you always," had a new meaning, for I had also found freedom from a state of unhappiness bordering on despair that I had known as a bosom companion for over ten years. Leaving my old church home to join the Christian Science church, I lost nothing, for all of help and light I had then I still have, and the truth of the words in Science and Health, page 494: "Divine Love always has met, and always will meet, every human need," has been proven over and over again, in the healing of physical ailments for myself and many friends, as well as the bringing of harmony out of chaos. The way leading out of darkness into light has not been smooth, and more than once, when many miles away from a Christian Scientist, a battle with error has been fought and won by the reading of Science and Health or by the study of a Sunday Lesson-Sermon.

These experiences, though severe at the time, have led me to know that God is "a very present help in trouble." The seemingly bitter antagonism of relatives and friends has given place to kindly tolerance, and in some cases to the study and investigation of Christian Science. To mention a few of the instances of healing in connection with the foregoing will only be touching upon what I have personally "seen and heard." I was healed in one day of an injury to the knee cap, caused by a fall; whereas, on two previous occasions a similar injury to the same member had caused months of suffering. I have also been healed instantaneously of acute indigestion, and ate a hearty meal within an hour, while previously these attacks meant days and at time weeks of most careful dieting.

After having received so much benefit from Christian Science, this may seem a tardy acknowledgment; but I am deeply grateful to our Leader, Mrs. Eddy, for the faithful and loving word that has brought this bread to a hungry world; to the loving practitioner who so carefully and patiently helped me when I was in the dark, and the Publishing Society which gives us these weekly and monthly messengers.—M. A. H., Palo Alto, Cal.

I have long wished to acknowledge through our periodicals my gratitude to Christian Science. When it came to me I was in sore need of aid, had tried everything from medicine to massage, also had spent one winter South. I was at that time a devoted follower of an orthodox church, and believed with all my childish faith what I had always been taught, that God sent all my disease and suffering. I did not, therefore, want Christian Science and would not have taken a treatment if my mother had not almost compelled me. I remember saying to the practitioner that if I had to have faith to be healed, it was useless for me to take any treatments; as I knew she could not heal me. She replied by asking me how I could have faith in something I knew nothing about; to wait until I began to improve and then I would "have faith." The fact that within two weeks' time I was entirely and perfectly healed and well, able to start to school, proves that healing may be effected when there is little or no faith.

Even after this wonderful healing I did not accept Science nor care to know what it was that healed me. I was satisfied with my church and was glad that I had found some-

thing that could heal, as I had no faith whatever in doctors. About two years after I was healed, I joined an orthodox church. Perhaps I should still be attending it if one time when I called upon my practitioner for help she had not said that it was time I was doing my own work, I could no longer use her as a physician, that Christian Science was demonstrable, and I must study and demonstrate for myself. At that time this seemed very unjust, and I could not understand why she would not be willing to do my work if I were willing to pay her. This proves the unfairness of the accusation that Christian Scientists are practising because it is a lucrative business. Since then I have been very grateful for the awakening which came to me through this faithful Scientist. Soon I began to attend Christian Science services and gradually lost interest in my former church, because I found in Science that which I had never found elsewhere.

I am now a member of The Mother Church, and also of Fifth Church of Christ, Scientist, of Chicago. I have never regretted any step that I have taken. Divine Love does meet "every human need" (Science and Health, p. 494), and it satisfies. I am learning in what true happiness consists; that it is not dependent upon material conditions or personality. I am striving to live up to my highest understanding, and though the way is long and there is much to overcome, our reward is sure, and for every effort in the right direction we receive an hundred-fold. The *Sentinel* and *Journal* are continuous helps, also the Lesson-Sermons. Only by living Christian Science can we express our gratitude to Mrs. Eddy for Science and Health, and for her pure and blameless life.

E. L. H., Chicago, Ill.

When this blessed truth was brought to me I was discouraged and disheartened with what I saw before me: namely, lots of work and no health or strength with which to do it. Life had no bright spots and I toiled on, half the time crying as I worked, praying every day that God would show me the way out of this misery and suffering, and He did through a dear sister who brought to my home Science and Health.

At this time I was to sense suffering with a constant pain in my left side, caused, the doctor said, by coughing and straining the muscles, after a severe attack of the grip which I had three times. The left arm seemed to have no strength in it, and I could not sweep the floor, for something about the motion would cause me to cough and seemed to make the pain more severe. My sister kept reading Science and Health to me, and in three days I discovered that I was free, my arm being all right and the pain in my side gone. This was five years ago and it has never returned; of course it could not, for God never made it and in reality it never did exist.

The next temptation was a case of typhoid pneumonia, manifested in my sixteen-year-old son. This I tried to destroy for him, but became conscious that fear was touching me, so called an olden Scientist to treat him, one whom I thought had a better understanding of this truth. By this time the neighbors were becoming alarmed and said there would be no boy there in the morning, and that we were letting him die,—doing nothing for him. The Scientist took the case, and the next day he was better. The third day he came down stairs and was perfectly healed without any drugs or material help, and is now a faithful student of Science and Health. I have also seen scarlet fever, which was seeming to manifest itself on my son and son-in-law, overcome with two treatments, and many other ailments, such as a crushed foot, sick headache, and stomach trouble which I had spent much time and money to cure and for which I never got any permanent help until I found Christian Science,—all have vanished. I had taken medi-

cine from childhood for my stomach and suffered untold agony. Now I wonder why I have waited so long and been so selfish, not to proclaim this truth to the world, and I ask myself if I have been grateful enough for my healing.

I do feel grateful to Mrs. Eddy and all her loving students who have helped me to see the truth, but most of all to God, who never fails us and is the same yesterday, to-day, and forever.

MRS. F. D. WAKEMAN, Lockport, N. Y.

Longing for something better than I had found, and being of an independent, super-sensitive nature, which was developing into a suspicious and distrustful one and which was leading to self-condemnation and isolation, I was attracted to Christian Science through seeing the glorious results of its healing and the Christlikeness of its gospel. It seemed too good to be true, and almost impossible that such blessedness could be realized on earth.

My growth spiritually has been slow, for I had to see surely that this understanding of God is practical and to be enjoyed now. Each succeeding year is proving the happiest, and I am rejoicing in the consciousness that man is "the spiritual image and likeness of God" (Science and Health, p. 591).

I am thankful for "the freer step, the fuller breath," that is mine through studying and trying to live Christian Science as taught in Science and Health; I am beginning to know that "God is All in all" and there is none else. This was brought still more clearly to consciousness through class instruction. I find that obedience to the smallest detail in the work of Truth, is multiplied many times in results, and if the still, small voice of spiritual guidance be followed, there is no missing the way.

The periodicals are an ever-increasing source of comfort, giving a helpful word, weekly and monthly, on subjects uppermost in thought at the time.

Previous to last year it was from a sense of duty that I endeavored to read the Lesson-Sermon once a week. Now it is a pleasure to study it daily. It is plain to me what I have missed by not making it a systematic study before, for paragraphs in Science and Health that have meant little to me heretofore, now reveal a depth of meaning that amounts to revelation, and whereas the Bible had been an enigma, it is now a most interesting and wonderful book, and it is a surprise that the truth so clearly expressed in it was not discerned before.

Divine Love in His own way reveals truth at the right time, and I am glad there is now one so spiritually minded as to prove a channel for its revelation in our time. I am most grateful to our Leader for the discovery of Christian Science.—MARION WILDE, Elgin, Ill.

It is with joy unspeakable, that I look back over the years of my life, and mark the experiences that were preparing me for the reception of Christian Science.

I belonged to an orthodox church, and I was as good a member as I knew how to be, yet when the stern realities of mortal existence faced me, I found that I was leaning on a broken reed. My prayers were not answered, and I began to question a religion that I could not prove.

I resented and repudiated the doctrine of atonement as I had been taught it, and when I stood before my infant class, and showed them a picture of Jesus on the cross, and looked into their trustful eyes, I could not teach them that a God of love sent His son that he should be thus crucified to save us. I said to myself, "I'll stop right here, I'll never teach that again." I knew it was not true, and yet I knew not where or how to get at the truth.

All the time the still, small voice told me that there was a solution to all the problems of life, that there was a power which would unravel the mysteries of being, if only I could find it. I searched in vain, I hungered and thirsted for

satisfaction, and every effort brought me nearer to the light.

Finally I came to Christian Science for healing, and there I drank from the fountain of Life, which not only healed me, but gave me the key to being. I had exhausted medical skill and hygienic cures of every kind; all had failed to make me well. I came to Christian Science as a last hope, and said, I want to know it for myself, if it is of God, and my healing was so perfect and so beautiful that I could but marvel. It seemed to me just like one of Jesus' so-called miracles brought down to modern times. I had so little understanding that I was almost afraid to say a word lest the dread sickness might in some way return; but I have long since lost that fear, I have proved that what God performs, stands. It seemed wonderful that I should be so well after having been sick so long.

I wish I might express the wonderful love that was revealed to me when I read "Miscellaneous Writings" for the first time. I once had a great deal of prejudice against Mrs. Eddy, because of failures to cure by Scientists I had known. In the reading of that book I lost sight of everything but the perfect love revealed in it, the tender Christ love, so pure and so uplifting. Now I thank God every day for Mrs. Eddy and for the truth that has been revealed to the world through her. I honor her most, when I follow most closely Christ's teaching.

VIRGINIA I. BROWN, Pueblo, Col.

I would like to tell why I came to Christian Science. I was a physical wreck, had been an invalid nearly all my life. I had what the doctors called indigestion, and severe headaches with it. I became despondent and even thought of committing suicide to get out of my misery. I had heard that stomach trouble sometimes made people crazy, and I was getting to be reckless and did not let my family have any peace, I was so ill. I was a slave to the tobacco habit and had tried to quit it several times but could not. My physician had told me that it was injurious to me. I had taken many kinds of medicine and was getting worse all the time, but at last I tried Christian Science and was helped very much. I was helped several times, but did not give up my medicine until I thought I could never get well. I wanted to get out of my misery and then I turned to Christian Science and was healed, and have learned that "man's extremity is God's opportunity." I have also learned that God is our only Healer, and I would not dare to lean on any other. We have a different home now; my wife is studying Science and Health, and we have some beautiful demonstrations in our family.

I am so thankful to our dear Leader for the blessed truth she has brought to us in her book, "Science and Health with Key to the Scriptures," and also to my practitioner, who helped me so much in time of need. There are a few of us studying Christian Science here. We have no church yet, but I know the seed of truth will grow, for God will cause it to spring up quickly.

CHARLEY D. GORDON, Saint Jo, Tex.

Two and a half years ago, while living in Waterville, Me., I first learned of Christian Science. I had suffered for a year all the tortures of locomotor ataxia, and had employed the best medical aid I could get. Two of the doctors had extensive hospital practice and talked very encouragingly at first, when I went to them for help, but after a short time they said, as had several other doctors, "Incurable; may live for years but will gradually grow worse, and liable at any time to become perfectly helpless." I could not walk a step if any one was looking at me, and could do no work, only what might be done while sitting down.

This was my hopeless condition when Christian Science treatment was recommended to me, and I found that "man's

extremity is God's opportunity," as I soon began to feel better. After a few months' treatment and reading of the literature I began to attend the meetings, riding both ways. Many and beautiful were the lessons I learned in the little hall where God led His faithful ones, step by step.

After a while I began to walk home from the meeting,—nearly a mile,—and a few weeks later I walked both ways and could say that I felt perfectly well. I could work all day, standing up most of the time, with no bad results. The tobacco habit left me when I began treatment, and things I once loved I now have no use for. The Bible has become a daily companion, also Science and Health. We have a number of Mrs. Eddy's books and other Christian Science literature in our home.

I have much love and reverence for our Leader who has made plain the way whereby we may know that "The same power which heals sin, heals also sickness" (Science and Health, p. 135). I am very grateful to the practitioner who, by her loving patience, led me out of bondage "into the glorious liberty of the children of God." I am now on a farm and do all kinds of work necessary, and do not fail to praise God daily for the teachings of Christian Science.

FORREST E. LANDER, Woodville, Me.

As my heart is filled and overflowing with gratitude for the understanding of Christian Science and the fruits thereof, I shall tell what a grain of truth can do for suffering mortals, if earnestly applied.

Before I heard of this truth, I was a sufferer from catarrhal stomach trouble, and had been laid up at times for many years, with what the doctors called congestion of the stomach and inflammation of the bowels. I had also suffered from female troubles for seven years, and had more or less pain, but when I got an understanding of Christian Science, all my ailments passed away without my knowing.

When I took up the study of Christian Science, I did not seek it so much for myself as I did for the rest of the family, but with this understanding there came to me a wonderful revelation of light. I could not state how, when, or where I was healed, for I never gave it a thought. I was seeking the truth, and in seeking I found peace, harmony, health, and strength. I owe all my gratitude to God and to our beloved Leader, Mrs. Eddy, through whom has been revealed this blessed truth which brought me out of darkness into light.—LOUISE SOMERLAD, St. Louis, Mo.

For over four years I have been studying Christian Science, and by recalling what I was before I had any understanding of the truth I feel encouraged. Much is still to be overcome, but for each day sufficient strength and understanding is given, and nearly every day finds me a little further on the way to a realization of perfect harmony.

I feel thankful that I am able to understand this truth, and I am learning not to be discouraged over past failures but to know that man has a right to reach perfection. With this thought to help me, the way grows plainer and easier.

Our periodicals are all great helps. They clearly answer so many questions that come up in my every-day experiences.

I believe, as so many have said, that the best way to thank our Leader is by daily deeds more than by words. The healing power of Truth has been daily proved in my family, and many wonderful demonstrations have been made, for which I feel thankful. I am also very thankful for the release from fear, doubt, anxiety, and discouragement, and for the constant assurance of a sufficient supply of all good.

MRS. H. V. D., Pike, N. Y.

My father was completely healed in three treatments after having a paralytic stroke. As for myself, I was a mental

and physical wreck, but my physical ailments, which were numerous, have completely left me, and I have not had the slightest return of them. The best of all to me, however, is the spiritual understanding which I long had sought but did not find in the old religious thought. Now I am fully satisfied in Christian Science, and am very thankful to my dear teacher who has helped me so much. I am thankful to God for this revelation; words could not tell my gratitude. Life now seems worth living, while before it was a burden. I have had many demonstrations, one of which seemed most beautiful to me. It was the first treatment I gave my little girl, who was healed in three treatments of kidney trouble. I have also been able to help others. I am daily watching and striving to have that Mind which was in Christ Jesus, and I have a thankful heart to our revered Leader.—MRS. MAGGIE BROWN, Scribner, Neb.

I am thankful to God for what Christian Science has done for me. It is about three years since I heard of this truth. At that time I was suffering from trouble with my breathing, and from other ailments. I rejoice and can truly say that I am free from the bondage I have been in. I am very glad that I heard of Christian Science, for it has carried me over many a rough place. It has been a great help and a comfort to me in every way. My heart goes out to our Leader, Mrs. Eddy, for what she has given to mankind. I cannot show enough gratitude towards all who have helped me along.—M. S., Newcastle-on-Tyne, Eng.

I would like to give a testimony of how I have been helped by Truth. For some time before I asked for Christian Science treatment I was very much in need of help, and was unable to get it from physicians or *materia medica*. I was suffering from rheumatism, indigestion, very severe headaches, and chronic constipation, all of which have been overcome. I am deeply grateful for the knowledge of freedom and for the spiritual peace which comes to us through the study of Christian Science, so that I can sing with the Psalmist, "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"—LILLIE A. FINDLEY, Keokuk, Ia.

It is nearly twelve years since the bonds of materiality were loosed, and I stepped forth into the glorious freedom of the truth as taught in Christian Science, by our revered Leader, Mrs. Eddy. The only way I can show my gratitude, is to try to live the life of a true Christian Scientist. The twelve years I have been in Christian Science I would not give for all the former years of my life. I have seen all manner of sickness and discord fade away under the light of truth, and best of all, our text-book, Science and Health, has taught me to read my Bible understandingly, so that it is now a pleasure to read it, whereas it used to be a task. Thank God for Christian Science.

MRS. NORA KEELEY BALDWIN, Cincinnati, O.

Notice.

The Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the Clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

From Our Exchanges.

Let us be wary of a piety that occupies itself mainly with the thought of heaven as the fruition of all our desires. There is an essential defect in the devotion that overlooks time and delights only in contemplation of eternal felicity. The Christ life is not so fashioned. Our Lord was intensely interested in humanity and in this world's affairs. His one overmastering ambition was service. He went about doing good, and he gives ample evidence that he expects his followers to emulate his example. The piety that will find heaven at last is of the sort that seeks Christ-likeness here,—that puts on Christ,—that lives his life over again among men. Dr. Van Dyke states it thus: "For of every soul that seeks to arrive at usefulness, which is the service of Christ, and at holiness, which is the likeness of Christ, and at heaven, which is the eternal presence of Christ, it is written: 'So He bringeth them unto their desired haven.'"

Pacific Christian Advocate.

The reward of work well done is said to be more work of the same sort. He who is faithful over a few things is honored with authority over more things. Everything has seed in itself bringing forth after its kind. This method of reward lays additional burdens on those who are willing to carry them. Rest from all work might seem the true and desirable reward, but the divine principle is that work is a blessing and it is found that men are happiest and most in touch with men when at work. Jesus said, "My Father worketh hitherto and I work." If we are "workers together" with God we gain closer relation with Him, and the more He calls us to do the more we know of His mind and receive of His joy.—*The Watchman.*

The mount of vision for spiritual things is secured only by the steady ascents of life. The higher our souls climb on the great moral and spiritual elevations of wisdom and character, the truer and purer they become and the more reliable will be their visions. The march of humanity is ever toward the land of verities. Justice will make itself known to the generation that shall be absolutely just; tenderness and pity will be no secrets to full-grown hearts; truth will dawn upon the absolutely great and wise souls; and God will reveal Himself to the God-like.

The Universalist Leader.

We share with Christians everywhere the supreme certainty that the power which has established this fabric of things is conscious and is beneficent. Upon this foundation, in all ages, has rested the hope from which cometh to man and nations every gift of noblest origin,—the hope of immortality. In virtue of this faith we claim our place in the ranks of those who, by whatever name they call themselves, are striving to bring in the kingdom of God, and that His will may be done on earth as it is in heaven.

HON. GEO. F. HOAR.

We are coming to understand that a sect is not a church: it is no more a church than a political party is a state. The prevalence of the sectarian spirit has obscured the essential church idea, just as party spirit obscures the true idea of the State. The history of the Church cannot be traced in the history of sects.

REV. CHARLES FERGUSON.

The Christian Register.

The passage from the letter to the spirit of religion is going on in all churches as fast as preparation can be made for it.—*The Christian Register.*

If truth, without passion or prejudice to aid it, cannot win, failure is better than victory.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SELFDENIAL AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges: 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston: 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston: 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

THE THIRTEENTH INTERNATIONAL PEACE CONGRESS.

The thirteenth International Peace Congress convened in Boston last week. Mr. Edwin D. Mead, who was chairman of the opening meeting, presented Secretary Hay, who welcomed the delegates in the name of the United States Government, with a quotation from the Secretary's own words at the recent meeting of the International Press Association at St. Louis. Said he:—

"The highest victory of great power is that of self-restraint, and it would be a beneficent result of this memorable meeting, this ecumenical council, if it taught us all that mutual knowledge of each other, which should modify prejudices, restrain acerbity of thought and expression, and tend in some degree to bring in that blessed time

"When light shall spread, and man be liker man.

"Through all the season of the Golden Year."

Secretary Hay said, "If our example is worth anything to the world, we have given it in the vital matter of disarmament. We have reduced our army to its minimum of 60,000 men; in fact, we may say we have no army, but in place of one a nucleus for drill and discipline. We have three-fourths of one soldier for every thousand of the population—a proportion which if adopted by other Powers would at once eliminate wars and rumors of wars from the daily thoughts of the chanceries of the world."

At the Consecration Meeting, held in Tremont Temple, Dr. Reuben Thomas said that the fact that there should be need of a Peace Society in the twentieth century is enough to produce a feeling of humiliation in every Christian clergyman. Our hope for everything that is high and noble is in the Church, yet how often we are informed that the Church has lost its leadership. The fact of the matter is, that our Churches are not Christian. Christianize the Churches and you will stop war. Rev. Charles G. Ames said he was glad people were getting to be uncomfortable; it showed that they were conscious they were wrong.

Elie Ducommun, presenting the report of the "Peace Bureau," permanently established at Berne, Switzerland, said, "Would the Pow-

ers, if an offer of mediation by them should be rejected, find themselves necessitated thereby to have recourse to the use of military force to impose peace? Such is not our opinion. For, before having recourse to such extreme measures, the Powers would still have at their disposal other means of coercion. The most efficacious of these might possibly be that of rigorously closing their exchequers to the further appeals of Russia and Japan for new war loans. It is well known that the treasuries of the two belligerents are exhausted at the end of every month, that their war expenses reach enormous figures; and that, left to their own financial resources, they would be absolutely incapable of continuing the struggle under present conditions.

"Under these circumstances Russia and Japan are at the mercy of those who make loans to them, and they could not keep up the campaign for two months if they were not sustained by the hope that their foreign creditors would make still further advances to them in order to save what they have already loaned."

Edwin D. Mead of the American Committee, welcoming the Congress, said,—

"We do not forget, be sure that none remember so constantly, that our own republic, from which it was indeed your right not to expect it, has yielded in these days to the temptations to make herself also a great naval Power and indulge the noary old ambitions of commanding respect by force instead of by ideas and the neighborly hand. We acknowledge the justice of your warnings and reproaches. We do not resent them; we thank you for them. We thank you for reminding us, as you have done with such eloquence and feeling in the last two days, of the principle of the founders of our republic, and the high duties of leadership in the path of peace and order which the republic by its history and position owes the world. If in the great temptations of our opulence and power some of us are in danger of forgetfulness and faithlessness, may the presence of so many of you here from nations whose burdens and dangers are so much greater than ours, and who need the support of every influence of ours upon the right side and not the wrong side, help to call us back to our great national ideals and our better selves. Of this be sure—that the American people are waking up. They will declare to-morrow that all playing with fire of militarism in this republic must forever cease.

"Men tell us war will cease in this world and our dreams come true only when the millennium comes. I pity men who have such poor notions of the millennium. The evils which we fight are among the grossest and most barbarous. They befit only the early and low stages of civilization. Our effort is but to clean the Augean stables. Horrors and wickedness such as those going on at this hour in Asia ought to be so far behind as not even to be mentioned among civilized men. Toleration of war in this twentieth century after Christ is like setting up the Ten Commandments on the walls of Christian churches, warning presumably decent Christians not to steal or kill or commit adultery. Put the beatitudes on the walls of your churches. It is only when we have done forever with such savage and gross forms of wrong as war that we shall be in a position to make a first fair and decent start for the millennium."

M. Houzeau de Lehaie, Senator of Belgium, and President of the Sixth International Peace Congress held at Antwerp in 1894, was the first of the foreign delegates to respond to the American welcome. Closing in English, M. Lehaie said that those who know war are not those who make war. They sit quietly at home who send others to be crushed or maimed on the battlefield, and who spend the money which they themselves do not pay. They know nothing of the miseries they entail on others. Here in America forty-five States exist in unity. How long will it be before the states of Europe may do the same? How long before the people shall say to their rulers "stop your wars and your armaments: we want men to walk in peace together"? The last century saw the rise of the United States of America; he pre-

dicted that this century shall see the United States of Europe, and the next the United States of the World, existing in justice, amity, and peace.

For Germany Dr. Adolph Richter, President of the German Peace Society and President of the Eighth Peace Congress at Hamburg in 1897, responded,—

"If we feel that the peace movement goes on slowly," said he, "if there are still places where the gun and the sword rule, we ought not to lose courage. We are fighting against an evil entrenched behind the centuries. War has long been looked on as a measure to gain people their rights; we peace people hope for the time when war will be looked on as a great wrong and even as a sin."

Hon. Thomas Snape, Alderman of Liverpool and long President of the Liverpool Peace Society, responded for Great Britain in America. "Universal peace," he said, "is as sure as the triumph of civilization over barbarism."

John Olseen spoke for Norway. He said, in part, "I have seen your great cornfields, your great prairies, and your Rocky Mountains, all so different from the old country, from Europe. We have not seen here your streets filled with soldiers and millions spent for fortresses. We know that great armies are a foe to peace, for great armies must have something to do. It has been said that great armies prepare the way for peace, but that is one of the lies that has blinded the Old World. They are obstacles to peace. You have proved that it is not the greatest nation that gains the victory."

Memorials to the Emperors of Russia and Japan, urging them, either by direct negotiation or by recourse to mediation of friendly Powers, to bring about an end of hostilities, and to the other signatory Powers to The Hague Convention, reminding them of their duty to impress upon the belligerents the desirability of making peace, were ordered by the Peace Congress at Wednesday's session in Tremont Temple.

The chairman, in announcing that Julia Ward Howe would speak, said, "I wish absolute quiet. Her voice is sweet, but not strong." "But it carries far," interposed Mrs. Howe, and the applause was deafening. "There is one word I have not heard as often here as I should have liked," she said, "and that is a word as holy as peace—the word justice. We should be able to assure the combatants that that will be considered. We want more than The Hague Tribunal as it is at present. We want the best tribunal in the world, which should be employed to give that justice. It is an ignoble peace," she said with strong emphasis, "that is not based on justice. The tribunal should be able to appeal to high heaven and say that each decision is one of which heaven itself will approve."

President Gompers of the American Federation of Labor, said at the workingmen's meeting that the men and women of labor bear the burden of war.

Pete Curran, representing one million five hundred thousand British workmen, said,—

"If all these congresses are to do is to meet annually and pass abstract resolutions, they may as well not meet at all. What is needed is continual pressure on Governments."

"The settlement of international controversies by war involves the destruction of hundreds of thousands of young men. Could any rule, code, or method be more void of reason and justice? What would have been the condition of the human family to day if the bravest and best, the noblest and the most unselfish, could have lived rather than have been sacrificed upon the red fields of war of every country and every age? . . . The intelligent world will not long endure the burden of great standing armies and enormously expensive navies, and there never has been a more favorable time for a candid, fair, and impartial discussion of this subject."

The Hon. Carl Schurz in a recent letter says: "It is useless to say that 'if you would have peace, prepare for war,' when at an enormous cost you prepare for war while there is not the slightest danger for your peace."

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Minister's Experience.

L.

A LITTLE more than three years ago, I caught a glimpse of Christian Science through the sore necessity of one to whom I owe more, in a human sense, than to any other. In its application to this dear one, I saw a little of its power to heal. I then bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and have been studying it regularly with increasing interest, satisfaction, and benefit ever since. In this pursuit I have been much helped by other and more experienced students, through whom I first learned of Science; by my faithful teacher, and by the publications of The Christian Science Publishing Society.

In the autumn of 1890, after the second session of my university course had been interrupted by illness, I was appointed a "student missionary" of an orthodox church in Canada to a "mission field" near our old home. Here I found my health equal to the task of preaching and visiting, though I was afraid of the strain of college studies. After a year, I returned to Queen's University (Kingston, Canada), but with a run-down feeling. Before the year ended, our home circle was broken by the sudden death of a very bright and affectionate sister. Owing to ill-health, I did not return to college after the Christmas holidays, but was given charge of a vacant pastorate in the country, where I remained for a year. I then returned to Queen's, pursuing my studies during the session and preaching during the summer. Thus I completed a course in arts.

The college work, especially in philosophy, English literature, and political science, upset and transformed very completely the religious traditions of Calvinism and the literal belief in the Scriptures in which I had been reared. Hence, though I loved the preaching of the gospel as I understood it, and found much spiritual encouragement in the college Y. M. C. A., I found the Westminster Confession of Faith so distasteful that my entrance to the Divinity Hall was postponed and postponed. However, more than a year after being graduated in arts, I passed the matriculation into theology, and began the study of divinity under Principal Grant.

It is very generally conceded that of Canadians there hath not arisen a greater prophet than George Munro Grant. He was a liberal theologian, regarding the higher criticism or literary criticism as the special "Charism," or gift of the Holy Ghost to this age; an inspiring teacher, unfolding his views with wonderful clearness, vigor, and leavening influence from day to day and from year to year in the class room. Loyalty to one's highest conception of truth, to Queen and country: freedom of thought, tolerance, unity, mental activity, and a broad outlook, these were some of the qualities inculcated and nobly lived by one whom many loved to call "Principal." Admirable courage, simplicity of habit, work and a constant aim at a spiritual interpre-

tation of life, the Bible, and everything, characterized him, therefore his teaching in theology was not dogmatic but vitally suggestive. He would say, "The old theology is inadequate, and the new theology has not come." "No satisfactory doctrine of the atonement (at-one-ment) has been formulated." "Sin is not a final reality." "God is best conceived as Love, manifested in sympathy, righteousness, and self-sacrifice." Also he taught us to distinguish between "the historical Christ" and "the essential Christ," between Jesus and the eternal Spirit, the Comforter. I mention him and his teaching in this connection, because he seems to me to have pointed to the Promised Land of Christian Science, though not entering it here himself.

After three years under his teaching, I found myself unable to subscribe to the "Confession of Faith" for license to preach. The Principal recommended that this might be done "in the spirit," though quite impossible "in the letter." After spending a year at that problem I thought that I saw my way, and subscribed accordingly. After licensure, still much unsettled in thought, I went to supply temporarily a Manitoba mission field, but was not ordained.

During my last session at college, my attention had been drawn somewhat to Christian Science. In fulfilment of a promise, I attended a Sunday service, a Wednesday evening meeting, and a lecture, and borrowed a copy of Science and Health from a Scientist who, with characteristic wisdom, was not going to lend it until I quoted Jesus' saying, "Give to every man that asketh of thee." I read it through, mostly, was impressed, but thought that Christian Science taught that all is Mind, to the exclusion of all concrete reality. I reasoned that to say, "All is Mind" was the same as to say, all is blank, without identity; and that, while it might be soothing to the nerves, it was one-sided, and therefore untrue. Yet, that there was good in Christian Science, I could not deny, and part of the philosophy at Queen's was to find a "soul of goodness in things evil." I was much impressed with the thought of one Mind, intelligence, Spirit. My preaching was along the line of "As many as are led by the Spirit of God, they are the sons of God." Of course I thought all the while that Christian Science was disposed of, so far as I was concerned, though I was wishing it were true, being much perplexed for years about the place of miracles in the gospel narratives, as well as with the whole problem of God, freedom, and immortality. I longed for a system of truth and a right understanding of it. I had almost entirely ceased to believe in or preach miracles, as I could not understand them. I preached ethics, the Golden Rule in so far as I understood it. But when I was brought to where I saw a sign of the healing in Christian Science, I got a glimpse of the truth. I then saw that it taught, not that all is blank, but that "all is Mind and Mind's idea" (Science and Health, p. 492), that Mind is expressed in the real, spiritual nature of everything. My eyes were opened. I saw the clew to the healing and teaching of Jesus. I saw the Comforter, Divine Science.

My way out of the old theological position and the old philosophy of matter manifesting spirit was not easy, but Christian Science had hold of me. I could not do without

it, and it has been and is a blessed and brightening path upon which to enter and travel. As we go on, and find that by study, by the use of the privileges provided for instruction, and by practice, we not only get help and healing, but we learn how to help and to heal others, then we learn to love Science, and to love and revere the noble, gentle woman who so faithfully leads us on out of darkness into God's light.

Grateful Recognition.

WILLARD S. MATTOX.

ON page 58 of the Manual of The Mother Church, we are told that "it shall be the duty of every member to daily defend himself against aggressive mental suggestion, and not be made to forget, nor to neglect his duty to God, to his Leader, and to mankind." Our duty to God is manifestly to be obedient, to acknowledge His will as our only law, to be constantly grateful to Him for continuous life, for a perfect body, and for perfect health; to be grateful to Him for an infinity of good things, for a limitless universe filled with countless spiritual ideas, each in its own degree perfect, and among which we live and move and have our being.

Our duty to our Leader is to be properly thankful for her heroism, for her self-abnegation and splendid achievements. It includes constant watchfulness, lest by thought or word we add to the cares of the noble woman who so patiently and uncomplainingly bears universal burdens in order that we may make our demonstrations. Our duty to mankind is to so express Truth in our thoughts, acts, and speech that we may stimulate men to make an endeavor away from sin and disease; to so present the Science of living in all its winsomeness that it will attract all who are weary of egotism and tired of pain; to so voice divine Love that the suffering human sense may take courage and begin to lay hold on hope and good cheer.

In performing our duty to God, to our Leader, and to mankind, we shall have much to do and something to say, and we may meet those who do not agree with all that we do or say. There are some, for example, who find fault with us because we love our Leader and say so. In our Wednesday night meetings many a man partially discharges his debt to her by publicly acknowledging some benefit, derived from the truth she was good enough to see, and brave and loving enough to utter. It is not surprising that men and women reclaimed from misery and degradation, who have been lifted from the very depths should overflow with gratitude for the one who, though knowing them not, has labored with unselfish devotion, to make their individual redemption sure. And it is not strange if the world now and then hears a part of the glad song of thanksgiving, nor is it very strange if the world, knowing not the cause of rejoicing, knowing nothing of the contrast between the hell of mortal belief and the heaven of peaceful understanding, should complain that all these people should express their gratitude and affection as they do. The chorus of thanksgiving cannot be repressed. It has its beginning deep down in human hearts regenerated, it comes from those who are well and sane and clean and valuable to themselves and others to-day because one has lived near enough to God, good, to catch a glimpse of the radiant beauty of holiness, and has reflected enough of what she saw and heard to inspire in others an earnest desire for better living. As a matter of fact, our critics would have something to talk about, if we were not thankful. They would have a case against us if we held our peace.

An illustration nearer home will accentuate the argument. Suppose that a man finds himself face to face with financial ruin. Forces over which he has seemingly had no control, bring about a series of reverses, and he is confronted with failure, a wrecking of all his hopes and

ambitions. His resources are exhausted, his energies paralyzed, his situation is desperate. A friend comes to his aid, saves him from disgrace and poverty, establishes his business, encourages the drooping thought, and restores hope and manly endeavor. Would it be counted singular, if that man and his family sang the praises of their benefactor? Would they not rather incur the severest condemnation if they forgot what they owed their friend? Though they never ceased to recount the generosity which was their salvation, they would awaken no complaint, no criticism. If we multiplied such an obligation an hundredfold, we could not measure the debt of those who "love to tell the story" of their redemption from nameless suffering, and who turn their gaze lovingly toward her who has labored unceasingly for them, without hope of reward or recompense other than the consciousness of a God-given mission faithfully performed. Neither wealth, nor earthly fame, nor the applause of multitudes, could compensate a tender woman for the buffetings and cruel misrepresentation which have been heaped upon our Leader. Not for gain, nor for personal following, could she be induced to endure the indignities put upon her by the world's hatred of every reformer. Remembering her toil and sacrifices, and knowing that she has endured all this, and more than we will ever know, is it a wonderful thing that Christian Scientists are grateful to Mrs. Eddy?

All this finds a parallel in the incident recorded in the 19th chapter of Luke. Jesus was meekly making his triumphal entry into Jerusalem. On the way, "the whole multitude of the disciples began to rejoice and praise God with a loud voice for all the mighty works that they had seen." And why not? Their joy and gratitude were natural and spontaneous. It was not prearranged nor spectacular. But the critics were there. And as they kept pace with Jesus in the throng which surged around the humble beast he rode, they called out to him to rebuke his disciples. It is not improbable that those who were loudest in their demands upon him were safely inconspicuous in the background of the crowd. They asked Jesus to rebuke his followers because they were grateful to God for His messenger, and he said, "I tell you that, if these should hold their peace, the stones would immediately cry out." And so to-day, "the Pharisees from among the multitude," complain of our gratitude and say, "Rebuke thy disciples," and the answer to-day is as it was then. It is impossible to check the impulse to be grateful, because it comes straight from God, and brings with it health. "A just acknowledgment of Truth, and what it has done for us, is an effectual help. If pride, superstition, or any error, prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student" (Science and Health, p. 372).

Jesus once cured ten men of leprosy. They were all healed at the same time and told to go to the priest and meet the requirements of the Mosaic law. They went, and one of the ten came back to Jesus to thank him. Note the impersonal tone of Jesus' comment, "There are not found that returned to give glory to God, save this stranger." He conveyed the idea that gratitude to the healing Truth must be expressed, and that it would take the form of thanking God's chosen one, the avenue for good through whom good can best work. The metaphysics of this position is further explained in Science and Health, page 94, "Of the ten lepers whom Jesus healed, but one returned to give God thanks,—that is, to acknowledge the divine Principle which healed him." To-day, when thousands acknowledge their healing through Christian Science, and thank God for it, they naturally include in their gratitude, the one through whom God has manifested His love.

It has been the misfortune of clear-sighted, keen-visioned reformers, to be misunderstood or undervalued by their own generation. So true has this been, for so many thousand years, that it was crystallized into a readily understood

saying, in the words of Jesus, "A prophet is not without honor, save in his own country." Moses was not popular with the mass of the people he strove so faithfully to save. They murmured often, because they did not understand him. They were too close to his greatness. But the descendants of the very people who rebelled against him, held him up as an ideal. Ezekiel was warned by Wisdom that the message of Truth he carried would be rejected, and he was prepared to meet opposition and criticism. Comparatively few people in any stage of the world's development have been able to get a large view of affairs and estimate with any degree of fairness or correctness the value of the various influences at work in society. Happy the man who is so wise that he can do no injustice to present accomplishments, who sees virtue and good where they exist and is glad for all the virtue and goodness he sees, in whatever human form it may be presented. Those who owe life itself to Christian Science would be recreant indeed if they failed to recognize their obligation to their benefactor, not only because she has done something, but also because of what she is. Extravagant praise and hysterical exhibitions of emotionalism will not be confused with that joyous, yet withal dignified, expression of a laudable and praiseworthy sentiment which the world cannot understand, chiefly because it has never possessed it.

Divine Guidance.

BEULAH G. HINES.

In dwelling on the thought of divine Principle as Love, we can readily see the innumerable ways in which Principle enters the smallest affairs of our lives if we only think quickly enough to avail ourselves of Divine guidance. Have we ever thought of what it means to be unprincipled? Even in a mortal sense, if we were accused of being unprincipled how quickly would we resent the accusation, or seek to remedy the evil, whatever it might be. In my own experience, I have many times rejected an error quickly and decidedly, because it appeared an unprincipled thing to think, say, or do.

Our text-book teaches us that Principle means God, Life, Love; and the command to obey God is imperative. In proportion to our obedience we are protected by Principle in every way, and we feel in such accord with good that our sense of power over evil will grow in strength until we absolutely know that God's commandment uttered through His ideas, cannot be broken.

I love that saying of the Master, "I can of mine own self do nothing." "The Father that dwelleth in me, he doeth the works." It gives us rest to know that every good motive and action comes direct from our Father, and that all the good in the world is our inheritance from Him, and that it remains indestructibly in Him, even as we remain indestructibly in Him.

We sometimes hear good people say that their motives and intentions are good, and yet that good results do not follow. Both of our best authorities, the Bible and Science and Health, emphasize the necessity for action. Our text-book says that "there is more Life and immortality in one good motive and act, than in all the blood which ever flowed through mortal veins" (Science and Health, p. 376). We also hear Jesus saying, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." We cannot sit still and say, "Principle governs, and my motive is right;" we must prove that Principle (not self) is governing, and we must act in accordance therewith.

In our work, and particularly in our relations with our fellow-man, we need to bring more of Principle into thought and action. We need to watch our thought of our fellow-mortals lest it be an unprincipled thing of which we would be ashamed if it were openly known.

By guarding the inward thought, the outward act will be guarded also,—guarded, guided, and made manifest by and through divine Principle, Love. This is God with us, telling us just what, when, and how to think, speak, and act at every moment for our brother as well as for ourselves, until our lives are beautifully rounded out on the lines formed by Principle.

"All that I have is thine."

CATHERINE MAY.

THE elder son was in the field; he had been working throughout the heat of the day. No doubt he was weary, hungry, thirsty, and needed rest. As the night drew near, he sought his home for the needed refreshment. Hearing music and dancing, he called one of the servants and asked what these things meant. He was told that his brother was come, that his father had "killed the fatted calf," and that his friends were making merry.

A sense of error entered his thought and he was angry and impatient. He had been working for his father many years, and no evidence of appreciation had been bestowed upon him. He would not go into the house, but chose to stay outside, and put on the garment of self-righteousness. His "incorrect reasoning" led to practical error. "The wrong thought should be arrested, before it has a chance to manifest itself" (Science and Health, p. 452).

Did the father leave him in his error, in this story? No. He came out to meet him, and "intreated him." Then error called louder than ever. "Lo, these many years do I serve thee, . . . and yet thou never gavest me a kid, that I might make merry with my friends."

Now note the father's kind reply, "Son, thou art ever with me, and all that I have is thine." What do these words mean in the light of Christian Science? All life, all truth, all love. The idea is almost too great to comprehend! Of whom is it said, "Thou art ever with me"? Those "who walk not after the flesh, but after the Spirit." "For as many as are led by the Spirit of God, they are the sons of God. . . . The Spirit itself beareth witness with our spirit, that we are the children of God: and if children, then heirs; heirs of God, and joint-heirs with Christ."

"God combines all-power, or potency, all-science, or true knowledge, all-presence" (Science and Health, p. 466). Son, daughter, "All that I have is thine."

[Written for the Sentinel.]

My Ambition.

E. B. M.

O, WERE it mine to sing a song
Whose sweetness, at my feet should hold
The spell-bound thousands, all untold,—
I'd rather far it were my part
With comfort e'en one life to fold,—
Bind up one broken heart.

O, were the power mine to paint
The fairest picture, to amaze
A wond'ring world that there should gaze,—
Oh, Father, I would ask instead
Thy healing truth to bear and raise
My brother from his bed.

O, were it mine to have my fame
Emblazoned high on yonder star,—
Dear Father, I would rather far—
I humbly pray in earnest tone—
One life be cleansed which sin doth mar,
And that, oh Lord, my own!

Selected Articles.

Christian Science Indorsed.

If the Supreme Court of New Hampshire had planned any public testimonial to Mrs. Eddy at her home city of Concord, it could not have done better than it has in deciding that the practice of Christian Science is and of right ought to be legal. With the Supreme Court's seal stamped upon her doctrines, Mrs. Eddy has reason to grant general amnesty to enemies and to the faint-hearted within her own ranks.—*Boston Record*.

The Spead-Tomlinson Case.

The decision announced by our Supreme Court Tuesday in the Spead-Tomlinson case is undoubtedly the most important legal victory yet achieved by the followers of Christian Science. The right to practise Christian Science in the healing of disease was practically involved in the suit; for if the contentions of Mrs. Spead's attorneys had been sustained by the court, no Christian Science practitioner could have undertaken the treatment of a patient or expressed to a patient his belief in the efficacy of his system without rendering himself liable to an action for damages in case of failure to effect a complete cure. These contentions are effectually disposed of by the opinion rendered Tuesday, and the right of the Christian Scientist to treat in accordance with his system persons who desire that method of treatment, as well as his right to express his honest belief in the merits of the treatment, is established.

While the question whether a Christian Science practitioner is required to take out a license like an ordinary physician, and the question of the liability of such a practitioner to criminal prosecution under special circumstances, has been passed upon by several courts with results almost uniformly favorable to the Scientists, the fundamental question of the Scientist's common-law right to practise his system of healing as ordinary physicians are permitted to practise theirs, has never before been authoritatively determined. The clear and forceful reasoning of the court's opinion must carry conviction to the minds of the legal profession and the general public alike, and it may be predicted with considerable confidence that Tuesday's decision will be generally followed in other states where the same questions may arise.—*The Daily Patriot*, Concord, N. H.

Its Tenets all for Peace.

Apropos of the Peace Congress now being held in Boston, the Wednesday services at the Christian Science Church last evening dealt with the subject of peace, and the First Reader of the church read selections from the Bible and from the Christian Science text-book bearing on that subject. The hymns selected for the occasion were in the same line of thought. Among the selections from Science and Health, the Christian Science text-book, the most appropriate, perhaps, was the following:—

"One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself.'"

After the opening exercises the meeting was given into the hands of the congregation, who occupied the time in short talks, many of them indicating how Christian Science had helped them to adjust their differences with their fellow-men through brotherly love and without strife and contention, pointing to the fact that the differences of nations could be settled by the exercise of the same principles. If all men were Christian Scientists, it was contended, war would end at once, because the practice based upon the principles of Christian Science would not permit of any conflict whatever.

One of the speakers said in closing, "Following the

Master in demonstration, Mrs. Eddy, the Leader of the Christian Science movement, has shown men how to understand and in what manner to obey the divine Principle which subdues hate with love and ends wars. In proportion as her life-work is known, it will be seen that as a true peacemaker she stands among the blessed ones of all ages, and if Christian Scientists but do their work aright, they will aid in bringing public opinion under the government of the Prince of Peace, and so make theories of war obsolete."—*Boston Herald*.

Considerate Attention.

Perhaps the public may have noted that the opposition to Christian Science, which was very much in evidence a few years ago, is dying out.

Worldly as a majority of our people may be, they have been quick to recognize the goodness which is in the new cult.

There is nothing in Christian Science which would suggest imposition. Faith is the foundation of the belief which has Mrs. Eddy as its chief exponent. Those who accept this good woman's teachings live pure and upright lives. As pious as the Pilgrim Fathers, the Christian Scientists are more liberal than those pioneers of religion in the New World.

Since the immortal Declaration of Independence was given to freemen, our people have held that all men are "endowed by their Creator with certain unalienable rights," among which are "life, liberty, and the pursuit of happiness." As men and women are happy in their religion, any belief which contributes toward the happiness of the world must at least receive the considerate attention of the American public.—*Albany (N. Y.) Press-Knickerbocker*.

The Scriptures tell us that "God saw every thing that he had made, and behold, it was very good." Paul says, "The things which are seen are temporal; but the things which are not seen are eternal." Many similar Scriptural classifications could be quoted, if space permitted. The late Professor Huxley wrote, "I repudiate as philosophical error, the doctrine of materialism." "What is this terrible thing called matter, after all, except the unknown, hypothetical cause of states of our own consciousness?" Professor Allen Gray, writing of the eminent natural scientist, Professor Tyndall, says, "The charge of materialism could only be brought against such a man by those abject materialists who have never had a glimpse of the profounder fact that the universe as known to us consists wholly of mind, and that matter is a doubtful and uncertain inference of the human intelligence." To say that matter is "reality," as Rev. Randle is reported to have said, is to espouse the side of those characterized by Professor Allen Gray as "abject materialists." It is unfortunate that those who claim to be champions of religion, should be found using the notions of the rankest materialism in their arguments against Christian Science.

Muncie (Ind.) Star.

A Correction.

The Selected Article in our issue of September 24, which was attributed to the *New York Advertiser Gazette* should have been credited to the *Geneva (N. Y.) Advertiser Gazette*.

A Critic Answered.

Mr. Alfred Farlow's article, "A Critic Answered," which appeared in the *June Journal*, is now issued in pamphlet form in order to give it a wider circulation. It will have a very beneficial effect in removing prevalent misapprehensions of Christian Science. Price, 3 cents each, \$2.50 per hundred. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

The Lectures.

Cedar Rapids, Ia.

Bicknell Young lectured last night [September 17] at Greene's Opera House, under the auspices of First Church of Christ, Scientist, on the subject of Christian Science. The lecturer was introduced by John M. Grimm, who said in part,—

Most of us have been taught to believe that everything on earth, including health, should be held subservient to a proper consideration for the future; then how intensely interesting and supremely important is the discussion of that subject which deals not alone with health and happiness, but with our future state as well.

Less than forty years ago the Rev. Mary Baker G. Eddy first proclaimed that interpretation of the Scriptures which applies Scriptural law not alone to the saving of souls but to the eradication of disease and the saving and restoring of the peace and harmony of human life. To-day her church has nearly one thousand congregations and over thirty thousand members. This wonderful growth has been obtained during a time when all creeds and religions have been under the lime light of skeptical and scientific criticism. Volumes of testimonials have been written by God-fearing men and women of high standing and intelligence, proclaiming what has been done by this religion to relieve suffering and brighten life. Such a record of growth and achievement surely challenges the respect and careful consideration of the most thoughtful and critical of the age.

Cedar Rapids Republican.

Osborn, Mo.

The lecture delivered by Judge William G. Ewing of Chicago at the Osborn Opera House, September 10, was listened to by an attentive audience of about three hundred people out of a population of only about four hundred. He was introduced by P. M. Hatch, editor of the *Osborn Enterprise*, who spoke in part as follows:—

It is not my place to-night to speak either for or against Christian Science; the argument if any will be made by the lecturer, but I may say this of the members of that body, in so far as I have observed them: they are earnest, honest, and in my judgment come close to living up to their convictions, and of all people I know they least find fault with or antagonize other people.

The student of history finds that during all the time covered by written history the man or woman who teaches an advanced thought in the moral domain meets with not only prejudiced, but usually active opposition, and often real persecution from the rest of the world who always imagine, and usually with good cause, that their own theories are endangered.

He who comes bringing a new message for the uplifting and betterment of humanity is an evangelist. If this man has a message of moral truth new to you and me, he is a direct messenger to you and me from the fountainhead of all truth. If his words are false they can do little harm, if they are true, while we may forget the speaker, may forget his words, still the truth that is in them will outlast the ages. I think it is one of the beliefs of the Christian Scientists that only those things that are true are real, all error is a shadow. I do not know if this is so, but I think I know that nothing that is good and pure and true can pass away, or ultimately fail. Truth will triumph over time and the wreck of worlds.

Gentlemen and ladies, I introduce to you Hon. William G. Ewing of Chicago, who cannot fail to entertain you, and who, I am sure, will speak to you words upon which you will do well to reflect.—*Correspondence.*

Montreal, Can.

The Kings Hall was crowded Thursday [September 22] with an attentive audience, to listen to the lecture on Christian Science, delivered by Judge Septimus J. Hanna, under the auspices of First Church of Christ, Scientist, Montreal. Mr. F. W. Sim of Troy, N. Y., introduced the lecturer in the following words:—

It was my good fortune about fifteen years ago to attend a meeting of the National Christian Scientist Association in New York City, and to listen to an address by Judge Hanna. His presentation and illustration of Christian Science have, through all these years, remained in my thought a help and stimulus. Those were pioneer days in Christian Science organization, and among the many activities put in operation since that time by our Leader, Mary Baker G. Eddy, none have produced greater results than the Board of Lectureship, of which Judge Hanna is a member. Through it the truths of Christian Science are presented in an official and authoritative manner, following the commands of our Master, "Go ye into all the world, and preach the gospel to every creature," and "As ye go, preach, saying, The kingdom of heaven is at hand," with the results that the sick are healed, the sinful reformed.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, we read, "The time for thinkers has come" (Pref. p. 7). This time has come to you to-night, and we ask you to consider thoughtfully and ponder deeply the Christianly scientific statements presented to you, and with Paul, "Prove all things, hold fast that which is good." Christian Science brings to you nothing that you have not always possessed; it takes from you nothing you really have; it is the Gospel of Restoration, it restores to you health, harmony, success, peace; and restores you to right relations with God,—divine Principle,—whereby man has dominion over all the earth. Thousands of men and women in this and other lands are blessing God for Christian Science, that has brought to them freedom and the restoration of their divine rights.—*Correspondence.*

Galena, Kan.

Judge William G. Ewing lectured on Christian Science for First Society of Christ, Scientist, Galena, Kan., at Sapp's Theatre Thursday evening, September 15, to a large and intelligent audience. The lecturer was introduced by Judge E. E. Sapp, who spoke in part as follows:—

I have been told that this is a new religion. This cannot be; religion cannot be new, it must be old, if it be religion, for religion is only right actions. In the fullest sense and meaning, there are no new right actions. I am told that this religion takes the wrinkles out of one's face and the scars from one's heart. If this be true, then it must be good. If in the hurry and rush of the busy world one can be taught to stop and think of the duty he owes each to the other, then it ought to be done, and this is what I understand the speaker will address you upon to-night, and I know that he will receive not only a respectful but intelligent hearing, and that each of you will take and hold that which is good.

I have the pleasure of introducing to you Hon. William G. Ewing of the city of Chicago.—*Galena Times.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Mother Church Building Fund.

[We are very glad to give a prominent place to the following letter.—Eds.]

To the Editors.

Our beloved Leader directs that in her behalf you notify, through the Christian Science periodicals, the dear friends, students, patients, churches, and all who have contributions for the Building Fund of the new Mother Church kindly to send their money direct to the Treasurer, instead of sending it to Concord. The clerical force at Pleasant View is not adequate to give the voluminous correspondence thus entailed the attention it deserves. The Pastor Emeritus is glad to note the growing interest in the new building project and bids God-speed to the enterprise. She knows of the ingathering of the funds by the reports that "the walls are rising into view," and thanking one and all for the generosity, self-sacrifice, and benevolence manifested to build the house, she will greatly appreciate the relief which will result from an obedient regard for this simple request.

The extra contributions for the Concord church were sent to our Leader, and with one mind, but the reasons therefor do not exist in the present case. Mrs. Eddy was building that church and did build it literally, because the money contributed by others was sent to her and she in turn paid it over to the trustees of the Concord church building fund to be applied as needed.

Fraternally,

GEORGE H. KINTER.

Pleasant View, Concord, N. H., October 10, 1904.

Changing Opinions.

THE following article is copied from the *Boston Transcript*:—

"Now comes a Paris physician who says that it is all wrong to boil drinking water, as the municipal doctors direct when there is danger of a typhoid fever epidemic. Professor Charrin of the Collège of France is the learned authority who is quoted as denouncing the popular theory that the fever germs being destroyed by cooking them well, the danger of sickness is avoided. Professor Charrin's doctrine is that in boiled water not only is the deadly microbe destroyed, but also the microbe which even more than the dog or horse deserves to be called the friend of man. The beneficent microbe is that which assists at the digestion of such substances as cellulose and albumen. If he is boiled out, these intractable substances set up irritations which end in enteritis and other maladies. Another eminent French authority, M. Pages, agrees with M. Charrin in saying that boiled water seriously impedes digestion and attacks the assimilative organs. 'It may,' he says, 'save you from typhoid, but the risk of typhoid is in any case very small, while if it does save you, it exposes you to a host of other ailments no less mischievous.' 'If you do boil drinking water,' says M. Pages, 'expose it

before you drink it for some hours to the open air, and agitate it.'"

Our purpose in copying this article is not to enter into a discussion of the comparative merits of the different theories regarding the proper sanitation of drinking water, but rather to call attention to the fact that medical theories seem to offer no permanent settlement of questions of this kind. What was considered almost a specific yesterday is discredited to-day and will be discarded to-morrow.

It has always been the plea of those who have endeavored to secure the enactment of legislation having for its object the compulsory employment of physicians of the so-called regular schools, that there is a science of medicine, but if this be true it remains to be demonstrated, for it is a well-known fact that the medical practice of to-day not only differs very much from the practice of a few years ago, but in many instances it is absolutely the reverse of it. The conclusion to be drawn from these frequent changes of opinion is that such legislation, if enacted, would result in compelling the sick man of to-day to submit to treatment which the physicians of a generation hence will undoubtedly pronounce harmful, and possibly a menace to human life.

M.

The Peace of God.

If we base our judgment upon the history of the church militant, we can but conclude that one of the last things which the followers of Christ Jesus are willing to learn is that the weapons of their warfare are *not* carnal. Apart from Peter's impulsive exhibition of the fighting instinct, the early disciples seem to have entirely discredited the use of the sword, but their successors soon accepted the world's way, and from that time the history of Christianity has been written in blood. Jesus' coming was announced with the promise of "Peace on earth," and among his last words he said, "My peace I leave with you," but this concept of his rule has been little more than a tradition or a hope in all the succeeding years.

At the opening of the twentieth century the contrast between the spirit Jesus inculcated, and the spirit exhibited by Christian sects and nations is still saddening indeed. And yet there are encouraging indications of a great awakening. The earnest faces and more earnest words of those gathered from many countries at the thirteenth annual meeting of the Peace Congress, recently held in Boston, gave tokens of a nobler sense—the promise of a nobler day. No one could question the genuineness of their patriotism, the unselfishness of their zeal, the purity of their love for mankind. They are companioning with a great idea, they are committed to a great enterprise, and in the providence of God their cause will win. Christian Scientists are deeply interested in this, as in every other humanitarian movement, and they are peculiarly fitted to contribute to its success.

A fighting Christian is the ally of a fighting God. The Christ concept of the divine nature and method of government, may not be a stranger to his thought, but it certainly does not dominate his habits. The gospel was committed to a fighting people, and its seeds were first sown in the soil of The Dispersion. The Christ-truth was thus but imperfectly reflected by the human media which for centuries had been dominated by the thought that God was a king of irresistible might and authority, who in unnumbered instances in their racial history had encouraged a vigorous militarism, and who in the person of his chosen representatives, a Joshua or a Gideon, had led his people to the slaughter of their enemies. Though the concept has varied, this sense of a God of battles has obtained in all the years, and in so far as it remains to shape conscious or unconscious determination, Christian men and nations are disposed to recognize a necessity for the arbitrament of arms in the settlement of their differences. Though

honored in many a resonant line; though sung by the worthies of many a heroic struggle, and though made serviceable, perhaps, in many an instance, to racial advance, nevertheless this concept of the fighting virtue has no place in a Christian life or a Christian civilization. In the feudal ages it was saved from something of its animalism if not its cruelty by the spirit of chivalry, but in modern times its gross selfishness is unredeemed, and the horrors it is precipitating to-day in the far East bring a shudder to every Christian sense.

It has been well said that "war is human nature at its uttermost," and it is manifest that if human strife is to cease it must be through the enthronement of the Christ-concept of God as infinite Love, and the manifestation or reflection of this Love in human lives. This is the work of Christian Science, and this it is accomplishing. Wherever it is permitted to govern, there the reign of selfishness has ceased,—the cause and occasion of all conflict has passed away. Christian Scientists know something of the unlimited possibilities of the radiation which attends this lifting up in thought of the Christ-idea. They know that it goes forth in all the earth to conquest, and to conquer through Love alone, and their sense of life's ministry thus expands to the measure of the world's need. In quietness is their strength, they have put up the material sword.

Blessed with the possession of this higher ideal, and called to the fulfilment of the glorious purpose of God in Christ Jesus, Christian Scientists may not forget the legitimate expectations which their profession awakens. It is for them to prove that the peace of God, the peace that "remaineth," is realized not through the cultivation of sentiment, but through the recognition and demonstration of divine Principle; and it is for them to exhibit in their personal and social relations, in the home life and in the church, that constant unselfishness and abundant love which will give them recognition before all the world as the sons and daughters of peace. W.

Count the Blessings.

Let us gather up the sunbeams
Lying all around our path.

THE subject of our experience meetings is of so much interest to the Field that a few additional thoughts respecting them cannot be amiss. The Christianizing influence of these meetings and of the testimonies given in our periodicals is becoming more and more evident; it is reaching many who are out in the darkness of sin and suffering, who have missed their way to the healing Christ, known of old and revealed anew in Christian Science. In this teaching we are constantly reminded that the demand of vital Christianity is the attainment of perfection in thought, word, and deed, and in striving for it we are assured in our text-book that "progress finally destroys all error" (Science and Health, p. 492). It is in this glorious hope that we toil on, even when progress seems very slow, for it gives assurance of final perfection in individual experience as well as in our churches, including, of course, our Wednesday meetings. As we gain a clearer sense of that which is most conducive to our advancement, we become conscious of better health, our thoughts are expressed with greater freedom, power, and grace, and if this be true of our daily experience our services will be correspondingly enriched.

While Christian Scientists are deeply grateful for their deliverance from pain and discord, they soon find that something far higher than these earlier experiences comes with spiritual growth, when the affluence of good unfolds to them. The Psalmist declares that God's "wonderful works" to usward are more than can be reckoned or numbered, and in a burst of thankfulness he says, "Blessed be the Lord, who daily loadeth us with benefits." If one in the olden time could thus discern his blessings, and speak of them in words that glow, what should be expected

of those who walk in the clear light of Christian Science and who know how the gifts of divine Love come into our hearts and homes? If we cannot "reckon" all our blessings, we may at least jot down a few of them on memory's tablet, and tell of them with fervor that throbs with gratitude to God, and to His messenger, to whose faithfulness we owe so much. Words which come from grateful hearts never fail to find their way to other hearts with the healing power of the Christ-message. St. Paul tells of the convincing power of truth upon those who attended the experience meetings in his day, and says of the stranger who might listen, "falling down on his face he will worship God, and report that God is in you of a truth." He did not think it either impossible or wrong to "speak with the tongues of men and of angels," he only insisted that Love be understood and obeyed, as the true inspiration to eloquence.

We need never hesitate to speak of past blessings, for the Israelites were commanded to tell their children's children of their deliverance from bondage, and of the signs and wonders which were vouchsafed to them on their way. Our Leader going before us has blazed a way through the thorny wilderness of sense; let us cheer her by bringing to our services the fruits of the Spirit,—the products of our Promised Land,—which are more precious than the grapes of Eschol brought back by the explorers to cheer the doubting and faltering hosts of Israel. K.

General Association of Teachers.

Members desiring rooms with or without board in private houses, will receive attention at the hands of a committee for that purpose, if they will make known, in season, their requests, by letters addressed to First Church of Christ, Scientist, 4017 Drexel Boulevard, Chicago.

A committee will be in waiting at the Church on Saturday, October 22, to direct any who have not previously secured assignments, to suitable places. It is desirable, however, to have all arrangements settled by correspondence before arrival in the city.

Letters to our Leader.

[Telegram.]

New York, October 5, 1904.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

It is fitting that the banner state in legalizing Christian Science practice should be the native state and home of our beloved Leader and Teacher. May New York soon fall in line.

JOHN L. ROBERTS.

ROSALIND ROBERTS.

Woodville, Maine, July 30, 1904.

Rev. Mary Baker G. Eddy.

My Dear Mrs. Eddy:—Love urges me to take up a few moments of your precious time, to tell you we are just three years old in Science. We desire to express our love to God for His many blessings to us, love to you for giving us "Science and Health with Key to the Scriptures" and other words of counsel and comfort which bring us nearer God and make us want so to live that our light may not be hid, but shine out and show others the way. We also desire to express our love to the practitioner who so patiently led us out of the darkness of disease and sin, into the light of health and contentment, and thus planted our feet upon the solid rock.

Although I had heard of Christian Science before, and knew there were Scientists in the city where we lived (Waterville, Maine), there seemed to be no way for me to find out anything about the teaching. At last, however, we were led to Christian Science through suffering. My husband had suffered many things of many physicians for a year or more, and they all agreed in pro-

nouncing the disease locomotor ataxia, from which he would in a very short time become perfectly helpless.

At this time a friend who was not a Scientist told us she knew Christian Science treatment would help him. We gladly accepted it when we saw the beauty of its teaching and recognized the Principle of its demonstration. When he commenced taking treatment he could not walk if any one was looking at him. Now he is well and working on a farm.

Love was the subject of the first Lesson Sermon I heard, and I have since been trying to learn how to reflect Love so as to lead others to the Truth that makes free. We are living now where there are no Scientists near, but we have the Bible, with Science and Health and many of your other writings to guide us on our way; also the works from the Publishing Society. We are now members of The Mother Church.

We pray for God's blessing on you who are working for us all. May we ever live the gratitude we feel.

Yours in love,
MARY H. S. LANDER.

Beloved Leader and Teacher:—I send the enclosed copy from the sermon of John Robinson, the original of which is in the Museum at Plymouth, Mass., thinking it will be of interest to you. I was impressed with its broad outlook and the recognition of a fuller understanding of God to come. Christian Science has brought to humanity this understanding and to you, through whom it has come, the love and gratitude of the world is due.

As one among the thousands who love and revere you,
Lovingly, your student,

ALICE S. BROWN, C. S. B., Boston, Mass.

August 6, 1904.

Extracts from the farewell sermon of John Robinson to the Pilgrim Fathers on their embarkation at Delft-haven, A. D. 1620. The original of this is in the Museum at Plymouth, Mass.

"Brethren, we are now quickly to part from one another and whether I may ever live to see your face on earth any more, the God of heaven only knows; but whether the Lord hath appointed that or not, I charge you before God and His blessed angels, that you follow me no further than you have seen me follow the Lord Jesus Christ.

"If God reveal anything to you, by any other instrument of his, be as ready to receive it as ever you were to receive any truth by my ministry, for I am verily persuaded—I am very confident—that the Lord has more truth yet to break forth out of his Holy Word. For my part, I cannot sufficiently bewail the condition of the reformed churches who are come to a period in religion, and will go at present no further than the instruments of their reformation.

"The Lutherans cannot be drawn to go beyond what Luther said; whatever part of his will our good God has revealed to Calvin, they will rather die than embrace it; and the Calvinists, you see, stick fast where they were left by that great man of God, who yet saw not all things.

"This is a miserv much to be lamented: for though they were burning and shining lights in their times, yet they penetrated not into the whole counsel of God: but were they now living, would be as willing to embrace further light, as that which they first received.

"I beseech you remember it is an article of your church covenant. 'That you be ready to receive whatever truth shall be made known to you from the written word of God.' Remember that and every other article of your sacred covenant with God. But I must here withal exhort you to take heed what you receive as truth. Examine it, consider it and compare with other Scriptures of truth, before you receive it, for it is not possible that the Christian world should come so lately out of such thick anti-Christian darkness, and that perfection of knowledge should break forth at once."

Testimonies of Healing.

Often one hears the expression, Is life worth living? To me, it certainly was not, only three months ago, for I was then a physical wreck, suffering agony from a terrible disease which the medical men failed to cure.

Every joint and sinew in my whole body was enlarged to twice its proper size, and caused me intense pain. My tongue was also swollen too large for my mouth. Over six years I had been suffering like this and was unable to work for long periods,—the last time for seventeen months. All the doctors I consulted gave the same opinion,—that my disease was incurable.

My eyesight was also affected, the eyelids not allowing me to see, and there was continuous pain at the back of my head as well as in the eyes. When the sun was shining I had to stay indoors, being unable to bear the light even when my eyes were shaded with special dark glasses which I always had to wear. I had tried several doctors and specialists, but to no avail.

A friend sent me a letter advising me to try Christian Science. She had heard that I was very much worse, and bedfast. Christian Science was at that time unknown to me, but after considering it for two days, I replied that I should like to try it, as it seemed to be my only hope, for I was then waiting for death to relieve me from my terrible pain and agony. A Christian Scientist came to see me and lent me a copy of Science and Health, and in three hours after the lady left me I got up and dressed myself. All the pain had gone from my head and body, and I felt a new man. My wife read to me, as I could not see to read for myself, and when she read these words from Science and Health, "*God is Mind, and God is All; hence all is Mind*" (p. 492), I began to realize that I should have to deny mortal mind and gain the understanding of Truth. In four days I was able to walk a distance of two miles, and that without wearing any glasses at all, much to the astonishment of my doctor and friends.

In a month after, my strength came so rapidly that I was able to take a situation as horsekeeper in a livery stable, where I am still working. The physical help has been nothing compared with the spiritual. My wife and I are far happier and more peaceful now, for we know that God is all Love, Life, and Truth.

Words cannot express the gratitude I feel to our Leader for bringing the truth of God to me through Christian Science. I am also most grateful to the lady who so kindly helped me. I hope this testimony may be the means of bringing some other poor sufferer to health, happiness, and to God.

JAMES WILLIAM SPENCER, Rochdale, Lancashire, Eng.

I spent one Saturday evening with friends who had classes in two different orthodox Sunday Schools. During tea-time one of the girls was stricken with a headache. As we finished tea my friend sighed languidly, "O that Sunday School lesson! I cannot study it to-night, my head aches so badly." I replied, "How strange! Christian Scientists study their Sunday lesson to be healed and find it effectual in proportion to their understanding of its meaning."

I then remembered with gratitude how I had been healed of the grip by the study of the lesson. As I sat down to study one Sunday afternoon, every part of my body ached, but more especially my head, which seemed to throb with each heart beat. I was cold and hot in a moment. When I had finished two citations the symptoms were so augmented that it seemed impossible to sit up any longer. Closing the books, the thought came to me that the healing of that disease was in that lesson, and fear could not keep me from being healed. In one of the remaining citations I found a passage so strong and pure in its diction that it dispelled the diseased belief with a thought of health which became a song of peace,—"*Every law of matter or the body,*"

supposed to govern man, is rendered null and void by the law of God. In ignorance of our God-given rights, we submit to unjust decrees, and the bias of education enforces this slavery. Be no more willing to suffer the illusion that you are sick, or that some disease is developing in the system, than you are to yield to a sinful temptation, on the ground that sin has its necessities" (Science and Health, p. 380). Needless to say, I was healed in a very few minutes and joined in a much relished luncheon, whereas the same symptoms had, in the past, developed into an illness of many days' duration, in spite of prophylactic drugs.

This is but one of the many immediate healings which I have felt since studying Christian Science, and it serves to illustrate the vast difference between a religion with a creed whose adherents leave their lesson until Saturday night, and then prepare it as a task, and a religion with a Principle, whose believers study daily and eagerly the lesson for each successive Sunday.

This is written with due respect to other Christian believers, and any one has the privilege of proving for himself the correctness of my deduction from the instances above,—that Christian Science is true,—after he has studied its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.—L. M., So. Omaha, Neb.

With loving gratitude, I acknowledge a great debt to God, and to our beloved Leader, for the many blessings received through Christian Science. I desire to join the "great cloud of witnesses," hoping some one may be helped and encouraged by my experience. Leaving home when a very young man, I carried with me a protection against the temptation of a great city,—a mother's prayers and a small Bible. For a time I read the Bible and prayed, but without understanding. This did not suffice, and evil seemed to gain the victory. I soon omitted to read my Bible; forgot to go to God in prayer for guidance and help, and looked to the world for that which it never has and never can give,—health, peace, and joy.

Thus, years later, when Christian Science came into my home, it found me prayerless, churchless, godless; a home discordant, and with no thought or knowledge of spiritual things. Up to this time, my wife had for years been seeking health through the physicians, but without success, and as a last resort had been sent to Christian Science. The help received was wonderful, and so impressive that I commenced the study of Science and Health. The first effect which I realized from the reading of our text-book, was a great love for the Bible and a desire to read it, something which I had not done for years. I went in silent prayer to God, that I might see the light and truth which would enable me to become a better man. "Ye must be born again." Thus again, and as a child, was I taught to pray "the effectual fervent prayer" which "availeth much." In a few weeks' study of Science and Health together with the Bible, and without other help, I was healed of a desire for liquor, of years' standing, and of the use of tobacco. Ten years have passed and these appetites have never returned. I have never used either liquor or tobacco in any form from that time to the present. Surely this Scripture is fulfilled in our home: "Old things are passed away; behold, all things are become new." How can we estimate the value of a book, the study of which brings such transformation and regeneration! Only as we endeavor to live, and strive to practise what it teaches, can we begin to pay our debt to God, and to her whom He has sent to make plain to human understanding the life and teaching of Christ Jesus.—W. H. P., Boston, Mass.

At the age of three months a fall caused the cartilage of the nose to be pushed across so that it entirely closed one nostril. When it formed into bone, the flow of mucous was obstructed until there was developed a most malignant type of dry catarrh, for which the best specialists in *materia*

medica could afford only temporary relief. They said that the poison was searching its way through the whole system, until every organ was in some degree affected by it. Six years ago the light of Christian Science brought health and strength through the efforts of a practitioner, who has ever since been my helpful friend. Each condition was uncovered and conquered. Glasses which I had worn for seventeen years, for inherited myopia, were discarded, teeth were extracted painlessly; in fact, the truth has met every need as it appeared.

I had cared nothing for religion, and even the name of Christian Science had never come to me until it was mentioned by the one to whom I afterward went for help. Clouds of sorrow, despondency, and pain have been gradually dispelled, until now I stand a living witness to the power of Truth as revealed through our beloved Leader, Mrs. Eddy, in what is to me, the most wonderful book of this age, "Science and Health with Key to the Scriptures."

Although the physical healing has given me great cause for rejoicing, it is the spiritual gain for myself and others, the daily unfolding of an understanding of the Christ-Principle, which brings a joy words can never express. I would also speak a word of thanks for the class instruction, so lovingly given me, and which enabled me to start with courage upon the strait and narrow way.

EMMA M. CLARK, Washington, D. C.

I was a sufferer for years from nervous prostration. I will not attempt a description of my sufferings, for they can never be known or understood, except by those who have had a like experience. I will only say that the physical suffering, which was great, was nothing compared with the mental. Christian Science was presented to me several years ago, but I was not then ready for it, I held strongly to the old thought and felt it would be very wrong to turn away from what I believed to be the truth, even if it would heal me, which I doubted. I felt that I would rather die than be healed by something which I thought required me to give up the atonement. I dared not let go of it while believing that my future salvation depended upon it. I now know that both my present and future salvation depend upon it.

I did not die, but suffered on, and finally got into such a mental condition that I could not trust, reason, or pray. I shudder now to recall the agony of those months and years. I found I did not, and could not, love a God who, I believed, had power, but who, in spite of all my cries to Him, would not send me relief. Thus I drifted for a time, when one day in passing the office of a Christian Scientist it occurred to me to go in, but I passed by, then stopped, hesitated, turned back, and in my desperation went in, I hardly knew why, as I did not think I should take treatments. The practitioner received me kindly, and before I left it was arranged that I should take treatments. These were continued for about nine months. My recovery was slow, but I never wanted to give up or let go, though I had many dark hours of doubt, discouragement, and fear.

I want to say to those whose recovery seems slow, Do not be discouraged, the time will come when you will feel as I do now, that not one hour of that time was lost, for my experience would not now be what it is, if that time had been shortened by one day. I needed it all, and again I say do not be discouraged.

Through all this time my practitioner patiently and lovingly led me on. As time goes by I realize more and more her faithful work and patient love. I afterward had the privilege of class instruction with her, and what I owe her as my teacher and friend, I can never express in words; but I hope by a life of earnest, steadfast devotion to Truth and Love to show my appreciation of her work and that of our dear Leader. I am also grateful for all our helps in the way of Christian Science literature.

I have occasion to say many times to myself, "Abundance to my need will flow, if I but feel, through mists of sense, the plenty of Omnipotence." My needs are many and varied, but no matter how many or how great, the supply is sure and unfailing. Love has brought me many miles from the scene of my healing, but is still with me. It is so good to know that God does not so much send us out, as lead us out, always going before us, opening the way and providing for us. I am proving daily that He is a God whose promises fail not.—M. I. W., Fort Fairfield, Me.

A number of years ago I applied to a Christian Science practitioner for help, and with the gratifying result that I was healed of a disease known to doctors as "incurable," and I have remained well ever since. I am grateful for this, also for many other physical helps; but far outweighing these is the spiritual uplifting, and the understanding of the Scriptures which comes with the study of Science and Health.

For many years prior to being healed I was a member in good standing of an orthodox church, and pursued a faithful study of the Bible. Although I took great comfort in the Psalms and some of the New Testament writings, I had to admit that there was much which seemed dark and contradictory. After reading "Science and Health with Key to the Scriptures" for a season, the Bible took on a new meaning to me, and to-day, viewed in this new light, it stands out in wondrous beauty and sublimity, bearing a message which is fraught with healing and blessings for mankind.

For the assurance of prayer answered, also this new understanding of the Scriptures, I am doubly thankful. I am filled with gratitude for the revised Manual and all the other helps that are given us, as we have need, by our dear Leader.—MARY C. QUINN, Castle Rock, Wash.

I have received so much benefit from the testimonies in the *Sentinel* and *Journal* that I send mine, hoping it may cheer some struggling heart. I was reared by kind and loving Christian parents and was a member of an orthodox church for over twenty years, but I was never satisfied. I was filled with fear and bound down by the false gods of this world,—sin, disease, and poverty; consequently every way I turned, and in everything I attempted to do, I was met with disappointment and failure; but God was leading me into a different life. My interest was first awakened to Christian Science about thirteen years ago, and I have been a willing disciple ever since. Through the reading of Science and Health I was healed of chronic catarrh, laryngitis, and constipation, and it also enabled me to lay off my glasses. Christian Science has not only helped me mentally, morally, and physically, but the greatest blessing of all is the spiritual uplifting which enabled me to know that God is both able and willing to care for His children, if we are but willing to do our part and bear the cross which, though it seems heavy at times, always brings a sure reward. Christian Science has not only helped me, but it has enabled me to help others.

The Bible is a new book to me. I now see what Jesus meant when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

My heart goes out in gratitude to Mrs. Eddy for the work she has done and is still doing for the world, and to God I am most grateful that He has guided me into the truth, that I may have life, and have it more abundantly.

I had the pleasure of attending the Communion in Boston, of seeing our dear Leader, and of hearing the loving words she spoke.—MRS. MAGGIE MARTIN, Chicago, Ill.

Christian Science found me, now some five years and a half ago, a physical wreck. I had been ill for several years,

suffering from severe nervous depression, the result, so the doctors told me, of repeated attacks of influenza. I had tried the various schools of *materia medica*, including allopathy, homœopathy, electropathy, osteopathy, besides mesmerism, sea voyages, etc., but all with unsatisfactory results. I was without hope, and my life was indeed a most miserable one.

One Sunday morning in July, 1898, I was induced to go to a service at First Church of Christ, Scientist, in this city. The service in no way interested me until the reading of the scientific statement of being (Science and Health, p. 468), when, with the reading of the words, "hence, man is spiritual and not material," I had an experience impossible for me to describe. It seemed as though the clouds were rolled back, and I saw heaven; not only did I see it, but I felt that heaven was all around me. The happy thoughts which instantly flooded my mind and remained with me for some ten days would require too much space to relate, even if I were able to find language equal to the occasion. I may say that both physically and mentally I felt I was a new man. I experienced such happiness as I never thought possible on this plane of existence.

To fully express my gratitude for the joys and blessings which Christian Science has brought into my life is beyond my power, and my constant prayer is, "May Thy Word enrich the affections of all mankind, and govern them!" (Church Manual, p. 57).

EDWIN WAREHAM, London, Eng.

When Christian Science was first presented to me, it came through the healing of a dear friend, and although I was not really antagonistic to it, I was not interested in it until some months later. My lungs, which had not been strong for some time, became troublesome, and I consulted our family physician who, I feel sure, did the best he could for me, but I grew worse as time went on. One day the subject of changing physicians came up and I was urged to try Christian Science. I hesitated for some time, then assented, and through the years that have passed since, I have not regretted the choice for one moment. There have been many battles fought and victories won for Truth, and through my practitioner's understanding of Christian Science I grew well and strong. I began to study the Bible and "Science and Health with Key to the Scriptures," and gained a new and better understanding of God. Later came class instruction with a dear teacher to whom I ever feel grateful for her watchfulness and guidance.

Before I became interested in Christian Science I was a member of an orthodox church and attended the services regularly, but the thought often came to me, "How do I know that I am right, I have no real proof?" It seemed to me there must be some way whereby we could *know*,—feel sure,—that we were in the right way. I do not suppose my experience is different from that of others who have found in Christian Science that which abundantly satisfies. I know that its Principle is divine, that it heals and saves. For all the good that has come to me through Christian Science my thought goes out to our dear Leader, Mrs. Eddy, with love and reverence; for it is through her faithfulness that I have been enabled to bring to others this Truth which destroys all error. I wish to thank all those who labor for the good of the Field; for the *Sentinel*, *Journal*, and the Lesson-Sermon. Each is doing its own work, and is full of loving thoughts which meet each reader's need.

A. H. B., Pierrepont Manor, N. Y.

A testimony from London, Eng., given in the *Sentinel*, of protection from hurt in the overturning of a motor cycle, leads me to send this testimony of God's loving care for His children. Shortly after coming into Christian Science five years ago, I was prompted to read the 91st Psalm every

morning, and this practice has been faithfully adhered to from that time to this. As my understanding of the teachings of Christian Science has grown, the beauty and truth of the statements of this Psalm have become clearer to me, to such an extent that I have been able to realize God's loving protection on several needed occasions.

One morning about a year ago I was riding my bicycle on my way from home to the office. I was on the left side of the street, riding rapidly, and before the wind, which was blowing strongly, and this of course greatly accelerated my speed. As I approached a cross street I noticed a wagon coming towards me, and as I expected that the driver would either keep on his way or turn up the cross street, I made no effort to slacken my speed, but intended to pass to his right at the cross street; but just as I turned out to the right he did the same thing to the left, as it was his purpose to go down the cross street, and as I had not calculated on this move, it threw me directly in front of the horse's head, and for a moment it looked to me as if I would run right into one of the shafts. I bore hard on my right handle bar, which carried me at an oblique angle over the car track right under the horse's head, and at this moment the driver pulled up. Notwithstanding I had to take such a sharp turn, and this, too, over a car track, which most bicyclists know is very apt to cause the bicycle to "side slip," as our friend expressed it, and throw the rider, I did not fall, and regained balance instantly.

I thanked God then and do now for my escape from accident. It has enabled me to find a new and richer meaning in the familiar words, "There shall no evil befall thee. . . . For he shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone."

W. S. MORRIS, JR., Norfolk, Va.

In *Science and Health*, page 427, Mrs. Eddy says, "The great difficulty lies in our ignorance of what sin is." Only since coming into Christian Science have I learned that sin is in the thought. I feel that I would give worlds had I only known this before, but—

No star is ever lost we once have seen,
We always may be what we might have been.

And now I find that in proportion as I overcome the thoughts of hate, pride, envy, jealousy, malice, revenge, anger, just in that proportion is harmony produced and the fruits of the Spirit made manifest in me. I am indeed grateful for the many blessings which have come to me and mine through Christian Science,—grateful to God, and grateful to our Leader.—M. C. W., Chicago, Ill.

I would like to tell of a demonstration we had a few weeks ago. My mamma and papa were attending a church business meeting, and my little Christian Science friend was to stay with me. We were having a happy time and had been reading in *Science and Health*, when, about nine o'clock, I was taken very suddenly with sore throat. I knew what that meant, for I used to have tonsillitis very often before I became a Christian Scientist. We went to bed and both of us worked hard to overcome the trouble, but I seemed to be burning up with fever. Papa and mamma came home late, and all I asked for was a drink of water, I did not voice the error. About two o'clock mamma heard me make a choking sound, and came to my room and stayed with me the rest of the night. By morning the fever was gone. This was Friday morning, and on Saturday I was out and went to the reading room. I am thirteen and attend the church and Sunday School. I want to do all the good I can. I feel very grateful to God, and to our Leader, Mrs. Eddy.

MARGUERITE WELPER, Owosso, Mich.

My path has been by no means one of flowers since coming to Christian Science, but the way grows brighter. All that I have that is worth having, and all I am, I owe to the understanding which has come to me through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible. Before coming to Christian Science I had been an invalid for a great many years. I had not only one ailment, but several, one of which was of twenty-six years' standing, but it responded quickly to the truth while other ills yielded more slowly. My love for our dear Leader, and the Cause of Truth has prompted this testimony.—E. B. N., Cleveland, O.

Not long since I was attacked with what might be called neuralgia of the heart. The trouble appeared very malignant, until one night it seemed I might pass from this plane of existence, when these words came to me from *Science and Health*, page 243, "The divine Love which made harmless the poisonous viper, which delivered men from the boiling oil, from the fiery furnace, from the jaws of the lion, can heal the sick in every age, and triumph over sin and death." I repeated these words prayerfully with the sweet consciousness of their reality, and was healed. This demonstration of the power of the spoken word, brought a new light to me. Jesus spoke the word of God and the sick and sinful were healed. He taught by healing, and he preached by healing. He is our great Exemplar, and he said, "No man cometh unto the Father, but by me."

My heart overflows with gratitude and love to God for His rich gifts to us through our beloved Leader; for *Science and Health*, the pearl of great price; the Manual, which reveals to us the law of Love, together with all her other works; the *Sentinel*, *Journal*, *Quarterly*; also for the wise and safe government of this great movement of Christian Science Mind-healing.

MRS. EMILE ROUNSEVEL, Littleton, N. H.

Christian Science has been my Saviour. It healed me when all material remedies were of no avail. I had been under numerous physicians for several years, and it was while in the deepest despondency that, as a last resort, I began Christian Science treatment. The disease from which I was suffering was nervous prostration, with constant fear of everything, although most of the time I could not have told what I was afraid of. I had been at three different sanitariums under all sorts of treatment,—massage, electricity, dieting, rest cure, and a number of other ineffectual things,—until there was nothing else to try, so I went to the Great Physician last, when I should have gone to God first, and have been perfectly healed through the understanding of His eternal and unchanging love and power. Nearly five years have elapsed and I cannot sufficiently express my deep gratitude to our beloved Leader who, through suffering and severe trials, has stood the test of serving God and the Wayshower.

SARA B. POLLACK, Chicago, Ill.

Notice.

The Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

From our Exchanges.

If the press of the world would adopt and persist in the high resolve that war should be no more, the clangor of arms would cease from the rising of the sun to its going down, and we could fancy that at last our ears, no longer stunned by the din of armies, might hear the morning stars singing together and all the sons of God shouting for joy.

JOHN HAY, at the Press Congress at St. Louis.

There is no dishonor in failure, but there is always folly in shutting one's eyes to facts; and every man who fails owes it to himself to charge the responsibility straight home to his own lack of capacity, of force, of steadiness, of energy. It may be that he is the victim of conditions; it is probable that he is failing to reap because he failed to sow.

The Outlook.

That evil should be opposed is also made clear by the teaching of Jesus. He was no exponent of the *laissez faire* theory of life, but an iconoclast, turning and overturning, tearing down and setting up. He brought a sword in that he demanded strong and constant opposition to every form of evil. He did not know how to compromise with wrong, and the bargaining and traffic with sin which is such a marked feature of our modern life finds no warrant in his example.—*The Standard.*

Rt. Rev. John Percival, Bishop of Hereford, Eng., preaching at the Emmanuel Church on the "Gospel of Peace," is reported by the *Boston Transcript* as saying, "We are looking to-day for a new gospel—one of peace and goodwill to men. But before we shall attain our heart's desire the spirit of peace must dominate our individual as well as our national life. Christian nations are spending untold wealth for barbaric implements of war. The time has not yet arrived, say the educated men, when war can be permanently abandoned; war, that weapon of barbarism, inflicting misery upon its countless victims. In England they have two gospels, one of peace and love, and the other of greed, pride, and power. When we learn to love our enemies we shall have none, but not till then."

In Tremont Temple the Rev. P. S. Henson, D.D., is thus reported in the *Boston Transcript*, "Christ came to put an end to war on the basis of righteousness, justice, judgment. Nothing is ever settled until it is settled right. It is no use to cry peace when there is no peace. There can be no permanent peace until it is established in righteousness. We are to have our peace congress, and we will thunder our declarations and fulminate all sorts of resolutions, but we will have no permanent, universal peace until the Prince of Righteousness shall reign, and we shall be ready—by compromise, by diplomacy, by arbitration, by consultation, by yielding our prejudices—to recognize, in righteousness, the desires and the rights of others."

A literalism in the interpretation of Scripture that makes no allowance for the drapery, so to speak, of the representation, that places symbolic imagery and plain narrative on the same level, must inevitably lead to distorted views of truth. Our Lord often used the customs of the time and country to illustrate and enforce a general principle. When, for example, he said, "If any man will sue thee at the law, and take away thy coat, let him have thy cloak also," he was not commanding a specific act, but inculcating a broad principle of action. Do more than the law requires, show no resentment even at injustice, but manifest a generous spirit, returning good for evil. The same rule of interpretation must be applied to other and larger things. It does not honor God's Word to read it without discrimination.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Merchant Marine Commission, whose establishment was authorized by Congress as a substitute for the passage of a subsidy act, will probably present a bill to Congress the first day of the December session embodying its recommendations. It will probably propose an increase in the tonnage taxes to be levied on the ships of all nations, American and foreign. In this way several million dollars of additional revenue can be secured for use in the payment of subsidies. It is also proposed to revise the ocean mail act of 1891. Postal subsidies will be recommended to encourage the establishment of regular American lines to trade points not now directly reached. These vessels, it is proposed, should be equipped to act as cruisers in case of war. The Commission will probably recommend that the United States Government turn its Philippine transport business over to commercial lines under special conditions for the encouragement of the Pacific trade.

The next Congress of the Universal Postal Union, to be held in April, at Rome, will consider two matters of preëminent importance: the reduction of the five-cent rate of international postage, and perhaps the issue of a universal stamp for the international mails. The lack of uniformity of monetary standards is the chief obstacle to the issuing of a universal stamp. The franc is the recognized standard of the Postal Union. We commonly compute this as equivalent to 20 cents of our money. Speaking accurately, however, the franc is only 19.3 cents of our money. Therefore, 25 centimes, the nearest practicable approach in value to our five-cent piece, would actually be worth \$.04825, or nearly a fifth of a cent less. It would, then, be possible with our money to buy a stamp in France for \$.04825 and sell it in the United States for five cents, netting a profit of a little less than four per cent on the investment.

Miss Annie S. Peck, the American mountain climber, has ascended Huascaran Mountain in South America to a height of 21,000 feet. She was prevented from reaching the summit by crevices and snow. Huascaran is 22,050 feet high. On this hemisphere only two

persons have excelled her, S. Vines, who ascended Mount Aconcagua, 22,860 feet, in 1897, and W. M. Conway, who ascended Mount Illimani, 21,030 feet, in 1898. W. W. Graham, who reached a point on Mount Kabru in the Himalayas, 24,015 feet above sea level, in 1883, reached the highest point known to man. Dr. and Mrs. W. H. Workman reached a height of 21,010 feet on Koser Gunge in 1898, and Dr. Workman and his guides reached an elevation of 23,400 on the Lungma Mountain.

President D. R. Francis and Director of Exhibits Frederick J. V. Skiff of the Louisiana Purchase Exposition, have been made grand officers of the Order of the Crown of Italy. The decorations were conferred upon them by the King of Italy, and the presentation of the insignia was made by Baron Mayor des Planches, Italian Ambassador to the United States.

Foreign.

Copies have been received of the report to his Government of General Rafael Reyes, (now President of Colombia), who was sent to this country on a special diplomatic mission in an attempt to modify the action of the American Government in regard to Colombian interests in Panama. The report, which is of considerable length, severely arraigns the shortsightedness of the Colombian representatives that led to the misfortunes which befel Colombia after the negotiations for the Hay-Herran treaty fell through. In conclusion the report says,—

"We must admit that the United States Government has granted to us by way of compensation in the Hay-Herran treaty much more than we had asked in the memorandum of our Minister in Washington, which served as a basis for that treaty. Comparing these two documents, the Government of the United States might well point to the generosity of its dealings with Colombia and obtain the public opinion of the civilized world, and especially that of the United States and France, in considering as an indisputable fact that the obstinacy of our Government was the only real obstacle to the construction of the canal by the United States, which was the only agency capable of bringing to a completion so colossal and gigantic a work."

A mass meeting of Filipinos was held last Sunday at the National Theatre, Manila, for the purpose of taking "some definite action upon the popular desire; to wit, the giving of our sincere support and sympathy to the American Committee on Philippine Independence in its efforts to attain the end we desire. It would be inexplicable, and even improper," the call continues, "for Filipinos to fold their arms and remain passive at a time when the very best elements of American society are working ardently in order that our native land may attain its ambition." The mass meeting is reported to have proved a fiasco, most of the theatre owners, some of whom are Tagalogs, the natives who are alleged by some to be strongly in favor of the movement, having refused to rent their buildings for the purposes of the meeting.

The Foreign Office expects the signing of the treaty between France and Spain relative to Morocco to take place within a few days. Only the details remain to be adjusted. The agreement will supplement the Anglo-French treaty whereby France secured paramount authority in Morocco. It is understood that Spain retains certain of her territorial and commercial rights in northern Morocco which do not interfere with the general plan for French development of the country.

Despatches from the Lhasa expedition state that the Chinese amban signed the Anglo-Tibetan treaty without having received the necessary permission from the Chinese Government. The expedition, these advices say, is undergoing great hardships in its march towards India.

The Institute of Social Reforms decided last week at Madrid, by thirteen votes to eight to ratify the absolute prohibition of

Sunday bull fighting. This is considered to be the death blow to bull fighting in Spain.

Mont Pelee, the volcano on the island of Martinique which caused such disastrous results there two years ago, is again in eruption. Dense clouds of black smoke and stones are emitted from the mountain.

The Archbishop of Canterbury, who has been visiting the United States, returned home last week. He expressed himself on the eve of his departure as much pleased and profited by his visit.

The Paris restaurant and café waiters held a meeting and passed a resolution demanding the suppression of tips and a weekly day of rest.

Industrial and Commercial.

The growing demand of the people of the United States for tropical and sub-tropical products is pointed out in the annual report of the chief of the Bureau of Statistics, just issued by the Department of Commerce and Labor. It shows that the total value of tropical and sub-tropical products brought into the United States during the fiscal year 1904 amounted to \$430,556,775, including those brought from the Hawaiian Islands, Porto Rico and the Philippines. In nearly all the tropical and sub-tropical products the importations of the fiscal year 1904 are materially larger than in earlier years, while in quantity the increase is even greater than that in value, because of the declining prices of many of these articles.

The International Engineering Congress was in session during the past week in the various halls on the Exposition grounds at St. Louis. "Within two years the great ships now being built in Great Britain will be crossing the Atlantic and making an average speed of twenty-nine miles an hour for the trip," was the remark made by Sir William H. White, President of the British Institute of Civil Engineers, in his farewell address.

The final papers for the transfer of Popocatepetl were signed last week by New York parties for the acquisition of the volcano and its immense sulphur deposits. General Gaspar Sanchez Ochoa, a veteran Mexican officer, one of the principal owners of the property, received \$300,000 gold and will be given 200,000 shares in an American company which is to be organized with a capital of \$5,000,000.

A party of four American engineers has been selected for the purpose of making a reconnaissance for the preliminary survey for a proposed system of railways in Bolivia. The system of railways proposed is intended to unite those of Peru and the Argentine Republic, and will extend through a region rich in minerals and agricultural resources.

The New York Rapid Transit Commission has formally authorized the opening of the main line of the subway to the general public on Thursday, October 27. The opening will be the occasion of a simple celebration.

The October report of the Department of Agriculture indicates a yield of corn of 2,463,724,000 bushels, very nearly a bumper crop.

Two million kegs containing 160,000,000 horseshoes are sold annually in the United States and Canada.

General.

It is stated that the cost of a first-class battleship (\$6,500,000) is more than the valuation of all the land and the ninety-four buildings of Harvard University plus all the land and buildings of both the Hampton and Tuskegee Institutes.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Now of Spiritual Being.

SUE H. MIMS.

Call no man your father upon the earth: for one is your Father which is in heaven.—JESUS.

Beloved, now are we the sons of God.—JOHN.

And because ye are sons, God hath sent forth the Spirit of his Son into your hearts, crying, Abba, Father.—PAUL.

Man is the offspring of Spirit.—MRS. EDDY.

The relations of God and man, divine Principle and its idea, are indestructible in Science; and Science knows no lapse from or return to harmony, but holds the divine order, or spiritual law, to have remained unchanged in its eternal history, wherein God, and all that He creates, are perfect and eternal.—MRS. EDDY.

THESE statements of Jesus, Paul, and John, with the correlated statements by our Leader, are altogether unique in the realm of philosophy and literature.

The theories of speculative philosophy and theology are more or less involved in the belief of material origin and evolution, though they concede that man may some time *become* spiritual, perfect, and immortal. It has been reserved for Mrs. Eddy to awaken slumbering humanity to the full significance of the *now* of spiritual being, as the true premise from which alone can be deduced a perfect Science, a healing theology, a satisfying philosophy.

The entire Scriptures, from the deep sleep that fell upon Adam to Paul's "Awake thou that sleepest, . . . and Christ [the Truth of being] shall give thee light," teach that this material existence and its concomitant phases of thought are the dream and not the reality of being. Stray rays of light have pierced the darkness of human existence, but to this day and this hour has come the full radiation and revelation of scientific being, as taught and illustrated by Christ Jesus.

Phillips Brooks once said, "All great truths are very simple." Could anything be more sublimely simple than the statement in Christian Science, that God, infinite good, is the divine Principle, source, substance of man and the universe, and that "the divine Principle of man remaining perfect, His idea, or reflection,—man, remains perfect" (Science and Health, p. 470), that "*now*" ever and forever is and will be; that man as the perfect idea or reflection never inverted, never perverted, is changeless in God, and that God,—divine Principle,—is changeless in perfection. These basic premises lived and practised, as taught in Science and Health are redeeming humanity from selfishness, sin, and disease, are awakening mankind from the fantastic dreams of materialism to the divine likeness, perfect, spiritual being in Divine Science.

Our beloved Leader, with her matchless love, her God-inspired wisdom, has not only given us this scientific statement of being,—of eternal basic truth, but with unwearied patience and unfaltering love, she is teaching us, line upon line and precept upon precept, how to make our understanding of infinite Truth practical, and thus establish the reign of righteousness in the individual consciousness,—the king-

dom of God on earth. We welcome the by-laws as sweet evangels which she has given us, calling us constantly higher and higher, to "come out" from the world and its material methods and ways. "Ye are . . . a peculiar people," be ye "separate," "follow me" through the wilderness of sense to the Canaan of Soul; from discord to harmony, to holiness—the realm of Love.

"Outside of this Science all is unstable error" (Science and Health, p. 202). Do we not already know enough of "unstable error"? Do not our hearts yearn for the pure waters of Life? the spiritual sense of being, alone? Have we not been gradually confining ourselves to the open fount of the Bible and "Science and Health with Key to the Scriptures," and the authorized literature of our dear church? and have we time for aught else? Is there really aught else?

In the Bible and our Leader's writings, the philosopher may find the "stone which the builders rejected," the alchemist may find the elixir of Life. "Thus Christian Science, by the alchemy of Spirit, destroys sin and death" (Science and Health, p. 422). The true Scientist finds the apprehension of the unerring and eternal "law of the Spirit of life in Christ Jesus," the true way to heal the sick and reform the sinner in obedience to the Master's commands. What unspeakable gratitude do we owe our illumined guide! Only lives consecrated to God and humanity can pay this priceless debt.

Elijah.

REV. ARTHUR REEVES VOSBURGH.

AMONG the whole procession of worthies whose history the Old Testament records, none stands forth with more dramatic interest and meaning than does the Prophet Elijah. His career comes to a focal point and a climax of significance in the experience on "Horeb, the mount of God," where he had fled from the consuming wrath of Jezebel. Here, on ground consecrated by the older revelation to Moses, Elijah is met by the question from Jehovah, the challenge of Truth, "What doest thou here, Elijah?" To see the significance of this question at this time, we need to see how Elijah came to be there.

This prophet's record is that of a wonderful career. Many of Jesus' miracles have their prototype in his work, and among these was not only the bringing of the dead back to life, but the final triumphant consummation of his own earth-experience when he himself passed hence, not through the gateway of death, but through the opening portals of eternal Life. The event which directly preceded Elijah's flight to Horeb was the memorable one on Mt. Carmel, when, in the presence of assembled Israel, Elijah challenged the prophets of Baal to prove the power of their God by the fire consuming the sacrifice, and gained this manifestation of power from Jehovah, when the worshiper of Baal had entirely failed.

We need not dwell on the details of this picture as it is given in graphic strokes in the Bible narrative, but we

Copyright, 1904, by Mary Baker G. Eddy.

note its result in the awakened and reclaimed conviction of the people and the shout of acknowledgment: "The Lord, he is the God; the Lord, he is the God!" Faintly we may imagine the relief and joy of this stern prophet of Jehovah when, after years of patient waiting in the midst of a people turned back to heathen customs, after years of hiding for his life, he sees this baneful spell broken, and his people turned back again to God.

And now comes Elijah's mistake,—a mistake that came from a wrong notion as to the nature of evil and the way to handle it. Falling on the prophets of Baal with the sword in his own hands, he executes them,—not one is suffered to escape. The explanation of this act is apparent; viz., Elijah had come down to the very plane of thought and action with the error he sought to destroy, and thus he was laid open to the counter-attack which sin always attempts to make on its destroyer. After the signal defeat which these prophets of Baal had suffered and the marvelous demonstration of divine power through Elijah, Baal's influence would have been, for the time being, dead, and his prophets would have been discredited men; Elijah could have walked forth unmolested, and the moral and spiritual influences that he had evoked would have gone on to accomplish their transforming work. Elijah had thus far broken no law, human or divine; but when with bloody hands he becomes an unauthorized executioner, it could be certainly foreknown that Jezebel's message would quickly follow: "So let the gods do to me, and more also, if I make not thy life as the life of one of them by to-morrow about this time." Elijah had to flee for his life; so he rested under the juniper-tree and asked to die; and so it was that he finally stood on Mt. Horeb and met the divine demand: "What doest thou here, Elijah?"

To understand what followed we must recognize the elements which had especially been invoked and involved in Elijah's previous relations and demonstrations. His first introduction to us is when he comes to Ahab with the assurance: "As the Lord God of Israel liveth, before whom I stand, there shall not be dew nor rain these years, but according to my word." Now as Baal was supposed to be especially the god of natural forces and the productive power, this was a direct challenge of the heathen deity's power in what was supposed to be peculiarly his own domain.

Was Elijah causing a famine in this? By no means. What he did was to announce that a famine already existed in the consciousness of king and people; such a famine as another prophet describes later as being a "famine . . . of hearing the words of the Lord" (Amos, 8 : 11). Elijah's bold utterance simply uncovers the real nature of this condition, and its logical result in the manifestation of the elements. That universal thought does stand in an immediate relation to the elements, a relation that involves in itself a law of cause and effect, is a fact clearly assumed and asserted in the Scriptures. In Jeremiah we read, "But this people hath a revolting and a rebellious heart; they are revolted and gone. Neither say they in their heart, Let us now fear the Lord our God, that giveth rain, both the former and the latter, in his season: he reserveth unto us the appointed weeks of the harvest. Your iniquities have turned away these things, and your sins have WITHHELD GOOD THINGS from you." A further and, if possible, clearer statement of how and why evil comes is stated in the following chapter: "Hear, O earth: behold, I will bring evil upon this people, even the FRUIT OF THEIR THOUGHTS, because they have not hearkened unto my words, nor to my law, but rejected it." So, if the prophet precipitated this condition of a drouth, his words were the cause of it only as they uncovered the nature of this condition in Israel's thought as a false belief,—a claim that could and would be broken and removed only when the belief in Baal as lord was broken, and the God of Israel was seen as the one source of all power and good.

It thus becomes clear that it was a work in mind which Elijah had wrought. As a symbol of the unseen, the fire that had consumed the sacrifice on Carmel was only the outward type of the fire of divine Love that was to consume the error which had been cherished by this people, and which was now being sacrificed—completely surrendered; and the rain that fell came likewise only as an outward manifestation of the showers of grace that would and did come as soon as the barrier of "sins" which had "withheld good things" was removed from the people's thought.

Now it is obvious that, up to this point, Elijah had been dealing with moral and spiritual forces only. His work had been to turn the confidence of the people back to God, and open their thought once more to receive and to express the spiritual idea. If, following this mighty event on Carmel, Elijah had still trusted to the same moral and spiritual forces which had wrought their mighty work thus far, the people would have been again established in the faith of their fathers, and even Jezebel on the throne would have had no power to harm him. What Elijah did was to make error personal; and in attacking Baal's followers, it is clear that he believed God to be manifested in destructive forces, as well as in those which come to refresh and renew, such as the dew and the rain.

Having thus invoked these destructive mortal forces, with the surging elements of human thought still sweeping through his own consciousness, and filled with a sense of Jehovah as "a man of war," a mighty destroyer of the wicked, Elijah now stands on Mt. Horeb and hears this summons: "What doest thou here, Elijah?" even as to his great progenitor, Adam, had come the call: "Where art thou?" To the implied reproach of the question there seems to be a touch of defiant reproach in the answer, as though Elijah had done his part, and God had not done His: "I have been very jealous for the Lord God of hosts: for the children of Israel have forsaken thy covenant, thrown down thine altars, and slain thy prophets with the sword; and I, even I only, am left: and they seek my life, to take it away."

Now Elijah is bidden to "Go forth, and stand upon the mount before the Lord. And, behold, the Lord passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but the Lord was not in the wind: and after the wind an earthquake; but the Lord was not in the earthquake: and after the earthquake a fire; but the Lord was not in the fire: and after the fire a still small voice." Here amid solitary heights, with rocks and elements as actors, is presented in mighty, dramatic setting, what in varying degree takes place in all human consciousness, what indeed was then taking place in the consciousness of Elijah and his people; viz., the appearance of the spiritual idea to awaken and transform. Elijah was thus taught in a mighty object-lesson, wherein he saw his own moods and thoughts externalized, what is the nature, what the mode of Truth, and how they differ from the lawless moods and modes of material sense. Our Leader, Mrs. Eddy, has indicated this in the opening lines of "No and Yes,"—

"To kindle in all minds a common sentiment of regard for the spiritual idea emanating from the Infinite, is a most needful work; but this must be done gradually, for Truth is as 'the still small voice,' which comes to our recognition only as our natures are changed by its silent influence.

"Small streams are noisy and rush precipitately; and babbling brooks fill the rivers till they rise in floods, demolishing bridges and overwhelming cities. So men, when thrilled by a new idea, are sometimes impatient; and, when public sentiment is aroused, are liable to be borne on by the current of feeling. They should then turn temporarily from the tumult, for the silent cultivation of the true idea and the quiet practice of its virtues. When the noise and stir of contending sentiments cease, and the flames die away on the Mount of Revelation, we can read more clearly the tablets of Truth."

This seems to be the process indicated in the narrative. When human thought awakens to perceive and receive Truth, the new idea arouses tides of human enthusiasm and impetuosity which sweep through the mentality of the individual and of society with all the rushing force of a mighty whirlwind, overturning old, weighty, rocklike human opinions in their way. "But the Lord was not in the wind."

Then as Truth works deeper in thought there are earthquake upheavals, old imbedded convictions are disturbed and displaced; but the upheaval and disturbance, the action and reaction is in the human sense, whose old beliefs are being jostled before they vanish away, and not in the spiritual Truth whose presence and power brings always peace. "And after the wind an earthquake; but the Lord was not in the earthquake."

As Truth, through the divine idea, works still more deeply and effectually, there comes the baptism of fire, the transfusing and transforming of divine Love, fusing the stubborn and refractory elements that even the wind and the earthquake could not reach; burning up the dross that is alloyed with the precious metal, and "melting and purifying even the gold of human character" (Science and Health, p. 565). But it is only to the false human sense, to everything unlike itself, that Love is a consuming fire. In its own nature Love's appearing is with joy and peace. "And after the earthquake a fire; but the Lord was not in the fire."

"And after the fire a still small voice." Now Elijah hears the message, and understands its spirit. Hereafter we find him anointing another prophet, and his career henceforth seems to have been largely that of a teacher of truth. Taking the law no more into his own hands, he abides in the confidence and consciousness of Spirit and spiritual power as all, and so by peaceful methods, with weapons which are "not carnal," he reaches the final triumphant demonstration of life eternal.

The bearing of all this history, its meaning and its application to our own present-day conditions, is not far to seek. It is evident enough to us that the people's infatuated following of Baal was entirely the pursuance of a false belief, the working of a lie. All that was to be destroyed was the belief in this lie. That it was supported by kingly power, that it had an elaborate ritual, a powerful priesthood, and that it carried a mighty influence made it no less a lie. That its rites were seductive and even licentious made it all the more an obvious evil, and yet did not alter its character as a false belief, as essentially nothingness; and to show its nothingness it only needed to be seen as such. This could be done only by revealing and bringing into demonstration the power of Truth. To see evil as anything more than a lie, to make it real or personal, forfeits the ability to estimate it rightly and handle it scientifically.

The old Baal worship was only an attempted mythical explanation of the elements cognized by material sense, an impersonation of certain seeming forces of nature. Baal was supposed to represent the masculine basis of the productive and reproductive forces of nature. Elijah raised his mighty protest that Jehovah, the spiritual deity of Israel, working not materially but spiritually, is the one perfect Principle of being; and by this understanding he wrought his work and gained his reward. Our work is to-day essentially the same. We have to meet conditions that are given different names. Baal worship has given place to a belief in physical force and material law. But the followers of God are called upon to declare anew that all true force is spiritual, the direct power of divine Mind working through spiritual law. This entails an uncovering of the character of the lie by demonstrating the spiritual fact which is the truth. And in this our own safety and success will always be assured as we see God as infinite Spirit, the one source of good, and evil as neither personal nor real.

Elijah's career tells its own story and points its own moral. Once only did this intrepid man of God fly before error, and then it was the inevitable result of his own mistake. Elijah had to learn the lesson that should give him a proper estimate of the nature of evil and a true understanding of God. Entering into the belief that error is personal and is to be personally resisted and destroyed, the prophet stepped down from the vantage-ground of Truth, and on the plane of error's own action and reaction he was reached by its threat, and only by fleeing into the wilderness did he avoid its blow.

Equally mistaking the nature of God, good, he made his Jehovah a man of war, who might lead his people forth to vindictive slaughter. Only when, apart from the wind, the earthquake, the fire, he came to hear and know the "still small voice," did he learn, "through pangs unspeakable, how to divide between sense and Soul" (Science and Health, p. 240), and find that God is Love, terrible to the sin, but infinitely loving to the repentant sinner.

The name Elijah means, My God is Jehovah. Honest, earnest, courageous, and true to every conviction, he wrought his Master's work, he learned by his mistakes, he profited from his failures. Ready to act when the time for action came, his mistakes were only the mistakes of a zeal that outran knowledge, and however much such an one may mistake the divine demand, or fail to divide unerringly between the behest of error and the summons of Truth, it will be written of him finally, that—

Perplexed in faith, but pure in deeds,
At last he beat his music out.

Thus Jehovah, the tribal ruler, the man of war, passes, and Eli-Jah,—My-God-Jehovah,—comes to mean, My God is Love.

In the New Testament the prophet is given the Greek form of the name, Elias. The significance of it is given in our text-book, thus: "Prophecy; spiritual evidence, opposed to material sense; Christian Science, whereby to discern the spiritual fact of whatever the material senses behold; the basis of immortality" (Science and Health, p. 585).

These elements thus defined are the elements Elijah finally apprehended and radiated in consciousness; these are the things by which the world was and is better for his having lived in it; and these are the spiritual revealings and resources by which he finally gained the full demonstration of life eternal.

The True Possession.

MATTIE EBBESEN.

I HAD a very great desire for a home of our own, but knew that the way to get it was not to pinch or to give to our Cause with a niggardly sense. Some years we gave as high as one third of our moderate income to Science in one way and another. It looked, humanly speaking, as though a home would be a far distant achievement at that rate, but my faith was good, and I believed God would supply it in His own time and way.

After working five years in this way an opportunity to buy an exceptionally good home for people in our circumstances presented itself, the avenues opened up, and we bought it. One year later, by various means upon which we had not counted and had not foreseen, it was paid for, and our faith was justified in this manifestation.

The question of human need seems to be one of no small importance among Scientists, and I trust that the little in this line that I am so grateful for having been able to realize, may be encouraging to some others whose means seem to be limited. I earnestly believe that all needed supply will be mine in proportion as I sacrifice self, and that there is no need to fear.

Selected Articles.

Rev. T. A. Goodwin Indorses Christian Science.

OUR purpose in publishing the following excerpts is not only to record the testimony of Rev. Mr. Goodwin but to call attention to the fact that it is not the policy of such high class newspapers as those from which we quote to bar from their pages whatever tends to place Christian Science in a favorable light before the public. There was a time when Christian Science was misunderstood by newspaper men as well as by almost every one else in the world, and then but little appeared in print, except in our own publications, which did not hold Christian Science up to ridicule and misrepresentation. Happily those days have gone by and it is no longer necessary for an editor to apologize to his readers for having mentioned Christian Science unless to deride it. While we believe that the *News* and *Star* were never in the class referred to, we feel sure that they will not object to our use of these paragraphs for the purpose of pointing to the general progress of public opinion regarding Christian Science which is so truthfully reflected in the changed attitude of the press.—Eds.

The venerable Dr. Thomas A. Goodwin sprang a surprise on the Methodist ministers' meeting this morning. He was asked to speak in the absence of the person who had been chosen, and though it was announced as he arose that his subject would be Christian Science, evidently no one was prepared for his treatment of it.

"I believe," he said, "in the Christ. Not so much because of the records we have of him in the Scriptures as because of what he stands for yesterday, to-day, and forever. I believe Christ told the truth and that that truth abides; that the changes of years have not made any change in the purpose and the power and the truth of that Saviour. I believe whatever Christ stood for in the first century he stands for in the twentieth century. One of the truths he taught was that those who believed in him might receive benefits in regard to health. A part of his work was to heal the sick, and he healed them. If it was true, as Paul said, that we should pray for the recovery of the sick, it is the same to-day as it was then.

"My faith in Christian Science is largely the result of my personal experience. About thirty years ago my wife lay at the point of death. She and I prayed together for her recovery. She recovered from that moment, and for thirty years has hardly had a day of sickness.

"Nine years ago she had a severe attack of rheumatism. We said we would try Christian Science, and a Christian Science healer, a woman to whom she went, cured her, and for nine years she has not suffered a pain from that rheumatism."

The doctor then told how the same healer had cured him of dyspepsia and his wife from threatened blindness. "The prayer of faith," he said in conclusion, "will save the sick. It grieves my heart to hear a man speak slightly of the Christ. If he has power to save sinners he has power to save the sick."—*Indianapolis News*.

The Rev. Dr. T. A. Goodwin, a retired Methodist minister, created a mild sensation yesterday morning at a meeting of the Indianapolis Methodist Ministers' Association by boldly declaring himself a believer in Christian Science.

This wasn't on the program. In the absence from the city of the minister who was to read a paper before the Association, Dr. Goodwin was asked to fill the vacancy. Unaware, it is said, that he was a Christian Scientist, the committee suggested that he prepare a paper on the subject of Christian Science.

"I guess I must have given some of my brother members a great surprise," said Dr. Goodwin last night at his home, 1220 College Avenue. "Although I've been a Christian

Scientist for the last fifteen years it has not been generally known, I believe.

"Of course a number of the members took exception to my remarks. But their criticism was directed more against Mrs. Eddy's book, *Science and Health*, than against anything I said. I told them that the healing power of Christian Science cannot be denied. One very prominent member of the Meridian Street M. E. Church recently recovered very quickly from a disease after a number of physicians had pronounced him incurable. I also contended that Christian Science was the very essence of religious faith and promotive of greater hope, faith, love, and confidence. The doctrines of Christian Science ought to make all Christians more devout.

"Further, I said that the churches ought to welcome Christian Scientists, instead of making it so uncomfortable for them that they are compelled to start churches of their own."—*Indianapolis Star*.

Evolution necessarily involves the belief that human life is infinitely progressive, whereas our Master taught that the "world, the flesh, and the devil," representing the material creation, "shall pass away," and must be overcome by obedience to his teaching and example. The spiritual life is not evolved from dust, but revealed through victory over the flesh, its false appetites and erring senses.

The Christian Scientist proves this in his daily life, perhaps more definitely than is possible by any other system of religion or science. He knows that as a man "thinketh in his heart, so is he," and that the kingdom of heaven is not a future state or locality, but is within him and is an individual realization of God's ever-presence. We do not need to wait for the perfect man to evolve from an atom of dust or a monkey, but we can demonstrate that now he is the image and likeness of God.

RICHARD P. VERRALL.
Medina (N. Y.) Journal.

Zeal against a religion, without any adequate idea of that religion, was clearly shown in the life of the apostle whom a recent critic quotes. For Paul was once fighting Christianity more fiercely than another now fights Christian Science, and doubtless for the same reason; namely, that Paul thought the gospel to be opposed to the faith of the fathers in Israel; although Jesus said that he came not "to destroy the law, or the prophets: . . . but to fulfil." Paul believed that the gospel was of the devil, and that Beelzebub was working through Jesus and his disciples to overthrow Judaism.

If our critic could have journeyed with Paul on the way to Damascus he would have found mental states in that zealous persecutor quite like his own; then, too, the white light of truth (the Christ) might have dazed his vision for a while, until the yellow or green or blue rays which he had before reflected had merged in the glory of the pure and perfect light. Christian Science does not reject nor destroy the partial views of the gospel seen through the many-colored creeds, but rather unites their every right idea in the one body and life of Christ.

Our critic admits that "people are healed in Christian Science," but he says that "no one should go to Christian Science for healing," because it is of "satanic origin."

We agree with our critic that salvation from sin is the great work of the gospel, but the physical healing is a sign that points the people to the true gospel of Jesus Christ. A salvation that does not heal is not the full salvation of Christ, and a system of healing that does not save men from sin as well as disease, is not the healing power of God. The Bible teaches that disease is an abnormal condition brought on by ignorant or wilful lawlessness; hence the way back to the normal state of health and

holiness is through salvation from sin or lawlessness, and obedience to the law of Life as taught and practised by Christ Jesus.

WM. H. JENNINGS.
Nebraska State Journal.

Like all other religions and philosophies, Christian Science will have to endure the searchlight of reasonable investigation, and stand or fall in the estimation of right-thinking people on the only basis recognized as practical; viz., achieved results. Results speak for themselves, and on this basis Christian Scientists are very willing to be judged. Results in the overcoming of sin and disease, in the uplifting of humanity, in the amelioration of discordant conditions wherever its beneficent teachings have been introduced. Against such testimony as this, ridicule falls harmless, its shafts diverted by the impregnable armor of conscious integrity which constitutes the safeguard of Christian Science.

JOHN L. RENDALL.
Mt. Pleasant (Ia.) Free Press.

The Lectures.

The Mother Church.

THE semi-annual lecture of The Mother Church, given in Symphony Hall, Boston, October 13, attracted an audience which filled every part of the vast auditorium, and which listened with the closest attention. The lecture will be published in full in the November issue of the *Journal*.

The lecturer, Rev. Arthur R. Vosburgh, C.S.B., a member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., was introduced by Professor Hermann S. Hering, the First Reader of The Mother Church, who spoke as follows:—

Friends:—Your generous response to the invitation to attend this lecture on Christian Science, given under the auspices of The Mother Church of the Christian Science denomination, is an evidence of your interest in this subject, and on behalf of the church I extend to you a very cordial welcome, and trust that which you hear to-night may bring to you a promise of the glorious hope and peace which have come to the thousands who have investigated Christian Science.

Christian Science reveals the great Principle underlying all existence and the rules for its application. It presents a practical solution of all the problems that confront mankind,—social, religious, medical, commercial, political, and philosophical; in other words, it reveals the Science of Christianity, making the teachings of our great Master, Christ Jesus, clearly understood and available to the present needs of humanity in every department of life.

When we consider for a moment what Christian Science has actually accomplished in this direction during the past few years, we may well give pause, listen to its Messianic message, and ponder somewhat the teachings and the mission of the one who discovered Christian Science, the Rev. Mary Baker Eddy, through whose wonderful spiritual perception, integrity, and fidelity to God and His Christ, this great truth has come to humanity in this age.

The gentleman who will address you this evening is a member of the official Board of Lectureship of this Church. He graduated from Auburn Theological Seminary, and became a Presbyterian clergyman. Christian Science having healed him after many years of ill-health, he investigated it thoroughly, and having demonstrated its verity he decided to make it his life-work. He has successfully filled the positions of practitioner, Reader, teacher, and lecturer, and is able to speak to you out of the fulness of a wide experience and a strong conviction.

I have the very great pleasure of introducing to you the Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y.

Delavan, Wis.

Bicknell Young of Chicago, who addressed a Delavan audience at the Opera House Monday evening [September 19], was greeted with a large and very representative house. His remarks were listened to with closest attention. The speaker was introduced to his audience by Prof. Seth W. Gregory, in a brief and pleasing manner.

Delavan Enterprise.

In introducing the lecturer Professor Gregory said:—

Ladies and Gentlemen, Friends:—It is with pleasure that I welcome you here to-night on this momentous occasion. And this is a momentous occasion in the sense that any occasion on which God's children come together seeking truth, is a momentous occasion.

What is life? This has been the problem of the ages. It occupied the best thought of Solomon on his throne, and it occupies to-day the only real, serious thought of the humblest inhabitant of earth. We, as Christian Scientists, are endeavoring to work out this life problem in our way, and it is the purpose of this lecture, and all similar lectures, to explain and elucidate the manner in which we are endeavoring to work out this problem.

We feel that, as we rise into a higher understanding of the Christ-life, our walk with him is just a little nearer, and just a little dearer, and just a little clearer than it ever was before, because we can understandingly rely upon him for our every need. We begin to realize in our lives the words of Jesus when he said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you;" and the correlative statement by Mrs. Eddy, where she says, "Divine Love always has met, and always will meet, every human need" (*Science and Health*, p. 494).

To you who are satisfied with your present religious belief, to you who are satisfied with your present concept of God and your relation to Him, we ask that you put aside any prejudices that you may now have and assume a fair and judicial frame of mind while we endeavor to show you that we as Christian Scientists have an intelligible, logical, and demonstrable religious belief, that we are endeavoring to live that belief, and that the fruits of our efforts justify our continuance therein.

To you who may be in a state of unrest, to you who are dissatisfied with your present concept of God and your relation to Him, we offer this truth as a cup of cold water in the name of the Master; knowing that, if you will drink of it meekly, it will take all discord out of your life and give you harmony; it will take all unrest out of your life and give you rest; it will take all weakness out of your life and give you strength; it will take all disease out of your life and give you health.—*Correspondence.*

Woodstock, Ont.

The Hon. Septimus J. Hanna lectured in the City Hall last night [September 9] on the subject of Christian Science. Rev. Moulding Baker, pastor of the Congregational Church, presided over the audience, which was fairly large, and in introducing the lecturer said that he had no apology or explanation to offer for his appearing as chairman of the meeting. His views and sympathies were broad, and it gave him peculiar pleasure to preside over a meeting at which Christian Science was to be discussed.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Spoad-Tomlinson Case.

IN our issue of October 8 we quoted at length from the decision of the Supreme Court of New Hampshire in the case of *Spoad v. Tomlinson*, and commented editorially upon this decisive victory for Mr. Tomlinson and for the Cause of Christian Science. This decision has since been referred to quite generally by newspapers throughout the country, and the consensus of opinion commends the court's action in so squarely and unequivocally sustaining the legality of Christian Science practice. Some time ago, it will be remembered, an attempt was made in the New Hampshire legislature to secure the enactment of a law prohibiting the practice of Christian Science in the state, but such a storm of protest followed the introduction of the bill that it was defeated within twenty-four hours. The law-making and law-enforcing powers of the state having thus expressed the will of the people so forcibly and unmistakably, our brethren will now feel free from the constraint which has necessarily impeded their work, and we may expect still greater growth of the Christian Science movement in our Leader's native state, the state where her family has been prominent for several generations in the struggle for religious and civil liberty.

In the case of *Spoad v. Tomlinson* the right of Christian Scientists to practise the tenets of their faith through the healing of disease was definitely before the court upon the contention that such practice is contrary to public policy, and it was largely upon this issue that the Supreme Court decided in favor of the defendant.

Mr. Tomlinson is to be congratulated upon having had his case so ably handled by his attorneys, Messrs. Streeter and Hollis. The brief prepared and filed by General Streeter in his client's behalf was a logical and masterly argument. We quoted from this brief some time ago. The favorable outcome of the case has renewed interest in General Streeter's argument, and we therefore republish the following salient paragraphs:—

"Neither judges nor jurors can pronounce the tenets and claims of Christian Science false, because they do not and cannot know, any more than the authors of this brief know, whether Christian Science is truth or error. That is a question of opinion, and is no more susceptible of proof as a fact than the soundness or unsoundness of the divergent theories of medical men are susceptible of proof as facts. Christian Science is sincerely believed in by many thousands of men and women throughout this and other lands. The magnificent churches going up in so many of our cities show that it is gaining ground, not waning. It is common knowledge that its followers come mainly, not from the ranks of ignorance and credulity, but from the ranks of intelligence, character, and wealth. They assert that it has cured and does cure disease, organic as well as other, with as much earnestness and sincerity as its critics and opponents assert the contrary. If their claims were altogether false, Christian Science could hardly have gained the foothold that it has. It is no answer to say that such cures are 'miraculous.' The vast majority of people over whom the courts of Christendom wield jurisdiction believe that greater miracles were wrought by the Man of Galilee

and his earlier disciples. It is more reasonable to believe that God is ready and willing to heal His suffering children to-day than it is to believe that He healed them once but abandoned them nineteen hundred years ago. If Christian Science is to be rejected in the courts because it is contrary to the teachings of ordinary experience, then by the same token the Christian religion must be rejected too."

It is alleged in this case that Mr. Tomlinson practically guaranteed to the plaintiff that she would be cured by the treatment administered by him, but that is controverted. As to such alleged representations and their effect, the brief says in part:—

"When the representation relates, not to a past or present truth which can be positively known, but to a matter of judgment or prediction, it is an expression of opinion in its very nature, and no verdict of a jury can make it anything else. Here the form of statement is immaterial. A statement cannot be a representation of fact unless it relates to a fact, and a fact is something capable of being known. The person addressed cannot understand that the speaker has positive knowledge, however sweeping his language, if the matter under discussion is one of which positive knowledge cannot be had. . . . The representation attributed to this defendant was an expression of his judgment relative to the success of future efforts to cause the plaintiff to be cured through the instrumentality of religion. No human being could possibly have positive knowledge on such a subject, and plaintiff knew it." M.

"The trees are crowned with glory."

WHO can ever forget the joys of a perfect autumnal day! To stand under oaks and maples that revel in hues for which even a Veronese, a Dolci, and a Murillo have vainly striven, and, looking up and beyond, to drink in the delicious flood of tinted light that is sifted out of cerulean depths,—this is to enter the treasure-house of the sun. It is to find one's own explanation for the "wood-mania" of a Thoreau and a Burroughs, and with them pleasures which yield only blessing, for in them the beautiful is the good.

Even they who are neither poets nor artists may sense the pervading charm of that genuineness, that unpretentious giving which always makes its appeal as we look upon the flowers, the trees, and the "aspiring hills;" and when the splendors of the sunset are spread upon the earth, so that, as we walk beneath the falling leaves, we are embowered in color; then, indeed, to the spiritually awakened, "the crude forms of human thought take on higher symbols and significations, the scientifically Christian views of the universe" begin to "appear, illuminating time with the glory of eternity" (*Science and Health*, p. 502). In such a moment our higher education is distinctly advanced through the realization that the truly helpful return of human experience is always found in its suggestiveness. We see that the nobler and only fitting statement of life and its environment is to be made in spiritual terms. With the writer of the Epistle to the Hebrews, we begin to recognize the signs and intimations of that universe "not made of things which do appear."

The gain of this spiritual and poetic interpretation of the interesting and beautiful in nature is an hundred-fold. The things all about us which are of God and ever declare His glory, but which the materially minded, the world's wavering, have passed by unheeded, because unperceived,—these come into vision, and we enter upon our inheritance of the only real value of large domains which others may have self-deceivingly fancied to be their exclusive possession. We begin to fellowship with those—

who in the love of Nature hold
Communion with her visible forms.

With the poets and seers, we too—

Go forth under the open sky, and list
To Nature's teachings.

The beam of light which to the uninitiated seems no less simple than pure, is working miracles of self-disclosure these days, through unnumbered leaflets, each of which, in its place and after its kind, is lending itself to the expression of some gladdening tint. All are busied about the business of light, all are illuminating and beautifying the world. Faithfulness and unity of response and service, in an infinite variety of condition and opportunity,—these bring us the panorama whose splendors to-day delight even those they cannot inspire, and in our lives this same impulse and character of ministry would bring the kingdom of heaven to earth, the glorious reign of Christian Science.

Can any escape the lesson? In our several spheres, in the humble ways no less than the exalted of human life, it is the mission of each to bring into effective expression some ray of that infinite Love which is indeed "this dark world's light." It may be ours to contribute but a smile, a word simply of "good hope and good cheer," but however simple the thought, word, or act, if it be good, beautiful, and true, in that is the heart of Immanuel revealed, and the glory of the infinite doth give it grace.

An impelling conviction of truth is usually the outcome of accumulated impressions; and the effect of thoughts, words, and deeds which reflect the light of Love, aggregated in the home, the church, and the Cause, will be as gladsome and irresistible as are the radiant splendors of a sun-embazoned hillside.

How happying and encouraging it is to know that the smallest facet of thought and purpose, if it but be pure and unselfish, will certainly bring to those about us a glint of the one Life, Love, and Truth through whose reflection in our daily living the world is to be redeemed. W.

"Blessed are the peacemakers."

THE echoes of the recent Peace Congress can never cease, for we may be sure that whatever of truth was embodied in its deliberations and utterances,—that will live on and touch to new and higher issues the silent chords of humanitarian sentiment and unselfish aspiration. It is noteworthy that in the formal appeal to the nations which represented the spirit of this Congress, we find a significant reference to the spiritual element which alone can insure true success to any movement for the uplifting of the race. It says,—

"The Congress at the conclusion of its deliberations appeals to the peoples of all nations and of all classes to arouse themselves to a finer and more adequate conception of their relations one to another, to a deeper sense of their mutual dependence and duties, to the community of both their material and spiritual interests."

The present unhappy strife in the Orient could not well have passed unnoticed, and it gained additional prominence when two men, representing Russia and Japan respectively, sat together on the platform, and it must surely have seemed a happy augury, when those two stood with hands clasped in token of amity and of a desire for the realization of universal brotherhood. This incident may well recall Isaiah's graphic picture of the mortal strife existing when the Christ ideal appears,—*"For every battle of the warrior is with confused noise, and garments rolled in blood."* Then there suddenly comes a changed strain, *"Unto us a child is born, . . . and the government shall be upon his shoulder: and his name shall be called Wonderful, Counsellor, The mighty God, The everlasting Father, The Prince of Peace. Of the increase of his government and peace there shall be no end."*

It is being more and more generally admitted, that even though, to mortal sense, the spirit of the Christ may seem as helpless as a babe on a battlefield, yet it embodies that Divine potentiality which will at length end all conflict and bring the peace for which many pray, and for which so few really strive.

All are agreed that no true peace can exist where righteousness is not, and one of the speakers at the Congress, in urging the concentration of all our efforts for the overcoming of social and individual evils, said, *"We inherit soft hearts, but not soft heads from Jesus."* Our Leader has said, *"Jesus stormed sin in its citadels, and kept peace with God"* (Miscellaneous Writings, p. 211).

Herein we find the secret of that peace which was ever with the Master, even when the fierce tempest of the world's hatred of Truth was breaking over him. He had sent out his humble followers with a royal proclamation, announcing the reign and rule of divine Love, and in evidence of its supremacy they were to uncover the false foundations of sin, disease, and death. He had no offer of peace for these,—he was waging a war of extinction upon evil, but he *"kept peace with God;"* and to those who were willing to accept truth he said, *"My peace I give unto you."* In the clear light of Christian Science we cannot plead ignorance of our Lord's meaning, nor of the way by which this promised blessing may be attained. Thousands who had known little else than a weary conflict with sin and sickness are, through this truth, rejoicing in its permanent possession.

Longfellow's beautiful lines are of deepest import to those who have learned that the Scientific obliteration of error is the only way to the realization of the peace toward which we look with an assurance born of overcoming.

Were half the power that fills the world with terror,
Were half the wealth bestowed on camps and courts,
Given to redeem the human mind from error,
There were no need of arsenals nor forts.

Down the dark future, through long generations,
The echoing sounds grow fainter and then cease,
And like a bell, with solemn, sweet vibrations,
I hear once more the voice of Christ say "Peace!"

K.

Letters to our Leader.

Columbus, Ohio, August 11, 1904.

To the Rev. Mary Baker G. Eddy, Leader in Christian Science, Concord, N. H.

Dear Mrs. Eddy:—I am aware that you do not seek or accept personal adulation, flattery, or compliment, and I do not offer these; I tender you, honored Leader, as your just due lovingly paid, my appreciative thanks for the results which have followed, in my immediate family, the study of your published words, and the attempt to follow your wise and lucid teaching. I am one of the thousands of Christian Scientists who have not yet seen an open path to Concord or to Boston; who have never seen your revered face or heard your speech; and yet who owe to you, more than to any other teacher in the world, a deep and lasting debt of gratitude for benefits conferred. Five years ago this month I was led to seek Christian Science treatment for my wife, and on the occasion of my first conversation with a practitioner I was healed of a tobacco habit against which I had struggled in vain for years. My wife was healed of an affliction of years' standing in ten days' time. We took up the study of your text-book, *"Science and Health with Key to the Scriptures,"* as a result of these remarkable experiences, not with the idea of becoming followers or admirers of Mrs. Eddy, but with the deeper and more searching thought of trying to learn of God. The appreciation of what Mrs. Eddy has done for the human race grew upon us as we studied her explanations of the Science of life, the Science of Christianity, and as we progressed to the point of testing her teaching in moments of need, and noted the prompt and satisfactory responses to the application of her rules of religious conduct, the feeling of indifference to Mrs. Eddy's personality with which the investigation was begun, slipped away from our thought, and in its stead there has grown up year by year a constantly increasing sense of thankfulness to Almighty God, good, that in the dark and

trying hours, and days, and years of dawning understanding of Truth as shown in Christian Science, there was one found who was worthy to bear the cross of a new discovery of God's allness, and strong enough to withstand the efforts of error to undermine it.

Without ever having seen our Leader, and without her having been conscious of our existence in the flesh, we have applied the teachings of Science and Health by absent treatment to the relief of family connections in other states whom we have not seen for years before coming into Science. Surely there is the finger of God in such impersonal results from purely impersonal teaching! Surely it is permitted me to express to one to whom we owe so much my earnest and reverent feeling of obligation. Under God you have been the means of brightening the lives of many persons who have come under my observation; your teaching has created in my own experience beneficent conditions to which I had ever been a stranger. Years of service in an orthodox church may have fitted me somewhat to assimilate the blessed truth when at last it came to me, but until I gave up my commission in that church and turned in growing understanding to Christian Science, I never had tasted such fruit from the service of God as I have tasted since that time. "Where the Spirit of the Lord is, there is liberty," and for the fruits of this liberty as taught us in your published words, your messages, and your Manual, please accept my assurance that as "Gratitude is much more than a verbal expression of thanks" (Science and Health, p. 3), I shall endeavor to give my gratitude an expression in that "action" which "expresses more gratitude than speech" (p. 3).

Your student's student,
E. HOWARD GILKEY.

Dublin, Ire., September 9, 1904.

Beloved Leader and Friend:—I have often thought of writing to tell you of my deep love and gratitude for all you have done and are doing for us, and I now feel that I cannot put off writing any longer. When I heard of Christian Science, nearly five years ago, I had been an invalid for three years and was seldom free from pain, but as soon as I began to know something of divine Principle all suffering left me, and a great joy has taken its place, for I know that I can never again be in such bondage to material sense.

My husband and child also wish to express their gratitude for what Christian Science has done for them, and they and I unite in thanking you with our whole hearts.

Yours lovingly,
LOUISE KING.

Index to Volume VI.

All those wishing the *Sentinel* index for Vol. VI. (September, 1903—August, 1904), can have it on application.

Notice Regarding the Bible Lessons.

Beginning with January, 1905, *The Christian Science Quarterly* will omit references to editions of Science and Health prior to the 226th.

A Critic Answered.

Mr. Alfred Farlow's article, "A Critic Answered," which appeared in the June *Journal*, is now issued in pamphlet form in order to give it a wider circulation. It will have a very beneficial effect in removing prevalent misapprehensions of Christian Science. Price, 3 cents each, \$2.50 per hundred. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

In the spring of 1901 I was stricken with chronic bowel trouble in its most malignant form, contracted in Southern Texas. I returned home for two months, and had the best medical skill in the city, an allopathic physician and a homœopathist. Then I tried a magnetic doctor, but grew worse. I then went to a hospital in Temple, Texas, and there I stayed two months; would improve a little, then grow worse. I next decided to try a change of climate, but was too weak to travel alone. My wife accompanied me, provided with an alcohol stove with which to prepare such light food as I was allowed to eat. I had been recommended to try Idaho Springs, Col., and we stopped at Denver, where we met some old friends who were Christian Scientists. On taking leave of them I remarked that if the Springs did not cure me I would return and take Christian Science treatment. The reply was that I would find plenty of Scientists at Idaho Springs.

I had grown worse on the road, and upon reaching our destination I was in a very bad condition and could hardly speak above a whisper. I soon heard that there was a practitioner there, and sent word that I would like to see him. I had known of Christian Science for fifteen years and thought it was a good thing,—“for the other fellow,”—did not dream it could ever do me any good. The practitioner came and talked of Christian Science, with much intelligence, it seemed to me, and of wonderful demonstrations he had witnessed. I told him that I did not believe in Christianity nor in God, that I was an infidel and a spiritualist. I asked if, under such conditions, he thought he could cure me. Suiting the action to the words, taking hold of the window-shade, he said, “No, of myself I can do nothing, but I can, as it were, roll up the curtain, and let the sunlight of divine Truth and Love shine in upon your consciousness, and that will cure you.” This was all Greek to me, and I thought of dismissing him then and there; but I realized fully that I was near death's door unless help came speedily from some other source than medicine, and I accepted treatment. This was given at ten o'clock at night. He said, “Eat what you want and as much as you want.” I looked incredulously at him and said, “You do not mean that?” He assured me that he did, and that it could not hurt me. I followed his advice and ate a hearty breakfast. The second day my wife and I climbed to the top of a high mountain. I discarded my cane and have not used any medicine since taking the first treatment, two and one half years ago. I was perfectly healed in one week.

I bought the text-book, Science and Health, and have studied it and the Bible faithfully. There are many things in each I do not yet understand, and at times I have been discouraged and cast down. Mortal mind was very bitter, and my preconceived, erroneous opinions deeply grounded and hard to overcome; but I had the practical, indisputable evidence of the power and goodness of God in my marvellous healing, so I have persevered.

When I left the hospital, it was with the understanding that I should, when strong enough to withstand the ordeal, return and be operated upon for hemorrhoids, from which I had suffered for years. That I have never done, being healed of them, and also of indigestion from which I had suffered for years. I had worn glasses for twelve years, but laid them aside about two years ago, as I did not need them. I was a very profane man; that left me without any effort, and I was able to demonstrate over the liquor habit, although I had used liquor all my life. I have not yet succeeded in overcoming the tobacco habit, but am gaining much in that direction. Last winter I overcame eczema in a severe form that I had had for years, also a tendency to take cold. I could not sit near an open door or window, or stand for a moment under an electric fan, without having

trouble, but have had only one cold in two years and a half, the time since coming into Science. Many other smaller demonstrations have been easily made, and my faith in the power of God to heal "all manner of disease" is unbounded. If we only apply the faith and knowledge obtained by an understanding of Christian Science, "these signs shall follow them that believe." I had this evidence in my own wonderful healing, and have since witnessed or been cognizant of many much more wondrous cases.

I am trying to "put off the old man with his deeds." I have been proposed for membership in the Galveston church, and if accepted will spend the remainder of my life in helping to advance the Cause of Truth.

I have had the privilege of attending the Christian Science Church in Houston, as well as the Galveston church, being a railroad man and running between the two cities.

Any attempt to express my gratitude to God, to Mrs. Eddy, to my practitioner, and to the loving Christian Scientists who have so kindly and generously assisted me, in my efforts to reach the understanding of Truth which I have attained, would be futile. My daily prayer is for more light that I may know more of the truth that sets men free, that I may be a humble instrument in bestowing upon others what has been so richly bestowed upon me.

D. W. HEAD, Galveston, Tex.

It may interest some to hear of the help I have received in Christian Science. For four years I had water on the knee, the result of rheumatism, and during that time I never walked a step without an elastic knee-cap. Every five or six months I had an acute attack of rheumatism in my knee, which caused such suffering that I would be unable to sleep, or even turn over in bed. This generally confined me to my bed for two weeks, two weeks more would elapse before I could go down stairs, and altogether six weeks would pass before I felt able to go out, even with the aid of a cane. Five years ago one of these acute attacks had kept me awake all night and in the morning a friend who had just taken up Christian Science came to see me. In a half laughing way, I asked her to treat me, and then forgot all about it. The next morning I was amazed to find that the swelling and pain had both nearly disappeared. The next day I went out, and since then I have never worn my elastic knee-cap, and have had but one slight return.

In spite, however, of that experience I did not then take up the religion, although I believed in the healing part of it. Finally, sorrow and suffering literally drove me into it, and I decided then, that what I could not understand and accept, I would put aside until Truth revealed it to me, and gradually all those things have been made clear. If Christian Science could do nothing but eliminate fear and worry, one would feel repaid for studying it.

J. W. B., Seattle, Wash.

A dear little nephew had been spending the morning with us, and when the time came for him to go home, after getting him ready, the door near which we were standing was opened for him. Very unexpectedly he cried out, "I don't want to go out of this door, I want to go out of another door." Without considering the consequences, in fact without apparently any special thought, I replied, "Of course you want to go out of this door when you are right here; Auntie is busy and does not want to go to another door." Upon this he threw himself down upon the floor and kicked and screamed. When I saw the commotion which had been caused I almost wished I had said nothing, but done as the child wished. I knew the demand was unreasonable, and I felt that, according to all ideas of government, it would be most unwise, for the child's good, to accede to it. I was much distressed at the situation, and sat down in an adjoining room to seek help. I said to myself, "I am trying to do what is right for the child, then

what is the matter; I know something is wrong, or the result would be different." Almost immediately it came clearly to me that I was indeed trying to do right,—my sense of right,—founded upon human opinion and education. I resolved at once to put this all aside, and to be perfectly willing to be led by God, and to open any door in the house, if God required it of me, but to be deaf to the call of error. Then I waited. In a few minutes the dear little boy came into the room, still tearful, but so loving, and said, "Won't you please wipe my tears, and open the door *you* wanted me to go out of." I felt like a very repentant child myself, and yet a very grateful child, that our Father had opened the right door for me, and the human will had not been allowed to hold sway. I need not say to any of our dear co-workers that this lesson has proved invaluable on many other occasions. Is not every such experience a blessing upon our dear Leader's labors?

MRS. HELEN C. SHERER, Janesville, Wis.

Nine months ago I was a weak, miserable woman, unable to do any work, and scarcely able to stay out of bed. Now I am strong and healthy, doing my own housework with ease and pleasure.

I was a terrible sufferer with indigestion, nervous prostration, rheumatism, despondency, and other troubles. For several years previous to my marriage I was a trained nurse, and was therefore a slave to material means, more than one who has not had such an experience, but I had lost all faith in every kind of medicine and treatment, and was almost hopeless. Now, thanks to God, through the truth as known in Christian Science I am free. Besides my own healing many blessings have come into our home through the same truth.

"The enslavement of man is not legitimate. It will cease when he enters into his heritage of freedom, his God-given dominion over the material senses" (Science and Health, p. 228). I know that I have gained at least partial dominion over the material senses, to which I was a slave.

I am very grateful to Mrs. Eddy, our beloved Leader, who has given us the light on the Bible by which we are able to gain this dominion, also to the kind practitioner who so patiently and faithfully helped me out of my suffering.

MRS. RETTA LANCASHIRE, Peterboro, Ont.

In October, 1889, after being under medical treatment for ten years, I turned to Christian Science for help. During this time I had spent sixteen months at a sanitarium, and most of the time there I was in bed. The physicians had been trying to heal neurasthenia and anemia with drugs, massage, health foods, rest, and fresh air, and I had co-operated with them in every possible way. My thought had therefore become so saturated with physiology and hygiene that the one who afterwards became my teacher in Science said she had never in all her experience encountered a similar condition, or one that equalled it. For these ten years I had walked very little. I had to lie down about five hours every day, and rest before and after every exertion I made.

The sense of fatigue and weakness disappeared instantly one day with the dawning of a clear thought of God as man's true Life and strength, and I have not since lain down half a dozen times during the day. This healing thought came to me after three weeks of treatment, and the lessons in a Christian Science class taught by one of our Leader's students. Other ailments have disappeared, some sooner, some later, and some have not yet gone, but I am strong, active, and well. The experiences I have had in Science during these fourteen years have made me absolutely sure that my whole condition was mental, and I find as the sense of fear, the belief in material life and human personality, is being overcome, and as thought is spiritualized, improvement and healing are inevitable.

By obedience and trust I mean to show my gratitude to

our Father-Mother God, to the great Wayshower, to our Leader, to her students who treated and taught me, and to all who by example or precept have helped to effect this radical change by reflecting Truth and Love. I cannot express how much help the *Sentinel* and *Journal* have brought me.—E. B., Milwaukee, Wis.

When one is benefited as much as I have been in the last year, it is a duty to tell of it so as to pass the good on for others to enjoy. Just one year ago I took my last dose of medicine. Our family physician and the house doctor at one of the largest hospitals in the city of St. Louis, had said that I must undergo a very dangerous operation or I would not live six months. Through a friend, I heard of Christian Science and took treatment of a practitioner, which gave me a good start in health and in the understanding of Christian Science, but as it was very inconvenient to reach her I went to another practitioner down town. I have made rapid improvement through the kindness of both, and think that if I had not been so impatient I should have progressed faster. I had not learned that we must "emerge gently from matter into Spirit" (*Science and Health*, p. 485), until I began to get discouraged, but by the kindness of others I found out that we must "wait patiently for divine Love to move upon the waters of mortal mind, and form the perfect concept. Patience must 'have her perfect work'" (*Science and Health*, p. 454).

If some are not healed as quickly as others, it is discouraging, but we all must work out our own salvation, and to those just starting in in Christian Science, I would say, "Don't give up the ship." Through Christ, and with our Leader to direct us to him, we shall all be saved both physically and spiritually.

I am the only Christian Scientist here, and our periodicals are of much comfort to me. I look for them longingly whenever they are due.

MRS. MARY L. M. WARNOCK, Columbia, Ill.

About fourteen years ago, my husband and I studied *Science and Health* for some time, and decided that the selling of drugs, in which business he was engaged and had spent ten years of hard study and practice, was not practical for us, nor suited to our advancement in the study of Christian Science.

It was some time before we could in any way dispose of the drug stock. There was a constant declaration of error, from friends and our own thought that there was no other way for us, that a knowledge of drugs completed our store of wisdom, and was our only source of supply. We moved from the small town in which we were then located, and commenced to search for work. Every time an engagement presented itself that offered a sufficient salary to meet our requirements, it was a drug store, which, in every instance, held some unusual inducement. After two weeks of this search a position was accepted, with a very meagre salary, only half of what the other positions had offered.

This was followed for three months, then another situation which promised better called for a trial, but did not stand the test. By this time we were both convinced that our living did not have to come from the selling of drugs. We were daily reminded that "The earth is the Lord's, and the fulness thereof."

It was now mid-winter,—just the time when mortal mind was affirming that there was no work. One morning, however, the mail brought a request from a large corporation to report for work on Monday morning, although less than a week previous the answer had been from this same place that there was nothing for us. The beginning was small, but year after year advancement has been made, until now we have a most comfortable living, with much more time than when employed in the drug store.

It has indeed been a demonstration, for error has in various subtle ways tried to sever this last engagement.

Expressions of gratitude that no pen can portray well up in our hearts to God and to our Leader for the light we now have.—MR. and MRS. ADELLO B. LATHROP, Omaha, Neb.

As I read, week after week and month after month, the wonderful outpouring of praise that ascends from grateful hearts, I too rejoice in thankfulness for the truth that is bringing light "to hearts and homes benighted."

During all the experiences of my life, my most cherished desire was that some day I might have a message to bear to the world that would uplift and strengthen. That desire has been answered, and the message has been given; and what a message it is! higher than I had ever deemed possible! For this blessing of Christian Science what cross is too heavy to bear? what task in overcoming self too difficult to perform? With the high goal of final achievement before our vision, what can obstruct our path heavenward?

This Christ, Truth, has brought to me what I once hoped for, but only looked for in some far-off future time impossible to calculate.

Now I am learning how to think aright, and through this transformation of thought I am leaving behind many a type of physical distress, many a mental anguish, many regrets and heartaches, and am laying up for myself treasures in heaven,—the harmony of ever-present good where the moth and rust of false beliefs in a power opposed to that good, cannot corrupt.

The treasures are becoming more numerous and more valuable day by day, and as I sit here this beautiful October Sunday afternoon and note from my window the wonderful tint of changing leaf, my heart is filled with unspeakable gratitude as I remember the many Sundays in the past when life seemed unbearable in the face of a despondency that only seemed to grow darker with length of days, and amid the glorious colors of autumn seemed only to catch a refrain of melancholy; but now there is a "new song" in my heart, and I here take opportunity to send it forth to divine Love, and to the one who has brought this gospel of healing to yearning humanity.

"How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!"

L. C., Dayton, O.

I wish to express my gratitude for the article in the *Sentinel* of January 23, "Physician Heal Thyself," which impressed me deeply and inspired me when put to the test a few hours later. On waking the following morning I had the sense of an extreme cold on the lungs, sore throat, and aching all over the body, which I immediately denied, and went about my duties as usual; but by noon a high fever with frequent chills tried to manifest itself. I however, took a necessary trip of about ten miles with a good deal of exposure to the weather, still working very diligently to keep my thought clear. On returning home, I remained up until tea was over; read our Science literature for two hours after retiring, and fell asleep with symptoms seemingly unchanged, but knowing that I was in the hands of God, who is the greatest of physicians, and that I had no thoughts apart from Him, hence, all was health, life, and holiness.

I slept well all night, waked at the usual time, perfectly sound in every way, and thanked God for the healing.

Heretofore I had always done my own work in Science excepting for this one ailment, which always seemed to need help, but from the article above mentioned I saw plainly that if I could handle successfully cases for others and all other ailments than this one for myself, that there was no difference in treating manifestations of error, as they were none of them "mine."

My deepest love goes out to our beloved Leader who stood alone with God when all the world rejected her blessed message. I am very grateful for my class instruction, which has made the way clear to me; also for our periodicals, all of which show loving labor expended for our happiness and progress in this glorious work.

MRS. E. F. DELLANO, Boston, Mass.

From being a tired, cross, and nervous woman I have gotten to be cheerful and happy, and I can do a large amount of work daily without the least fatigue. Where at one time I was critical and resentful, I am gaining more of love and its teachings. In the two years that I have been in Christian Science, so many blessings have come to my family that my heart is filled with the thought, "Praise God from whom all blessings flow."

I am very grateful to the practitioner who so faithfully worked to bring me to the light, and to my teacher. The Christian Science literature is such a help in my daily work, and only those who rely on the promises in the 91st Psalm know the freedom from care and the peace which the truth gives.—MARGARET SMITH, Chicago, Ill.

I have received so many blessings from Christian Science that my heart overflows with thankfulness. It found me in a dark world of suffering, and after trying all the material remedies I had any faith in, I turned to it, thinking it could do me no harm if it did me no good. "Science and Health with Key to the Scriptures" by Mrs. Eddy, was given me, and I became interested at once. I have found so many blessings in it, that it is more than all the world to me. I find it good to help me in my work, good to teach to the children, for they learn to love one another and that God is Love. To mothers I would say that I have found Christian Science to be a great help with children.

When I was about sixteen my father passed away, and this set me to thinking. I did not know anything of the Scriptures only what I learned at Sunday School or at church, but that was enough to show me that Jesus healed the sick and raised the dead. I thought if this were ever done it could be done again. I never had any desire to be a church member, for I first wanted to understand some of these things. My health was then fairly good, but when I married and became the mother of two children, my health failed, and as time passed on I grew worse. I took many kinds of medicine, had different doctors, but my suffering grew worse. We spent nearly all we made for doctors and medicine, and to me it seemed that I suffered everything common to mothers. Another baby came to our home and my health became so poor that part of the time I was unable to wait on myself or the child. I ate so little for fear of distress that I became very thin, and had to be careful so as not to take cold, even in hot weather. In this condition Christian Science found me, and twelve years have elapsed since I began its study. My health is so improved that I can eat anything I wish. I was not instantly healed, for I have come into this spiritual uplifting little by little, but the goodness and blessings I have received are many. I am very thankful to our Leader, Mrs. Eddy, and to God for the good that I and my family have received from Christian Science. In so far as I can realize God's allness I am living in a new world.

MRS. BELLE PERCY GLAZE, Crawford, Neb.

Before me is a New Year's card, sent by a dear friend, and in looking at the title, "Shining Hours," I feel that I must tell others how Christian Science turned my long, weary hours of gloom into shining hours. It not only healed me of three diseases pronounced incurable by *materia medica*, but it has changed my mental condition from that of a depressed, despondent, irritable woman, to one of peace, and of love for all mankind. Where I was always look-

ing for faults in others, I now try to see good in them, thereby bringing out the good. I know from actual experience that if one thinks evil he will bring that out in his experience, no matter what his environments, for to look upon everything with an evil eye blinds one to the good. To have "Shining Hours" we should flee unto "the mountain," to Christian Science, the highest altitude of Christianity that can be found, for it is the teaching of Jesus the Christ; and we study this truth as taught in Science and Health by Mrs. Eddy. This book is indeed the "Key to the Scriptures;" it unlocks their hitherto spiritual meaning which our Master intended us to possess, because it enables us to use his teachings in a practical way. It also enables us to realize that God gives us dominion over all discord, physical, mental, or financial, and that He is omnipotent and omnipresent. I am not writing this from a visionary standpoint but from actual experience of its truth. When the verdict was passed upon me by *materia medica* that I would die in two or three days with Bright's disease, I was given Christian Science treatment, and began to improve at once. That is six and a half years ago, and since then I have had the benefit of class instruction by one of Mrs. Eddy's students. I have also had the great pleasure of helping others out of discordant conditions through my understanding of Christian Science.

It is with sincere gratitude to God and to our beloved Leader, that I am able to write of the grand works of Christian Science.—E. DELLA WOOD, New York, N. Y.

I wish to testify to the blessings which Christian Science has brought me. Two years ago through treatment and much reading of our text-book, Science and Health, I was relieved from great suffering. I consented to try this Science as a last resort, after all else had failed,—not willingly, or with much, if any faith in it. I asked the practitioner who came to see me if she could help me, and she assured me that I could be made whole through Christian Science. I then said, "Very well; but I will not have anything to do with it after I am cured." My first treatment, however, not only gave me great relief but took away all my feeling of dislike to Christian Science.

My healing has been very slow, and there are some ailments yet to meet, but as the spiritual sense of the Word is being unfolded to my understanding "clouds of doubt and fear" are vanishing. Some of the many things which are being overcome by the study of Science and Health are a very quick temper, a habit of criticising others, and great fear of everything. I could not expect space in which to tell of all the benefits I have received from Christian Science. I have joined a Christian Science church and am striving to be good that I may do good.

A. V., Milwaukee, Wis.

[Written for the *Sentinel*.]

My Prayer.

GEORGE D. ARTHUR.

TEACH me, O God, to see and know
The light the Christ has shed
Upon our path, to walk in love,
The way our Master led.

Give me to know the perfect Mind,
Which Jesus said must reign;
That Spirit, Life, is All in all
And matter void and vain.

Receive, O God, my humble prayer,
I bring my all to thee,
In faith and hope that Truth and Love
May ever reign in me.

From Our Exchanges.

We need not so much a faith in a past resurrection, though our faith must be linked with history, and joined with an event which created Christianity out of the lacerated and marble contents of Joseph's tomb; nor so much a confidence that Jesus is to come by and by, necessary as is that to keep the hope serene: we need a faith in a Saviour who rises in us daily, is with us here and now, with words and spirit of life and treasures of immortality. With that consciousness of the presence of the living Master the gospel will cease to be a "tale of little meaning though the words are strong," our daily conduct will be spiritual: God's life the light of our consciences, perfect in joy and love. Then shall our Christian mysticism, our spiritual vision, our hidden and conquering strength, grandly meet the needs of to-day and go out with calmness and courage to welcome the problems and overcome the perils of to-morrow.

GEORGE L. CLARK.
Hartford Seminary Record.

Even though Christ was made in the form of man, it is essential not to know his appearance or hold a fixed representation of him in thought, as it chains the mind to a limited conception forever. All worship and all ideas of divine things must be free from material representations that are devised to help, and prove to hamper struggling thought.

The Bible opens in its first sentence with a statement of God that is exclusive of every heresy concerning the divine nature, and its succeeding pages never vary from the high standard of spiritual conception, but in human practice there is a constant tendency to diverge from this standard and to adopt the easier and seemingly helpful means of worship, to the harm of the mind in its conceptions and character.—*The Watchman.*

Yet, in spite of crowds which thronged him so that at times he had no leisure so much as to eat, in spite of the toils and trials of his life, its atmosphere is that of rest. He had mastered the great secret of the unhurried life, which is repose of heart in a continual sense of the presence of God. He who promised to give rest knew in his own life what rest was, even in the midst of labors and betrayals. This true and secret rest is never far away, to be searched out by painful or by joyful journeyings. It goes along with work. We rest where we are. Having endeavored, we repose, for we are God's children and underneath are the everlasting arms.

The Congregationalist and Christian World.

The failure of the Gospel to reach the hearts of men is not because of any defect in it, nor always because of its defective presentation. It may be very faithfully and very earnestly preached, and yet fail to persuade the hearer. A willing heart, open to the persuasive influence of the divine Spirit, is essential to the saving reception of the truth. So the responsibility, in the last analysis, rests upon the hearer for the reception or rejection of the offer of salvation. God is willing. He has provided the way. He invites men to accept. There is nothing in the way but man's sinful unwillingness.—*The Examiner.*

Many sinners are not troubled about the act of sin, but all their distress is on account of the fear of being found out. Sin is just as bad when it is secret as when men know it. The evil of sin is so deep that in the sight of God it is exceeding sinful even though it may find no opportunity to express itself in outward act. The sin of the heart is the thing we should hate and seek to overcome.

The Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Before the twenty-ninth annual convention of the American Library Association in St. Louis, last week, a report was presented on gifts and bequests to American libraries covering the period from June 1, 1903, to May 31, 1904, and including single gifts of \$500 or more, of 250 volumes and upwards, and others miscellaneous in character. Five hundred and six gifts are reported, representing in all 137,318 volumes and \$6,103,137. An analysis of the money gifts shows that \$732,359 was given as endowment funds for general library purposes, \$198,654 for the establishment of book funds, \$78,709 for the cash purchase of books, \$1,507,600, of which \$970,100 is reported as accepted, from Andrew Carnegie for buildings; \$2,750,419 from various donors for buildings, \$27,400 for sites. The gifts of the year, other than those made by Mr. Carnegie, amount to \$4,595,537. This includes thirty-six gifts of \$5,000 each, eighteen of \$10,000, nine of \$15,000, seven of \$20,000, five of \$25,000, two of \$30,000, four of \$35,000, three of \$40,000, one of \$45,000, and twenty-one of from \$50,000 to \$600,000.

The United States minister to Panama has completed his report to the Government. It is stated at the State Department that the differences between Panama and Colombia have practically been cleared away, and that the most friendly relations can be established immediately upon the taking of the initiative by Colombia. Panama is making no contention over the boundary and has announced acceptance without protest of the demarcation of the old department of Panama. The boundary dispute between Costa Rica and Panama is also in a fair way of settlement. France, Chili, Peru, Costa Rica, and Venezuela have appointed diplomatic officers to be stationed at Panama. England, Germany and Mexico, will soon do likewise.

The Bureau of Insular Affairs of the War Department has received from Manila copies of the forestry manual. A forestry bureau was created soon after the American occupation of the archipelago. The Government levies a tax on all timber taken from the public lands. This tax ranges from

fourteen cents per cubic foot for the best quality down to one cent per cubic foot for the inferior. The amount of taxed timber taken from the forests during the last three fiscal years was 7,453,678 cubic feet. Licenses are now granted by the Government for a term of twenty years.

It has been decided to have the one hundred young Filipinos who are being educated in California placed in Eastern schools for the coming year. Those who wish to study civil engineering will be sent to Cornell, but the greater part will be placed in schools in Maryland and in the city of Washington. Several boys will be sent to agricultural schools and colleges and others to technical schools to take up lines of practical study. Another hundred next year will be sent to this country from the islands. The expenses of these young men are paid by the island government, which allows \$500 a year for each student.

President Roosevelt has sent Secretary Taft instructions directing him to visit Panama and consult with the authorities there with regard to certain questions that have arisen since the occupation of the Canal Zone and give assurances of the intention of the United States not to trespass upon the rights of the Panamanians.

The postal deficiency for the fiscal year ended June 30, 1904, last, was \$8,779,492. Reports show a total postal expenditure during the year of \$152,362,116; total postal revenue, \$143,582,624.

Foreign.

President Palma has sent a message to the Cuban Congress asking for the authority to expend two million dollars of the surplus upon additional public works.

Lord Milner has resigned the High Commissionership of South Africa.

Industrial and Commercial.

The Treasurer of the United States has submitted the annual report on the transactions of the Treasury during the fiscal year ended June 30, 1904. The net ordinary revenues are shown to have been \$540,631,749, a decrease of \$19,764,925 as compared with 1903; the expenditures for all purposes, including \$50,000,000 on account of the Panama Canal, and \$4,600,000 lent to the Louisiana Purchase Exposition (this sum now in process of repayment), were \$582,402,321. The Canal and Exposition payments were made from the treasury surplus. The net increase in ordinary expenditures was \$76,303,314. In the receipts, the principal falling off was \$23,205,017 in customs, while in the disbursements the important increases were \$11,423,446 in commerce and labor, \$60,788,589 in Treasury proper, and \$20,338,067 for the navy.

The operations affecting the public debt exceeded those of the preceding year, and amounted to \$699,660,941 in receipts and \$638,924,379 in disbursements. The aggregate receipts for the year were therefore \$1,240,292,690, and the aggregate disbursements \$1,221,326,701.

Cotton exports in the month of September, 1904, exceeded both in quantity and value those of any September in any earlier year, the total quantity of cotton exported being 410,940,894 pounds, valued at \$43,742,325. The next largest September exportation of cotton in earlier years was that of September, 1902, when the total was 347,596,100 pounds, valued at \$29,930,815. The average export price per pound was 10.6 cents in 1904, against 10.8 cents in September, 1903; 10.3 cents in September, 1900, and 10.2 cents in 1890. The average export price in September, 1893, was 8 cents per pound; in September, 1895, 7.6 cents; in September, 1897, 6.7 cents; and in September, 1898, 5.3 cents per pound.

The production of bituminous coal in the central district of Pennsylvania has been less by more than 1,500,000 tons this year

than it was in the same period last year. Shipments of the product over the Pennsylvania Railroad alone have fallen off more than one million tons. The slump is attributed to the sharp competition of West Virginia coal.

The General Electric Company has sufficient orders for turbines to keep its plant devoted to this part of the business busy for two years. Contracts are booked for turbines for Japan, China, Russia, and England. The demand for turbines illustrates the development of industrial enterprise both in this country and abroad.

The Aroostook County (Me.) farmers are harvesting the largest crop of potatoes ever raised in the banner potato county of the Union. It excels in quantity, quality, uniformity in size, and keeping qualities.

General.

The first high altitude sounding balloon, liberated on the grounds of the St. Louis Exposition at 4:33 p. m., September 15, has been returned. The balloon, after drifting slowly toward the north for fifteen minutes, rose into a much stronger wind current, moving from the northwest. The greatest height was reached about 6 p. m. At that time the barometer carried by the balloon recorded only 4.1 inches, which is the equivalent of a height of about eight miles. The instrument showed that the temperature fell very rapidly, the lowest point, —47 degrees F., being reached about 5:30 p. m. At the highest point reached the balloon burst and fell slowly, reaching the ground at 6:30 p. m., about fifty miles from St. Louis. The instrument was returned in accordance with the instructions attached to the basket carried by the balloon, and arrived in good condition. The experimenters are much pleased with the success of this first attempt to utilize sounding balloons in the United States.

Injuries resulting from the disregard of the laws governing the speed of automobiles shall be sufficient ground for the recovery of damages, according to a verdict which has been returned by a jury in the Supreme Court at Ballston, N. Y. In charging the jury Justice Spencer said that if the defendant was driving the machine at a rate of speed demonstrating reckless disregard of its proper use and was wantonly indifferent to the consequences that might happen to others, the act constituted a wilful assault on the plaintiff and his property and entitled him to damages. The jury returned a verdict awarding the plaintiff damages in the sum of \$600.

Seventy-five cents' worth of iron ore when turned into bar iron is worth \$5. Made into horseshoes it is worth \$10, or if into table knives \$180. Seventy-five cents' worth of iron ore manufactured into needles is worth \$6,800, and when converted into some kinds of fancy buttons it is worth about \$30,000. Made into watchsprings the product is worth ten times more than buttons, and when turned into hairsprings it will sell for the enormous sum of \$400,000.

"As a result of the great agitation caused by the injury and in some cases killing of persons by automobiles," says Consul Hamm at Hull, England, in a report to the State Department, "a proposition has been made by members of the Roads Improvement Association to repair and adapt the old Roman roads to the requirements of motor car and cycle traffic."

Governor Gessler's castle, near Kussnacht, on the Lake of Lucerne, famous in the history of William Tell's exploits, has been sold to a company, which will convert the ancient stronghold into a modern hotel.

More than 613,000,000 picture post cards passed through the British Post Office during the last twelve months, an increase of twenty-five per cent over the preceding year.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Vanity of Matter.

SAMUEL GREENWOOD.

THE Hebrew king who has since been called the "wise man," tested to its fullest extent the ability of the world and the flesh to give pleasure and satisfaction to mortals. His abundant wealth and high position gave him every opportunity to fulfil the heart's material desires, and he seems to have traversed every avenue which holds allurements for mankind. The final verdict of his experience should therefore have weight with those who are likewise tempted with the glamour of "a beautiful lie" (Mrs. Eddy in *Unity of Good*, p. 66). In summing up his exhaustive experiments with materiality, this wise man pathetically confesses his disappointment at finding in material things only vanity and vexation. No one who aspires to a life above the animal and earthy has ever questioned Solomon's decision, though he may consider materiality as a necessary condition of human existence.

Christian Scientists, believing that nothing real can be vain or vexatious, and that no necessity of man's existence can mock and befool him, are striving to discern man as the spiritual idea or emanation of Spirit, not matter; hence that spiritual man is the only really substantial man, neither sensible in matter nor to matter, but living and moving always in the consciousness of God, infinite Spirit.

The Christian Science teaching that matter is non-sentient, and, in the absolute, scientific sense, non-existent, is commonly misunderstood and misapplied, though human experience abounds with evidence in support thereof. Mortals must be willing to see things as they are and not as they seem, if they would understand truth. The materialists who make merry at times over the statement of the unfeeling nature of matter, should be ready reasonably to defend the logic of their own beliefs and to prove by demonstration the superiority of their human science of sensitive matter over the divine Science of infinite Mind. The man who would fain have us thrust a pin in the body to prove the sensibility of matter, might tell us how a pumpkin, for example, receives the thrust without pain or protest. The pumpkin is believed to be alive, yet gives no sign of consciousness or feeling. To exist thus painlessly in matter is surely enviable to those who uphold its dignity and divine right. But, alas, for the price of mortal knowledge!—the unfeeling pumpkin is transformed into a pie and eaten, and lo, a pumpkin no longer, it becomes a part of mortal man, and *feels* at last. A doubtful promotion truly, from peaceful ignorance to painful knowledge.

In just such ways, man's wisdom teaches us mortals are formed and preserved; here a little salt and there a little soda, a little lime and iron, a great deal of water, filtered through fruits and vegetables and animal flesh. A strange belief that would fashion the divine offspring thus, and produce in this accretion or aggregation of mindless molecules the power of thought and will. What would God be like if this were His kind of man? And what must con-

stitute the life of Spirit, the divine Principle of being, if His "image and likeness" is at the mercy of food and drink for substance and life? St. Paul wrote to the Romans, "For the kingdom of God is not meat and drink; but righteousness, and peace, and joy."

Who has the final logic of the situation, the metaphysician who finds no mind in matter, or the materialist who conceives of no mind without it? Those who decry the teaching of Christian Science on this subject should be able to give us a more wholesome and helpful theory in its stead; something that would better become the dignity and happiness of man as the son of God. If "matter is not the Christian's God" (Miscellaneous Writings, p. 23), and who will say that it is?—then he should have nothing to do with it except to overcome it as his Master directed. To seek life and joy where God has not placed them is a hopeless quest that ends in sorrow and darkness.

Those who make light of Christian Science because of its radical spirituality should consider well their own premises and draw logical conclusions therefrom. Can they give a rational explanation of human origin and development apart from mind? Take, for instance, the phenomenon of age appearance; some look old at thirty, others look young at sixty. Two men of equal age may be twenty years apart in their appearance; are these differing exteriors the result of thought or of food, of experience or of digestion? Is the same matter young as a vegetable but old when assimilated into human tissue? Will the materialist tell us what there is in matter that makes the old man old and the young man young, bearing in mind his own premise that the matter we are supposed to carry about, and which constitutes our bodies, was thousands of years old when we were babies?

The questions multiply concerning common, every-day conditions which cannot be answered from a material basis. After two thousand years and more of human material speculation and philosophy, the words of Isaiah might be appropriately quoted, "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" For, after all, what is really known of matter even by its advocates, those who would make of it the substance and life of man, the boundary of human perception, and the horizon of mortals' hope? Do the generous impulses of men, their lofty sentiments and exalted virtues, emanate from a bit of tissue under the skull, which, if taken out and laid on a plate, would be considered as supremely inert and as devoid of sensibility and volition as the pumpkin referred to, of which in part it may be composed? Were the peerless productions of Shakespeare, which still delight the world, the result of some secret combination of mineral and water in the gray matter of his brain? or has human, scientific research yet discovered the key to that combination?

Materialism would confine the joys of man to those that reach him through brain and nerve, but it does not define the medium by which he may rejoice when these exist no longer. Do the conditions of nerve filaments control the pleasure which should result from doing good, or the peace of knowing God? Does God require a brain in order to

think, or nerves to feel? and if not, why not, if these are necessary to man, who is the divine image? Christian Science declares that "matter is not the organ of infinite Mind" (Science and Health, p. 191); the materialist must either deny this or concede the Christian Scientists' position that mind and not matter thinks and feels; for every manifestation of intelligence must proceed from the Infinite.

If matter constitutes life,—and this is the essence of materialism,—what takes it away? If matter is at peace with itself, what disturbs its harmony? If the human, material laws regarding food, air, and water—the supposed necessities of life—are observed, what causes mortals to pine in sickness and disease, and succumb to death, while these things are in abundance at his hand? Where is the logic of calling that a necessity of living which will not preserve man from dying?

A clot of blood in the brain, or the scratch of a pin, is said to have produced death. Think of the pity of it, that man, "the noblest work of God," can be robbed of Life (God) by a bit of thickened blood which one could hold on a needle's point. Paul said that the Christian's life is "hid with Christ in God;" then how could matter give or take it away? The apostle's words imply that the Christian should not look to matter for his life, nor fear its power to kill. Paul further declared, "The life which I NOW LIVE IN THE FLESH I live by the faith of the Son of God;" he did not consider life, even in the flesh, as dependent in any way upon the state of the blood or its circulation through the brain. How do those Christians who defend the claims of matter, or the flesh, in opposition to the spiritual teachings of Christian Science, agree with Paul?

Christian Scientists do not feel that their attitude toward the flesh, or matter, is different from that which any Christian's should be, for their only standard of Christian life and practice is that given them by Christ Jesus, who understood life and law better than did any before or since, but who never taught his students to consult brain or nerve or blood as to man's right to be happy and well. If the Christian would worship the God of his Master, he should not speculate as to the existence of any other, however much he may be tempted by the mortal sense of evil to admit the life and power of materiality.

Man could never hope to reach God, and immortality, if he "begins as a material embryo" (Science and Health, p. 476), even as water cannot rise above the level of its source. In its first or last analysis materialism is but the fettering of mankind to ignoble passions, to illusive pleasures, and inevitable pains. Is this the highest standard of manhood which the materialist allows himself and us? Who that hopes for freedom from sin and death would plead for a theory, a philosophy, a science, or a religion, that points to this goal; that condemns man to die the moment he begins to live, whose brightest lights are snuffed out as a candle, and whose ideals of perfect manhood are at the last but unshapely heaps of mold? Who that has measured the sadness of this belief, who has sounded the hollow mockery of its joy or tasted the bitterness of its pain, would protest against the pure, exclusive spirituality of Christian Science, wherein man is held to be the manifestation or idea of divine Mind, a spiritual being under the government of omnipotent Truth and Love. Which of these two ideals of manhood should appeal to the aspirations of men for peace and immortality?

Physics is confessedly unspiritual, neither law nor factor in the realm of Spirit; hence physicality is not the medium through which man can "worship him [God] in spirit" or "in truth." What other conclusion is there but that the flesh, or materiality, is not the mode whereby God, divine Spirit, expresses Himself? Opposites do not mingle nor express each other. To couple good with evil, Spirit with flesh, or Mind with matter, and call it man, is the vain effort of

that false sense which Jesus defined as the devil, and as neither existing in Truth nor having truth in it.

Those who aggressively champion the claims of matter in opposition to the teaching and practice of Christian Science, do so, not because of the advantages of their own belief, but because, not having availed themselves of the spiritual truth of Christianity, they are in darkness as to its existence and scientific applicability. Those who have recovered health and strength through Christian Science after material law had condemned them to helplessness or death, have proved the existence of an operative spiritual law, outside the range of material knowledge, which is capable of annulling material law and penalty. These demonstrations of man's present right to spirituality are at variance with the discord and mortality which make up the supposititious life of matter. Mankind must choose between Spirit and the flesh, since to combine them is impossible.

The effort to be satisfied with the so-called life and limitations of matter or the flesh, is the daily farce and folly of the world, whose pathetic failure has ever mocked the hopes of mortals through all the lengthening past of time. That matter is the life and home of man, his refuge from poverty and care, his ease from pain and his defence from death, has been the serpent's lie to every generation of the Adam race; a lie whose falsity is exposed in mankind's long, continuous, terrible prayer for life and peace. The darkness that envelops the concept of man as embodied in a "fortuitous concourse" of changing atoms has never radiated one ray of light upon the pathway to immortality, nor broken one link of human servitude to evil. Over the darkness and void of this vain belief has moved the divine light of Christian Science, revealing the inanity of matter and evil, giving back to man the joy and perfection of his spiritual birthright, and claiming infinitude for God. Jesus said, "I am come a light into the world, that whosoever believeth on me should not abide in darkness."

The influence of Christianity is not to confirm men in sensualism, but to spiritualize their thought and life, and hence Christians who would live as their Master, cannot be materialists any more than rays of light can hold fellowship with darkness. The ideal Christ-man which Jesus represented, and which he endeavored to unfold to mortals, has no affinity with the flesh, but is the Saviour from it. "Christianity causes men to turn naturally from matter to Spirit, as the flower turns from darkness to light" (Science and Health, p. 458).

Christian Science and materialism must be judged by their fruits, by their influence on the morals and happiness and health of men. That which turns thought away from sin to righteousness, which makes men less selfish and more kindly, which makes joy rather than sorrow the home's abiding guest, which enables men successfully to subdue their evil passions and desires and makes them delight in honesty, purity, and love, which gives them health, strength, and a growing sense of peace,—that which influences men thus is surely most acceptable in the sight of God, and is fraught with richest blessings for mankind. The way of the flesh has ever been one of weariness and pain, a way of sin and enmity, and has the common end of death for all. The fruits of Christian Science designate it as the highest and broadest Christianity, giving men deliverance from the vanity and delusion of material sense and self, and fulfilling the prophecy of Zacharias concerning the Christ, "To give light to them that sit in darkness and in the shadow of death, to guide our feet into the way of peace."

A Glance Backward and Forward.

CLARENCE A. BUSKIRK.

THE hoof-prints of a personal devil and the scent of brimstone have well-nigh disappeared from modern thought. Our ancestors had so many dogmas and creeds of their

own brewing to pour into the vessels of the Christian religion that it is a marvel the original contents were not all spilled upon the ground. The mediæval superstition that an ancient theological dogma or creed has something sacred about it, so that it is sacrilegious to touch it, which has long been a darkening and oppressive fog before the eyes of men, has, however, about drifted from the horizon. Not a few of the dogmas and creeds still found imbedded in theology appear to the twentieth-century men and women, utterly foolish, and it is not strange, therefore, that there has been a decay, strand after strand, of those ropes of traditional belief with which scholastic theology formerly towed the world in its wake.

Not yet wholly finished is the great struggle against the theological errors which fastened themselves on the Christian religion as survivors from ancient paganism, or as the progeny of mediæval superstition; but the signs of an assured victory are appearing in the sky. Man's trust in God is approaching its lustration. Nearer and nearer is the glad day, it has almost come, when, without shivering with fear or waxing hot in indignant protest, honest men can think about their destiny and duty as immortal beings. The kettle-drums have been pounded long and loudly, and our race has suffered much from their stunning noise, but they are growing silent; and glad and sweet, like the happy song of a bird, "when purple morning breaketh, when the tired waketh, and the shadows flee," begins to rise from the world's heart the joyous and reverent recognition of the eternal Ever-presence who has declared, "I am with thee to deliver thee!"

Useless, and oftentimes worse than useless, has been the work, however valiantly attempted, of those who have merely sought to destroy falsehoods without building up truths in their stead. We must have the cradle of truth as well as the tomb of error. There is no vacuum in the beliefs of men. To annihilate, and then to stop short, is of very doubtful benefit to humanity. We must have spiritual growth to effect the destruction of error.

It is the nature of a thought-advance that its beginnings must be humble. Hercules is sure to be an unrecognized infant during a considerable period; but the advancing years wax and wane while the Pleiades shine on steadfastly. A thought-advance begins with a few, it may be with one seer only. Emerson wisely said, "The truth and the hope of any time is to be sought in the minorities."

The great work achieved by Christian Science in the destruction of the dragon is already an established fact in history which can never be effaced. "To us there is but one God, the Father, of whom are all things, and we in him." The perpetual shadow of fear which has rested so long on the forehead of scholastic theology has not been able to withstand the serene radiance of absolute hope and faith and love. Into all the channels of modern religious thought the steadfast joyousness of the Christian Science concept of the Divine lovingkindness has penetrated steadily. The period of disrespect and sneers for our great Leader and her work has passed, and to her is now applicable the poet's description of the abiding mountain,—

Though round its breast the rolling clouds are spread,
Eternal sunshine settles on its head.

Mrs. Eddy's teaching has been no theological kerfing-machine. It makes no adjustments in order that the old theological planks may be bent to our likings or prejudices. It tenders and it accepts no compromises with error. For friend or foe it is never found to

crook the pregnant hinges of the knee
Where thrift may follow fawning.

Our Leader has always been found stating what she understands to be true, with her eyes bandaged against the consideration of all mere expedencies and all propitiatory half-truths; and the meed of praise ought not to be stinted for those patient and devoted pioneers who, however re-

viled and misrepresented, have carried forward the banners of Truth to an assured victory.

There is, however, great work still to be done. The "good fight" is not finished. Materialism, a seemingly vast and powerful octopus, is dwelling in the dark abysses of human thought, and to vanquish and destroy it means much. While a nation is young and weak, materialism seeks other lands as better suited to its habitation. But when a nation seems to have grown into a safe deliverance from its youth and weakness; when the ovens are overflowing with bread, and the stalls are filled with their fat oxen; when heroic fortitude and patience become of more unfamiliar use, then is there danger that God be forgotten, that sympathy and love for our fellows be lost in selfishness, and devotion to virtue and duty disappear in self-indulgence and enervation. It is then that materialism becomes more dangerous to a nation than sword or sedition. When men and women become pleasure-seeking and retrogressive, sensual and degenerate, then the Nebuchadnezzar beliefs of materialism send their mouths to the ground like cattle. What is to be expected as fruitage, if there has spread among the people the materialistic idea that happiness is earth-born and earthly, that its fruits and flowers are purchasable with money, that virtue is an illusion, that heavenly faith and adoration are only dreams? Is it to be wondered at if everything really sweet, fair, and lovable is found to have been emptied out of the honeycomb of such lives?

History is full of warnings of the sure decay and destruction awaiting the nation which forgets that man is a spiritual being, and that he is governed by spiritual law. Unless resisted by truth the icy breath of materialism will seem to desolate our fair and teeming land as inevitably as Hymir, the frost-giant of ancient myths, could split pillars with a single breath from his nostrils. All the national dramas upon which the curtain of history has risen and fallen have ended in dire tragedies when, in the fruition and arrogance of material success, a people have forgotten their dependence upon God because the constancy of His protection has come to be regarded as a system of physical laws.

To those familiar with the works of our revered Leader, the writer has no need to say that they are replete with the antidote for materialistic thinking. How shall the rank and file carry on "the good fight" against the threatening materialism of the age? The answer is manifest. By spreading the Gospel that Spirit is All in all, by carrying this healing truth into daily life and conduct; so doing, we shall prove both to our neighbors and to ourselves the efficacy of our faith.

Camelot; or, the Town of Seekers.

VIOLET M. BELL.

WHAT find we, friend, in Camelot, the Camelot of to-day; what for him that hath the eyes to see, the ears to hear the spiritual meaning of this ancient tale of knightly deeds and thoughts? Is there a meaning in it for us who, as Christian Scientists, have come into the lists of error as knights of Spirit to fight for that which is good and acceptable to God? Who is our King Arthur, but one who points the way to the quest of the Sangreal or spiritual life, who wields the sword of Truth, and helps the knights of Spirit to attain the high honor of a siege by that Round Table which to us signifies perfect harmony with God.

To the ear of him who hears, comes the strong sound of wings beating towards the light, the cry of those dissatisfied with material vision, yet almost unaware that they are crying for God, from the least to the greatest.

Camelot is the town of seekers, its high and low classes are marked by the spiritual or material character of its citizens, for hither they all come. Here we find the physical scientist seeking the cause of matter, little knowing that matter is not real, little dreaming that his search is useless, for God

all glorious stands behind a cloud to him; it will lift one day, and he will understand. Here, too, is another, piling shining heaps of gold, knowing full well that one day he must leave them, but not knowing that he is playing with dream shadows, that when he understands, he will see that what he and the world has thought a miser, was in reality an infant without understanding. Another is crying for love, earthly loves to keep his sense of loneliness away, but one by one these earthly ties slip from him, till one day, looking up to the eternal ether, he sees only God, and then realizes that in God he has gained all things. And so they go on, these dwellers in Camelot, consciously or unconsciously seeking for Truth, for something higher and surer than themselves. The highest of the seekers call their quest God, the lowest call it ease or fame.

In reality all this people of blind eyes and deaf ears are seeking for God; they will never rest till they find Him. What if these dwellers in the Camelot of to-day are slumbering? What if they do not hear the cry which has come to the world in Christian Science, "Behold, the Bridegroom cometh"? In an hour that ye think not of, oh world of materiality, He has come. Which of you like the wise virgins is waiting with lamp filled with spiritual oil, ready to light your comprehension of the truth? The lamps of some are not burning, and so when He comes it is night to them, the night of material things, and they do not see. "Watch therefore, for ye know neither the day nor the hour wherein the Son of Man cometh."

These, then, with lighted lamps, true knights of Spirit, come fully equipped to the lists at Camelot. Clad in the armor of Spirit they meet and overcome their deadly foes, sin, sickness, and death. They conquer the lusts of the flesh, the material, mortal mind; they are healed, and wonder, and understand.

Christian Science teaches us to see the cup of our Lord. Like Sir Percival we cry, "What may this mean that we be thus healed, and right now we were at the point of dying!" for we too realize the holy truth, the great glorious law of liberty, which, through a better understanding of God, has made us free from the law of sin and death.

[Written for the *Sentinel*.]

The Call.

MARY IRVING KEITH.

EYES with love so full and tender
Said to us, "I know you all,
You are God's own blessed children
Hearken to my loving call.

"Go ye forth and cast out evil,
Heal disease and raise the dead,
Freely give of your receiving,
This is what our Master said."

Some had eyes, yet did not see him,
Some had ears and did not hear,
But to those who caught the vision
Came the message strong and clear.

Blest are we above all people,
"Yea, thrice blessed" in this call;
Ministers to those who suffer,
Teaching them that "God is All."

Sometimes a fog will settle over a vessel's deck and yet leave the topmast clear. Then a sailor goes up aloft and gets a lookout which the helmsman cannot get. So prayer sends the soul aloft, lifts it above the clouds, and gives us a chance to see which way to steer.—C. H. SPURGEON.

Selected Articles.

A Word for the Christian Scientists.

Quite a while ago the habit of many newspapers of poking fun at Christian Science went out of fashion. Attacks on Christian Science because of isolated cases of ignorant followers is now almost in the same class as persecution of the Jews. It is therefore the more remarkable that a local newspaper seized upon the case of a Whittier lad who was treated by Christian Science, and who died, as the basis for an attack upon the faith.

There are followers of every faith who, through ignorance, bring criticism upon themselves, but there is no reason why these individual cases should cause an attack upon a religious belief. An attack of this kind upon Christian Science is just as senseless as an outburst directed against the Methodist, the Presbyterian, or the Catholic church because a member has gone wrong.

This is not a technical discussion of the merits or demerits of Christian Science. Mrs. Eddy says "Christian Science explains all cause and effect as mental, . . . It shows the scientific relation of man to God" (*Science and Health*, p. 114). Can you find anything so terribly offensive in that? And, moreover, it is almost a sure thing that the newspapers which still continue to attack Christian Science have never even read that much of Mrs. Eddy's doctrine.

The Whittier incident may have been one of these cases which are found in every religion, or the case may have been misrepresented by the newspaper. At any rate, it simply proves that we are not so far removed from our witch-burning ancestors as we think, when we are so intolerant as to ridicule and attack a belief which is comparatively new, and which generally we do not understand.

All religions have of necessity certain fixed characteristics, and each has its inherent qualities or defects.

"But," as "Wagner's Simple Life" says, "if your religion serves to make you think yourself better than others, quibble over texts, wear sour looks, domineer over other men's consciences or give your own over to bondage, your religion is worthless—it separates you from God and man."

Newspapers won't attack Christian Science much longer. They will become educated and broad-minded enough to give it as fair a show as they give other beliefs. That a local newspaper has attacked it is simply the exception to the rule of tolerance which has given this country all good religious beliefs and accomplished remarkable progress in the way of education.—*The Los Angeles Record*.

A Minister Changes Views.

Northport, Long Island, October 1.—The Rev. Dr. Samuel T. Carter, for many years a member of the Presbytery of Nassau, has sent to all the members of the Presbytery a letter that has caused a decided stir among the ministers. Mr. Carter now lives in New York. He says in part,—

"I feel that we owe to our people a better statement of the doctrines of the Holy Scripture. It hurts the consciences and intellects of our best people to be assured, on Divine authority, that the world was made in six days; that a plague came on Israel because David numbered the people, as we do every ten years, or that the Holy Ghost approves of dashing 'the little ones against the stones.' The attempted explanation of such utterances does credit neither to our intellect nor our conscience.

"Surely we ought to have a better doctrine of sacred Scriptures as an advancing revelation of God, while accepting it as containing the supreme utterances of spiritual truth and as being a faithful guide to eternal life.

"I cannot accept the basis of the scholastic theology in the

fall of Adam, so I cannot accept one of its chief results, the endless punishment of the wicked. I can in no way make that fit in with the love of God.

"As you will perceive, my denials pertain to ecclesiastical theology and not to the New Testament gospel. That I accept with my whole heart and as cordially as any man. If you determine that one receiving the whole gospel of Christ, but rejecting these additions, can remain in the Presbyterian ministry, I shall be greatly relieved; but if you conclude otherwise, I hereby ask for a letter of dismission to the Manhattan Congregational Association of New York City."

New York Tribune.

You published a letter in yesterday's *Globe*, signed by George L. Pomeroy, in which the writer suggests that Christian Scientists build a home for that class of young women who, through no fault of their own, may find themselves temporarily destitute and out of employment.

Inasmuch as this subject has come up, it may be well to state at this time that Christian Scientists are already doing, in their own way, the very thing that your correspondent recommends. Instead of building homes, however, they are dealing with the question in a way that seems to them even more practical, by disseminating a knowledge of the Principle of self-help. Instead of dealing only with the effect of poverty, Christian Science meets this evil in its germinating ground; namely, the human mind.

The churches, reading rooms, and institutes which have been organized and are being maintained by this denomination are meeting the genuine needs of a very large proportion of the class referred to. Christian Science also lays great stress upon the institution of preventive measures, believing that the best remedy for poverty and destitution is to avoid its occurrence by the employment of a prophylactic method. As an illustration of the above, it is a matter of fact that the improved health and renewed courage resulting from the teaching of Christian Science, have reduced to a minimum the element of poverty in the ranks of the Christian Science church.

RICHARD P. VERRALL.

New York Globe and Commercial Advertiser.

The Christian Scientist, of all men, has learned the necessity of proving all things and holding "fast that which is good." His experience, as a general rule, has been very much like that of the woman who spent all her living upon physicians, "neither could be healed of any," and he has received the blessings of health only by studying and applying the great healing truths and promises of the Bible after having given material remedies a thorough test.

That God has given man the ability and opportunity to work out his own salvation cannot be disputed; and, furthermore, He demands that this should be done in the way of His appointing. If we are to take Jesus for our example, we find that nowhere did he use, or instruct his followers to use, any sort of medicine to heal the sick, and yet he said, "The works that I do shall he do also."

ALBERT E. MILLER.

Chester (Pa.) Republican.

The celebration of Emancipation Day has come to mean to me, not the celebration of the old emancipation of slavery, which must have come anyway, but the celebration of a newer freedom,—the liberty to do, to learn, and to be what God intended us for; to live up to the best that is in each of us.

PAUL DUNBAR to his people.

Dayton (O.) Herald.

We must be saved, if we are saved at all, by the strength of our convictions, not by a pious regard to their weakness.

EMERSON.

The Lectures.

Concord, N. H.

Mr. Bicknell Young of Chicago, lectured on Christian Science in the new First Church of Christ, Scientist, Sunday evening [October 16] at 7.30.

The audience was a thoroughly representative one, every seat in the beautiful auditorium being taken. Many stood throughout the evening, and hundreds of others who desired to hear the words of Mr. Young were unable to gain admission. Several prominent Christian Scientists were present from Boston, and a large delegation came up from Manchester.

The speaker was in splendid voice, and his distinct pronunciation and enunciation enabled every one in the large audience to follow his every word. Throughout he was listened to with the closest attention, and deep interest was manifested by all present.

The Rev. Irving C. Tomlinson, First Reader of the church, welcomed those present in well-chosen words, and introduced Frank S. Streeter, Esq., who presented Mr. Young. Mr. Streeter spoke as follows:—

My Friends:—I am very glad to be here with you tonight to listen to the message of the eloquent teacher who is to address us. It may be that most of you have given your adherence to the faith that is here taught, and that some are here as investigators or seekers after the truth.

It is well that this should be so; that when a new direction is given to the spiritual forces and longings which must exist in the heart of every thinking man and woman, such men and women should pause, hear, and consider each for themselves.

In all history, the world has never been more tolerant of individual religious beliefs than to-day. The walls which separated from each other churches and congregations of different beliefs are crumbling away and have almost disappeared. Iron-bound creeds, which formerly fettered the souls and intellects of the communicants of so-called orthodox churches, have become more elastic, and to-day the Jews and the Gentiles, the orthodox and the liberal, are welcomed to each other's places of worship and there together have their thoughts directed to the same, one, eternal God.

The thinking man and woman of to-day are not hostile to any faith which is sincerely held, provided it exercises a restraining and correcting influence upon human conduct.

The great-hearted Washington said to his friend Lafayette,—

"I am disposed to indulge the professors of Christianity with that road to heaven which to them shall seem the most direct, plainest, easiest, and least liable to exception."

Washington was a hundred years in advance of the general thought of his time, but the world is catching up.

In the spirit of seeking the truth for ourselves, and with the broadest sympathy and tolerance for the views of others who are also seeking the truth in their own way, we come together in this beautiful church to listen to the explanation of a faith which is sincerely held by many and in a marked degree seems to exercise a tremendous influence for good upon human conduct.—*Concord Patriot.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Remember the Sabbath Day.

WE recently received a request to say something in the *Sentinel* about the proper observance of the Sabbath, but the necessity for advice to Christian Scientists on this subject did not at once appeal to us. We have since concluded, however, that the very fact that such a request has been made is of itself proof that there may be such a need as our correspondent mentions, and that something can be said to the advantage of the Field.

The commandment is, "Remember the Sabbath day, to keep it holy," and with this in view it is needless to say that Christian Scientists will so order their conduct that the spirit and the letter of the law will coalesce in their lives, and that they may thus be saved from doing anything which can in any wise offend the highest moral and religious sense of the community. This is the moral and spiritual requirement of Christian Science, and adherence to the teachings of Science and Health and the Church Manual will bring it out in our daily living. We once heard of a lady who was so filled with the desire to show that Christian Science had liberated her from her former religious beliefs, that she really inconvenienced herself in order to save her weekly mending until Sunday so that she might do it on that day in full view of her neighbors. It is needless to say that this display of contempt for the proprieties did not raise her in the estimation of her neighbors, and that the Cause of Christian Science in the city in which she resided suffered by reason of her conduct.

Christian Scientists should know that this command to keep holy the Sabbath day does not mean that there is no call for them to keep holy the other days of the week. Every day is a day of thanksgiving and prayer, and should be made fruitful in the service of Truth, but this does not imply that a long countenance and a lugubrious manner should be cultivated or assumed for Sunday or any other day.

When the Pharisees assailed Jesus because his disciples plucked and ate the corn on the Sabbath day, he said, "The Son of man is Lord even of the Sabbath day," and when they found fault with him because he healed the withered hand on the Sabbath, he said, "What man shall there be among you, that shall have one sheep, and if it fall into a pit on the Sabbath day, will he not lay hold on it, and lift it out? How much then is a man better than a sheep? Wherefore it is lawful to do well on the Sabbath days."

The best advice we can give our readers (though we are quite sure they do not need it), is to obey the commandments at all times, conform to the recognized proprieties of life as nearly as possible, whether the day be Sunday or Monday, and refrain from everything which may put a stumbling-block in the way of a neighbor.

If we are living the life of a Christian Scientist, and are doing the work which comes to us as followers of the Nazarene, we shall have neither time nor inclination to break the Sabbath either in letter or spirit, and whatever we do will be to the praise and glory of God. The desire for the frivolities and non-essentials of mortal existence will fall

away from us, our steps will be so ordered that our conduct will be above criticism, and we shall bring no reproach upon the Cause which is so dear to us. M.

Reliance on the Divine Nature.

Spiritual understanding is changeless.—*Science and Health*, p. 96.

THE stability of the universe, together with the possibility of faith, inheres in the revealed and demonstrable fact that Truth's essential nature is eternally maintained; that there are no uncertainties or inconsistencies in the divine manifestation and government; that God can but be God all the time. Upon repeated occasions Jesus incidentally called attention to the constancy of those orderings and sequences of nature on which the definiteness of human expectation is based. He taught that the surety and precision of its operations, the promise that "While the earth remaineth, seedtime and harvest, and cold and heat, and summer and winter, and day and night shall not cease," the invariable radiation of light, the persistence of parental affection, etc., all the experiences which have begotten the confidence that underlies so much of human judgment and activity, are to render their nobler service as stepping-stones on which we rise to an apprehension of the absolute reliability of spiritual law.

Our unquestioning assurance that the sun will return in the east, and that the seedling will bring forth after its kind,—this is to be the type of our restfulness in the certitudes of Truth. As the builder trusts his plummet, the mathematician his rule, the mariner his star, so are we to trust in the promises of our God. The mere suggestion of the possibility of such a faith will make apparent to all how far short of our privilege we have come, and how easily, therefore, our past failures may be explained.

Jesus declared that the source of all being is Love, and so far, therefore, as we apprehend the divine nature, and that from everlasting to everlasting it is without variableness or shadow of turning, in so far are we convinced that there is, and can be no cause for anxiety or distrust. More than this, we begin to realize that in fact there is no ground or explanation of disharmony, dis-ease, or death; that these things have neither place, authorization, nor being.

The more personal touch and significance of this uplifting thought appears as we remember that it is God who worketh in us to will and to do; that the power of Principle is present in its every idea, and it is the realization of this truth which gives authority and effectiveness to the word of healing which we utter. Jesus said, "Ye believe in God, believe also in me." Faith in Principle makes possible an intelligent reliance on its reflection. Inspired by this thought, St. Paul could write to the Philippians, "I can do all things through Christ which strengtheneth me." The highest order of faith is thus seen to be the consequent rather than the antecedent of that spiritual understanding with which it ultimately coalesces. It is the inevitable outgrowth of a right apprehension of the divine nature and of man,—that Truth as Principle and truth in reflection are one in quality and in the ability to do. To Timothy, Paul said, "I know whom I have believed;" and we are further taught that "Only through radical reliance on Truth can scientific healing power be realized." "Faith, if it be mere belief, is as a pendulum swinging between nothing and something, having no fixity." The "common custom of praying for the recovery of the sick, finds help in blind belief; whereas help should come from the enlightened understanding" (*Science and Health*, pp. 167, 23, 12).

A belief in the final supremacy of Truth is sometimes asserted as a reason for the indulgence of the present supremacy of error. How frequently do men say, or think, "Well, things are bound to come out all right in the long run, let

us not be troubled or too particular!" Such belief often clasps hands with doubt and fear, or hopes for ultimate freedom while conceding the naturalness of present bondage, and this explains its weakness.

Christian Science brings the incisive and stimulating assurance that we may so apprehend the divine nature and have such resulting faith as to become an avenue for the active and immediate expression of that nature, and this constitutes the supremacy of the Christ consciousness. It was for this spiritual realization, the endowment of "power from on high," that the Master counselled his disciples to tarry in Jerusalem, and it was this assurance supported by multiplied demonstrations which enabled the great Apostle to the Gentiles to glory in the grace of God which was manifest through him, "in the effectual working" of divine power.

That the presence, or absence of this unwavering reliance on the divine explains the success or failure of our ministry is apparent. He who is uncertain respecting the imminence, the infallibility, and the entire competence of Truth, lacks an essential to the fulfilment of our Lord's command, "Heal the sick." Trust—the availing faith—is an handmaid of assured reliability alone. It cannot abide where Principle is questioned.

A Place of Safety.

THE early history of the Hebrews reveals the fact that they were originally a pastoral people, and lived close to nature. No figure is more frequently and effectively employed in their literature than that of the shepherd and his sheep, and every devout student of the Bible loves the familiar Psalm which begins, "The Lord is my shepherd; I shall not want." We also find that Jesus used the same illustration, and toward the close of his healing ministry, when the need of a place of safety for his followers had become very apparent, he made frequent reference to the fold.

There are many evidences that the Master carefully instructed his disciples how to avail themselves of the Divine protection against every condition of mortal thought which would hinder the success of their healing mission,—a mission identical with his own, concerning which he said, "I am come that they might have life, and that they might have it more abundantly." In Acts, 20, we find Paul alluding to this teaching in deeply significant words. He says, "Take heed therefore unto yourselves, and to all the flock, over the which the Holy Ghost hath made you overseers, to feed the church of God."

Christian Science churches were established in view of the urgent need of protecting those who had been healed by Truth. These all discern sooner or later, that the material surroundings of their past experience fail to furnish the protection which they find necessary, especially when they are but "babes in Christ." Indeed, they come to see that their former mental environment, with its belief in the reality of sin, disease, and death, was largely responsible for the discords from which they suffered, and to all such the atmosphere of Christian Science, with its faith in good, is unspeakably helpful and inspiring. Thus it can but be seen how all-important it is that we guard our churches against the old-time wolves of fear and anxiety, which brings a brood of other evils in their train. The fold should be a place of safety as well as of peace. In it should be gathered together those who recognize and obey the Divine power which heals sickness and sin alike,—those who acknowledge and seek to demonstrate the supremacy of Truth and Love. It is therefore the solemn duty of every member to guard his thought so that it may never become an avenue for anything which would menace the safety of the flock.

It should be remembered that we are making history, and while it may not be written on deathless page, as was St.

John's record of the "seven churches in Asia," nevertheless it is being inscribed upon the living book of the world's spiritual experience,—the record of those who rise from sense to Soul. To Christian Scientists, as individuals and as churches, comes the word of divine Principle: "I know thy works." Are we ready to respond with joy to this pronouncement of Truth? Our Leader emphasizes the assurance of divine protection to the fold when she says (Miscellaneous Writings, p. 151), "If He be with us, the wayside is a sanctuary, and the desert a resting-place peopled with living witnesses of the fact that 'God is Love.' . . . Not more to one than to all, is God demonstrable as divine Life, Truth, and Love; and His people are they that reflect Him—that reflect Love. He guards, guides, feeds, and folds the sheep of His pasture;" and of these the Master says, "No man is able to pluck them out of my Father's hand." K.

Letters to our Leader.

1532 North Nevada Avenue, July 7, 1904.

Beloved Leader and Teacher:—I wrote you a letter the morning after the beautiful day at Concord, June 14, endeavoring to express my appreciation of your recognition of my return from abroad, and of your sweet "God bless you." I also gave a brief sketch of the work on the other side. Mr. K. informs me that you did not receive it.

I now renew and re-emphasize my thanks for your loving greeting at Concord, as I appreciate it all the more for the time that has intervened. I will also run over again the ground covered by the sketch of the lectures.

I lectured first at Dublin, Ireland, to an audience of about eight hundred, which the local Christian Scientists thought was very good for that place. The attention was as close as that of any audience I ever addressed on this side, and we hear since that good was done.

Next at Belfast, Ireland, to an audience of about one thousand. I was introduced here by a prominent Scotch Presbyterian elder, who only a few evenings before had presided at a meeting in which an American evangelist had attacked Christian Science. He made a most kindly introduction and at the close arose and said, in substance, that he indorsed all that had been said, and that he felt sure he was expressing the sentiments of all present in doing so. The audience applauded as if in approval.

An amusing incident occurred here. A few moments before I went on to the platform I was handed a note written on the reverse side of one of the cards of invitation sent out, addressed to me, and saying, "I read the Bible and know of its power unto salvation. If what I hear of Christian Science is true, you and all of your Board are going to Hell, and when you get there please remember that at Belfast, May 5, 1904, you were duly warned. Don't sneer. S. Martin."

At the close of the lecture I read the note omitting, of course, the name, and said I received it in the spirit in which I believed it was written; that if I had heard of Christian Science what most likely he had, I, too, could have warned others against it, that I did not know whether or not my friend was present, but if he were, I submitted to him the fair question as to whether, after hearing what was said, and especially what was read from the Bible, he was still of the opinion that Christian Scientists should go to the place mentioned. The incident amused the audience very much.

I lectured in succession at Manchester, London, Newcastle, Edinburgh, Brighton, Cambridge, and in London a second time. These lectures were all well attended and certainly well listened to. The London and Manchester lectures have been reported in the *Sentinel*. The second given at London was as well attended as the first,—about three thousand being present at each. The largest audience was at Manchester, about four thousand. Cablegrams were

sent you from several places, giving you a general idea of the occasions, which you no doubt received.

The work is progressing well at London, Manchester, and Edinburgh. It is getting a foothold at the other places, but is yet in its infancy. One of the most remarkable things was its introduction to Cambridge through Mrs. Butler, wife of the Master of Trinity College. There are at Cambridge eighteen colleges, but Trinity overshadows them all. That Christian Science should have reached that great (material) educational centre through its greatest institution is significant, is it not? Mrs. Butler has done and is doing a brave work there. On the whole, I was astonished and pleased with the growth of Christian Science in Great Britain. One does not realize what it means there to take a stand against the established church, until one is brought face to face with the situation. It is almost like rebelling against the government itself, so closely are the two interwoven; yet there is a growing public sentiment towards the disestablishment of the church.

I enclose a letter from Mr. James Marshall, a man of character and standing over there. His reference to you is so fine that I thought you might wish to see it.

I regret that we cannot be present at the dedication of the very beautiful church in Concord, but we shall surely be there "in spirit and in truth." I fear this letter is already too long. We both send our sincere and unchanging love.

Yours in Christ.

S. J. HANNA.

Mr. Marshall's letter, above referred to, is as follows:—

Carthew, Poole, Dorset.

My dear Judge Hanna:—I am delighted to know that you are with us, and hope to have the pleasure of making myself known to you on Thursday, before or after your lecture.

I have before me your kind and valued letter, written to me as long ago as December 7, 1895, and I am reproving myself severely for not having acknowledged your great kindness by a suitable and speedy reply; but your letter embodied principles of such profound importance, that I have put off and off my intention to write to you, until I had learned something more about the subject.

I will not go into many details now, but will express my firm conviction that the Founder of Christian Science, by her prayers, expressions, teachings, procedure, and wonderful legislative and administrative ability in connection with her divine work, has done, and is still doing, more to bring about peace on earth, good-will to men, and to promote the kingdom of God and His righteousness than any other being since our Saviour carried on a similar mission, under less favored circumstances, for the rapid and wide spreading of Truth and Love. I will not say more now, as I am sure you will be overwhelmed with admiring friends anxious to say a few words to you.

My late dear wife, one of the best-intentioned women in the world, to whom you referred in a fatherly way in your kind letter, and who, alas! succumbed to a malady that nothing in the world could have overcome but a change of morbid thought to vital thought, such as is insisted upon by Mrs. Eddy (but it was rejected), said over and over again, "I like Judge Hanna, for I am sure he is a good man;" but, without enquiring, she regarded Christian Science as something destined to upset the truth as she knew it. In haste,

I remain, yours sincerely,

JAMES MARSHALL.

A Critic Answered.

Mr. Alfred Farlow's article, "A Critic Answered," which appeared in the June *Journal*, is now issued in pamphlet form in order to give it a wider circulation. It will have a very beneficial effect in removing prevalent misapprehensions of Christian Science. Price, 3 cents each. \$2.50 per hundred. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

I became interested in Christian Science nearly five years ago through the healing of my wife. She had what the doctors called consumption in its last stages. I had tried everything that I could get in the way of *materia medica*, and every doctor would tell me nearly the same story about her case. At last they only recommended for her a higher, drier climate, and when she would be at her worst to give her something to quiet her. This was the only thing they knew to do until she should pass on. The last three or four years of suffering, she was confined to her bed from three to eight weeks, and from two to three times a year, and there she would suffer with constipation, lung fever, hemorrhages of the lungs, until she could not speak above a whisper, for eight or ten weeks.

I tried different climates, but she was no better, indeed worse. At last she struggled along until the first of March, 1899. She had taken to her bed again. For two days and nights she suffered, and I called a physician. He came and diagnosed the case, and said that he could do nothing for her, but give her some morphine tablets to make her rest. I gave her two of them according to direction, and just before the time to give her the third, she called me to her bedside, and said, "Don't give me any more of that stuff, for it does me more harm than good," so I turned and placed them in the fire, though I did not then know anything about Christian Science. We had heard of it, but that was all. I gave her the last tablet at eight o'clock that night, and about nine o'clock the next day a lady who had been healed in Christian Science visited her, and introduced her to this great truth. She accepted it and thought she would try it. The lady loaned her *Science and Health*. She got the book about ten o'clock that day and read it until dinner was called. She ate a hearty dinner, the first in about three days, and that same evening she dressed herself, walked into the dining-room, ate a hearty supper and enjoyed it. She slept well that night. She borrowed this lady's copy of *Science and Health* two hours each day for eight days, and was healed. The first day that she read *Science and Health* she weighed about ninety-five pounds. Three months later she weighed one hundred and thirty-five pounds.

I became very much interested in Christian Science through the healing of my wife, which was so quick that to my understanding then, it was a miracle. As for myself, I had no idea that I needed it physically, for I thought that I was as hearty a man as there was anywhere, but I afterwards sought help for a chronic disease which had given me trouble for ten or twelve years. It had never kept me from work, but it was what is termed spinal trouble from kidney disease. I could not even stoop in the least without pain. This trouble was healed in one treatment in Christian Science. I have had some beautiful demonstrations myself, and could testify to many cases that I have seen healed through this great truth that has spread abroad through the work of our Leader, Mrs. Eddy. I realize that when Christian Science entered our door it was the beginning of a Pentecostal feast.

My growth in Christian Science has been slow, but I do feel thankful that divine Love is still leading me above the dark clouds of fear, and showing me the light which makes me know that God is All in all.

A. J. DARNELL, Houston, Tex.

I have long wished to tell what Christian Science has done for us. In the summer of 1888 I first heard of this wonderful healing through Mind. I had been a great sufferer for six years, although I had the best of care that *materia medica* and a loving husband could give me; but with it all I had been told that I could never get well, and had only

a short time to live. The physicians dared not try an operation, knowing that I could not live through it, and nothing else could save me, as they had exhausted every known means for my recovery. My husband heard of a Christian Science practitioner who was coming to the village three times a week to treat a neighbor. He wished me to let her come to treat me. We had never even heard of the Science before, and inquired earnestly about it. We were told that it was the same manner in which Jesus healed the sick when he was on earth; so after a little we sent for the lady. I will say here, that my doctor had told me that I was taking strychnine enough, each day, to kill a well man, and that I must not fail to take it; to do so would be sure death. The practitioner told me not to fear giving it up, Truth would take care of me.

I began to improve immediately in some ways, enough to convince me that there was more power in Mind than in drugs. After one month's treatment I went through a class. I was not thoroughly healed at that time, but was very eager to learn all about it. Others were so surprised at my recovery that they brought their friends to me to be healed, even before I had finished my class lessons. My teacher encouraged me, and I took up the work with fear and trembling, and such marvelous demonstrations of healing were the result of my earnest searching and work, that I could never doubt for a moment that it really was the work which Jesus had promised we could do if we would follow his teachings. My own father was healed at that time through absent treatments, after the doctors had given him up, from what they called his third attack of sun stroke. I well remember how earnestly I went to work for him after receiving word that I must be prepared for a telegram at any moment telling of his death. I did not even wait for a letter to reach him. The telegram never came; instead, after four weeks he wrote me a beautiful letter which I have to-day, telling of his recovery, through my help, and giving God all the glory. He at that time called it a miracle. He is a well man to-day. I could tell of many other cases, but this is sufficient to show how strong must have been my faith in the God-given power that had so suddenly been revealed to me. I had always read my Bible, but never had I grasped the meaning of Jesus' words until Science and Health came into our home. I formerly read the Bible because I thought I ought to do so, now I read it because I love to do so. Christian Science has been the only doctor in our home for fifteen years, and it has brought us through deep waters.

My own ailments at the time this glorious truth was presented to me were many, and chief among them was nervous prostration in its last stages. My husband had been subject to sick headaches from early childhood, and believed them to be inherited. He often had them twice a week, and they lasted twenty-four hours or more. He gave up all material remedies and they disappeared through reading and self-treatment. Our daughter suffered from the same trouble upon any unusual excitement. Christian Science has destroyed nearly every old ailment and every new one as fast as it appears. We feel that the healing of physical troubles alone is cause for great rejoicing, but words can never tell what the spiritual uplifting has been to us. About eight years ago we came to Brooklyn to live, and it was then my privilege to go through class with one of Mrs. Eddy's students. That class has meant much to my hungering heart. Each day as we go on we find some new cause for rejoicing that we have been led out of darkness into light.

My love and gratitude to our dear Leader, Mrs. Eddy, can only be expressed by my earnest striving to follow in the same footsteps, and bring out in my daily life this wonderful love that has been revealed to me through her. I am also very grateful to my faithful teacher.

MRS. H. E. HOTCHKISS, Brooklyn, N. Y.

About six years ago I awoke from a long dream to that new life revealed to humanity in "Science and Health with Key to the Scriptures," through the self-sacrificing love of our dear Leader, Mrs. Eddy.

My past had been very desolate through sickness and suffering of every sort. I did not wish to live, and thought death would bring me rest. Then came the blessed truth. At first I could not understand Science and Health, and I was often on my knees praying to God to give me the right understanding, to baptize me with the Spirit. I grasped its meaning slowly and learned that death was not the end, and that the knowledge of the true Life brings peace and harmony. The first which became clear to me was a passage in this book, on page 261, "Look away from the body, into Truth and Love, the Principle of all happiness, harmony, and immortality. Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

I become very happy in the study of this new-old idea, and I thought myself like Peter, James, and John, in the transfiguration of Jesus on that high mountain; but I had to come down as did they, and to follow step by step that narrow way which Jesus assigns us. The Bible, which I had read many times before, became a new book to me. The passages of Scripture, which I learned by heart when a child, helped me to understand it in the English language. I learned to overcome many false beliefs,—sickness in myself and others. I lived only in and with the two books,—the Bible and Science and Health, and sometimes when I was alone I felt such peace,—as if angels visited me. I am thankful to our heavenly Father-Mother God, who called me from the abyss of mortal sense, to the perception of eternal Life, through our beloved Leader, who has lifted up the standard of Truth, Life, and Love for the whole world. I pray that nothing may hinder me from striving to follow her example, to have the Mind of our Master Christ Jesus, to make Love my constant companion, that at all times I may be ready to help my brethren, wherever required; to make my whole life one Sabbath day.

MRS. JULIA C. MUENTER, Chicago, Ill.

I deem it a great privilege to tell others how I came into Christian Science. A lady in Boston whom I have never met, sent me Science and Health, as she had heard of me and knew that I was in poor health and very despondent. She wrote me many beautiful letters, which were very helpful, and suggested that I read this book as a spiritual help. I began to read Science and Health in November, 1903, and as I perused it I found it to be a great help. I became so interested in it that I abandoned all other reading except my Bible. I attended church one Sunday evening in December and realized that it was unnecessary for me to trust any longer in drugs. I have not taken any medicine since. All my old troubles left me that night, and they have not returned.

I had been wearing glasses for ten years, but of late I could not read or sew with them any length of time without causing my eyes to ache. I therefore decided to consult an oculist and have new glasses. This was Sunday; I had the name of a specialist, and was intending to see him Monday, but decided to wait a day or two. Wednesday morning—a dark, rainy day—I felt a little downcast, but got Science and Health and began reading. About ten o'clock I was led to take off my glasses, which I did, but could not see the letters, so put them on again. After a half hour I again removed them and began to see the letters, then words, and I read five pages. A gleam of the spiritual dawn revealed to me that I was healed by my heavenly Father. I prayed and gave God thanks and knew that I was a Christian Scientist. God had healed me of my illness, and my spiritual thoughts convinced me that this was the true religion, for it revealed to me the Comforter.

I have also been able to overcome other ailments. Through my healing, a teacher boarding in the same house has been led into Christian Science, and four others are looking into it.

Two days after my healing I met the lady who sent me the book. She rejoiced with me that I had reached thus far in Christian Science. This shows that we all should do our little for the Master by giving others Science and Health, or even a *Sentinel*, for this will lead some one to read our text-book. God is an ever-present help. I send this with love and gratitude.

MRS. MAY W. H., Philadelphia, Pa.

I give my testimony with great pleasure and a very thankful heart, that others may know what Christian Science has done for me and mine.

About the first of this year my little son, who is ten years old, was very sick. He had fever, and vomiting, also chronic constipation, bleeding of the nose, and catarrh of seven years' standing. He had been treated by doctors but they could not cure him. In one week's treatment by a Christian Science practitioner my little boy was healed. A few days later my little girl, seven years old, seemed to have a hard cold, and later, pneumonia. For three days we thought she might pass from our sight, but through the understanding of the practitioner who treated her, she was healed in a short time and is now going to school, perfectly well. These demonstrations have shown me the great healing power of God if we will only trust in Him. I have been cured of dyspepsia, palpitation of the heart, and a very bad cough. I wish to thank all those who have helped me to find the truth which makes us free.

MRS. B. CARR, Menominee, Mich.

I do not know how to express my gratitude for what Science and Health has done for me. Through the study of this wonderful book, I have been made well, and stronger than ever before. For many years I had trouble with my back. I employed different physicians who tried all sorts of remedies,—Spanish fly plasters, and burning my back from my neck down, which caused severe suffering, but neither was of any avail. The last doctor tried electricity, but without benefit, and so I was left to the mercy of *materia medica*, until I found the pearl of great price, Christian Science, which has entirely healed me, and brought peace and comfort that the world can neither give nor take away. I was also healed of indigestion. Every time I had an attack I thought it would be the last of me. After I had been reading Science and Health for a short time, one day, I felt this ailment coming on, and my first thought was, What shall I do? In an instant it came to me, Try Christian Science. I declared the truth of being, and when I came to the words, "God is All in all" (Science and Health, p. 468), the pain left like a breeze passing over me, and I have never had a touch of it during the three years since. This truth is indeed "the beauty of holiness." I have been helped in manifold ways, and through my understanding of God's word, as explained in Christian Science, I have also been able to help others.

I find Truth to be the great Physician, and I feel like giving thanks daily that there has been a way shown to overcome the ills of the flesh. The spiritual uplifting is beyond comprehension, it gives light to the path that leads to Life eternal. May the choicest blessings rest upon our dear Leader, Mrs. Eddy, through whom the truth has been revealed to mankind.—Mrs. D. N. C., Johnstown, N. Y.

I wish to express my grateful joy for sixteen years of almost uninterrupted health and prosperity. Sight has been restored where blindness seemed imminent, and robust health has taken the place of chronic weakness, through the beneficent ministry of Christian Science. This indeed means much, but the mental quickening, the spiritual awak-

ening, which followed the treatment and the study of our priceless text-book, Science and Health, are of infinitely more value.

My heart is filled with love and loyalty to our dear Leader, and this I am earnestly desirous of proving by daily deeds.—S. L. L., Rockland, Me.

Christian Science was first brought to my attention by the healing of my wife of appendicitis. While she was having treatment, my fear was so great, that the practitioner suggested my taking a treatment, saying it would help my wife as well as myself. I consented, and after having the treatment, what was my surprise to find that all sense of fear had left me. This so impressed me, that the following day I began a course of treatments for myself. I also bought a copy of Science and Health, and began studying it.

For thirty years I had been a slave of the tobacco habit, both smoking and chewing, but in three days the desire to smoke was destroyed, in two weeks I did not care to chew, and I have never had the slightest desire to use tobacco since. For twenty-eight years I had the social drink habit, but in one month I lost my taste for liquor, and am positively healed, and free. I had also used distance glasses for over five years, but soon discovered that I could see all right without them, so I never put them on again. I had my near-sighted glasses made stronger twice, but in three months after treatment I found I could read without them, so have not used them for reading to this day. My hearing had been very poor for four or five years, and was rapidly growing worse. One day I found I was healed, and my hearing is perfect to-day.

For over a year I had a chronic case of nasal catarrh, which, according to *materia medica*, was incurable, but in three months after taking treatment it left me, and has never returned. I also used profanity, but that went with my other bad habits. Christian Science has changed my home from one of discord, to one of harmony, happiness, and love.

For this healing and for the spiritual uplifting which has come to me, words cannot express my gratitude to God. I am grateful to our dear Leader, Mrs. Eddy, whose teaching has made the Bible the most interesting and instructive book I have ever read. I am also grateful to my practitioner, who has so patiently, lovingly, and firmly guided me from darkness into light.

DR. WILLARD D. BALL, Boston, Mass.

I wish to tell of the wonderful help our family has received since coming to Christian Science. My children have been helped in many ailments. My little boy, five years old, was taken with spasms when he was two years old, and lost his speech. I was advised to go to a specialist with him, but the medicine did him no good. I tried everything I knew of, but got discouraged and thought there was no help for him. My mother then told me that some one had spoken of Christian Science treatment. I told my husband about it, so he went and made some inquiries.

Some books and papers were given us to read, but we did not at first understand them. After we had read a good deal we thought there must be something in it, and we thank God that we now have our eyes open, and can see "the light of the world." After our boy had treatment he improved right along in talking, and he is stout and healthy.

I am thankful every day for the benefit we receive in Christian Science. My husband cares more for reading now than ever before, and when I rock my baby to sleep I take up the *Sentinel* and read. We love to spend some time each day in reading and in praising God for the good He has sent to us.

I am thankful to God and to our dear Leader who has

taught us to understand the truth. I am also very thankful to the practitioner who helped to bring us to Christian Science. My daily prayer is that I may live so as to be worthy to be called a follower of God.

MRS. C. G. JOHNSON, Moline, Ill.

I feel that I must not wait any longer to acknowledge some of the benefits we have received from Christian Science. It is seven years since I first began to study its literature, and although my husband, myself, and children needed the physical help, I sought it more eagerly in hopes of finding spiritual help. It was not long before we found that it supplies both of these needs. The doctor, who had been a frequent visitor at our home, has not once been in attendance since, and medicine is now unknown there. I had worn glasses for some years, and shortly before hearing of Christian Science I had gone to a specialist about my sight. He said I required very much stronger glasses, but I had been at so much trouble and expense trying to get suited before, that I concluded to do the best I could with the old ones. After reading Science and Health I put off my glasses, and could read large print. After some time I had treatment from a practitioner and my sight soon began to improve. As time went on, I was enabled to read fine print by lamplight.

My husband's hearing troubled him very much on account of his having had the grip so frequently, and his use of quinine. It produced confusing sounds in his head. He has not complained once since the first treatment he had in Science, which is fully six years ago. Although he and others of the family are not reconciled to Christian Science teaching, yet they enjoy its benefits. Two of our children and I joined the Christian Science Church here, and I am also a member of The Mother Church. The Bible was never read in our home so much as it has been the last years.

Sometimes when thinking over our blessings I am reminded of those beautiful words by our dear Leader, in Science and Health, "For victory over a single sin we give thanks, and magnify the Lord of Hosts. Then what shall we say of the mighty conquest over all sin?" (Science and Health, p. 568).—E. KRAMER, Owen Sound, Ont.

I was advised by a friend to try Christian Science, and I sent for a practitioner, who came to me, and I was healed in less than one week. From childhood I had never known a well day. I was healed of lung trouble of long standing,—consumption was hereditary in our family, my mother and other relatives having passed on with it, and the law of *materia medica* was that in a short time I must follow them. I had severe stomach trouble of ten years' standing, during which time I always retired without supper, as the fear of suffering from my food was so great that I denied myself even when hungry.

For over twenty years I had ovarian trouble, which was almost unbearable at times. It dated from the birth of my first child, and at one time the doctors advised an operation. I suffered from nearly all the ills that flesh is heir to, but, thanks be to God who so loved the world that He gave His only begotten Son,—that blessed Christ who was sent to us to open the eyes of the blind and set the captive free,—the truth reached me through my study of our textbook, which gives us an understanding of the Christ.

Words fail me to express what Christian Science has done for me in every way, for my children, and my home. The physical healing is but a small part of the blessing, the spiritual unfolding and uplifting is the pearl of great price. The half has never yet been told.

Thanks be to God, and to her who made it possible for me to receive such blessings,—that loving, consecrated woman, Mrs. Eddy, who has made clear to our darkened sense the one loving Principle, God, and thus awakened

within us an appreciation of our great Teacher, Christ Jesus,—our Wayshower to Truth and Love. I do not forget the help of the *Sentinels* and *Journals* and our Lesson-Sermons, which are meat and drink,—daily helps to overcome error. For all these blessings I desire to learn obedience and follow the leadings of Truth.

MRS. DORA STRICKLER, Colfax, Ia.

For a long time I have been prompted to tell others what Christian Science has been to me and mine, but this testimony gives only a small part. When I stop to think, there is not a day goes by, but I wonder what I ever did without Christian Science in my home.

Just before I heard of this Science I was looking for some one to take my three little girls, as it seemed that I would not live long to care for them. It seemed very hard to leave them. That summer, four years ago, I was expecting a sister to visit me. I was sure she would be willing to take one of the children, but when I asked her she hesitated. I shall never forget the feeling I had, but I can now see that it was best for me that she did not take the child. It was only a week later that I met a Christian Scientist who afterward became a very dear friend. I was helped from the first, but I had not then the least idea what had helped me. She sent me some reading matter, and in three months I was so improved that everything seemed to be more like heaven than I had ever dared hope for.

The thought would come to me, What if one of the children should be sick. I did not then know that I should have denied that suggestion of fear, but my lesson came. One of the little girls came in from school and said, "Mamma, it hurts under my ears." There was an epidemic of mumps, and I looked, and saw a swelling under both ears. For a moment I was in great fear, as she always had everything so hard, but the next minute I called her to my side alone, and opening to the scientific statement of being (Science and Health, p. 468), read it, and tried to know that God would help us. In a short time I could see that the swelling was going down and she was soon well. Now, if any one asks her if she ever had the mumps, she says "No," very decidedly, for she never knew what it was, and I did not tell her.

My own healing was not so quick,—it was over a year before I was quite well, but never for one moment did I doubt the truth of Science. I am very thankful for the physical healing, but the unfolding of the spiritual idea is so beautiful that words cannot half express it. I wish to thank the two Scientists who so patiently helped me along. The *Sentinel* and *Journal* are a great help in my every-day work.—ANNA JOHNSON, Owatonna, Minn.

[Written for the *Sentinel*.]

The Awakening.

AGNES FLORIDA CHALMERS.

O, little drop of dew,
Thy face is radiant.
The silent night, all through,
Thou waitest for the light,
Believing thou wilt be,
When morning drives away the clouds of night,
The image of the sun's sweet purity.

O, little drop of dew,
Thy lesson I must learn.
The silent night, all through,
My heart must trust and know
That I will wake to find
Myself, in Love's transforming morning-glow,
The perfect image of eternal Mind.

From our Exchanges.

A "Gospel of the Kingdom" that tries to reform the community without first reforming the men who constitute the community must inevitably fail to accomplish the end sought. The New Testament plan of uplifting society is based on a true philosophy. Regenerate the constituents of society, and you regenerate society. The reason why municipal reform is a failure in New York is because the majority of the people are not in sympathy with reform. And there can be no kingdom of God on earth, despite the dreams of Utopian philosophy, until a majority of the people—and a large majority—are willing subjects of the King.—*The Examiner*.

In discussing the great questions of the time, we should not forget that Jesus Christ is the solution of life's hardest problems. His utterances are perfect statutes for the regulation of the world's affairs. His Spirit is a perfect panacea for humanity's ills. We do not need to go beyond him for counsel. A study of his wisdom will amply equip the philanthropist who seeks the betterment of human conditions. Conduct him into any desert of need, and it takes on beauty and bloom. Admit him into any lane of misery and his passage through it transforms it into an avenue of comfort.—*Pacific Christian Advocate*.

No thoughtful man to-day believes that present existing ecclesiastical alignments are to be forever maintained. Something is coming in God's good time, more inclusive, more Christian. . . .

Such an influence as this at work in the world to-day, aroused to its fullest capacity of service, may be potent in shaping the form which the larger unity shall take. Only, before launching complicated schemes of immediate absorption and consolidation of the various Christian battalions, let us Congregationalists see to it that first of all we illustrate within our own ranks the fellowship and the unity, the mutual love and good-will, the willingness to sacrifice for and serve one another, which are the only agencies on earth that can bring about the unity which Christ prayed might prevail among his followers the world over.

The Congregationalist and Christian World.

The idealism which lies within every man's reach and is every man's need, is surrender to the urgent and passionate desire to give his own spirit the shape and quality of the divine Spirit, and to create in himself those traits and that attitude which he yearns to find wrought into the fibre of society; to be in his own soul that which he wishes all men were. Conditions, whether easy or difficult, are secondary; the eternal element of peace and happiness lies in every man's soul, beyond the reach of accident. They who seek heaven must take refuge in their own spirits, not in some solitary place at a distance; and they must find it, not in more congenial circumstances, but in a freer and nobler putting forth of the best in themselves.

The Outlook.

Looking at the Church collectively, many a man outside has cause to say, "What do ye more than others?" It is not abstinence but achievement that attracts men and wins a following. Christianity can convince the world only when manifested in its true character as the way of self-realization. For self-realization is the grand object toward which, however misconceived, in ways however mistaken, all men are naturally bent.

REV. JAMES MORRIS WHITON, PH.D.
The Homiletic Review.

We should hate not the sinner, but the sin that makes men enemies of God and truth and holiness.—*The Examiner*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

National.

The New York subway was opened to the public last week. The system, when fully completed, will consist of twenty-six miles of underground tracks, elevated structures, and viaducts, over which will run express trains at nearly a mile a minute, reaching to the city's northern and southern limits, and, diving under the East River, making the extreme eastern skirts of Brooklyn as accessible to the business districts as the heights of Harlem. It is estimated that over this vast system, and those of the Metropolitan Street Railway Company and the Manhattan Elevated Company, will pass annually more than 900,000,000 passengers. The total expenditure on New York subways will, it is estimated, amount to about \$205,000,000.

The Massachusetts Institute of Technology has received six prizes in the educational exhibit at the St. Louis Exposition, as follows: A grand prize for the general exhibit, a gold medal for mining engineering exhibit, a silver medal for special exhibit of analytical chemistry, a silver medal for special exhibit of drawing, a silver medal for special exhibit of photography, students' work, etc., bronze medal for special exhibit of transparencies. These six prizes were awarded in the group of higher education, which included all the colleges, professional schools, libraries, and museums.

It is stated that the efforts of the joint committee, charged with seeking a scheme for an educational alliance between Harvard University and the Massachusetts Institute of Technology, are likely to be successful. The plan to be presented to the governing bodies of the two institutions has already been prepared in the rough. No "merger" is contemplated, but a true alliance. Harvard University is to secure representation upon the corporation of the Institute, and in return the Institute is given place in the corporation of Harvard University.

The airship designed and built by T. C. Benbow of Columbus, Mont., last week made a successful trial flight in the aeronautic concourse at the World's Fair. After navi-

gating the air for fifteen minutes, during which the prow of the vessel was directed towards all points of the compass, it slowly descended to the ground near the starting-place. The Benbow airship weighs about six hundred pounds without an operator. The gas bag is seventy-five feet long and about twenty wide at the center, tapering at the ends.

The Venezuelan Court of First Instance has rendered a decision against the New York and Bermudez Asphalt Company, thereby confirming the attachment of the property of that company by the Venezuelan Government, a victory for President Castro. Last spring Venezuela seized the asphalt lake and appointed a receiver on the ground that the New York and Bermudez Company had violated its concession by not making certain developments. The company protested and the matter was left to the courts to decide.

The immense bronze statue of Frederick the Great, presented to the United States Government by the Emperor of Germany, arrived in Washington, October 17. It is covered with heavy canvas which will not be removed until the statue is unveiled on November 19.

The opening exercises of the celebration attending the laying of the corner-stone of the new Dartmouth Hall took place in the college church at Hanover, N. H., last week. The Earl of Dartmouth made the trip to the United States to be present for the occasion.

Preliminary figures of the registration of students in the various departments of Yale show the total number of students enrolled at present to be 2,995. This is the largest number in the history of the University.

The House of Deputies of the General Convention has decided to retain the title "Protestant Episcopal" on the title-page of the prayer-book.

Foreign.

While the United States' note inviting a second peace conference at The Hague for the purpose of broadening and strengthening the original convention has not yet been received by the German Government, it is understood that the Foreign Office there emphasizes Germany's wish for another conference. This would consider practical reforms and not touch upon the Russo-Japanese war except so far as questions of international law have arisen in connection with this war which demand a settlement in the interest of the world's peace.

The Russian Pacific squadron en route from the Baltic to the Far East, in passing through the North Sea last week fired into an English fishing fleet off Hull, England. The incident produced intense feeling in England and created a grave situation. An agreement has been reached between the British and Russian Governments to submit the question of the individual responsibility in the North Sea incident, first to a court of inquiry, and finally to The Hague Tribunal. With this understanding, the acute phase of the crisis has passed.

The acquisition of a superb portrait by Titian by the National Gallery of England is mainly the work of a few patriotic English men and women, materially aided by two American gentlemen, Mr. Pierpont Morgan and Mr. Waldorf Astor. Of the purchase price of £30,000, £18,500 was thus contributed, leaving only £11,500 to be found by the trustees of the gallery.

The French Government has recently bought, for the Luxembourg Gallery, three pictures by British artists,—two landscapes and a figure subject.

Industrial and Commercial.

The General Electric and American Locomotive Companies have built for the New York Central terminal service in New York City an electric locomotive, which demon-

strated in its recent test that it will ultimately provide high speed motive power for railroad traffic. In the test the locomotive attained a speed of sixty miles an hour. The locomotive is one of tarty or more which will be used by the Central for hauling passenger trains through the Park Avenue tunnel. With one of this type, trains of ten or more cars may be hauled at express speed of sixty to seventy miles per hour. The design and method of control are such that two or more locomotives can be coupled together and operated by a single engine driver from the leading cab. In general design the locomotive is double-ended and symmetrical in construction, and can be run in either direction with equal facility. The maximum horse-power of this locomotive is approximately three thousand, which is considerably greater than that of the largest steam locomotive.

California roadmakers during the past five years have made considerable advance in the practical application of oil in making good road surfaces. California oil containing a large percentage of asphaltum is used upon the road, which has been previously prepared by plowing and pulverizing to a depth of about ten inches to insure evenness in setting. When this has become hard and dry, the oil, heated to a temperature of 175-300 F., is applied. This combines with the soil and produces an oil-paved surface, dark brownish in color, free from glare, dustless, and that wears well under any traffic. It can be constructed for about one and one-half cents per square foot, while crushed stone, costs about twice as much, and asphaltum fifteen cents.

A project is under discussion for a ship-canal from the Rhine to the Danube. The proposition involves the dredging of the Neckar from Mannheim, where it flows into the Rhine, for a distance of 110 miles to Neckarems. The expense is estimated at about \$10,000,000. From Neckarems to the Danube, a distance of 71.5 miles, the beds of small streams would be followed, requiring a considerable amount of excavation and engineering work, which is expected to cost about \$25,000,000. There would be a certain amount of water-power available from the various locks and feeders of the canal.

A cargo of pitch is to be sent from the United States to Genoa, to be used there in the manufacture of briquettes, a fuel in common use in Italy and some other European countries. The pitch is used as a cement for moulding coal dust into the shape of bricks or balls. Heretofore Italy and other countries which use briquettes to a large extent as fuel have procured their pitch from England and Scotland, where firms have built up a large and profitable trade.

Statistics gathered from the Connecticut oyster-opening trade go to show that thirty-five hundred gallons of shucked oysters are shipped from that State to the West by express trains daily. The principal points of consignment are Chicago, Omaha, and Kansas City. By sending the opened oysters by express they reach their point of destination in good condition. The express companies make special arrangements for the forwarding of this class of freight.

The attention of professors at the University of Chicago has been attracted to the invention of a student by which it is claimed that cast iron can be mended by brazing, in the same manner that pieces of wrought iron are joined. Heretofore, it is asserted, no successful method of brazing cast iron has been discovered, although wrought iron has been brazed successfully.

During the fiscal year ended June 30, 1904, lumber exports from Gulfport, Miss., have exceeded for the first time those from any other Gulf or Atlantic port. Hitherto Pensacola has held the palm for lumber exports, but last year Gulfport made a record of 193,000,000 feet as against 174,000,000 feet for Pensacola.

Drugs and True Healing.

LEWIS C. STRANG.

IN the National Museum at Washington is a department devoted to the History of Medicine, which aims to present the chronological development of *materia medica*, and which affords a striking illustration of the erroneous derivation of the "science" which claims to heal suffering humanity by means of matter. It is graphically set forth in this exhibition that the practice of *materia medica* began with undisguised incantation. The first drugs were charms and amulets worn on the person. A direct descendant of these ancient superstitions is the habit of carrying a horse-chestnut in the pocket, which is supposed to ward off rheumatism, and of wearing an eel-skin around the leg, which is regarded as a preventive of cramps. Indeed, it is plainly, though perhaps unintentionally, indicated that the difference between the ancient tom-tom, beaten by the bedside of the sick to frighten away the devil, and the modern electric shock, given the body for the purpose of dislodging pain, is not so much one of kind as of time.

Nevertheless, definitely shown as these things are, the casual visitor customarily leaves the exhibition quite unimpressed by the lesson as to the false basis of *materia medica* so emphatically taught. Instead of noting the logical sequence between the charm of yesterday and the drug of to-day, the person whose perceptions have not been somewhat sharpened by an understanding of spiritual reality, marvels at the progress that medicine has made. Such a person seems to regard as of no consequence the suggestive fact that day after day honest medical men are frankly voicing their conviction that, from the standpoint of absolute science, drugging is a failure,—admissions which declare how generally the truth taught in Science and Health is striking off humanity's mental shackles.

An experience like the one just described has a compound effect upon the Christian Scientist. It strengthens him in his conviction regarding the basic absurdity of drug medication, and it further awakens him to the seeming hold that the false claim of its efficacy has on the human consciousness. The reason that the average person sees nothing in the medical exhibition at this museum to uncover to him the primitive and derivative error of *materia medica*, is because he is under the widespread mesmeric influence of the belief that *materia medica* is scientific. This mesmerism holds strong sway, not so much because humanity generally desires to be healed by material means, as because mortals fear that if they learn that these cannot heal them, there will be nothing to which they can have recourse for help. Mortals deliberately blind themselves to the failures of *materia medica*, because they fear to lose their faith in the only healing system they know anything about.

Plainly, the way to break this mesmerism is to teach fearful humanity that the Christ, Truth, is the same positive and certain healer to-day as when Jesus did his mighty works, and this is exactly what Christian Science is doing

for a world pitifully in need of mental, moral, and physical salvation.

Error accomplishes its purpose when it establishes in human consciousness the lying sense of separation. The first argument of the serpent was that man could have a mind apart from God, a mind which was more desirable than the one divine Mind, in that it knew both good and evil. As a natural next in the suppositional development of evil came the argument that man himself was separated from himself, that he was two persons instead of one, spirit and matter, soul and body, immortal and mortal. Death came into the world with the knowledge of good and evil, and mortals, having permitted the error of separation to rule them, experienced death in two phases in their dream existence: death of the soul, so-called, through sin; and death of the body through sickness. Ignorant of omnipresent, omnipotent, and omniscient Life, Truth, and Love, they forthwith called upon a manlike God to heal them of sin, and a godlike drug to heal them of sickness.

Thus, from the one trunk of false religion, there grew in human consciousness the two separate branches,—theology and medicine. Not until Jesus revealed the true healing, and Mrs. Eddy discovered the Science of this true healing, did it dawn on mortal thought that in reality theology and medicine were one and the same thing.

The great privilege and stern duty is therefore laid upon Christian Scientists to-day of demonstrating the healing power of Truth. Peace, the result of this true healing, is the great need of the world. Amid wars and rumors of war, amid ever-increasing human weakness, disease, and distress, all witnessing to the impotence of human idealism to save, individuals and nations are crying aloud for peace. Christian Scientists know where to look for true peace. They know that it is to be found in Spirit, not in matter; and they know that the basis of peace is unity with God and with man. They know, too, that the enemies of unity are self-will, self-justification, and self-love. Is there ought to prevent them from scourging these errors out of the temple for the glory of God and the benefit of humanity?

The Story of Naaman.

E. C. MOSES.

AMONG the very interesting Biblical narratives, the true meanings of which have been unfolded to me by the light of our text-book, Science and Health, none have impressed my thought more forcibly than the story of Naaman in Second Kings. A review of Naaman's character, and of the incidents attending his experience, brings out the fact that human nature is fundamentally the same now that it was twenty-eight hundred years ago. It also shows how mortal mind, then as now, seemingly swayed by gross materialism and by ideas of self-will and self-satisfaction, desires to secure relief from the ills of the flesh by almost any other means than that of childlike trust in the Father, who forgiveth all our iniquities; who healeth all our diseases.

Copyright, 1904, by Mary Baker G. Eddy.

Naaman was captain of the host of the king of Syria. He was a man of honor, a good and courageous warrior, but, in common with many of his fellow-mortals, both among the high and the low, he was a leper. His wife had in her service a little captive maiden, an Israelitish girl who knew something of the prophet Elisha and of his demonstrations of Mind-healing, and one day she said to her mistress, "Would God my Lord were with the prophet that is in Samaria! for he would recover him of his leprosy."

Naaman was probably suffering and therefore receptive, and after securing a commendatory letter from the king of Syria he went with it to the king of Israel. The tenor of this letter indicates that the king attributed such possible healing to necromancy, even as some to-day erroneously hold that Mind-healing is a process or a result of hypnotism.

It would appear that Naaman regarded the letter somewhat in the light of a diplomatic negotiation which might enable him to secure the desired relief from the king himself or from some agency directly under the king's control, and that the method he pursued would go far to convince the court of the importance of his personality and case. Everything possible was therefore done to impress the king of Israel that he would be honored by any service which he could extend to a representative of the court of Benhadad. Some of our latter day Naamans may similarly think that Christian Science will be honored and advanced by their patronage. But many of our modern captains of the hosts whose sense of self-importance seemingly blinds them to the requirements of Truth, ultimately learn with Naaman of old, that Christian Science makes no concessions to human opinion, and that its healing effects are not secured nor made more sure by human influence.

In this case the king of Israel, with entire propriety, and with not a little suspicion of anything coming from the court of Syria, declined emphatically to have anything to do with the matter. He intimated that he would not be drawn into any personal affairs from which there could arise a possible occasion of conflict with his neighbor. News of the matter came to Elisha, and he sent word to the king to send Naaman to him. So the Syrian captain came to Elisha with a great cavalcade of attendants and other signs of official rank and importance. And here we notice a salient point in the narrative. Naaman had come many leagues in quest of truth, and finding that his search was not to be rewarded by nor through kingly office, he gives evidence of faith and receptivity by following the line of action recommended by the little maid of Israel.

Elisha at the time may have been busy or perhaps he knew that it was best to treat all these manifestations of mingled willingness and pomposity by keeping in the background, so he sent down directions to Naaman by his messenger in about these words: "Go and wash in Jordan seven times, and thy flesh shall come again to thee, and thou shalt be clean." Now Jordan was a seemingly inconsequential little river with nothing to attract the eyes of one whose views were sensual and materialistic. The mighty captain of the Syrian host, struggling with conflicting emotions of desire for health, pride, self-will; and waiting in expectation of a ceremonial reception, hears the counsel of the prophet with surprise, disappointment, and anger. Truth is speaking in sweet yet firm tones, but error tortured, impels Naaman to turn on his heel and angrily say in effect, "This is adding insult to injury. Instead of coming down and standing before me and calling aloud upon his God and laying his hand upon me, he tells me to go and take a bath in that dirty little stream. Are not Abana and Parohar, rivers of Damascus, clearer, more beautiful, and better in every way? No, indeed, none of this nonsense for me!" In modern phraseology, he would have said per-chance, "Why should I try Christian Science, the ideas of an insignificant cult, it's far from being clear to me; moreover, it's the proper thing to have a doctor when you are sick. Read that little book! No, I am too busy a man.

But, Naaman, you know your hour has struck; you know your lotions and medicines and massage, your rivers and resorts, can do nothing for you; you know that your thought is not pure, your conscience is not right with your God; you know that your course has been far from one of rectitude even according to the standards of your own school,—the hour has struck for you to obey.

The faithful attendant, free from the error which concentrated itself upon Naaman, cried out, "Father, if the prophet had bid thee do some great thing wouldest thou not have done it?" All that Love asks is to wash and be clean; it is so simple, why not try it? Naaman, standing on the very brink of that which separates the false from the true, knowing that now if ever the deep innermost yearning of his heart for wholeness, for Love, must be realized, silently, slowly, and perhaps with tears of humility and repentance, wends his way down into the Jordan, as the prophet of God had commanded, and lo, he is healed!

The demonstration was made and Naaman perceived that it was not the waters of Jordan which had healed him, but that his reception of Truth through humility and obedience had destroyed in his consciousness the pride, arrogance, self-will, and self-love, which were expressed in a condition of loathsome disease.

So Naaman, a man of valor, having experienced the omnipotence of Truth to destroy error, returns to Elisha and in the presence of his retinue, healed by Truth and subdued by Love, declares, "Behold, now I know that there is no God in all the earth, but in Israel." His acknowledgment was not delayed nor lacking in fervor of conviction. The new Naaman had found his heart's earnest desire; peace brooded in benediction, and underneath him were the everlasting arms.

Then it occurred to him that, while he was thereafter to know but one God, and would serve none other, he was still in the service of an idolatrous king. He turns to Elisha, and exhibiting that sense of conscientious honesty and moral courage from the review of which we may all profit, he said, "In this thing the Lord pardon thy servant, that when my master goeth into the house of Rimmon to worship there, and he leaneth on my hand, and I bow myself in the house of Rimmon: when I bow down myself in the house of Rimmon, the Lord pardon thy servant in this thing." Note the change. The mighty soldier has become the "servant" of the man of God. And Elisha tenderly and assuringly replied, "Go in peace." Another has said, "Emerge gently from matter into Spirit" (Science and Health, p. 485).

Many who come to Christian Science are closely associated with business and other affairs of the nature of the "house of Rimmon,"—affairs to which many of our modern Ephraims are joined, and they often find it expedient to bow "in the house of Rimmon" until with faithful work and earnest desire they find their rightful and better place. The words of our Master, "Suffer it to be so now," and those of Elisha, "Go in peace," blend beautifully and support the above words of our dear Leader.

Character.

WILLIAM P. MC KENZIE.

It is quite evident that changes for the better in the world are to be wrought by the betterment of individual character. The unit in society has been termed the family, and it is considered as important to prevent the disintegration of the family, as it would be to prevent the individual bricks in a building from crumbling. Hence the laws formulated for the protection of the family in all ages; and the fact that in history we have many records of waning power, and even extinction, for nations that disregarded the basic truths which these laws were intended to safeguard. Sometimes the guild or association has been looked upon as the unit, and for the welfare of one guild measures have been adopted

which were disadvantageous to others. When the viewpoint is selfish, the Golden Rule will be reversed, whether by a trade guild, or by the larger and more composite union called a nation.

When all is said, we recognize that we have to deal with men and women, and children too, separately and individually, and that the progress of reform must be worked out by bringing them one by one into sympathy with the law of Life illustrated by Christ Jesus. Where was the right method of dealing with the individual better interpreted in action than by that interview which Jesus had with the woman of Samaria at Jacob's well? Leaving the sin in her life to be condemned by herself, and appealing to her capacity to understand spiritual things, he opened out to her the truth regarding God and man just as earnestly as do they who seek "the applause of listening senates to command," yet his audience was at that time one individual, and she a woman with none too good a reputation. By the saving of that one woman, however, he saved all who have since been blessed by the truth promulgated to her. Thus we see how betterment for man as a whole comes by betterment of a man as an individual, and the change does not need to be in his circumstances so much as in his character.

When a right character has been formed it will show in this, that decisions will be made in harmony with Principle, and not in view of transient self-interest. The man who can be influenced by a bribe is foolish as regards himself, and dangerous in the community,—for the briber gives to the few, expecting by their help to take again from the many. The proverb remains true, "Fools make a mock at sin;" but there is also a promise in Scripture regarding the timidity of culpable men in the presence of one who is honest, "One man of you shall chase a thousand: for the Lord your God, he it is that fighteth for you, as he hath promised you." This has been illustrated when one true man in a city has caused hundreds of wrong-doers to tremble and many to flee, simply by having courage to enforce law. Here courage and character are as one, both being reliance upon the permanent whereby man may reflect the changeless and eternal God. When all men are courageous in trusting to good as Principle, when they are characterized by actions manifesting that which is enduring and God-sustained, then happiness is of necessity universal and permanent.

Not Governed by Chance.

HERBERT S. FULLER.

As the individual student advances in Christian Science, and the deep things of life begin to be understood in part, and take on even deeper significance because of the budding and unfolding of truth in his consciousness, one of the lessons which is sure to be learned in time, and generally in a short time, is that Christian Science reveals a Principle from which can be logically explained all things that come up in daily life, and therefore one is no longer obliged to dismiss as unexplainable, or charge to chance the things that come into his experience. Christian Science, therefore, eliminates from human consciousness all belief in chance as a factor in being, denies that there is any power in "good luck" or in "bad luck," that anything "just happens" or "would have been so anyway," and the student soon learns to seek for reasons, and in seeking he is rewarded by becoming satisfied and in knowing that there is a cause for everything that comes into his daily experience, however trifling the circumstance may seem to be at the time.

The Christian Scientist knows as a result of his study that God is the only Cause; he argues from this premise alone, rejects the fleeting hypotheses of human reasoning which had previously been his standard, and thus he arrives at the conclusion that certain effects which have challenged his thought and attention come from mental causes, and that any good thing which comes into his life does not

"just happen," simply because it seems unexplainable from the old viewpoint.

Error often tries to rob truth of the credit which is rightfully its due, by whispering into the ear of the student that some good thing which has come to a faithful follower of Truth is merely the result of chance. Such is not the case. All good that comes to us springs from a cause, and comes in natural order from God, good; and any argument that would try to make a Scientist believe differently is only a voice trying to lead him into the wilderness of human hopes and opinions.

There is nothing uncanny or unnatural when things which we have desired come to us through most unlooked for and unexpected channels. We may, unwittingly perhaps, defraud ourselves because we do not understand how the good we wished for and which has come to us, was attained. We may echo the words of that familiar hymn, "God moves in a mysterious way, His wonders to perform," and thus find ourselves thinking that what has come to us, has come in a "mysterious way." But has it? Do we not know, deep down in our hearts, as a result of our faithful study of Science and Health, that God does not move in a mysterious way; that His ways only seem mysterious when we do not understand them, and sometimes perhaps think it easier to continue in our ignorance than to go to work in order to obtain this understanding.

In Science and Health, page 319, we are told, "Mystery, miracle, and error will disappear when it becomes fairly understood that the divine Mind controls man and man has no mind but God." On page 452, we read, "Incorrect reasoning leads to practical error," and it is incorrect reasoning which leads mortals to believe that they are ever governed by chance. Christian Science teaches us that we are governed by God alone, and the manifestations of good that come to us daily and hourly are not miraculous to good, and should not be considered so by us. When we cease seeking reasons for the coming of good outside of God, more good will come to us.

The Motherhood of God.

G. L. MC NEILL.

ONE of the blessings that follows the study and demonstration of Christian Science is the continual unfoldment, expansion, and elevation of our thought of God. Recently the study of the Lesson-Sermon brought to me a sense of the motherhood of God that has been very comforting and helpful to me, and I wish to share it with others.

I was brought up to think of God only as Father, and my conception of Him included those attributes alone which I ascribed to the ideal Father, including intelligence, wisdom, justice, power. In the Bible and elsewhere all reference to God is in the masculine gender, and largely through this fact, as well as on account of early training, we lose sight of God as Mother.

In our text-book and in the other writings of our Leader, we find God referred to as "Father-Mother," and yet the old thoughts cling to us so persistently that we are liable to overlook the significance of this newer designation of Deity and thus lose, to some extent, the comfort, peace, and helpfulness of including in our concept of God, the attributes of our highest ideal of mother as well as of father. To me, and probably to all of us, there is associated with the word "Mother" a sense of love, spirituality, tenderness, constancy, forgiveness, and protection that we do not so surely associate with the word "Father."

Since this beautiful thought of the unity of the ideal qualities of fatherhood and motherhood has come to me, and I have listened to the spiritual interpretation of the Lord's Prayer as given at our Sunday services, the expression, "Our Father-Mother God, all-harmonious" (Science and Health, p. 16) has made this prayer mean more to me than ever before.

Selected Articles.

The Ethics of Christian Science.

To the Editor.

Sir:—I am very much interested in the discussion of the ethics of Christian Science that I note in your recent issues. I am only a student of the subject, and therefore not capable of discussing its spiritual features, but of some things I am fully assured, and that is of its healing powers. I have personally witnessed its success in cases that no physician could ever cure, and I am a graduate in that art myself.

Their proposition appears to me to be of the simplest. The Bible is true, or it isn't. Christ lived, or he didn't. He healed the lame, the blind, and the crazy, or he didn't. He cured the sick, or he didn't. He gave his apostles the power and orders to go forth into the world to preach the Gospel and cure the sick, or he didn't. They cured the sick and healed the lame, the blind, and the crazy, or they didn't. The only power to do so came from their belief in him, for with one or two or three exceptions they were poor and ignorant, they had no medical training.

If those apostles had it, all that believe in him have it. If the Christian Scientists have not got it, the apostles didn't have it. If they didn't have it, Christ did not give it to them, in which case he is a liar and the Bible a fraud. Christianity has no foundation.

It all resolves itself into the proposition: Is the Bible true? If so, Christian Science is the true religion. "The union of all who love in the service of all who suffer," is a God-given and sublime sentiment which would be its fitting motto.

H. B. LA RUE.

Rochester (N. Y.) Democrat and Chronicle.

Consistency of Christian Science.

It is conceded by all Christendom that Jesus the Christ was more accurate in his knowledge of God, the Creator, than any other earthly personage. Indeed, what he taught is accepted as absolute truth, not only by Christian Scientists but by all other Christian denominations.

After carefully examining the objections which have been raised against Christian Science, we find that they bear directly upon the fact that Christian Science adheres to its Principle, and follows the admonition of St. Paul, "Yea, let God be true, but every man a liar."

In her teaching of Christian Science Mrs. Eddy has undertaken that which has never been attempted perhaps by other theologians. She has adopted a spiritual premise from which she has deduced a complete spiritual Science. If we endorse her premise—the Scriptural declaration, "God is Spirit"—and strictly adhere to it in all our reasoning, we are compelled to give full endorsement to all that is contained in her book, "Science and Health with Key to the Scriptures."

If it is proper to rely upon spiritual understanding in seeking a definition of God, the Creator, it is surely sensible to draw our conclusions regarding the creation from the same source. If it is admitted that God is not discernible to the physical senses; that He must be understood spiritually, it must also be admitted that a true knowledge of His creation can only be discerned spiritually. It must also be admitted that a knowledge of the nature and essence of the Creator includes an understanding of the nature and essence of the creation.

If it be admitted that God is Spirit, Mind, it must be admitted that His creation is spiritual or ideal. The constituency of the creation, as well as the mode and method of the creating, is revealed in the true knowledge of the Creator. Doubtless we will all agree that Spirit is Mind as opposed to matter. In what does the action of Mind consist? Mind thinks its thought, evolves its idea—the result of Mind labor, Mind action, the product of Mind, is

thought. Thus we note the truth of Mrs. Eddy's statement in Science and Health, "All is infinite Mind and its infinite manifestation, for God is All in all" (page 468).

The divine Mind is pure and good and creates only good thoughts. Evil thoughts do not emanate from the divine Mind; therefore they have no origin in fact, and are consequently untrue and unreal, manifesting the absence of intelligence even as the darkness shows the absence of light.

Since the materiality of the universe can claim no origin in God, who is Spirit, the only logical conclusion is that it has no existence except as a false belief, and is nothing more nor less than a false conception of God's spiritual creation, which hides the truth of creation even as the fog distorts and gives a wrong sense of the objects which it obscures.

The duty of the Christian is first to understand the true nature that is, the spiritual nature of man and all things created for his use, and conduct himself according to the requirements of the image and likeness of God, then he can appropriate the universe according to the true spiritual concept thereof.

ALFRED FARLOW.

Boston Times.

The writer fully agrees with the Rev. Mr. Black, when he says, "There shall be no sign given to curiosity mongers; there can be no sign given to those who imagine that the spiritual can be proved by the material, to be convinced of the spiritual by sound impressions of the senses is impossible," etc. On the other hand, when physical healing is the result of a purified, uplifted, and cultivated spiritual consciousness, I cannot believe that he would deny that this is the sign of Immanuel, "God with us."

That Christian Science is healing the sick in accordance with Christ's promises, and redeeming thousands from the bondage of sin, is a fact impossible to disprove.

It is true that Jesus said, "An evil and adulterous generation seeketh after a sign; and there shall no sign be given to it, but the sign of the prophet Jonas;" and it is equally true that he said, "And these signs shall follow them that believe: In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover."

Mrs. Eddy, the Discoverer and Founder of Christian Science, speaks of it as follows: "To-day the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition. . . . The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of its higher mission, or Christ-power to take away the sins of the world" (Science and Health, p. 150).

The Way of the Cross.

EDWARD EVERETT NORWOOD.

I do not know that I shall ever
Be called to do some noble deed and great;
I only know my peace flows like a river,
And I can wait.

In darkest moments though I seem forsaken
By friends, and all that human sense holds dear,
I yet can know, it is the way that Love hath taken
To draw me near.

And so I trust and pray, well knowing
My every pang and heartache in the night
Is but the sign attendant on my growing
To perfect height.

The Lectures.

Brockton, Mass.

Nearly one thousand people, constituting one of the most satisfactory audiences ever assembled in City Theatre to listen to a lecture, heard Mr. Bicknell Young of Chicago discuss Christian Science there last evening [September 30]. Some of the best-known people in the city were present and its wealth and culture were exceptionally well represented.

Hon. L. E. Chamberlain introduced the speaker.

Brockton Enterprise.

The introductory remarks by Mr. Chamberlain were in part as follows:—

In the human conflict constantly being waged between right and wrong, between the constructive forces and those destructive forces whose operation is to disorganize and weaken society, any man, any organization of men, any institution whose fundamental basis and purpose is the uplifting of mankind, should be welcomed as a valuable reinforcement to the forces contending against the common enemy.—evil and error.

The world is engaged to-day in the same occupation it was yesterday, the same it has been engaged in for the past hundreds of years,—a search for truth. If it is honest it is ready and anxious to receive light from any source. It will not reject a new thought simply because it is new, nor retain an old simply because of its antiquity. It will not readily cast aside the old for the untried new, neither will it permit apparently fixed beliefs to stand as obstructions in the advanced thought of the world's progress. Bigotry and a stunted growth have marked those periods in the world's history where light was refused and reason stifled; while the arts and sciences flourished and the most pronounced progress has been made when a broad charity and liberality of thought flourished most. A frank recognition and acknowledgment of the fact that each man can help his neighbor and from him receive help if he will, is a position precedent to that right mental attitude so vitally essential to the solution of those mighty questions involving our higher and better life.

The nineteenth century contributed much that was new in material knowledge and in religious and scientific thought. New alignments became necessary, new vistas were opened up, new fields explored and life and thought quickened all along the line. Birth was given to a new thought, or there appeared a new expression of an old, known to the world as Christian Science. Promulgated in 1866, it has had a most practical application. Given to the world in 1875, some scoffed at its teachings, many of us read it with indifference, a few embraced it. These few saw in it at once a realization of longings hitherto almost unfashioned, hopes put into words and made to breathe, the blending of a religious and scientific thought,—a Christian Science,—and expressed as a practical reality. They embraced it with a warmth of love, it became a living force.

I do not know its personal worth. I am not a believer in its doctrines. I have casually read its "Key." I have never turned its searchlight on myself and therefore know it not. But what do we see? A great multitude of earnest, ardent believers, spread all over the world, working out, in this attractive and beautiful new expression, a new life and experience. The living of it makes for its followers a sweeter life. It helps them to bear the cares and burdens of every-day life; it brings comfort to the sorrowing and health and healing to the sick; it gives cheerful assurance of the future and dispels doubting and darkness. It gives to us all better citizens, better neighbors, better friends, better men and women. It is a great uplift in the world. Believing in it they want to enlighten men, and I am

honored in being selected for the purpose of presenting the lecturer of the evening, Mr. Bicknell Young of Chicago.
Correspondence.

Arkansas City, Kan.

Yesterday afternoon [October 9] at the Opera House a lecture on Christian Science was delivered by Edward A. Kimball of Chicago, under the auspices of First Church of Christ, Scientist.

Rev. W. F. Harding of the Congregational Church introduced Mr. Kimball, in a neat but brief talk.

Arkansas City Traveler.

The introductory remarks of Mr. Harding were in part as follows:—

As civilization advances it becomes increasingly apparent that thought is a revelation of power. Indeed, it is this power which moves civilizations forward. The aborigines of America and Africa are unchanged for generations until the missionary goes among them and teaches them to think aright.

The trouble with many in our midst is that they do not think. That is their excuse for their mistakes. They acknowledge a greater truth than they may be ready to recognize. If they would think, they would save themselves blunders, at least they would not blunder twice in the same way. Thinking would save them from many troubles. Thinking would open the door and let in the sunlight with its healing, radiant glory. Thinking transforms lives.

True religion is based upon the power of right thinking. Such a religion has been, is, and always must be progressive. He who was the world's greatest religious Teacher began his work by setting an old truth in a new mounting when he said, "Change your mind [*i.e.*, your thinking, incorrectly translated, 'Repent'], for the kingdom of heaven is at hand."

Someone has said, "The habitual thought that we bring with us to each day, colors the hours black or golden far more surely than anything the day brings to us." The habit of right, great, and good thinking makes us God-like.

Mrs. Livingston Mims of Atlanta, Ga., lectured last evening [October 23] at Third Church of Christ, Scientist, Washington Boulevard and Leavitt Street. In the course of her remarks she paid the following tribute to Mrs. Eddy: "Mrs. Eddy is not only one of the world's greatest religious teachers and reformers, but through her discovery of the Science of Mind,—that Christianity is a demonstrable science,—she has made the sublimest and most practical discovery of the modern world, and is therefore rightly entitled to as high a place among scientists and discoverers as among the spiritual teachers and reformers."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Holiday Gifts.

Beloved Students:—The holidays are coming and I trow you are awaiting on behalf of your Leader the loving liberty of their license. May I relieve you of selecting and name your gifts to her, in advance? Send her only what God gives to His Church. Bring all your tithes into His storehouse, and what you would expend for presents to her, please add to your givings to The Mother Church Building Fund, and let this suffice for her rich portion in due season. Send no gifts to me the ensuing season, but the evidences of glorious growths in Christian Science.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., October 31, 1904.

Church By-law.

Article XXVI., Sect. 14, has been amended to read as follows:—

CHURCH ORGANIZATIONS AMPLE.—SECTION 14. Members of this Church shall not be members of Clubs which exclude either sex,—except they are Free Masons, or Press Clubs that give the toil-worn aged Journalists a Home. God requires our whole hearts, and He supplies dutiful, sufficient occupations for its members within the wide channels of The Mother Church.

The General Association of Teachers.

THE second annual meeting of The General Association of Teachers in the United States was held at Chicago, October 24 and 25, and was largely attended by members from practically every state in the Union. The proceedings were of great benefit to the members, and unity and harmony prevailed.

The following despatch was sent to our Leader upon the unanimous vote of the Association:—

Chicago, Ill., October 24, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

The members of The General Association of Teachers for the United States in annual session convened at the city of Chicago, send their loving and cordial greeting to their Teacher and Leader, the Discoverer and Founder of Christian Science.

The key that has unlocked the storehouse of the Scriptures and given its marvelous wealth and peace, song, love, and redemption to the children of men, is your munificent contribution to the weal of the world. Reverently we call you Teacher, with emotions of pardonable pride we acknowledge your unchallenged Leadership of the great moral, intellectual, and spiritual endeavor of your Church, that to-day makes for righteousness and the reign of God's kingdom in the hearts of men. We love you, but your abundant reward rests in the full fruitage of the divine declaration, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Dutifully awaiting any communication you may desire to make to the Association, we are

Sincerely your students,

Attest, IDA G. STEWART, *Secretary.*

Mrs. Eddy replied in the following felicitous and encouraging telegram:—

Pleasant View, Concord, N. H., October 25, 1904.

General Association of Teachers, First Church of Christ, Scientist, Drexel Boulevard and 40th St., Chicago, Ill.

Beloved Brethren:—I thank you. Jesus said, "The world hath not known thee: but I have known thee, and these have known that thou hast sent me."

Lovingly,

MARY BAKER EDDY.

Mrs. Eddy also sent the following telegram to The General Association of Teachers in Canada in response to the letter of its president, which appears in another column:—

Pleasant View, Concord, N. H., October 25, 1904.

General Association of Teachers in Canada, Ormond Higman, President, 231 McLeod Street, Ottawa, Canada.

Beloved Brethren:—Accept my love and those words of Jesus, "Holy Father, keep through thine own name those whom thou hast given me, that they may be one, as we are."

MARY BAKER EDDY.

"The work of righteousness shall be peace."

ONE of the addresses delivered upon the occasion of the dedication of a monument to the memory of the Jewish soldiers who died in the Civil War has occasioned no little comment, and this is not to be wondered at in view of its radical plea for the righteousness and necessity of war.

The speaker is reported to have said,—

"No death is more glorious than death for one's country. In the providence of God war was ordained, and the human race will always fight for what it loves. This nation was founded through war. In the day we are unwilling to fight for our liberties we shall surely lose the respect of the world. We have had wars since the world began. Therefore we shall always have wars."

The doctrine that "in the providence of God war was ordained" is but a part of the mortal belief that God is the author of sin, sickness, and death, and Christian Scientists know that this belief must be eradicated from human consciousness before the era of universal peace can be ushered in. *The Washington Post*, commenting upon this address, says,—

"It must be freely conceded that the teachings of Christ pointedly and overwhelmingly condemn war. There is nothing in the New Testament more conspicuous than this phase of Christ's work among men; and the startling fact that Christian nations have made little or no progress toward a final abolition of war, does not change the other great fact that a belief in the final triumph of Christianity implies a belief that war will eventually be eliminated from human institutions."

The doctrine that "in the providence of God war was ordained," is certainly not Christian teaching, although it has been put forth for centuries in justification of such carnage as has made tragic the history of the race, and now reddens the mountains and plains of Manchuria.

The facts of war, freed from the sentimental glamour which always has been cast upon them, are thus referred to in a recent issue of the *Advocate of Peace*.

"War is waste, irrationality, colossal folly, the final argument against war is found in its deeds,—its butcheries, its mad charges, its mangled flesh and bones, its raging passions,—in its horrors of the flesh and its more repulsive horrors of the spirit. However noble the causes or aims of any war may be thought to be, its deeds are always, from any high moral point of view, hideously wicked. How can any humane man, any man of conscience and moral sensibility, look these deeds in the face and then consent to go and do them?"

"These reflections have been occasioned by the war now raging in the Far East, where it has again been proved that 'war is the business of hell,' where its essential horrors

have repeated themselves on a scale and with an intensity that have made the civilized world shudder. If the facts correspond with the reports,—and they are probably much worse,—these horrors have never been surpassed in anything bearing the name of 'legitimate' war.' But in essence they have had their counterpart in every serious conflict ever waged."

What can Christian Scientists do toward bringing in the reign of universal peace? Mrs. Eddy points to the First Commandment as essential to our progress in this line as well as in all other lines of Christian endeavor. In *Science and Health*, page 340, she writes,—

"One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself,' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed." M.

"The Unity of the Faith."

THE second Annual Meeting of The General Association of Teachers is another milestone passed in the forward march of Christian Science, and the spirit which characterized it; no less than the number of those in attendance, gave proof of the good already accomplished by this agency. If one who attended these meetings were asked why he had come so far in order to do so, his reply would perchance be, in substance, that he might gain a higher sense of the service of Truth, of the best means for promoting the welfare of our Cause. Another might say that his prime object was to gain such an understanding of unity in thought and uniformity in method as will most quickly and effectively bring this healing truth within the reach of all mankind.

From the history of many of the past religious movements of the world we can see how they were hindered by the narrow or selfish views of many of their adherents,—views which were not intentionally wrong, surely, but which, none the less, wrought irreparable injury to the cause they represented. Even at this comparatively early stage in the history of the Christian Science movement, it is admitted by all fair-minded people who are acquainted with it, that our Leader's understanding of divine Principle and her steady insistence that all merely personal opinions must bow to its supremely wise and loving demands,—that these have already accomplished wonders in establishing a large measure of unity and solidarity in our ranks. We should never forget, however, that, even when we have reached altitudes far above the plane where Truth first appeared to us, our prayer must still be that of the Master: "Not my will, but thine be done."

From the gospel narratives we learn how difficult it was for even the great Teacher to impress upon his followers the need of self-abnegation. Their material beliefs and personal opinions were adhered to with all the obstinacy which characterizes mortal mind, but under the unerring guidance of Christ, Truth, self was at length lost in divine Love, mortality "swallowed up in life." In one of Paul's epistles he tells of a dispute with Peter, occasioned by a difference of opinion, when he "withstood him to his face." Later, we find Peter eulogizing Paul's wisdom and referring to him as "our beloved brother Paul." The same blessed unity of purpose and action will be realized by all Christian Scientists when, like St. Paul, they can say, "I live; yet not I, but Christ liveth in me." This unity has been the dream of saints and sages throughout all Christian history, but its attainment has been the despair of the sects, so far as outward results are concerned. It remains, therefore, for Christian Scientists to prove to the world the possibility of its realization, since Divine Science reveals it to be an eternal fact, established in Mind before the morning stars sang together. Jesus prayed, "that they all may

be one; as thou, Father, art in me, and I in thee, that they also may be one in us."

The earnestness, enthusiasm, and devotion of Christian Scientists to their Cause and their Leader which were much in evidence at the gathering in Chicago, are not destined to fade away. The holy lessons of those hours will go out into every part of the world, and their spirit, if not their letter, will reach and bless every sincere lover of Truth. When man knows himself as spiritual, then will he demonstrate unity with his fellow-man in knowing and doing the Father's will.

K.

THERE'S nothing that wins like winsomeness, and many a man's determination and consequent career for good could be traced to some very simple but very genuine expression of the spirit of Christian brotherhood. We were reminded of this by the following pleasant reference to the atmosphere of a Christian Science church, which appeared in the columns of an exchange.

"The manner in which a stranger is greeted by the Scientists is very happy, indeed. He is made to feel thoroughly at home, and to realize that every one in the church is in sympathy with him before he goes away. A little of this thing does a person good, even though he does not sympathize wholly with the Christian Science belief."

The fact is that ready sympathy, the exchange of genuine interest and good-will, is the one thing the heart of humanity always welcomes, and he who has a smile, a pleasant greeting, a hearty hand-grasp for his fellows, that man is an unlimited blessing; he is able to do a large business with a modest capital, and he can but succeed.

Well and fitting indeed will it be if Christian Scientists and Christian Science churches, the world over, come to be known for their optimistic good cheer, and for their unfailing kindness and courtesy to all. If we have the spirit of the Master, this may be achieved, without doing any violence to personal reserve, and without giving to our address the least flavor of intrusion.

"THROW up your windows and stand in the draft. It may be your salvation; the fear of it has caused thousands of deaths."

This counsel, which, according to press report, was given in a lecture before the Chicago Academy of Science, by a distinguished physician, gives a good illustration of the surging contradictions of belief and practice which have ever characterized the history of medicine. The honored dictum of yesterday is the "folly" of to-day, and after a while the people will all see it, and discard its dominion.

Our friend the lecturer squarely breaks with tradition as to drafts, but under prevailing mental conditions, his advice is likely to prove quite as harmful as the fear he condemns, for he encourages the flaunting of a red rag in the face of a rampant belief, whose ability to harm he little kens, and those who are governed by his counsel "without understanding" are liable to be smitten, and that sorely. The predispositions of unconscious mentality are not rendered null and void through venturesome bravado, by any means. Error is defeated not by indifference to it, but by the apprehension of the truth about it, and by that alone. A Christian Scientist neither fears error nor trifles with it in a spirit of braggadocio. He understands the nature and subtlety of its claim, and while firm in the declaration of his freedom at the call of duty or higher privilege, he knows that he has too many necessary problems on hand, to authorize the precipitation of those that are unnecessary, just to startle the uninitiated with his daring. The demands upon us for earnest overcoming are numerous, and the needless excitation of error is therefore to be wisely avoided.

AGAIN, according to press reports, a physician of prominence, speaking before the National Prison Congress, has

strongly urged the wisdom and necessity of relieving the communal burdens by painlessly ending the life of the "mentally irresponsible," the "hopelessly defective," that these unfortunates may find their only means of escape from unspeakable conditions. Surely the reign of material sense has reached a most startling ultimate, when, through the belief of hereditary degeneracy, it has so overwhelmed the utmost provisions of charity with the so-called "incurable" wrecks of mortal procreation, as to awaken the serious suggestion that their earthly existence be quietly terminated as a means of relief. The tragedy of innocent and involuntary suffering is to be closed by the infliction of death at the hands of mercy! And yet this is still called "God's world," and the laws which have begotten these conditions are named "natural,"—are said to be the instruments of Divine Providence! Could anything present a more impressive picture of humanity's removal from the right understanding and application of the truth which Jesus voiced when he said, "I am come that they [even these poor sufferers] might have life"? The pitiful inadequacy of material remedies for mortal ills,—the hopelessness of human conditions apart from God,—are they not sufficiently apparent? And yet there are those who are impatient with the loving assurance of Christian Science that Life is indeed come,—that Life, not death, is the Saviour, even in this world. They refuse to believe the testimony of those who have found the truth and are rejoicing in its freedom. Passing strange though it be, the possibility of the spiritual healing of those afflicted with all manner of diseases is piously and persistently denied, and the carnival of human woe drags on, while adown the ages is borne those pleading words of the Master: "O Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, as a hen doth gather her brood under her wings, and ye would not!"

W.

Letters to our Leader.

Ottawa, Can., October 21, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—As President of the Canadian Teachers' Association, I deem it to be my duty as well as my very great privilege to send for your information a short account of the organization of the Canadian Teachers' Association, which I accordingly append hereto.

I would like, if words were adequate to the occasion, to tell you something of the blessedness, the holy experiences, of our meeting together, but any attempt to put it into words, would, I fear, be a clumsy failure.

I have had many wonderful experiences since coming into Christian Science fifteen years ago, but anything like the blessed harmony and at-one-ment that pervaded our meeting I have never before experienced.

We all felt that you were with us in spirit, and this, as well as your great labors and devotion to the Cause, appealed to our loyalty and lifted each one above the possibility of harboring anything but pure and exalted thoughts.

Before the members of the Association separated there was, though unexpressed in words, a settled determination to work together in unison for the upbuilding of our Holy Cause. That we may have strength to do this was and is, I am certain, the earnest prayer of each individual.

With much respect, I remain

Your obedient and faithful student,

ORMOND HIGMAN.

[The following extracts from the minutes of the meeting held at Toronto, October 18, 1904, accompanied the above letter.]

The meeting was opened by reading from the Bible, Philippians, 2 : 1-16, and from "Science and Health with

Key to the Scriptures" by Rev. Mary Baker G. Eddy, pages 572, 12-17, and 506, 1-11, followed by silent prayer and the Lord's Prayer, and the singing of our Leader's hymn, "Shepherd, show me how to go."

The following resolutions were unanimously adopted:—

Resolved: That the Executive Board of the Canadian Teachers' Association shall be composed of a President, a Secretary, Treasurer, and five additional members to be elected by ballot annually. Not less than four members of the Board shall be teachers and five members shall be a quorum.

Resolved: That the meetings of the Canadian Teachers' Association shall be held annually and in alternate order in the cities of Toronto, Montreal, and Ottawa.

Ballots were then taken and the following Board elected:

Ormond Higman, Ottawa, *President*; Miss Elinor F. Edwards, Berlin, Ont., *Secretary*; Mrs. Isabella M. Stewart Toronto; Mrs. S. M. Williams, Berlin, Ont.; David S. Robb, London, Ont.; Thomas J. Kinnear, Kingston, Ont.; Charles W. Pearson, Montreal, Que.

Papers were read by,—

Mrs. Isabella M. Stewart, Toronto, Mrs. Elizabeth Higman, Ottawa; Mrs. Williams, Berlin; David S. Robb, London; Charles W. Pearson, Montreal; Miss Veasy, St. Stephen, N. B.

A telegram to our beloved Leader was prepared by the Board, read to the Association, and adopted by a standing vote.

Wilmington, Del., October 14, 1904.

Beloved Leader and Teacher:—We are writing you today to tell you of the completion of our temporary chapel to-morrow, and its dedication the day following. Divine Love has supplied every need and there are no obligations resting upon the little church.

There has been great joy with us as our thoughts have turned more earnestly toward The Mother Church, the nourishing root and vine. This loyal branch was busily engaged with the selection of plans and the commencement of a permanent church structure, but when the needs of The Mother Church were made apparent, the members were unanimous in the decision for a temporary building, that they might be free to give to the Building Fund of The Mother Church while it is needed. The only collection next Sunday will be the members' offering for that fund. We are thankful for the permission to have the Communion lesson on "Obedience" for our dedicatory service.

We are often prompted, dear Leader, to write you of the ministry of Love in our midst, especially regarding the results of the services at the workhouse, which is the highest penal institution in the state, and where, we regret to say, the pillory and whipping-post are still used; also of the reports from the girls' industrial school and the county almshouse. But we are mindful of your moments and hesitate to burden you, even with good news. There is one instance, however, that we are constrained to relate. A young man was committed to the workhouse, awaiting trial. During the months of waiting, he lost all courage and felt that he was entirely forsaken. At one of the Christian Science services held at the prison on invitation of the warden, his hope was renewed, and when the announcement was made that Science and Health was in the prisoners' library, he asked for it and read it diligently for the two intervening weeks. When the trial came, although the circumstantial evidence was strongly against him, his innocence was established and the jury's verdict was "Not Guilty." He came immediately to the reading room, purchased a copy of Science and Health, and expressed sincere gratitude.

Lovingly and gratefully yours,

NORMAN E. JOHN, C.S.B.

MAY BURNS JOHN.

Testimonies of Healing.

For the benefit of those who may be discouraged by delayed results, or who may be similarly afflicted, I wish to relate the healing of my niece, who was injured in an accident which occurred five years ago while she was spending the summer in a small country place. She was then twelve years of age and was swinging in a hammock, one side of which was attached to a pole upon which was fastened a very large old-fashioned bird house. The bird house fell upon her and it took the combined strength of three men to remove it. Upon examination it was found that not only was every part of her body bruised, but her left foot just above the ankle had sustained a compound fracture; the ligaments in the foot, on the outer side, were severed, and a small bone in the back was broken. It was months before she was able to stand on her feet without crutches, and then it was found that, owing to the knitting of the bone, the left leg was three quarters of an inch shorter than the right.

Massage was tried and every known means for strengthening the limb were used. The doctors recommended that an extra heel of three quarters of an inch be added to the left shoe. This was some help, but at the end of a year she could not stand flat on her feet and keep her balance even with this extra heel. She was taken to a specialist and examined by the X-ray, and the decision was that it was a case of arrested development with a strong inclination to curvature of the spine. She was ordered to wear a brace for nearly a year, electric treatments were tried to strengthen her back, and instead of three quarters of an inch added to her shoe, she was obliged to have shoes built for her, one with an extra heel two and a quarter inches high to enable her to stand straight. She was also obliged to wear a pad on one hip on account of the sinking of the hip bone. She could not at this time walk from one room to another without her shoes on, for she would lose her balance and her foot would turn under.

All the physicians employed, and they were some of the best this city affords, did all they possibly could for the child, and we have always felt very grateful to them and appreciated their efforts in her behalf, but at the end of two years they could do nothing more for her. One of the surgeons told the mother to pray to God that her child would not grow, for the taller she would grow, the higher the heel she would be obliged to wear. Naturally she was not asked to exert herself in any way in the home on account of her lameness and weak back.

She commenced Christian Science treatment in May, 1903. The improvement was so gradual at first that it was scarcely noticeable. In June she was invited to visit some friends who were camping, and they expected that she would not be able to climb the hills with the other children, but she surprised them by being able to do all they did. It was a little difficult at first to overcome the thought of her weakness in the home, but that was met after some time to such a degree that they forgot anything was wrong with the child, for she began to do everything the others did, and did it as well, so that it was a matter of course to ask of her any service that had to be rendered. It was four months after commencing treatment that the first three quarters of an inch was taken off the shoe; in three months after that another three quarters of an inch was removed; a month later the pad on the hip was found to be unnecessary and was discarded. At the end of nine months the last three quarters of an inch was removed from the shoe, and she now wears ordinary shoes with heels of equal height and stands perfectly straight. After the last three quarters of an inch was removed, she found that her ankle was weak, but this was overcome in three days.

I am deeply grateful for this and many other blessings received during the last two years, but the physical healing,

although very great, is nothing in comparison to the spiritual understanding which I have received. Words are inadequate to express my thanks to God and to our beloved Leader through whom this truth was revealed to us, and my daily prayer is to be worthy to be called a Christian Scientist.—H. R., San Francisco, Cal.

I know that Christian Science can heal the palsied hand to-day just as Christ Jesus healed like human afflictions centuries ago. In October, 1902, my right arm began to pain me, and in a very short time I was unable to raise it from my side. The pain was so intense that I could not sleep and was confined to my bed the greater part of the time for several weeks. The physicians were kind and made every effort to relieve me, but my arm was paralyzed and entirely useless. In time it became perceptibly smaller than the left arm and seemed to be getting worse all the time. It was at length decided that I should go to the hospital and there have my arm examined to ascertain what was the cause of the trouble. After a careful examination by the physicians at the hospital they were of the opinion that nothing could be done, and that while I might regain a partial use of my arm, they could give no assurance even of this. I had heard of Christian Science through my brother, who had given me a copy of the *Sentinel* and had told me that I could be healed. It was not, however, until I found that material remedies could do nothing for me that I consented to be treated. My husband gave his consent, and my brother was requested to write to a practitioner for absent treatment. I became better at once, and in less than a week I could sleep and had the partial use of my arm. I had treatment for four weeks, during which time I helped with my housework and in the care of our three little boys. I regained the entire use of my arm. This is more than a year ago, and there have been no symptoms of the old ailment. God healed me. I am very thankful to my practitioner for her loving guidance and to our Leader for the light she has given to suffering humanity. I am striving to learn something about this wonderful truth.

BESSIE I. COON, Horatio, Pa.

I can no longer refrain from expressing my deep gratitude for the great blessings which I and my family have received since we came into Christian Science. When first I heard of Christian Science I had for nearly two years been suffering from the effects of a fall of forty-three feet into a chalk pit, which took place on November 10, 1900. When picked up I was suffering from a compound fracture of the skull, four ribs fractured, the right leg broken and severely rent. When my dear Christian Scientist friends found me, about two years later, on August 11, 1902, I was suffering from seven different ailments. I was longing to be healed; I had been seeking but had not found, because I did not understand. The doctors said that I should never be able to work again, and the ministers of my church said it was God's will that I should remain a cripple. But when Christian Science came to me it brought me that understanding of divine Principle which had been hidden from me, for now I am a healthy and sound man, and can walk many miles in a day. Since the first day that I knew of Christian Science I have not used nor desired to use any kind of medicine. I was healed in four days and was so changed that my wife and children scarcely knew me when I stood before them.

Since then, all my family have come into Christian Science and have had beautiful demonstrations of the power of Truth. My boy of nine years was cured of a large abscess in twenty-four hours, there being not the least sign of it left. He studied only Science and Health for relief. Also my daughter of eleven years was healed of a discharge from the ear, and another daughter was healed instantaneously of toothache. I could name many instances

of healing by Christian Science, for we apply it to everything each day.

My experience of Christian Science is only good. And Christ's demand, "Be ye therefore perfect," is the ideal which I would strive to reach.

J. BOSWELL, Beverley, Yorkshire, Eng.

It is now seventeen years since my attention was first called to Christian Science through the healing of a friend who had been a great sufferer from asthma. Her case was pronounced asthmatic consumption, therefore hopeless. In six weeks' time she was transformed into a well and happy woman, having gained twenty-five pounds during this short interval.

The healing seemed very wonderful to me, and in my extremity, as I had been a great sufferer from a complication of diseases, I concluded to call on the same practitioner for help. I only sought the physical healing, but I was willing to be obedient and do whatever was required of me to get the best results. In this mental attitude I soon began to improve, and in one week's treatment I considered myself well. Catarrh of thirty years' standing, chronic sore throat, weak and sore lungs, liver and stomach troubles, rheumatism, and many other ailments all disappeared like dream shadows,—all went out into their native nothingness.

I shall never forget the beautiful spiritual uplifting that came to me at that time. I soon procured the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, for I must know from whence this healing power came. I read and reread it, and soon understood something of the Principle and rule, which are absolute and unchangeable,—a demonstrable truth, the problems each individual must work out for himself. In applying my understanding of this Principle in my life work, I have found it an ever-present help in trouble. If there have been seeming failures, these have been due to personal sense, not Principle, which is always right. In the spring after I was healed, I entered a class taught by one of Mrs. Eddy's students.

As each year goes by, this wondrous truth becomes clearer and dearer to me, and I am trying to show my gratitude to our beloved Leader by following in her footsteps as nearly as possible,—by healing the sick, comforting the sorrowing, and spreading this gospel, whenever I have an opportunity to do so, knowing that the same truth which has sustained her through all her trials will also sustain me.—MRS. SARAH M. VAN CAMP, Denver, Col.

Three years ago, in a time of great need, and in answer to a life's unceasing quest of truth, a heart's constant hunger for love, I found in Christian Science the revelation of Truth that met and satisfied all my needs,—healed all my ills. I had lost much of what I thought essential to my happiness, and was obliged to undertake duties which brought me under conditions that seemed beyond endurance. I became disheartened, discouraged, ill, and for about three years this depressed condition continued, until nervous prostration was threatened. Despite all that love and skill could suggest, I grew weaker, entirely indifferent to all my former interests. My only effort was to remain true to my relations in life, so that love should feel no change, lack no proof of love; for among the many blessings of my life, the most tender parental love, most happy family ties, have been mine. Twice I was sent away for rest and change. A third time the collapse came, and being ready for truth, I found it.

In leaving a large book department where I had vainly searched for better than the best, I came, in an unaccustomed street, upon a Christian Science Reading Room. Apparently without voluntary intention I entered. I knew nothing of this Science, nor of any one who did know anything of it. From the heat and bustle of the street, the cool

and quiet of that little room, the atmosphere of love that welcomed me, these were indeed the angels of His presence, and this I felt. I was told that I did not need to go away; help was here; help was now. I believed it; I seemed to know it.

During the first reading of the text-book, Science and Health, I was healed. Here I found the answer to all my cries for light and love and life! Here I found every ideal, every aspiration, every human need satisfied, and the "famished affections" fed. (Science and Health, p. 17.)

And this light has never failed. Through many shadows, in some deep valleys, tears have blinded sight, but only for a little way, a little night that made the joy of morning more divinely bright; that brought the "Father-Mother God" in tenderest close grasp of groping childish hands by human loss left empty.

My gratitude abounds for the dear gift and grace of Love that has guided during many years of life, and kept unspotted from the world, a heart that loved the world her fancy made and knew no other.

It is with finger on the lips that I think of her through whom I have this priceless gift of Love. No words, but deeds for her. To love as she loves; to pray as she prays; to be what she gives her life, her love, her tears, her tender smiles to help us be, and some day by this faithfulness to arrive in full, rounded growth to fit a place of higher use,—this is the hope that brightens every day, and this alone can prove my love.—IDA M. CRAWFORD, Washington, D. C.

I would like to tell of a case of healing which proved conclusively to me that God is ever ready to help us in time of trouble. My two little sons were playing in the laundry where the maid had been ironing. She had just turned off the gas, leaving the irons on the stove. One of the children picked up a hot iron, and instead of dropping it he carried it over to the table to set it down. He came upstairs crying very hard, and when he showed his hand, a solid blister covered the whole palm and the fingers to the tips. He was asked to repeat the scientific statement of being, which he did, then had Science and Health read to him. In about half an hour he fell asleep, and while he was sleeping the soreness was met. After he awoke he did not once mention his hand, and the blister disappeared, leaving no soreness or scars of any kind.

This same child was brought through pneumonia, which had all the symptoms of a very serious case according to *materia medica*. I have been healed of headache which usually followed my going down town, by realizing that man as God's image and likeness is free from pain or error of any kind. I feel that I am being helped to overcome a great many things besides sickness. I am trying to be less selfish and quick tempered, and to realize that there are others than myself to be considered. I still have work to do, but to know that I am gaining a little, day by day, proves that I am working out the problem with the right understanding of Principle, and with the aid of the Bible and Science and Health, I hope to continue until all the tares are rooted up and nothing remains but the wheat to be garnered in the heavenly storehouse.

MRS. HATTIE MOORE, Chicago, Ill.

When I began to read *The Christian Science Journal* I thought it must be the truth, but I was afraid that if I accepted Christian Science I would have to give up my dear orthodox church, so I laid the literature aside and expected never to have anything more to do with it. Four years later, after having for several months taken care of a lady who was considered a nervous physical wreck, I myself was taken to a hospital suffering from severe nervous prostration.

This seemed a very dark hour to me, and I turned to my Bible for solace and comfort, with the thought, I believe that God can make me well. My Bible opened to the ninth

chapter of St. John, and, after earnest reading, I felt within my consciousness that somehow I was healed, and that whereas I had been blind, now I could see that God was indeed the Great Physician who healeth all our diseases and cureth our infirmities. When the doctor came in, I unwisely told him of my beautiful experience, thinking that he would be as glad as I was, but, to my amazement, he looked at me very seriously and said, "If you go to studying Christian Science you will lose your mind, and I shall not permit you to go home until you have gone through a course of treatment here." He evidently thought I had already lost my mind, as he immediately called the leading physician of the medical staff to examine me.

The following morning I read this verse from Exodus: "If thou wilt diligently hearken to the voice of the Lord thy God, and wilt do that which is right in his sight, and wilt give ear to his commandments, and keep all his statutes, I will put none of these diseases upon thee, which I have brought upon the Egyptians: for I am the Lord that healeth thee." I knew that was all the treatment I needed and told the doctor and attendants that I wanted to go home, but they still refused to permit me to go; so one night, at eleven o'clock, I quietly donned my garments and, without my hat, as that had been put away, I silently took my departure. Ever since I can truly say that His word has indeed been "a lamp unto my feet, and a light unto my path." I have been an earnest student of Christian Science ever since, and have had the blessed privilege of class instruction from one of Mrs. Eddy's students. My heart goes out daily in loving gratitude to God for our dear Leader, Mrs. Eddy, for Science and Health, and for all the helpful publications of our Publishing Society.—EMMA RANKIN, Cincinnati, O.

[Translation.]

Although deeds are the best proofs of our gratitude, we may express it in words also. About six years ago, I was seeking for a church which I and my two children might join. I searched quietly and prayed for divine guidance. I then heard of Christian Science and borrowed the text-book, "Science and Health with Key to the Scriptures," from our city library. I read in it every day, sometimes until after midnight, for I could not leave off; and what a glorious revelation came to me. I felt that this must be the truth, although now and then, something tried to suggest, "Do not be misled!" I looked around for a Christian Science church, and two months later became a member, and one year later so much good had come to me that I was led to take class instruction.

During these six years I have had numberless opportunities to test this truth for myself, my family, and also for others; and I have found that it is the only deliverance from sin and disease.

Twenty years ago, while visiting a friend, I heard that she was afflicted with a skin disease. Fear and disgust seemed to come over me. I cannot exactly describe how and when, but all at once I noticed two spots on my body. The physician gave me different salves and remedies, but nothing helped me. Sometimes the trouble seemed a little better, and then again worse. Now it has disappeared, not a trace of it has remained, and my skin is as white as formerly.

I am infinitely grateful to our heavenly Father and also to our Leader, Mrs. Eddy, for all the good I have received through Christian Science. The more we learn, and the more this truth is revealed to us, the more humble and grateful it makes us.—E. V. H., Cincinnati, O.

It is nearly three years since I took up the study of Christian Science. In that short time, by reading Science and Health, the *Sentinel*, *Journal*, and other literature of our Publishing Society, the following has been accomplished. I was a wreck in body and nearly so in mind, and I have been raised out of these conditions and planted

on the rock of health, joy, peace, and understanding. My oldest trouble, dyspepsia, dates back to 1864. It was of the worst form, and lasted thirty years or more, with other ailments as bad if not worse. I became a member of an orthodox church in 1864, but for the many years which intervened between that time and February, 1901, I received no relief from the terrible suffering which I believed was sent by God, to mould me and make me fit for heaven.

I acknowledge help given by others, especially my wife, but I have been obliged to work for myself, and can cheerfully state that such demonstrations are easily discerned and acknowledged by those who know me. As my wife accepted the truth revealed in Science and Health at the same time that I did, we have had no antagonism in our home, but a sweet peace while searching for more light. We have services in our home each Sunday, but have not yet organized a society. To love and revere our Leader for showing us the way, is perfectly natural for me, as well as my duty.—E. W. HAMMOND, Retrop, Okla.

I desire to make an acknowledgment of what Christian Science has been to me. I was led to take up the study of Science and Health for relief from mental suffering, and I shall never forget the peace that came to me in hearing our Leader's hymn, "Shepherd, show me how to go" (Miscellaneous Writings, p. 397). I purchased a copy of our text-book, and four years later had the privilege of class instruction. I wish to thank my dear teacher and practitioner, and all those who have so lovingly shown me the way to Truth which has been to me as the sweet unfolding of a rose.

I am employed as a working girl at one of the institutions at Faribault, and have had many beautiful demonstrations of truth over error. The study of the Bible and Science and Health, also the Manual, has been the means of destroying error in all its forms, and my hope is to obey the one God, and to keep the commandments, "Thou shalt have no other gods before me," and "Love thy neighbor as thyself." This indeed means much to me.

I am grateful for Science and Health by our Leader, and hope I am earning the right to say that I follow her in thought, word, and deed.

EDNA HEADLINE, Faribault, Minn.

Ten years ago I became interested in Christian Science through the healing of a friend, which was very remarkable. My brother's wife then sought help, and being greatly benefited, purchased a copy of Science and Health, and brought it into our home. I had suffered from throat trouble for some time, and had grown despondent, feeling that there was nothing to live for. My parents were strictly orthodox, but I could not understand why they believed in sickness as they were honest readers of the Bible. I then visited with another orthodox church, but found nothing there that could give me any light on the Scriptures, and I would take up the Bible and lay it down, feeling that it was a sealed book.

Through the study of Christian Science I soon read the Bible understandingly. Many forms of error in myself and others have been overcome, and I am learning to know something of God, as Love, also of His justice, and mercy; and that He is an ever-present help when we trust Him. Fear of doing public work has been cast out, which enables me to sing in church with confidence, and I am proving daily that God is a never-failing source of supply, that good is abundant, and that man as the image and likeness of his Maker, reflects the full understanding of divine Principle. My heart is full of deep gratitude to our dear Leader, Mrs. Eddy, through whose teachings I have found "my Life, as God's own child;" and for what the truth is doing for me and for the whole world.

LIBBIE OTTERBEIN, La Grange, Ill.

From Our Exchanges.

If one were to ask for the causes of that decay of conviction which has come upon so large a part of Christendom, he might discover that it lies in the cowardice which dares not make its venture, take its chance and unfurl its sail to the winds of truth. Knowledge in these modern days is like Hiawatha on those wonderful moccasins when he went "a mile at each stride." To keep pace with this spirit requires a confidence and an endurance which has not been cultivated in the churches. It is not dishonesty so much as hesitation, uncertainty, timidity, which afflicts so many. If Christendom dared, if it only *dared* to sail out or travel out toward the light! If it would *stop* this everlasting telling people about things which endanger faith. If it would only appropriate all well-established truth, and climb up on it and get a glimpse from it on to the wider world, what tremendous forces would then be turned for rather than, as now, against faith. The momentum of truth, the hunger of men for knowledge, the whole tide of intellectual expansion ought to carry forward the high interests of human trust and hope. A religion which contributes to the perfect whole of life must make this conspiracy, must harness itself to truth and run with it.—*The Universalist Leader.*

In a recent sermon Rev. W. S. Jones pointed out a need of our time too pressing to be neglected. After describing forms of religion that may lack the moral impulse, he said, "The chief danger of our time lies, not in an immoral religion, but in an unspiritual morality. The various forms of religion which flourish in our day are, as a rule, moral faiths. Their adherents usually observe the commandments. Religion in its higher manifestations to-day is eminently practical. It does not neglect the needs of man's body. It is concerned about the developments of his mind. It builds and equips hospitals and schools. It is not lost in dreamy Oriental speculation. It is in the forefront of the battle for moral reform. There is no reason, therefore, why we should be particularly alarmed about the possibility of an immoral religion springing up in our day; but we cannot help being concerned about the future of society, no matter how scrupulously it observes the moral law, if it loses its grip on spiritual realities."

The Christian Register.

We need fewer religious denominations but not less doctrinal truth. Truth, whether held by an individual or a denomination, will have a propagating power in proportion to the love in which it is clothed. The persecution of heretics has been the soil out of which sects have grown. The bitterness of controversy is far more harmful than differences in belief. Other men's convictions of truth are as sacred as our own. Any union of the organized forces of Christianity is desirable that will give to any and every truth of Scripture the prominence and authority it deserves. Such a co-ordinated movement, controlled by the true spirit of Christ, could but aid in the re-emphasis of the truth which it has been thought would have to be left out in the union of denominations.—*The Standard.*

The true Idealist is not a dreamer in a world of realities which make his dream incredible, nor is he a refugee escaping from conditions which he cannot bear, to a more comfortable place; he is a man who is patiently and often painfully shaping his life in harmony with an inward purpose; who is mastering crude materials that he may make the vision in whose light he lives, shine before the eyes of men whose sight is less clear than his; who is doing commonplace things in a spirit which gives them the beauty of a high purpose, as the great architect redeems the meanness of the hidden stone by the splendor of the structure in which it finds its place.—*The Outlook.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of **SCIENCE AND HEALTH**, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in **SCIENCE AND HEALTH**. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5.00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

Telegraphic communication has now been reached between Seattle and all parts of Alaska. The following official message to the press was received at Seattle, announcing the opening of the line:—

Sitka, Alaska, Oct. 6.—The completion of the Government cable from Valdez to Sitka, making a complete connection by an all-American line with forty-six stations in Alaska, is the beginning of a new era for Alaska. Wagon roads and railways will open up the greatest mining center of the world. Other industries will quickly follow and insure this country's future prosperity.

WILLIAM DISTIN,
Acting-Governor of Alaska.

In a circular note Secretary Hay has carried out President Roosevelt's instructions relative to proposing a second peace conference at The Hague. The note contemplates the consideration of questions specifically mentioned by the original conference, such as the rights and duties of neutrals, the inviolability of private property in naval warfare, and the bombardment of ports by naval forces. It practically indorses the project of a general system of arbitration treaties and the establishment of an international congress to meet periodically in the interests of peace.

Twenty-seven members of the Boston Symphony Orchestra are reported to have resigned their membership in the Boston Musicians' Protective Union. It is also said that every member of the union who plays in the Symphony Orchestra will resign from the union.

Harvard University has 534 instructors and 5,966 students; Columbia, 455 instructors and 4,709 students; University of Chicago, 347 instructors and 4,463 students; Cornell, 393 instructors and 3,457 students; Yale, 325 instructors and 2,975 students.

Foreign.

An arbitration treaty between France and the United States was signed at Washington on the 1st inst. The initiative in this action was taken over a year ago, at the time

of the Anglo-French convention. The public and press strongly approve of the treaty, mainly because of the friendly attitude of France toward the United States, and also as a notable achievement for Delcassé's diplomacy.

Industrial and Commercial.

The total value of manufactures exported during the nine months ending with September, 1904, is \$365,000,000 against \$311,000,000 in the corresponding months of 1903, \$338,000,000 in the same months of 1900, \$145,000,000 in the corresponding months of 1895, and \$113,000,000 in the corresponding months of 1890. Agricultural products exported in the nine months of 1904 amounted to \$502,417,678, against \$566,282,378 in the corresponding period of 1903.

Turning to the import side, materials in a crude condition which enter into the various processes of domestic industry amounted in the nine months ended with September to \$248,000,000 and formed 33.03 per cent of the total imports, as against a total of \$245,000,000, forming 32.37 per cent of the total in the corresponding period of last year.

It is reported that the plant known as "guayule," which covers a large section of the semi-arid region of southwest Texas and a large portion of the plateau of Central Mexico, yields a substance which can be compounded with Para rubber as a basis for various purposes. A factory in northern Mexico with an investment of about \$150,000 has produced during the past year large quantities of this rubber substitute. The discovery that this plant is valuable has caused a stir among the land owners of southwest Texas and Mexico, where land which has heretofore been considered worthless, except for grazing purposes, will possess value for the cultivation of the "guayule" plant.

The discovery, through tests on Lake Erie, that the apparatus of wireless telegraphy installed on shipboard will unfailingly indicate the direction of complementary apparatus on land, opens the way to a more effective safeguarding of mariners against the dangers of hidden reefs or bold projections of rocky shores. This has suggested the establishment on reefs and projections, of wireless telegraph apparatus which would inform all masters having a similar equipment on their ships of the proximity of the danger spots.

It is expected that a speed of 150 miles an hour will be reached in the new tests which will be made on the high-speed electric line near Berlin. The last experiments resulted in a speed of over 130 miles an hour. A project has been laid before the Prussian Minister of Public Works for constructing a high-speed electric line between Berlin and Hamburg, but the authorities do not wish to allow such a road to be built without making a further series of trials on a smaller scale on the Berlin-Zossen line.

The Portizuelo Light and Power Company of Pueblo, Mexico, has placed a contract with the General Electric Company of Lynn, Mass., for generators for the plant. The General Electric is also making a number of dynamos on contract for the Waipori Electric Company of New Zealand, a part of a four thousand horse-power electrical equipment ordered in this country.

The Standard Steel Car Company of Pittsburgh has perfected plans for building passenger, mail, and express cars of steel.

Wages in Egypt are nine to eleven cents per day in the upper region and thirteen to eighteen in the lower.

The United States imported last year over \$40,000,000 worth of coffee from Brazil.

General.

Some interesting and valuable archaeological discoveries have been made on the site of the ancient Greek city Olbia, not far dis-

tant from the estuary of the Dnieper. This ancient city was a colony of Miletus (655 B. C.), and was a great centre for Greek trade with the interior. The excavations that are now in progress upon the site are being carried out under the auspices of the Russian Archaeological Society. The masonry is found to be identical with that of the ruins of ancient cities excavated in various parts of Greece. The stone blocks composing the ruins of houses, temples etc., in the upper strata are of remarkably exact area, square proportions, and excellently dressed. The more solid constructive work is, however, found in the remains of the original city, where there was unearthed a perfectly preserved wine cellar containing some fifty huge jars or vases. A large collection of valuable antiques in gold, marble, and ancient pottery has also been found.

Some fine religious paintings are finding their way, it is said, into the art collection of J. P. Morgan, as the result of the activity of French Radicals in causing the removal of those pictures from French law courts. Since the establishment of courts in France it has been the custom to place behind the judge's bench a crucifixion or some painting combining the idea of religion and the law, and some of France's most famous masters have contributed to this work. Among the most famous of these great works of art is the picture known the world over as "The Christ of the Parliament," said to have been painted in 1176 by Meunier at the order of Louis XI. Another famous picture is a "Christ" by Henner, and another "Christ on the Cross" by Bonnat, in the assize court.

The income to the people on Cape Cod from cranberry culture is said to be as great or greater than that from fishing. Eighty to a hundred barrels per acre is considered a good run. The annual output is about 200,000 barrels, representing an approximate value of \$1,000,000. Harvesting begins in August and continues into October. Formerly the picking was done by the natives and was a time of jollity for the countryside. Now fully eighty per cent of the pickers are Swedes, Finns, French, Italians, and Portuguese.

The most titled monarch in the world is Emperor Francis Joseph of Austria. Without his imperial crown, which is the identical tiara of Charlemagne, he is nine times a king, twice a grand duke, once a grand prince, twice a prince, four times a margrave and the multitude of his titles as count and so forth is past enumeration.

At St. Louis last week the Baldwin airship, California Arrow, was successfully navigated to a height of two thousand feet, circled in every direction, and was brought safely back to the starting-point. The flight occupied about thirty minutes and covered a distance of about 34 miles.

What education is doing for England and Wales is shown by the fact that the last year out of 1,000 marriages only 23 grooms and 26 brides were unable to sign their names to the registers. Fifty years ago the numbers were 305 and 446 respectively.

In 1848 not over one thousand pounds of salt a year were gathered from Great Salt Lake, Utah. At present the State ranks sixth in the production of salt, the production having increased from 96,760 barrels in 1880 to 417,501 in 1902.

Fourteen million men were killed in "civilized" warfare in the "years of our Lord" 1800 and 1900, and one hundred and fifty billion dollars were required for the enginery of war.

More than two thousand skilled workmen have left the French silk factories of Roubaix and Turcoing, within a year, for the United States.

There are no less than 476 bridges on the Great Siberian Railroad between European Russia and Irkutsk, on Lake Balkal.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Things that We Can Do.

SAMUEL GREENWOOD.

RIGHT living has ever been recognized as the need of mankind, though each passing generation has looked to some successor to usher in the reign of righteousness. Men instinctively cling to the idea of a millennial era when peace and love shall rule the hearts of all peoples, but they do not generally admit that their own time can be the period of its dawning. Mortals find it easier, as a rule, to postpone their right doing than their wrong doing. God's demands, they think, can stand for a more convenient season; but their material pleasures, their selfish purposes, or their business, must be attended to as they have opportunity. As Jesus said of his teachings, that they were not to give peace to false conditions, so Christian Science has come to waken Christians and others out of their chronic apathy towards the claims of God.

A too common conception of God is that of an indulgent parent, who will not hold His children to the strict observance of His commandments. Christians who entertain this thought suppose that if they keep a fraction of their Master's teachings, live a fairly moral life, and avow a general acceptance of Christianity, then the balance of God's requirements will not be urged against them. Although they had abundant opportunity to do the right things they have left undone, they still comfort themselves with the belief that their sins will be pardoned at the last. This attitude towards God does not ascribe as much dignity to His law as to the laws of mortals. In our human courts even, those who are ignorant of the laws are not excused from their observance, much less those who know and do not. Why should we deceive ourselves that "the Judge of all the earth" is less just and less exacting than mortal man?

We should remember that it is not ourselves but God who decides what shall be required of us. God's demands upon mankind are made for their good, not for His; and their lack of compliance therewith cannot be atoned for by another, nor be adjustell or dispensed with through the lapse of time. Nothing that others do can compensate us for what we should do and do not. For God to approve man's conduct before it has become perfect would be to lose His own likeness in an erring mortal. The righteousness required of mankind is the necessity of their salvation; hence to pardon its omission, even in a degree, would but hold them still, to that degree, in the grasp of evil.

To forgive the unkindness and meanness of mortals would not thereby make them kind and loving; then wherein would be the advantage of this forgiveness? There is no way to the refined sweetness and joy of purified love except through the practice of kindness and gentleness and self-sacrifice. God does not encourage mortals to think that they can omit these things, and yet be admitted to the same plane of consciousness with those who have crucified the lusts of self through a life of goodness and love. The belief that mortals will be forgiven, either in this world or

the next, the things they could have done but have not, is a delusion from which their own suffering must some time awaken them.

Although Christian Science teaches (Science and Health, p. 254) that God does not require perfection of us as mortals until we have conquered in our warfare with the flesh, this does not afford us an excuse for ease or idleness in that warfare. God demands of us all the time all that we can do. "We are all capable of more than we do" (Science and Health, p. 89). Then what of the things which we are capable of, yet do not? Do we expect to escape the doing of them some time? if not, why not do them now? We cannot find time for yesterday's work to-day, nor will we find time for to-day's work to-morrow. Each day's duties demand all the time we have. When do we think of doing this neglected work? A little left undone each day that we could have done, accumulates rapidly. What shall we do with such a growing surplus of neglect, since God will not forgive it; that is, deal with us as though we had not been neglectful? And yet we complain sometimes because God does not heal us more quickly of our discords and faults. Is it wise or honest to expect that for doing a part of our work we shall receive the same reward as if we had done it all? We do not reason thus in our material affairs.

The divine, impartial justice of Truth does not give men something for nothing. It is folly to seek the reward of working if we are not doing the work. When divine Love says, "Son, give me thine heart," it is not enough that one half, or three fourths, or even nine tenths be offered, while the balance goes to selfishness and hate. If men were not capable of righteousness it would not be required of them. The man with the one talent was not expected to do the work of the man with five, but the full work of the one was justly required. God did not expect Judas to do the work of Jesus; but He did require the honesty and fidelity which he was able to give, and through which he could have grown towards his Master.

Christian Science has laid on us a larger responsibility by giving us a clearer understanding of what is right and what is wrong; but it has given us as well an increased ability to meet the demands of God. It has taken away the false hope of an unmerited pardon, but it has given us the understanding how to work out our salvation. This work includes the abandonment of evil practices, of wrong thinking and false speaking, and the doing of all the good that lies within the range of present possibility. It means this all the time, for God's time is always. The question is not if this work is hard, but if we can do it. We are not asked for impossible things, but the possible things are often hard; yet to give them up on that account will not relieve us of the doing of them. How can we expect to escape from evil and its consequences if we neglect to deliver ourselves from it through our own right doing?

The "suffer it to be so now" does not apply to the indulgence of dishonesty or selfishness or any form of sin; it does not apply to the thoughtless disregard of the injunctions of our Church Manual, to careless ignorance as to the needs and success of our Cause, or to our duties as Christian

Scientists towards it and our literature. It does not apply to the indiscriminate and wanton discussion of our own or of others' errors or diseases or sins. It gives us no refuge for idleness or ease or lack in the service we are capable of rendering unto God and man.

We have no right to say what we cannot do until we have tried our best and hardest. It would be a revelation and a blessing to most of us if we did with our might all that we found at our hands to do. Contentment with what we are doing is a false peace if we are not doing all that we can, not what we have time for after worldly things are cared for. To go to God with a prayer on our lips while we are too lazy or too selfish or too indifferent to do all the good we are capable of, is to offer the prayer of the unrighteous that availeth not. What will be the use of saying that we tried to do right, when we could have done right and did not? What would we think of a man who said that he tried to be honest because he only stole twenty dollars when he could have taken a hundred? What would God think of a Christian who said that he tried to love his neighbor as himself, but that he couldn't help being a little hateful and a little selfish?

What law of matter or of mortal mind can compel us to believe what is not true, to think what is not true, or to live what is not true, beyond the necessity of our ignorance? Does any law in heaven or on earth make it incumbent on man to be selfish or sinful or impure, when with every temptation to be so is an opportunity to be the reverse? When we know that God renders unto every man "according to his work," our own desire for salvation should impel us to be ceaselessly working for the coming of God's kingdom within us. If we are doing all that we can to rid the world of its discord and evil through our own self-purification; if we are filling full our every opportunity to love and help our neighbor, to be faithful to our Church, and to have one God, then we can enter into that rest that remains for the people of God.

Reality versus Unreality.

E. C. WICKERSHAM.

SCIENCE AND HEALTH, page 275, states that "To grasp the reality and order of being in its Science, you must begin by reckoning God, as the divine Principle of all that really is."

Principle means source, cause, foundation, that from which everything proceeds, that which underlies all true phenomena. Thus Principle or Mind being the infinite Creator, its creations, or ideas, must express the nature and perfection of their cause, and this cause and its effects constitute the realities of being, and are eternal. When, therefore, we speak of anything as real, it must have emanated from divine Mind, and must manifest all the qualities of this Mind.

The distinctive difference between Christian Science and all other forms of religion, philosophy, or ethics is found in the fact that the latter are based upon the asserted reality of both good and evil, Life and death, Spirit and matter, Truth and error, health and disease; while Christian Science teaches that since God and His manifestation is real and eternal, the opposite must be unreal and temporal, though it seem ever so real to material sense.

Paul's admonition, "I would have you wise unto that which is good, and simple concerning evil," is applicable to this generation of seekers after Truth as well as to the early Christians. Like Solomon, we should earnestly seek after an understanding heart that we may discern between good and evil, for in this spiritual discernment is found happiness and eternal life.

The good which we know and demonstrate is our true self, the man after God's (Mind's) own image and likeness, in contradistinction to the false sense of man which is real only to itself. In the second chapter of Daniel the

reality and immortality of good, the unreality and temporal nature of evil are depicted. We read that Nebuchadnezzar dreamed he saw a great image, "whose brightness was excellent, . . . and the form thereof was terrible." This image is a symbol of material sense, and it is significant that in verses 41 and 42 we read, "And whereas thou sawest the feet and toes, part of potters' clay, and part of iron, the kingdom shall be divided; . . . as the toes of the feet were part of iron, and part of clay, so the kingdom shall be partly strong, and partly broken. . . . They shall not cleave one to another, even as iron is not mixed with clay." It is thus indicated that good and evil, Spirit and matter, Life and death, like iron and clay can never mix, and the effort to make them do so by declaring for the reality of these opposite qualities can only lead to defeat, as the stone which was cut out without hands, smote the image and broke it in pieces.

Thus does the eternal Rock, Christ, or spiritual understanding which declares the omnipresence, omnipotence, and omniscience of good, smite to the earth the "image" of material sense. The glorious consummation of the demonstration in human consciousness of the reality of good, the unreality of evil, is portrayed in the 21st chapter of Revelation, "and they shall be His people, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Speaking in Meeting.

ELLA S. SARGENT.

CHRISTIAN SCIENCE does not put a premium on "bad grammar" any more than upon "bad spelling;" but it does teach that a false sense of "intellectuality is a snare." It is the fowler's net spread to catch those who might serve the Lord with gladness and come before His presence with thanksgiving and praise. We should remember that what seems "foolishness" to this world, God has taken to confound the "wisdom" of this world!

Of all the glowing testimonies to which I have listened as to the physical, financial, mental, moral, spiritual help brought by the application of Christian Science to "a whole world's woe," the three which stand out clearest in my memory.—white with the high light, the Shekinah, "the visible glory of the divine presence,"—these three were faulty in construction, while one could not even have been written out by the speaker. Ay! but they came from the experience of those who have "lived their way" into the understanding of Immanuel, as "God with us." This understanding is rare, because it comes only through the human heart's consciousness that in the time of trouble, He did "hide me in his pavilion;" that He has, once, hidden me, and that forevermore "in the secret of His tabernacle shall he hide me."

Can all the blended light of the stars, the mellow light of the moon, or even the midday splendor of the sun, pour down upon a sufferer such ineffable peace, or joy, as does divine Love when, trembling on the human lip, softening in the human face, intensifying in the human eye, God is expressed in the smile of human tenderness? Can all the light of the solar universe thrown back from earth and star and moon, return to the parent sun with such divine reflection as shines in the smile which answers to smile? This is the language of heart to heart; "Infinite Love is reflected in love" (Science and Health, p. 17); this is "the light that never was on land or sea." No tortuous windings of human reason, no dainty details of construction, no intellectual intricacies are needed, if

heart to heart
Speaks kindly when we meet and part.
Miscellaneous Writings, p. 388.

So, when the winds rage, and all the sea is lashed to fury,

and the vaunted "life-boats" go down, we, on the Mount of Ararat, need no syllogistic logic, no sesquipedalian words, no sermonizing; it is enough that in our safety, we open wide our arms and call, "Here, *here* is the ark!" Or, when the sun goes down and "all is chaos and old night," and through the darkness we hear the wailing or the weary toiling, we need not wait for fine grammatical construction, but set up that little light! No matter how faint the ray, how feeble the light, set it up, and peering into the midnight blackness, whisper, This is the "Light which lighteth every man that cometh into the world!"

What will meet the heart's great needs? Not we ourselves, not our scholarliness, not our intellectuality, but our experience. What has fed one starving child will feed another; what has warmed one lifeless man, will warm another; what has lifted one sinner to God will set another safe within the encircling arms.

"Oh, tell me where to hide!" is the deep unuttered cry. In the silence it is going up around us; "Where to *hide*?" "H*ere* to hide?" Brothers, sisters, say the word! Tell them "Love is our refuge," and they will seek "the shadow of His mighty wing" (Miscellaneous Writings, p. 389).

Lift up your countenance and radiate to them the light which only he can see who standeth in God's light, the smile which proves that in His presence is fulness of joy; repeat but one convincing promise from that Bible which Christian Science has proved to you to be your strong salvation, and the thin closed lips will smile back to you, hope will overspread the weary face, faith will kindle the listless eye, and they will turn their feet to follow.

Next to these three testimonies, stand in my recollection, those of speakers whose experiences so filled their consciences, that all sense of "self" was lost; rhetoricians, logicians, linguists speaking with the simplicity of little children,—

Telling them the wondrous story
With an earnest heart of love.

However helpful they may be, years of study, hours of practice, cannot bring the eloquence of one spiritual experience,—one "day" with God which is as a thousand years lived among men; yea as thousands of thousands, in the knowledge that satisfieth not!

Our Leader, "rich toward God," has appointed a Love Feast, that we may overcome evil by "the testimony of the word;" and because through bitter, and yet sweet, experience I have come to know that they who make the feast are partakers of the feast; and that the blessedness comes to us in the measure that we mete it out to others, I write this for those who may not yet have made the demonstration of freedom, and in Love's name I say, it is not to put on fair speech and flowing words; it is to let our lips and heart be still, and "list the voice within."

When I rose to present my first offerings of thanksgiving and praise at our Love-altar, the pains of hell got hold upon me, and once a friend, who sat at the extreme end of the pew, told me that before I was fairly on my feet, she felt the hammering pulsations of my heart vibrating through the seat. I did not know, in my untutored freshness, as I do now, that it was wholly impersonal evil working through self-consciousness to stifle the word of Truth which would become error's undoing. It seemed to me that there must be personal friend or foe, who wished to still me, or who condemned perhaps my testimony as unworthy the time or place, and I therefore suffered some unnecessary pain; but, impressed with the wonderful line, "Tear or triumph harms," in Mrs. Eddy's poem, "Shepherd, show me how to go" (Miscellaneous Writings, p. 308), when some would praise and other some seemed to withhold condemnation, I knew by intuition that I must conquer, or be conquered; that "self" was crying out for reward or punishment, and I would kneel down and pray with all the fervor of childhood.

When we go "up to Jerusalem,"—to our Mother Church, —which in the language of Israel, we might call our High

Altar, we must purify ourselves indeed. Purify ourselves, not alone of "bad grammar," but, more important, of bad concepts of God, of ourselves, and of our brother man. We should seek not to adorn thought with eloquence, but to strip it of inharmonies of sense and will, which entrap all spiritual aspirations with the snares of self.

Let me give here the gem of all the testimonies I have ever heard; the "gem," because in one short minute it flashed all the crystalline light of Christian Science. It was given in our own church, by a shy, sweet, modest "love-of-a-woman," whose white curls and laughing eyes betray the unbroken mother love,—and I have permission to give it verbatim, because it has helped me for four years and will help those who hesitate because they cannot give long testimonies. "Ever since we were married," said she, "I thought I must have mustard in the house,—either mustard plasters, or mustard leaves,—because, if we didn't, somebody would be sure to die before morning! Now, when anybody's sick, they say, 'Mother, I've got a cold; give me a thought of Truth, will you?' and that's the last I hear about *that* cold! So I thank God for the little I know about Christian Science; it's a handy thing to have in the house!"

The Lesson from a Bulb.

J. D. L.

IN the fall, when the bulbs which were to bring us the earliest blossoms of spring were being covered with the soft mould, through ignorance some of them were set on their heads, their faces turned away from the light, and when springtime came, and all the beds were gay with fragrant bells, there was one little patch which gave no sign. After a time of patient waiting, the gardener raked away the surface earth and disclosed little points of pale green pushing through the soil; further investigation showed that some of the bulbs, obedient to the law of life, had started to grow in due season, and at first the shoots had gone down, but finding only darkness, and attracted by the warmth of the sunlight above, they had gradually turned themselves and slowly pushed their way to the surface. Others showed the long, sickly leaves still spreading about and groping downward.

The gardener watched the growth from day to day, and as the leaves came up into the light, they grew green and strong; then the bulb itself began to turn and put its roots into the earth, until finally the blossom came and the little plant was straight and in its rightful position.

In Science and Health we read, "The inverted images presented by the senses, the deflections of matter, as opposed to the Science of spiritual reflection, are all unlike Spirit. In the illusion of life that is here to-day and gone to-morrow, man would be wholly mortal, were it not that Love, the divine Principle that obtains in divine Science, destroys all error and brings immortality to light" (p. 305).

What cause for rejoicing that the light of Love does not leave mortals forever groping in the darkness of erring, sinful beliefs, but compels them, by its gentle attractions, to look upward and seek their native air and opportunity, until, imbued with strength and health, they sweeten and enrich with their blossomings the barren places of human life.

What thankfulness should fill all hearts that the manifestations of divine Love in Christian Science are correcting our false concepts and bringing to mankind a right understanding of God and His creations.

Have love! Not love for one alone,
But man as man thy brother call;
And scatter, like the circling sun,
Thy charities on all.

SCHILLER.

Selected Articles.

Gift that will be Treasured.

The Rev. Mary Baker G. Eddy has recently presented to the State Library a copy of that magnificent work, "Bohemia," the official publication of the International League of Press clubs for the building and endowment of the Journalists' Home. This copy is one of the four that were made expressly for her.

The book is a large quarto of four hundred and six pages, and is profusely illustrated with pictures of contributors and of men and women of note. It is printed on heavy cream paper, with deckle edge and gilt top. The contents are a symposium by men and women in journalism, art, romance, literature, finance, diplomacy, politics, and state craft. The contribution by Mrs. Eddy is entitled, "Fundamental Christian Science." The editor-in-chief of the work is Alexander K. McClure, and his associates are Henry Watterson, Henry Starr Richardson, Arthur T. Abenethy, and George J. Brennan.

The book is bound in dark Levant morocco with covers both front and back inlaid in gold and colors. The inside lining is of dark blue Russia leather inlaid, and with tooled margins. The fly leaf is of heavy watered silk.

The edition *de luxe* of the book comprised one hundred copies, the first four of which were made expressly for the Discoverer and Founder of Christian Science. The one given to the library by her is numbered three.

The work represents the highest type of the modern art of book-making, and it will be treasured by the library officials.—*Concord (N. H.) Patriot*.

An Important Decision.

The following excerpts taken from a summary with comments respecting the ruling of the Supreme Court of North Carolina, appeared originally in the September number of *Physical Culture*, and was written by G. Edwards. It comes to us through the columns of the *Raleigh (N. C.) News and Observer*.—EDS.

"The Supreme Court of North Carolina has just handed down an opinion which is encouraging to every American citizen who loves fair play, and especially to those who may have suffered from the tyranny of laws enacted under the pressure of powerful, but quietly working medical societies.

"Their influence in the state legislature is powerful in having laws passed for their own protection. They often come to prattle about the need of protection for 'the common weal,' 'the ignorant and helpless common people,' and by such means they have sought to secure the passage of laws which have restricted the rights of others and trampled the 'equal privileges for all' under foot.

"The document following herewith is taken from the *Medical Library News*, and shows the way medical legislation is worked up.

"Confidential and Strictly Private.

"*Dear Doctor:*—Of course you are aware of the fact that some very much needed medical legislation is now pending in the Indiana legislature, and the strong opposition from the so-called "liberal doctors" is about to defeat it. This we must not permit for two reasons: First, we must have the supervision of the practice in the state; and next, we must have protection. We, you know, deserve much better fees than we get, but can never get them till we have a state board to control the practice, and then we can cut out the cheap and inferior men who are willing to practise for any beggar price. And next we can raise the requirements, so that it will take at least seven years' study and a college course. Then every ignorant country clod-hopper

cannot push himself into the profession to compete with respectable physicians.

"Where such laws, as we ask, have been tried, as in Pennsylvania, Illinois, etc., fees have been raised in one year from fifty to one hundred per cent.

"Now, what we want is this: If possible go to Indianapolis, Wednesday, March 4, and visit the legislature with the many other doctors that will be there for the same purpose, and as a body we will demand the passage of a certain bill, and get it and have it signed before our opponents know what we are doing. Of course you know where the headquarters are—go there upon arrival in the city.

"We confidently expect five hundred physicians present that day. If it is impossible to come, write to your member in the House and Senate, urging the passage of this bill. Read and destroy this at once.

"By order of Committee."

"This is a document of the medical organization in Indiana, but it is the same trust, the same medical monopoly on which the Supreme Court of North Carolina has put its heavy foot. It is a monopoly as dangerous as, if not more so than, any of the trusts that attempt to deprive the people of their freedom and of the necessities of life. The letter given above means that 'supervision of the practice in this state and protection' is wanted by a band of doctors who dare not place their methods of cure in open competition with other methods, and who are alarmed at the success of those who would institute a brighter era in the curing of human sicknesses. It means that such laws, under the false pretense of protecting the people, are really enacted to sustain medical graduates who could not, otherwise, command enough public patronage to prevent their starving. It means that they are not willing to give full freedom to the spread of truth, and that they would limit by law the spread of human knowledge in healing because it does not conform to theories which they are afraid to put to the test of the survival of the fittest. It means that the citizen is deprived of his most sacred liberty,—the right of a man, in the hour of sickness and in the nearness of death, to choose who should administer to him. Some existing medical laws mean that a person, no matter how well he is versed in physical culture, or mental healing, or any other healing, can be committed to jail if found out, even if he has cured the person after the regular doctor has given up the case.

"Chief Justice Clark, who handed down the opinion in the recent case in North Carolina, pointed out clearly and in an enlightened way the selfishness and tyranny of medical laws. Referring to the law that caused his opinion, he says,—

"It is forbidden to relieve a case of suffering, 'physical or mental,' by any method unless one is an M.D. It is not even admissible to 'minister to a mind diseased' by any method, or even dissipate an attack of the 'blues' without that label duly certified. Is not this creating a monopoly and the worst of monopolies?"

In protest against this condition of things, a liberal-minded doctor in Illinois cites two cases in which, after the regular physician had given up the case as hopeless, he objected strenuously to the parent's expressed desire and determination to try some other means which had been recommended. In one case he went so far as to threaten the mother with prosecution if an "irregular" was called to the relief of this little one, whom he pronounced to be dying.

"In the case in North Carolina, *State v. Andrew C. Biggs*, this same practice was carried on. Dr. Biggs has advertised himself to cure disease by physical culture, massage, baths, and diet. The state board of medical examiners began a fight against him in order to prevent him from practising his profession in Greensboro without a license from the board. Dr. Biggs had courage enough to

stand his ground and to fight the question to a decided finish. The case was carried to the highest court of the state. In this tribunal, the Supreme Court, the men who molested him not only received the humiliation attached to being worsted, but their law was pronounced an unconstitutional, monopolistic grab.

"Dr. Biggs's victory is the victory of every man who resents a medical empiricism that would encroach upon our liberties and deprive us of freedom of choice as to who shall administer to our dear ones in their hour of sickness, and in what manner relief should be given. We hope that this question will be fought out now in every state where these tyrannical laws exist until freedom for every manner of healing shall have a fair field. Let the best survive!"

The Lectures.

Chicago, Ill.

Rev. Irving C. Tomlinson of Concord, N. H., of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, delivered a lecture last night [October 25] in Chicago. He spoke at First Church of Christ, Scientist, in Drexel Boulevard.

The Chicago Chronicle.

In referring to the lecture editorially the *Chicago Chronicle* said,—

Rev. Irving C. Tomlinson delivered a notable address at First Church of Christ, Scientist, in this city last Tuesday evening [October 25] on the growth of the denomination. What he stated in detail was already known in general, but the public cannot fail to be interested in some of the particulars.

In 1897 there was only one Christian Scientist church in Chicago and now there are six. So they must have increased at the rate of one a year, and if their church buildings are any criterion they must be large, wealthy, and cultivated societies. In 1897 the whole denomination contained only three hundred and sixty churches, now it contains eight hundred and fifty. In 1897 Science and Health, the text-book of the denomination, written by Mrs. Eddy, had only passed its 130th thousand, and now it has reached its 315th thousand, and more copies of it were sold in the last twelve months than were sold in the first twelve years.

There are some remarkable things about this growth that Mr. Tomlinson did not mention. The converts all seem to be intelligent, refined, and well-to-do people and to come from all other Christian churches, as well as a large percentage from the Jewish church. This is all the more remarkable because the Christian Scientists are not propagandists and never so much as turn over their hands to make converts.

It is said that money is the measure of all sorts of success, and the most remarkable feature of the growth of Christian Science is that it attracts more money than the denomination knows what to do with. Christian Scientists build costly churches, but they never dedicate them until they are paid for.

The most significant thing in this growth of the Christian Science church is that it has taken place at a time when the other Christian churches have been complaining. Rev. Dr. John Balcom Shaw of the Second Presbyterian Church, in an interview published last Sunday in a Chicago newspaper, said there was a regular "stampede" from the Presbyterian church. In particular the servants and the laboring class had left it, but he complained that the well-to-do class was going also. He said his former church, in New York, was located on a street only eight blocks long, and there were living on that street more than enough ex-

Presbyterians to fill his house of worship. Similar complaints are made by other churches, but the Christian Scientist church appears to be on the crest of the wave.

Christian Science is a subject we do not pretend to understand, but there must be something good in it. "By their fruits ye shall know them," and "Men do not gather grapes of thorns nor figs of thistles." The system must also be needed at the present day, or else men would not be so strongly attracted to it and its spread would not be the marvel of the age.

Mechanicsburg, O.

Rev. C. E. Byrer, in introducing Bicknell Young of Chicago, who lectured on Christian Science, September 26, said in part:—

There are three elements which enter into the understanding of any and every creed. There is the intellectual element,—the array of facts which appeal to the reason; there is the practical element,—how it works itself out in every-day life, and in this Christian Science is not without its share of good evidence; and there is the religious element,—what it teaches about God and man and their mutual relations. Christian Science in its teaching about man believes in the "Youth, health, and vigor habit," and it has small patience with the "martyr habit" and "the misery habit." It believes that pessimism leads to weakness, that optimism leads to power. Our theologies have cultivated rather too much the "fear-thought" instead of forethought. The God of Christian Science is not only good, but His goodness may be used, and used every day.

Mechanicsburg News Item.

Calais, Me.

Bliss Knapp of Boston lectured for First Church of Christ, Scientist, Thursday evening, November 3, to an appreciative and representative audience. Mr. Knapp's lecture was deeply spiritual and instructive, meeting most uniquely the needs of this community. He was gracefully introduced by Ralph A. Barker, a rising young lawyer of this city. Mr. Barker spoke as follows:—

Every movement of human thought that has won for itself the adherence of multitudes of our fellow-men is worthy of the candid and interested consideration of all thoughtful persons, and in the study of such a movement we should go to its supporters rather than its opponents for information as to what it stands for and represents. That school of thought known as Christian Science is exerting a very considerable influence in our modern life, and we are privileged this evening to listen to an exposition of its teachings from one who speaks with authority in regard to them. I take pleasure in introducing Mr. Bliss Knapp of Boston.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

[Republished by Request.]

What our Leader Says.

Beloved Christian Scientists:—Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourself are safe, but all whom your thoughts rest upon are thereby benefited.

It is the evil-thinker who injures himself with what he would have harm others. Goodness involuntarily resists evil. The evil-thinker takes his own dose and dies of his own physic. The right thinker is safe, and abides under the shadow of the Almighty. His thoughts can only reflect peace, good will, health, and holiness.

MARY BAKER EDDY.

Pleasant View, Concord, N. H.

Christian Science Journal, March 1899, Vol. XVI., No. 12.

Good deeds overdone numerically, or bad deeds, are remedied by reading the Manual.—MARY BAKER EDDY.

A New By-law and Amendments.

THE following new By-law has been adopted,—

ARTICLE XIX.

SUBJECT FOR LESSONS.—SECTION 6.—The first lessons of the children should be the Ten Commandments (Exodus, 20 : 3-18), the Lord's Prayer and its Spiritual Interpretation by Mary Baker G. Eddy (Matthew, 6 : 9-14), Sermon on the Mount (Matthew, 5 : 3-11). The next lessons consist of such questions and answers as are adapted to a juvenile class, and may be found in the *Christian Science Quarterly Lessons*, read in church services. The instruction given by the children's teachers must not deviate from the absolute Christian Science contained in their text-book.

Article XIX., Section 5, has been amended to read as follows:—

TEACHING IN SUNDAY SCHOOL.—SECTION 5.—Children up to the age of twelve years may be received into classes in the Sunday School of any Church of Christ, Scientist, but none shall remain there after reaching the age of fifteen years. None others except the teachers and officers of the Sunday School should attend these exercises.

Section 8, Article XXXII., has been amended by adding the following paragraph:—

If both husband and wife are found duly qualified to teach Christian Science, either one, not both, should teach yearly one class.

A Correction.

Dear Editor:—Please correct this mistake of my typewriter in the "Church By-laws." For the word "be" it

should read "become," and publish this corrected By-law in your next issue.

MARY BAKER EDDY.

Pleasant View, November 8, 1904.

The correct reading of the By-law referred to is as follows:—

ARTICLE XXVI.

CHURCH ORGANIZATIONS AMPLE.—SECTION 14. Members of this Church shall not become members of Clubs which exclude either sex,—except they are Free Masons, or Press Clubs that give the toil-worn aged Journalists a Home. God requires our whole hearts, and He supplies dutiful, sufficient occupations for its members within the wide channels of The Mother Church.

Words of Appreciation.

THE following telegram expressive of love and loyalty was recently received by our Leader.

New York, November 4, 1904.

Reverend Mary Baker G. Eddy, Pleasant View, Concord, N. H.

We, the members of the Students' Association of the New York City Christian Science Institute in annual meeting assembled, send to you, our beloved Leader and Teacher, our love and assurance of increasing appreciation of your wisdom and untiring guidance. We reconsecrate ourselves that we may demonstrate the spiritual co-operation which is the unity to which your wise leadership calls us. Our earnest aim is to reach your exalted ideals of purity and power.

AUGUSTA E. STETSON, *For the Members.*

Mrs. Eddy's cordial and cheering reply follows:—

Concord, N. H., November 7, 1904.

Mrs. Augusta E. Stetson, C.S.D., and Students' Association of the New York Christian Science Institute.

Accept my thanks and loving congratulation. Jesus said, "My sheep hear my voice and I know them, and they follow me."

MARY BAKER EDDY.

Practitioners' Cards.

WE have recently received quite a number of letters from Christian Scientists giving a statement of the work they are doing, some asking whether it is proper for them to continue their cards in the directory of practitioners published in *The Christian Science Journal*, others asking whether the writers should not make application for the insertion of their cards in this directory. Perhaps the most definite and satisfactory answer that can be made to these inquiries is this: The directory is intended to include the names of none but competent and available practitioners,—persons who have proved their sufficient understanding of Christian Science by healing the sick, who are not engaged in any business, or in any profession other than Christian Science work,—and only such should wish to have their cards appear.

The following editorial touching upon this matter appeared in the November issue of *The Christian Science Journal*.

"The list of names and addresses of practitioners which appears each month in the *Journal* has grown to such an extent as to be unwieldy, and it has now become so much out of proportion to the number of pages of reading matter as to be a serious problem to the publishers, so serious that they are about to adopt new rules by which they hope to reduce this department to a size more nearly in keeping with its original purpose.

"It has never been the intention of the publishers to make this list a complete directory of Christian Scientists, yet it has been so regarded by some who have inserted their cards in order to be officially identified with the Christian

Science movement, while others have patronized this department as a means of contributing to the financial support of the denominational publications; and thus the distinctive character which was originally planned for this list has been more or less interfered with, and not a little disappointment has been occasioned to seekers after help who have applied to some of these advertisers only to find them unable to respond to their call.

"During the period in which the present large list has been growing, the original and legitimate purpose of a directory of practitioners seems to have been more or less lost sight of, and it now becomes necessary to adopt rules which will conserve this original purpose and maintain the integrity of the *Journal*. The publishers feel sure that in their efforts to this end they will receive the cordial and helpful support of all Christian Scientists.

"A directory of practitioners of Christian Science should include only the names of those persons who devote their entire time to the practice of Christian Science healing, or those who devote certain specified days or hours to the work, and it is the intention of the publishers to eliminate from the present list the name of every person who does not measure up to this standard of availability as well as to the standard of efficiency which has always been in force, for it is the right of every person who consults the *Journal* for the name and address of a practitioner to feel assured that every name in the published list is that of one who is ready and willing to respond to legitimate calls at all times, unless certain hours are specified.

"If this is not kept in view, the usefulness of the list will be minimized, and it may become a source of annoyance instead of fulfilling its legitimate mission. Teachers and others who indorse applications for these cards should see to it that the applicants are not only well qualified to be practitioners, but that they intend to give such time to the work as will justify the insertion of their names." M.

A Complaint and its Cure.

IN commenting upon the present condition of religious thought and life, the editor of a leading denominational weekly has recently said,—

"With reference to a very large proportion of the members of every church, . . . an outside observer would fail to find that they have any other connection with the church or with religion in any way. If he could follow them to their homes, to their work, and to their amusements, he would find nothing to distinguish them from the people about them; no family or private devotions, no distinctively Christian features in their business, no religious element in their recreations."

He further remarks that such an observer could but draw some striking conclusions, were he to contrast the facts noted with that Scripture ideal which regards the church as the body of Christ, and its every member as vitally articulated therewith.

If our brother's statement respecting the religious status of the average Christian congregation be correct, then surely no further explanation need be given of the meager results already attained in the world's evangelization. Professed Christians who are spiritually apathetic can but affect the visible church as a paralyzed limb affects the physical body, they exist only to impede. The consistency and efficiency of a man's Christian life is determined by the depth and sincerity of his religious convictions, and while education, self-interest, or prejudice may beget assertive and tenacious beliefs, the knowledge of demonstrable truth, and that alone, creates and establishes a conviction which is intelligent and abiding. It is here that Christian Science brings to humanity the promise and proofs of better things. Its representatives have abundant occasion to be humble in the presence of their ideals, but they also have occasion for great thankfulness that through mul-

tiplied and indisputable demonstrations they have gained immeasurably in the strength and definiteness of their assurances of truth, and this explains the fact that they can and do uniformly witness to a more consistent living, a more alert and impelling interest in spiritual things than was theirs before.

The significance of this content and finality of faith respecting truth and its availability for the solution of our life's problems, more fully appears when we remember that while the effective force of a religious organization like the Christian Church, demands a communal consciousness,—voluntary mergence in the larger unit,—its success is yet more dependent upon the loyalty of the individual member to his highest ideal of personal duty and conduct, and it is here that the mortal falls so far short. When a professed Christian fails to apprehend that so far as he is concerned his own spiritual struggle compasses the cause for which he stands, that its every battle must be fought, its every victory won, first, within the arena of his own heart,—then his connection with a religious organization is sure to become conventional, his life superficial, his influence a zero, if not an actual disability.

The awakening of such men is the key to the solution of the problem of the Church, and this is the work of Truth in Christian Science. Its faithful students cannot escape a realization of the necessity as well as the possibility of overcoming all evil, that they may prove to a doubtful and caviling world that "in Science divine Love alone governs man" (Manual, Art. XX., Sect. 1). They know that only as they demonstrate over their own temptations to sickness and sin, can they effectively help the race in its struggle for spiritual freedom, and they are continually urged to do the one thing that will prove most serviceable to humanity by those higher and impelling self-considerations which lead them to escape suffering of body and mind through the enthronement of the Christ ideal, its manifestation in all the experiences and relations of every-day life. This putting in evidence of truth, this manifestation of the sovereignty of the Christ in man, is the greatest event of human history, it is the goal of all Christian endeavor, and it is the answer of fulfillment to Peter's great declaration that "there is none other name under heaven given among men, whereby we must be saved."

This is our great and far-reaching vantage, that we are so constantly and so imperatively incited to earnestness and sincerity of effort to attain unto the Mind that was in Christ Jesus that we may do his works, which *doing* we know to be the one sure and divinely appointed test of saving faith. This is the very palladium of Christian Science, and so long as its representatives honor it, so long will it be impossible for the conditions our brother bemoans to retard this Cause. W.

Letters to our Leader.

Buenos Aires, September 20, 1904.

Dear Mrs. Eddy:—The steamship "Serapis," which sailed from Valparaiso for Montevideo on August 9, had but five passengers. Of these, four were *en route* to the United States for the purpose of receiving instruction in Christian Science, having been active in the dissemination of hope and healing in Santiago, Chile, through the knowledge gained from the study of Science and Health alone. The fifth member of the party is one of the Readers of a large church in Illinois. We five had a most memorable voyage, sailing through Smyth's Channel and viewing there some of the most majestic scenery in the world. Mountains rise on each side of the narrow passage, their tops covered with pure white snow and their bases with the densest vegetation. Innumerable white glistening waterfalls add to the beauty, and an occasional gleaming glacier lends interest and wonder to the trip.

Through all this, traversing the straits discovered by Magellan, and so up to the "River of Silver" we journeyed, reading the Lesson-Sermons regularly, and thankful each day for the harmony and love that have blessed our lives since coming into some understanding of the Truth of being as elucidated by you.

With the deepest sense of our many obligations to you, we procured a trifle of lace which was made here in South America. "Nanduti" is the aboriginal name for this lace, which has been made in Paraguay for many, many years. Children of a tender age are taught to make it and continue at the work all their lives. Its principal market is in Buenos Aires. Emboldened by the unusual character of our journey we ask you to accept this lace as a filmy expression of our love, together with, what will please you more, the information that in two cities in South America, Santiago and Buenos Aires, Christian Science is established, and regular services are held. We again express our constantly felt gratitude and love for you.

Sincerely,

EUGENE R. COX, Chicago. ALFREDO L. DEMOREST.
LIDA M. DEMOREST. CHERESE HUGUET.
ISAAC N. DEMOREST.

Chicago, Ill., October 27, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

My Teacher:—For years we have desired just what these Teachers' Association meetings are giving us, uniformity of action in our work. "Way out West" we could not be in close personal touch with you, and in great loneliness of heart we have cried out to be guided aright. God has answered us and we are supplied. Each paper read seemed touched by Divine wisdom. There has been a marked growth since one year ago in every line.

Dear Leader, we are trying to follow your command and to love each other. One night I awoke suddenly and opened my Bible at the 17th of John, with the prayer that God would teach me. I saw in it all unity, all healing. Since then I have made it a constant study, so when your telegram came with its quotation, I knew that your prayers were being answered, and that we are all becoming one. To heal "quickly and wholly" seems the only prize to gain.

With gratitude for all your prayers and your unselfish love.

FRANCES MACK MANN.

South Omaha, Neb.

Beloved Leader:—I long to tell you that I have proved by demonstration the truth of your words: "trenchant Truth . . . cuts its way through iron,"—it was a strange incident,—and no sufficient human aid was near, nor time to wait, as a life seemed at stake, or in peril, but Christian Science was realized sufficiently to break or cut a piece of heavy fence wire, and the captive was set free. Also it may gladden your dear heart to know that I have made seven demonstrations of healing, of one treatment each, in the past five weeks, and one was over the claim of broken bone.

Lovingly your student's student,

BEATRICE B. QUINBY.

Whole Edition Sold.

The following extract from a letter received from Mr. Meehan of the *Concord* (N. H.) *Patriot* is self-explanatory:

"Owing to a notice which appeared in the *Christian Science Sentinel* stating that the *Patriot* published in full the address of Mr. Bicknell Young, we have received a great many orders for the paper, and are still receiving them.

"The whole edition was soon exhausted, and as we are unable to fill any more orders, we would esteem it a great favor if you would make a little note to this effect in the next number of the *Sentinel*."

Testimonies of Healing.

I feel that the time has come for me to acknowledge some of the blessings I have received through Christian Science; to withhold my statement any longer would seem like ingratitude. In 1885 I came to Southern California in search of a climate that was milder than Utah, feeling that I had only a short time to live, on account of the condition of my lungs. I had been a soldier in the army, and at the close of the war I came home a physical wreck, and a victim of the alcoholic habit. I located at Colton and soon afterwards my wife came to me. She too was an invalid, suffering from heart trouble, and often it would seem as though her life would go out, so grave and distressing were the symptoms. I did not find the help I had expected from the climate, and being very much discouraged, would try to drown my trouble in drinking and gambling, until we were reduced to the verge of poverty. My wife's mother, who was with us and in poor health, heard of Christian Science and was healed by it. Afterwards my wife was treated, and she too was made well. She was very anxious to go into a class and expressed to her practitioner her great desire for the teaching, but said that her husband was so opposed to anything like Christianity that it made it very unpleasant for her when she mentioned the subject. This lady advised her to wait, and said that Truth would open the way.

After this, my cough became much worse, and knowing what Christian Science had done for my family, I thought I would have a few treatments, to see if I could be benefited, but had very little faith. I had not met the Christian Scientist, for I was never at home when she came to the house, and did not care to see her, but when I found that I could be treated absently, I requested my wife's mother to go to Riverside and ask for the treatment. She explained my condition regarding the cough, but after a week's treatment all the symptoms seemed aggravated. I went deeper than ever into drinking and gambling, going so far as to buy out the gambling-den and stay there day and night. My wife, very sorely troubled at what I was doing, went to the practitioner and told her of all these conditions, that being the first she knew of my irregular habits. She comforted my wife as only those who know the truth and live it are able to comfort the sorrowing, telling her to trust, and all would be over soon, as it was nothing but error's final struggle. She repeated the words found in *Science and Health*, page 97, "The higher Truth lifts her voice, the louder will error scream."

Three days later I went home early in the morning, just as the sun was rising over the hills, with the sunlight of a new life dawning in my consciousness,—a sober man once more,—and told my wife I would never enter that hell again, and I never have. The "old man with his deeds," which were many, was laid off, and the light of Truth had taken their place. I was completely healed. My appetite for drinking, chewing and smoking, gambling, and the terrible sin of profanity had passed into oblivion, and soon all pulmonary trouble was destroyed; and glasses, which I had worn for ten years, were laid aside, and have never been used since. For these blessings, with many others that have come to us through this beautiful Christ teaching, I am very grateful to God, and to our Leader, Mrs. Eddy, who has so faithfully pointed out the way of Truth and Life to all mankind.

A short time after my healing, my wife again spoke to me about taking class instruction, asking if I had any objections. My reply was, "No, and I will go with you." The beauty of holiness was unfolded to us, and we are truly grateful to our teacher. I am grateful for the spiritual uplifting, for the healing of sin is much more to me than the healing of consumption. All I am and have, I owe to Christian Science,—spiritually, morally, physically, and

financially; for with the disappearance of an irregular life and sickness, poverty also became a thing of the past. Our home is one of peace and plenty, and to-day I am a perfect marvel to my old associates with whom I used to walk hand in hand, emaciated with disease and fettered with sin, but now erect in form and weighing two hundred and five pounds.

"The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love" (*Science and Health*, p. 1).—LUTHER CARTER, Colton, Cal.

I have been studying Science and Health with the Bible for a number of years, and the more I study the more I know them to be true. I try to spare all the time I can to learn more of the truth which is taught through Christian Science. I have most of Mrs. Eddy's writings, and have had them for a long time, but never realized the need of studying her smaller works as I have recently. There is so much healing in them.

I have read "No and Yes," and "Rudimental Divine Science," all three of the Messages to The Mother Church, and "Unity of Good," and they have all seemed so good to me that I feel I must tell others. If we walk in the path our dear Leader is pointing out to us, we shall surely find that it leads to Life eternal. Many thanks to her and to all who have helped me to find this way.

I am glad that medicine did not heal me, for if it had I might not have the joy of understanding God as I now do. This is the truth that I long have sought; it heals the sick and shows us how to love our neighbor, it shows us the way over all the rough places and how to have harmony in our homes. The world is seeking a loving Principle, and this is the God revealed by Christian Science, who healeth all our diseases.—MRS. BELLE P. GLAZE, Crawford, Neb.

Of the many cases of healing which I have experienced, I want to cite one. Prior to a professional tour through the various parts of the country, for a number of consecutive weeks, I was busy with rehearsals, of which I was an important factor, being at leisure about five minutes out of the three hours consumed in the presentation of our play, and being in one brief instance obliged to waltz.

The first week of preparation passed, when the Sunday following found me laid up for repairs with a dislocation of the knee, unable to move even around my room without assistance. I was in despair, having in mind not only the necessity of my presence at our future rehearsals, but the possibility of some twenty-four people being forced to be idle, pending my recovery.

My husband suggested a practitioner, to which I acquiesced. At the conclusion of the Sunday services, which he attended, he was directed to the lady, who called upon me that same afternoon, and with excellent results, for on Monday morning I not only visited her office but attended rehearsal, which required the ascent of four flights of stairs, in addition to being constantly on my feet. For six days I visited my practitioner, prior to the beginning of the day's work, until I finally felt that error was crawling away defeated. I left New York the succeeding week, and for eleven months traveled and worked without a return of the difficulty, nor have I been troubled since.

While I fully appreciate all that my practitioner did for me through her understanding of divine Mind, I cannot but feel that her strict adherence to the "allness of God," and her unselfed love lifted me even beyond the physical healing, into a clearer and more spiritual understanding of Truth, which has since proved the beacon light that has steered my little boat through error's many storms. My earnest desire in this great unlimited truth, is indeed to show my faith by my works, to be a humble follower of our blessed Wayshower.

EFFIE ELLSLER WESTON, New York, N. Y.

Since the publication of my testimony which appeared in the *Sentinel* of August 27, I have received so many letters from all parts of this country that I have concluded to send a further statement, hoping that it may be of equal interest to your readers. The experience which I related took place in the latter part of 1901 and the early part of 1902. Upon my reaching my home one evening in January, 1902, I detected a very strong smell of wood smoke. I at once called the fire department, and by the time they had reached the scene the fire was well under way and resulted in the destruction of the house and most of its contents.

At this time my wife was slowly recovering from heart disease, under the influence of Christian Science treatment, as related in my former testimony. She had recovered only so far as enabled her to walk with care across her room. When the fire broke out, she was reclining on a couch. Right here I will say that when a child she had met with an accident and received an inguinal hernia which necessitated her wearing a truss whenever she was on her feet, and although her parents had her treated during several years by many physicians and specialists, she failed to receive any benefit from their treatment. The night our house was burned we spent at a neighbor's directly across the street from our home, and the next morning my wife followed me to the door to bid me good-by and whispered in my ear, "You will have to get me a new truss to-day." I asked her what had become of her truss. She replied that it had been burned up in the fire last night; that she had taken it off before the fire started. She added, "Now, don't forget it, for I cannot get along without one. It has caused me severe pain to get to breakfast this morning without it." This indicated very positively that the rupture was just as severe at that time as it had been before.

After disposing of my morning mail, I closed my desk and went up town for the purpose of purchasing the truss. As I walked along the street something suggested to me to go and tell the Christian Science practitioner; and without any well defined idea why or for what purpose I should see her, I walked directly to her office. When I got there the purpose of my visit was so illy formed in my mind that I felt foolish and hardly knew what to say, as I had no idea that my wife could be healed of this trouble through Christian Science, but I abruptly told the practitioner what I had come uptown for, and she at once remarked that she did not know my wife was afflicted with a hernia, and that had she known it she might already have been healed. She further said that I did not need to buy a truss unless I wished to, that I could say to my wife that she did not need one as she would treat her, and the rupture would be cured. I expressed my surprise that one could be cured of such an ailment through Christian Science, but was told that it was nevertheless a fact, as nothing is impossible to divine Mind, and that the unerring and fixed Principle of all healing is God. The result was that I did not buy a truss. I went home and told my wife what the practitioner had said, and from that day to this she has not worn any truss nor has she had any inconvenience for want of it, and she has experienced no pain. She was absolutely cured, and no other means whatever were used except treatment in Christian Science. She is a very active woman, on her feet a great deal, goes wherever she pleases, does whatever her hands find to do, and is not inconvenienced nor annoyed by any trace or suggestions of hernia or heart disease.

As a family, we have a great deal to be thankful to Christian Science for; we have not used a drop of medicine for over two years. Since my wife's healing she has gone through class with her practitioner, and now has a sufficient understanding of Christian Science to be able to demonstrate its power for other members of the family.

While I myself have not yet studied Christian Science, I hope some day to obtain the understanding. I have seen

sufficient of its workings, however, to know that it is a true science, a correct interpretation of the truth, and it affords me great pleasure to be able in a small way to assist others.

While some of this day and generation have been able to tell us new things about astronomy, have made various discoveries along different lines of natural science, art, and manufacture which are beneficial to humanity, in my opinion, no one, for hundreds of years, has ever written anything which has been, and which will in time to come be, of such vast importance and benefit to the human family as the exegesis by Mrs. Eddy of the plain and simple teachings of Jesus Christ. She has pointed out why and how they may be applied to daily life and its exigencies; thus proving conclusively that the orthodox teaching—that “the day of miracles is past”—is a great mistake and without foundation in fact. I am beginning to learn that Christian Science is a good thing in business,—a good practical religion to live by, “giving mortals new motives, new purposes, new affections, all pointing upward. This mental condition settles into strength, freedom, deep-toned faith in God; and a marked loss of faith in evil, in human wisdom, human policy, ways, and means” (Miscellaneous Writings, p. 204).—J. D. DAVISON, Kansas City, Mo.

We had for three years been trying many of the best doctors in our city and many different remedies for our little girl. One evening on my way home from the doctor's I felt discouraged and despairing, and stopped at a friend's house. There I met a lady who heard my troubles; she said I ought to try Christian Science, and told me where to go for help. We had to be up much at night because the child would just scream with pain, and was getting worse all the time. We had never heard of Christian Science before and did not know what it was, but we wanted help. The lady spoke to me of God and His goodness, and asked me if I would trust Him, because all things are possible to Him. She gave me something to read and gave the child a treatment. That night we got up several times to see if she was all right, because she went to bed as usual, but never stirred. The next morning she got up and was singing all day, and skipping about. I was glad, and only hoped it would last. She has been well ever since, although when I took her she had a growth on each limb, about six inches long and about two and one half inches deep in the centres, and on one arm a lump as large as a hen's egg. That took a few weeks till it got smaller, for it was hard like bone. In a few months it too was all gone. We can never tell how grateful we feel to God and to Mrs. Eddy for this beautiful truth.

A few weeks ago my little girl had a very high fever and sore throat, but we read the wondrous book, Science and Health, all the afternoon and evening. I felt some fear and wanted to put a handkerchief around her neck, but she would not have it, because God did not need any help. Thanks for this truth.—MRS. MAY GILBERT, Cincinnati, O.

When I took up the study of Science and Health by Mrs. Eddy, and the real meaning of the Scriptures came to me, I cannot tell the peace and joy that came with it. To be able, even in a small degree, to reflect Truth is a blessing I never expected to have. To learn that I could help those whom I met in every-day life, and to send out loving thoughts which could not return unto me void, certainly seemed wonderful.

I cannot express in words my gratitude to Mrs. Eddy, and I thank God hourly that she has been steadfast,—faithful; so that divine Truth has been revealed in this generation. I am also thankful to the many friends who have been painstaking and loving in helping me to see and understand Christian Science.

MRS. NELLIE BREWER, Auburn Park, Ill.

I want to tell the world what Christian knowledge has done for me. Neither words nor pen can express the love, joy, peace, and health I now enjoy. Just one year ago this month I was taken sick and was confined to my bed for three months with typhoid fever, tuberculosis, and peritonitis. I had one of the best physicians and my mother, who is called a good nurse, took care of me, but I continued to grow worse all the time, being reduced to a mere skeleton. My suffering was beyond description. The long days and nights came, still no relief, and on a Saturday morning a Christian Scientist called to see me, as my husband had gone the night before and asked for her.

I must now state how I came to call the Scientist. A few days previous, four of our best and most esteemed physicians held a consultation and fully diagnosed my case. They reported to my husband and mother that I was beyond any help, that all had been done that could be done, and that I could live but a short time. They also said my bowels were paralyzed. At the time the practitioner called I was under the influence of an opiate, to deaden the pain. She asked if we were ready to give up the medicine. I replied, all but the opiate, as it did not seem that I could do without it. I allowed her to go. As she was leaving she gave my mother her telephone number, and said that if we wanted her, to call her at four o'clock of the same day. I gave up the drug, the false god, and recalled the Scientist. Mortification was then plainly visible. She came, gave me a treatment, in twelve hours harmony was restored and the bowels moved three times. I began improving at once. The following Tuesday I was sitting up. On Wednesday I was in the dining room dressed and at the table eating dinner with my family. On Thursday I went to the table alone and ate whatever I wanted. In one week my mother took me out riding in a wheel-chair, in three weeks I rode into the country several miles, and the day following I went with my mother to her home, sixty miles distant on the cars; changed cars at Rochester, riding three miles in a carriage after leaving the train, ate a hearty dinner, had a rest, and felt refreshed. I improved right along and am now doing my household work. Other diseases have disappeared: liver trouble and severe headache having all gone now.

I have deep gratitude and love for our dear Leader, Mrs. Eddy, and for the dear practitioner and the friends who have helped me. I love the dear Bible and understand it as never before. My husband and mother have had glorious proofs of the ever-presence of divine Love. I feel stronger and better every day and praise God for the understanding I have gained.—MRS. ALIE WADE, Batavia, N. Y.

I wish to express my gratitude for Christian Science and for the many blessings that have come to me and my family from the blessed Christ-Truth revealed to our age through Mary Baker G. Eddy. I had been under the physician's care for nine years, and going to Atlantic City to stay a couple of weeks, I was taken very ill with nervous prostration and was unable to leave for eleven weeks. The doctor said that I was very anemic,—my blood filled with uric acid, and all of the organs in a weakened state. He was a homœopathist and wrote to a specialist of the same school in my city, under whose care I was placed. He gave me electricity three times a week, together with medicines, which I continued taking for three months. As there was also an internal trouble, it was thought better to consult with my former allopathic specialist. He said I was a physical wreck and should continue with the electricity, but I should take his medicine and treatment. He prescribed ozonate-lithia water and a diet with a laxative every night.

One day while in a most perplexed state of thought, as I seemed to be getting worse instead of better, I went to see some friends who were Christian Scientists. These friends spoke of God as Love, and that He did not send distress

to His dear children. The conversation impressed me so that I spoke of it to my husband's mother, who loaned me the two volumes of Science and Health published in 1883. After reading them I was convinced that Christian Science was true. I sent for a practitioner and was healed in ten treatments, and gained great joy in deliverance from the bondage of error.

I threw away all the once valued prescriptions and medicines, having two medicine closets full. I was determined that I would no longer break the first commandment, which I had been doing ignorantly, in making gods of material remedies; but would now turn to the one God, "whom to know aright is Life eternal" (Science and Health, Pref. vii.), the great Physician "who forgiveth all thine iniquities; who healeth all thy diseases."

This was six years ago and we have not had a doctor in the house or taken any medicine in a family of seven. Class instruction from one of Mrs. Eddy's students strengthened me and enabled me to overcome grip, croup, fever, and other ailments in my own household.

My little girl had the habit of sucking her fingers from infancy until the fingers had become disfigured. This habit was entirely overcome in Christian Science treatment and the fingers became all right. Another daughter was attacked last winter with eczema, which, to mortal sense, seemed alarming. It appeared to be a fever blister, but in a day it had spread over nearly the entire face. We are a large family circle, many of our relatives are antagonistic to Christian Science, and there was much talk, many fears expressed, and many suggestions made, but when she was entirely healed in Christian Science in a few weeks, all were much surprised. I hardly know where to stop when I begin to speak of all I owe to Christian Science. Through the helpful articles from our beloved Leader which are constantly coming, together with our welcome *Sentinel* and *Journal*, I feel that we are certainly blessed.

H., Baltimore, Md.

I am twenty-five years of age, employed as salesman in one of the large retail establishments of this city, and every day for over two years I have proven the power of Truth over error. Before that time I had been to many doctors and had exhausted the resources of *materia medica* in my efforts to get free from nervous trouble. During those years I took large quantities of medicine, and the last lot of empty bottles which were thrown away nearly filled a bushel basket. The last treatment I took from a physician was the lymph cure. This treatment was very expensive, and I had to borrow the money in order to take it. At the end of that time I seemed to have improved but the effect lasted barely one month and I was then in about the same condition as before. I soon got worse; was obliged to stop my work temporarily, and it was during this period, when I was hopelessly discouraged, that I was induced to try Christian Science.

My first distinct impression after treatment was one of peace and happiness which I had not known for many years. I was under treatment for a little over a week when I was healed. I was, however, only commencing my work, which has continued for the last two years. I was healed but I had to learn that if I wanted to stay healed I must "go, and sin no more." My progress after that was slow, and was "attended with doubts and defeats as well as triumphs" (Science and Health, p. 39). There were many struggles in darkness and many a time it seemed that I should never be free, but one by one the errors were destroyed, the wrong thinking was corrected, and from each seeming defeat I emerged stronger and with a clearer understanding, which enabled me to meet the errors more successfully when they presented themselves again. In my business life, which is exceedingly active, I have found a practical basis,—the understanding of divine Principle,—which demonstrates good and harmony. I have found that

the law of God, good, will, if applied rightly, work for good everywhere, no matter what the condition seems to be. Science and Health teaches us that all action is in Spirit, harmonious and perfect, and by realizing and applying this truth, I have been enabled, with the help of my teacher and practitioner, to rise above the nervous prostration which a physician said was the worst case he had ever seen in a person of my age. The power of Truth was demonstrated time and again when, if the evidences of the physical senses had been believed, I would have been prostrated. In learning the basic law of mathematics for the first time, we must have faith in that which is taught us until we have worked it out for ourselves and know it to be true. So in learning Christian Science, if we want to work out our problem successfully, we must have sufficient faith in the Principle until the demonstration is made, and then faith becomes understanding. This understanding I have received to the extent that it has destroyed the illusion of sickness and restored health by the power of Truth over error.

RUSSELL FREEMAN, Chicago, Ill.

I wish to give an experience which shows that the so-called laws attached by mortal mind to forms of matter can be proved null and void. A few years ago, while employed as instructor in chemistry in the high school of another city, I was doing some experimental work on ores. While talking to my wife, who happened to be with me in the laboratory, I carelessly brought together in a flask two chemicals in a heated condition, as a result of which there was evolved a copious volume of chlorine gas. This gas, which is held to be very active and poisonous, came so quickly that I inhaled considerable of it. I at once entered a mental denial of its supposed power and continued with my work, feeling scarcely any ill effects. On going home a few hours later, quite a high fever manifested itself but this was quickly destroyed. I remembered that my professor of chemistry at the university was the victim of an accident with a similar but less active gas, which resulted in broken health and finally death from bronchial and pulmonary troubles. I am very grateful to Christian Science for showing us a way of escape from the discords of material belief,—a way into the harmony of Spirit,—and to our Leader, Mrs. Eddy, for living so pure a life that this revelation could come to this age through her.

J. W. MAHIN, Denver, Col.

So many are God's kindnesses to us that as drops of water they run together, and it is not until we are borne up by the multitude of them, as by streams in deep channels, that we recognize them as coming from Him. We have walked amid His mercies as in a forest where we are tangled among ten thousand growths and touched on every hand by leaves and buds which we notice not. We cannot recall all the things He has done for us. They are so many that they must needs crowd upon each other until they go down behind the horizon of memory, like full hemispheres of stars that move in multitudes and sink not separate and distinguishable, but multitudinous, each casting light into the other, and so clouding each other by common brightness.

HENRY WARD BEECHER.

Ministry.

They might not need me—
Yet they might—
I'll let my heart be
Just in sight.
A smile so small
As mine, might be
Precisely their
Necessity.

EMILY DICKINSON.
The Standard.

From our Exchanges.

The Christian world does not lay sufficient stress upon the importance of having the "mind of Christ." Of course we all agree in declaring that the possession of our Lord's spirit is essential to worthy discipleship, but in our living we all do largely give the lie to our declarations. Many a man whose theology is of unquestioned antiquity and in absolute agreement with the historic symbols, does not hesitate to be unjust in his judgments. To a brother who differs from him he assigns motives and purposes that exist only in his own excited imagination. He fails utterly of any fair valuation of the worth or the work of the brother who will not pronounce his shibboleth. This spirit is not confined to the conservative. The so-called liberal is often more narrow and unfair than the man whom he condemns. The fact is, that judging righteous judgment is about the most difficult task that the Christian has to perform. When we have come to the place where we can credit the man whom we dislike with all the virtues which he really possesses, we have traveled far along the road which Jesus has laid out as the highway of his disciples. When we can talk about the man who differs from us radically in theology without depreciating his character or misrepresenting his work, the grace of God has done much for us.—*The Standard*.

Fixed creeds, which settle how people must believe, are a mischief and a nuisance. Every generation should be at liberty to modify its faith under the light of Scripture, reason and knowledge, and the guidance of the Holy Spirit. To shut the windows against future light is bad policy in money as well as in religion. It is a good plan for individuals to revise their creeds as often as they choose; and there is no objection to very general statements of present belief; but when these are made not *credos*, but *credenda*, not what we do believe, but what we must and will believe, they are dangerous and wrong. It is these formulated systems of required faith that keep Churches from uniting. This is the trouble that the various Presbyterian denominations are now finding. How easy it would be for them to unite if they only had no creeds.—*The Independent*.

How have you been excited over the wrong and sin of luxury and extravagance of some of the world's people, and how you would cure it by making more people luxurious and extravagant; you would make things right by turning things around and making the poor rich and the rich poor when there is no difference in men, and the new rich would be just as oppressive and the new poor would be just as discontented. The remedy of the world's ills is not to be found in changed conditions except there be a change of heart.—*The Universalist Leader*.

Men are made happy, not by the things which surround them nor by the things which they take to themselves, but by the noble putting forth of the soul in love and work; the two great activities which are never divorced in the harmonious and balanced life, the two languages in which every true Idealist makes confession of his faith and gives evidence of its reality. For love is the ultimate expression of faith, and without works faith is a vain shadow of reality.
The Outlook.

The religion of every man, such as it is, is the work of his god, as he views him, or as the god exists in his thoughts. The gods of the nations are the determining factor in the religions of the world. A base or cruel god builds base and cruel men; a lustful god builds lustful men, and a good god builds good men. Nothing is more true than that men are moulded by the god which they worship.
The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

German Supplements

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . \$5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.
No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.
The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

John Morley, the noted English writer, at the banquet of the Merchants' Club, Chicago, said recently,—

"I have watched the progress of the United States with interest and awe. The prophecy that you are to be the greatest Power on earth is coming true. With your resources, energy, and strength there is not a Power in Europe that does not covet your friendship and good feeling. Your policy should be to keep your powder dry and your diplomats active."

Hon. James Bryce, another well-known English writer on American subjects, at a farewell reception given him in New York last week, took the quiet and good nature with which the minority of the American people have accepted election results as the text of his address. He said,—

"No other country has attempted on so large a scale, or has succeeded in doing what I saw going on yesterday. The voice of the whole American people was making itself heard in every hamlet and in the largest cities at the same hour and with a peacefulness which could not fail to excite the highest admiration. There was no mistake about the voice being that of the whole people, and it proved that you have gone far toward solving your problem of Government."

During the last fiscal year 12,058,048 pounds of mail were despatched by sea to foreign countries, an increase of ten per cent over the previous year. The actual net cost of the service was \$2,516,053. The United States ranks first among the different countries in the number of postoffices, first as to letter boxes for the use of the public, second in proportion of postoffices to population, first in the number of articles of mail matter received by and sent to each inhabitant, first as to the length of mail routes, third as regards the number of letters sent, first both as to postal income and postal expenditures, and eighth in proportion of postoffices to area.

Secretary Hay has received assurances from Great Britain and Mexico that they

stand prepared to negotiate arbitration treaties with America on the lines of that recently concluded between France and the United States. Such treaties will be prepared for submission to the Senate when it meets again December 5. It is understood that the German Ambassador is prepared to proceed at once with the German treaty. The Italian and Swiss treaties are almost complete. It is known that a number of the countries of Central and South America stand ready to enter into similar arrangements with the United States.

The fiscal business transacted through the postal and money order branches of the Postoffice Department during the last year was as follows: Revenues of the postal service, \$133,582,624; expenditures of the postal service, \$152,362,116. Total amount of money orders issued: Domestic, \$383,452,373; foreign, \$37,876,265. Total amount of money orders paid: Domestic, \$385,100,020; foreign, \$6,714,846. The deficit in the postal revenues was \$8,579,492.

President Roosevelt's invitation to Great Britain to take part in a second peace conference at The Hague, to continue the work of the conference of 1899, has been presented by the United States Ambassador to the Foreign Office. The Ambassador received verbal assurances of its cordial welcome.

The American charge d'affaires at Constantinople has communicated to the Porte President Roosevelt's invitation to the peace conference.

The annual report of the Military Secretary of the Army gives the total strength of the army at the close of the last fiscal year at 3,871 officers and 68,946 enlisted men. Of the 27,380 recruits enlisted during the past fiscal year 3,662 were foreign born.

Three battleships, five scout cruisers, six torpedo-boat destroyers, six torpedo boats, and two squadron colliers at an aggregate maximum cost of 41,300,000, is the program which the Secretary of the Navy will recommend to Congress.

Another new battleship, the New Jersey, passed down the ways at the yard of the Fore River Ship & Engine Company, Quincy Point, last week.

At the Oxford freshman sports last week two American Rhodes scholars won in the half mile run and the high jump.

Foreign.

President Diaz has announced that the Mexican Government is preparing to issue bonds to the amount of \$10,000,000 to provide funds for national irrigation work. Government engineers have been investigating irrigation possibilities in various parts of the country the last several months. Mexico will cooperate with the United States in solving irrigation problems, and special representatives of President Diaz and delegates from several Mexican states will attend the national irrigation congress at El Paso this month.

According to the census of 1900, the population of Spain was 18,891,574, of which 9,087,821 were males and 9,803,753 females. The number unable to read and write, including children, is given at 11,000,000. That the number of illiterates is being slowly reduced is evidenced by the facts that in 1860 only 19.97 per cent of the population could read and write; in 1877 the proportion had increased to 24.48 per cent, ten years later to 28.49 per cent, and in 1900 to 33.45 per cent.

Final details covering the Anglo-Russian convention regarding the North Sea incident have been completed by the acceptance of Russia in writing of certain points. Invitations will be issued jointly by the two Governments to the United States and France to appoint admirals to serve on the commission which will meet at the earliest possible moment in Paris to select the fifth

member. Both agree to accept the findings of the commission.

Mylius Ericksen's expedition, after two years and a half exploring in Greenland, has returned to Copenhagen with valuable ethnographical and scientific records, the explorers having lived with the natives, studying their language and customs.

The Cuban budget for the fiscal year 1905 has been prepared. It shows total expenditures of \$19,138,102 and receipts \$19,639,650, leaving a surplus of \$501,548.

Another Russian volunteer fleet steamer, Tamboff, with a full cargo, passed through the Bosphorus last week bound for the Mediterranean.

Industrial and Commercial.

A test of bolting steel tires to the drive wheels of passenger locomotives is being made by the motive power department of the Pennsylvania. If it proves successful, as preliminary trials indicate, the plan will be generally adopted. The slipping of tires has been a source of much annoyance to railroad men for years. Frequently in applying the air brakes to a rapidly moving locomotive the tires, becoming heated, expand and sometimes slip off the wheel. In other cases they break, and in both instances serious accidents occur.

The Southern Peanut Company of Paducah, Ky., asserts that peanuts will pay the planters of western Kentucky better than cotton or any other commodity they have experimented with so far. The yield per acre this year was larger in that section than in either Virginia or Tennessee, the two largest peanut raising States in the Union. This year there were five hundred acres of peanuts planted in western Kentucky, and it is proposed to greatly increase the yield the coming season.

As the result of several years' experimenting in their use, an order for seven thousand tons of steel ties has been given by the New York Central Railroad to the United States Steel Corporation. The ties will be used on the New York Central and Lake Shore roads. If they prove a satisfactory substitute for wood, railroads will soon adopt them, on account of the growing scarcity of wooden ties and consequent increase in price.

The *Iron Age*, in its weekly review of iron and steel conditions, says: The production has arisen to 1,448,973 gross tons for October, for thirty-one days, as compared with 1,352,677 for September, for thirty days. The steel companies made 971,447 tons in October, against 939,494 tons in September. The merchant furnaces have gone from 416,183 tons in September to 477,526 tons in October.

General.

The Museum of Fine Arts, Boston, has just acquired a full-length and life-sized portrait of King Philip IV. of Spain, by Velasquez. It was secured for the Museum from Francisco Prince de Bourbon, Duke of Anjou, in whose family it has been ever since it was painted. This is the second example of Velasquez to be acquired by the Museum, the other being the beautiful portrait of Don Balthazar Carlos.

The Americans in Che Foo have started a movement for the establishment of an International Naval Young Men's Christian Association. Rear Admiral Evans, commander-in-chief of the United States Asiatic fleet, says that an association would meet a much-felt want for a large number of seafaring men visiting that port.

Next summer will see the first touring competition for automobiles for "The Charles J. Glidden Touring Trophy," a \$2,000 silver trophy, which has been offered by Mr. Glidden for a tour of not less than one thousand miles, and not less than five hundred miles a week.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Better Country.

BLANCHE H. HOGUE.

IN the 11th chapter of Hebrews, Paul says, "By faith Abraham, when he was called to go out into a place which he should after receive for an inheritance, obeyed; and he went out, not knowing whither he went. . . . For he looked for a city which hath foundations, whose builder and maker is God. . . . These all died in faith, not having received the promises, but having seen them afar off, . . . and confessed that they were strangers and pilgrims on the earth. For they that say such things declare plainly that they seek a country. . . . They desire a better country, that is, an heavenly: wherefore God is not ashamed to be called their God: for he hath prepared for them a city."

Joseph Rotherham, in his translation of the New Testament, writes the fourteenth verse of this chapter, "For they who such things as these are saying, are making [it] plainly manifest that a paternal-home they are intently seeking."

In the Twentieth Century New Testament the same passage reads, "Those who speak thus show plainly that they are seeking their fatherland."

In all sacred literature, there is no clearer portrayal of the transitory nature of earthly experience and the inborn hunger for a secure and heavenly heritage, than this reference to Abraham's journey as a type of the mental pilgrimage undertaken by every man who abandons the selfish and unworthy, for the attainment of the highest ideal. Abraham "went out, not knowing whither he went." Over and over again, upright and earnest men and women are called upon to "go out" from sinful or outworn conditions of thought, not knowing whither they go. They know only that they must leave behind them that which is inconsistent with the highest selflessness, and that they must walk in obedience to the best they know, whithersoever it may lead.

To all such expectant ones, the message of Christian Science is calling continually, "Come higher." And the responsive hearts, saying with the Prodigal's earnestness, "I will arise and go to my father," turn from the restless dwelling-places of selfishness, toward the Christly consciousness of which Isaiah has said, "My people shall dwell in a peaceable habitation, and in sure dwellings, and in quiet resting places."

Every student of Christian Science knows that this question of "seeking a fatherland" is, purely and primarily, a transformation of consciousness, and that only in the degree that right consciousness is attained, can he hope for improved conditions. Yet he is so prone to measure his happiness, his success or his failure, by external matters, that he often puts forth personal effort to effect an outward change, to the neglect of that inward growth which alone can accomplish it. The beginner is sometimes tempted to believe that if he could alter his surroundings immediately, he could make rapid growth in the knowledge and practice of Christian Science; whereas the scientific fact assures

him that as he grows in understanding he will be able to alter his surroundings. Each man must begin just where Christian Science finds him. He cannot change places with any brother whose opportunities for growth may seem to be more favorable. But as his *thought* arises and goes to the Father, all his personal conditions will begin to change. Fears will be allayed, associations will be purified, obstacles will be removed, bonds of sin and disease will be loosened, and the habits of a lifetime will fade from thought and action. And all this because he is mentally rejecting evil and coming into the spiritual possession of a better quality of thinking.

It is a truism that mind thinks. Mind must, because of its very nature and existence, think continuously, and because of this ever-operative activity, mind cannot, by any possibility, stop thinking. The Christ Mind, then, must be perpetually manifested in Christly thinking, and he who entertains these God-like thoughts must, in the measure of his fidelity, be an inhabitant of God's "country." Material surroundings, however discordant, cannot hold one's thought from seeking and finding this better country, and one may dwell in it to-day, if the determination for righteousness governs the heart. Here, now, in the problem of this very hour, one may substitute a generous thought for a selfish one, a loving thought for an unkind one, a grateful thought for a complaining one, and a trusting thought for a doubting one. And in the measure that thought advances along these higher pathways, the bondage imposed by the conditions of the "old country," disappears.

The well-known illustration of the mist in the valleys can be remembered with profit. Dwelling in the valleys, one is subject to valley conditions, and must climb to a higher altitude to enjoy perpetually sunlit peaks. In like manner, a higher mental and moral standpoint will set one free from bondage which seemed hopeless when thought dwelt among the lower ranges. Tarrying in the realm of the valley-fogs, one may fight bravely, but in vain, to resist them; abandoning the lower land, one escapes all its conditions. So, a higher moral and spiritual altitude will lift one into a realm beyond the reach of error's suggestion or attack.

Again, one does not expect to live in arctic regions, and gather tropical fruit by the putting forth of one's hand. The fruit simply cannot and does not grow there, and no amount of wishing or struggling on the part of the inhabitant will cause it to grow there. Occasional fruits may find their way into the frozen land, telling the story of a sunnier clime, but to possess such fruit in its beauty and abundance, one must rise and journey to the place of its growth and there abide.

Paul speaks of the fruit of the flesh and the fruit of the spirit, well knowing that they are the differing fruits of two distinct "countries." And he says, "This I say then, Walk in the Spirit, and ye shall not fulfil the lust of the flesh." The Christian Science text-book clearly sets forth the fact that spiritual understanding and material sense are two distinct and opposing states of consciousness which do not know each other. The adoption of the one, means the loss of the other. That the dweller in material

sense comprehends not the existence of spiritual consciousness, argues no more for the unreality of the latter than does the ignorance of the valley dweller and the Laplander, for the non-existence of sunny peaks and tropical climes. In *Science and Health*, page 91, we find, "Absorbed in material selfhood we discern and reflect but faintly the substance of Life or Mind." And in "No and Yes," page 29, Mrs. Eddy also says, "Ever-present Love must seem ever absent to ever-present selfishness or material sense."

May it not be recognized that the fruits of Love, as well, "must seem ever absent to ever-present selfishness"? and is there not in the human heart a strong desire to transplant the fruits of Love into the realm of ever-present selfishness, and a complaint because this cannot be done? Yet so long as the Fatherland remains unknown or unsought its fruits must remain unappropriated. To enjoy the fruits of divine Love we must journey to Love's country and dwell therein. And to do this means to abide persistently in loving and lovable thinking. To enjoy the fruits of Truth, one must live truthfully. To possess the fruits of holiness and purity, thought must be holy and pure. To possess health, one must cherish the enlightened righteous thoughts which build for health. One must live with such thoughts, walk with them, talk with them, make them one's own, and all this to the exclusion of the opposing thoughts which would build for discord and disease. This may not reform, immediately, every other evil-doer, but it does lift one's own individual experience beyond the reach of evil doing. A Christian Scientist's line of travel is always in direct resistance to all the claims of the flesh, and it lifts him daily into higher and purer thought-associations.

This change of consciousness cannot be measured by the old sense of haste or delay, for the transformation is in thought, and is in many ways instantaneous. But whether slow or fast, the divine law of supply is such that one comes into possession of the fruit of this better country whensoever he may lodge there in sincerity and in truth. It is God's country,—this daily and hourly companionship with the best one knows of God,—and well should man heed the Scriptural admonition, "Acquaint now thyself with him, and be at peace: thereby good shall come unto thee."

Some Thoughts of a Truth Seeker.

C. H. JONES, M.D.

READING in the *Sentinel* of September 24, the article, "A Word Concerning Discouragement," my first thought was that I would like to know the author's address, so that I might write and thank one whose contributions always help me.

It may seem strange that one who is not a Christian Scientist, and who is still identified with *materia medica*, should be writing an article for the *Sentinel*, but I feel that in order to enlist the sympathy and best wishes of all Scientists, it is only necessary for me to state that I fully believe in all that Christian Science teaches, that I am an earnest seeker for Truth as revealed in *Science and Health*, and that I am trying to "study thoroughly the letter, and imbibe the Spirit" (*Science and Health*, p. 495), and to demonstrate out of present conditions. I long for the time when I shall be able to tell my patients that the only medicine I shall give hereafter is truth, but at present the difficulties, to mortal sense, seem insurmountable; nevertheless, I know they are only seemings, and that omnipotent Truth can overcome them, as it can all errors, whether mental or physical, and establish perfect harmony. I was led, a little more than a year ago, to investigate Christian Science, by the fact that my wife had been healed of an incurable trouble of nearly thirty years' standing, after my system of practice and that of many others had failed. She certainly "had suffered many things of many physicians, . . . and was

nothing bettered, but rather grew worse." What she suffered in those years, only God and she know, until, like a drowning person grasping at a straw, she was led by divine Love to Christian Science and was cured. There was no doubt left in my mind of that fact. I tried to believe it was hypnotism that healed her, that having been my last resort, but she said, "No indeed; it was Science." She went to Christian Science with intense prejudice, but she is now the most enthusiastic of Scientists, and has burned the bridges behind her,—withdrawn from her former church,—for the reason as she told her pastor, that she could no longer remain a member without being a hypocrite. I fully approved of her course, as did her pastor, who honored her for being guided by her convictions. I do not know which had the greater influence over me, her cure, or the spiritual uplift she experienced, demonstrating it in her daily life; but I knew she had something that I had never found in orthodoxy,—joy, peace, and freedom from all care,—and I wanted to find the same.

A year ago, while in Colorado Springs, I was fortunate in having the privilege of attending Christian Science services. I enjoyed especially the Wednesday evening meetings, the first I had ever attended. Love seemed to be the ruling spirit there. They gave me a more loving welcome than I ever received elsewhere. They found me a stranger and took me in to their hearts and homes. I left for home fully convinced of the truth of Christian Science. Some day the Master will say to them, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." May the arms of divine Love ever be underneath them.

It is strange that ministers of the gospel admit that Christian Science does heal the sick, even so-called incurable cases, thus virtually conceding that Christ's commission to the disciples applies to this age, but will not admit its theology. They do not seem to realize that when they bisect Jesus' dual command, observing the first part and yet leaving out the healing, they not only fail to carry out his command, but they are leaving out the most potent factor in convincing the world of the truth of his doctrine. This is a practical age in which we live, and the world demands proof of the truth of everything, the gospel not excepted. It has a right to demand fruit, and not mere leafage. If Jesus found it necessary to heal, in order to demonstrate the truth of his teachings, surely we can do no better than follow in his footsteps. We cannot improve upon his method.

Sometimes, as I strive to climb the "hill of Science" (*Science and Health*, p. 326), my progress seems so slow that I am tempted to feel discouraged, but as I recall Mrs. Eddy's advice, "Emerge gently from matter into Spirit" (*Science and Health*, p. 485), I take courage and press onward and upward. I realize that this matter of working out our own salvation is necessarily slow, especially to one who has so long lived in another faith, with all its materialistic ideas; and then, I suppose, it is more difficult for one to take off the clamps of mortal mind who has been so long bound by the fetters of *materia medica* as I have. But I know that if I trust to the guidance of divine Love, I shall some day be led into the full light of Truth,—the full realization that God is all.

The world will some day render justice to whom justice is due, and acknowledge the good brought to humanity by Mrs. Eddy in resurrecting from the debris of materiality the doctrine taught by Christ Jesus and revealed anew through *Science and Health*, which means so much in lifting mankind out of the beliefs of sin, sickness, death, and all error.

I am deeply grateful to God for what Christian Science has done for my dear wife, and for the help it brings daily into my life. If it has done so much for me, with my present slight understanding, what will it do when the full fruition appears?

God's Relation to Man.

THOMAS E. SCANTLIN.

I HAVE learned so much and gained so much through reading our periodicals, that I feel the longing common to all loyal hearts to add my mite to the wealth of love that comes as a continuous stream through these channels.

It was after studying Science and Health, and while reading from the *Sentinel* and *Journal* the other afternoon, that I felt impelled to write. For days previous I had been apparently under a cloud. I could not get a clear vision of God and my heart was troubled. While thus striving to obtain a clearer understanding, suddenly the clouds parted and my prayer was answered, at least in part, and this is the manner in which the truth came to me,—

If God is Mind, divine Principle, is this Principle conscious, as we understand consciousness? and the answer was, how could He be the all-knowing Mind and not be conscious? God is the only consciousness.

Is God conscious of each and every one of us, His ideas or children; conscious that is, as we are conscious of things? How could we be His ideas and not be constantly in Mind? There is no possibility of separation between thinking and thought, and hence all the ideas of Mind must ever remain in its embrace.

Does God's love for us resemble, in kind, our love for our own ideas; or does it resemble, in kind or character, the love we entertain for our dear ones? Our love for our friends and relatives is, after all, the love of ideas. We love our own idea or conception of each, as the reflection or manifestation of good. This idea or conception may be true or false, wholly or partially, according to our understanding, our own spirituality. Of course, the real individuals are the children of God, perfect as their Father in heaven is perfect; but we are considering now our concept,—the manifestation of Truth or of error in the object of our thought or affection, whether our affections be carnal or spiritual. In any case it is the idea that we love, whether we truly understand this or not, but so far as this love is pure, unselfish, and spiritual, we reflect the infinite Love, and therefore our love resembles God's love, in kind, and blesses the object upon which it rests.

In endeavoring to conceive of God as universal Principle, some may be tempted to think of Him as we have learned to think of the basic law of mathematics,—an unconscious something that can never respond to or comprehend our love, or be manifest to our consciousness as our friends are manifest; the all-inclusive but unknowable entity of creation; the source, indeed, of all life, truth, and love, of all good in fact, but itself unfathomable, unapproachable, afar off. Is *this* the Truth of being? No; for the Scriptures teach that God is an ever-present help in time of trouble. "God is Love; and he who dwelleth in love dwelleth in God, and God in him." Christian Science teaches that He is our "Father-Mother God" (Science and Health, p. 16). He is Spirit, and to the spiritually minded, He is a living presence. The carnally minded cannot see God, for only he "shall ascend into the hill of the Lord" and "stand in His holy place" who "hath clean hands and a pure heart."

I do not know how it may impress others, but to me the thought was beautiful and helpful, for I felt that God came very near to me then, and I seemed to hear His voice from out the burning bush. He was no longer "afar off," and I have felt Him near me ever since, a veritable living presence. I thank Him with all my heart for the grand anthem of love His angels are singing, and love and gratitude go out to her through whom this wonderful Science was revealed. Surely the fountain of her love was pure and sweet, else divine Love could not have poured the waters of Life through its channels. The world is awakening to the recognition of the debt of gratitude it owes to one whose life was so pure and spiritual that she, like Enoch of old, could walk and talk with God.

Why we Love our Leader.

ESTHER A. L. RUDD.

WE have had the Bible all our lives, we have read and studied it, and have tried to get the peace and harmony which it teaches. We have, however, worshiped many gods under the guises of belief in pleasure in the senses, the belief in sickness, that death is a friend, and that evil is most powerful. Besides all this, we have believed that God is not unlike mortal man, and we should be doing the same to-day were it not for one who was found worthy, one who loved God more than she feared man. Through this one came the reflection of divine Love and she was obedient unto the heavenly vision and inspiration, denying herself, forgetting her own personality in her love for God and man, and her desire to lift her brother man up to his God-given dominion. Giving love for ridicule and buffetings, while bearing the yoke, she sought not her own ease, but did God's will and work, and labored to release from bondage all who were enslaved to the carnal mind, those who were worshiping under every green tree of error, in every valley of corruption.

Is it any wonder that we love our Leader, Mrs. Eddy? We have learned to worship one infinite God through the truth revealed through her to us, and we know that her teaching is true because we are daily and hourly proving it in numberless ways, even as Jesus did and promised that his followers should do. Christian Science as taught by our beloved Leader has given to multitudes, joy for sorrow, peace for brokenheartedness, love in place of hate, health instead of helpless invalidism. It saves from the bondage of sin, and shows us how to know our Father-Mother God.

We express the love and gratitude we have for our Leader, not in the way that the world teaches us to love, but we love her just in so far as we understand, live, and practise the truth taught by her, which is "prove all things; hold fast that which is good."

[Written for the *Sentinel*.]**A Thanksgiving.**

MARY A. NEWMAN.

A VISION came to me in days gone by,
A vision sweet of what I longed to be;
A helper, as I listened to the deep, sad cry,—
Of sin-enthralled, enslaved humanity.

And then a glad, strong hope arose and filled
My heart with sweeter longing as I prayed,—
Oh take me, Lord, and use me as Thou wilt,
But use me for my fellow-creatures' aid.

And so I waited till the answer came,
Sure that my Father would point out the way;
Then 'mid the darkness shone celestial flame,
As Christian Science heralded the day.

For one whose purest thought has reached that mind
"That was in Christ," hidden with God above,
Has lived in ministry to all mankind,
And proved the healing power of Truth and Love.

For through the "little book" that she has given,
New joy has come to hearts long pressed with pain;
And in its messages revealed from heaven,
We hail the coming of the Christ again.

So may we follow in her footsteps still;
"Laving aside the earth-weights" self and sense;
Knowing but one desire, our Father's will,
"No other trust" than One Omnipotence.

Selected Articles.

Christian Scientists agree with the statements that "all human beings have sinned," and that "without some forfeiture God cannot pardon the offender." In fact, they declare that the forfeiture must be complete, a yielding of all that is unlike God. Christian Science, however, does not teach that Jesus was crucified to appease the wrath of a revengeful god. It shows God to be a God of love, and that Jesus permitted the wickedness of this world to crucify him that he might prove to sinning and suffering humanity that Life is immortal.

A. V. STEWART.

Highland Park (Ill.) News-Letter.

It must be remembered that the average Christian Scientist has run the gamut of medical practice and in most cases turned to Christian Science as a last resort. They do not, therefore, repudiate material means for healing merely to be fanatically true to their religious convictions, but because their experience has proved to them irrefutably that God's way is the better way. Christian Science has not only healed them physically, but has given them an enlarged understanding of God and man, a more comprehensive outlook upon life, and that moral and spiritual impetus which accompanies unbounded faith and trust in God.

The teachings of "modern science" and a fair deduction from the same are proving indisputably what Christian Science contends for; viz., the uncertainty and unreliability of matter, and the consequent repudiation of matter as cause or effect. This leads thought to the contemplation of the great and only cause, God, Spirit, and the universe as spiritual, governed and controlled by God, and this is the basis of Christian Science.

JOHN L. RENDALL.

Koekuk (Ia.) Gate City.

Kind words may carry persuasion, but harsh words never. There is so much sin, sickness, suffering, all around us, that those who are sincerely doing the best they know how to overcome them, ought to regard and treat each other as brethren, however widely they may differ as to the best means and methods to be employed. Christian Scientists are humbly seeking to obey the command of Jesus, to "heal the sick," according to the method which he employed, which was without drugs or other material agencies. Jesus carefully explained that the works which he performed were of the Father, not of himself, and that of himself he could do nothing. Christian Scientists do not claim that they perform the works of healing sickness. They claim that God is "the Great Physician," and that the Divine relations between God and man are the same to-day that they were nineteen centuries ago, when Jesus promised to his followers of all times and countries, "He that believeth on me, the works that I do shall he do also." They thoroughly believe this promise; also, the promise which Jesus made, speaking of himself as the Christ, "Lo, I am with you alway, even unto the end of the world."

Christian Scientists do not claim that they can rival the works of Jesus. They are doing the best they know how to follow in the way which he pointed out, taught, and commended to his followers of all times. They may make some failures, but that does not impeach the Christ-healing which they are striving to follow and obey, any more than an erroneous addition of a column of figures by a student of arithmetic impeaches the rule in addition. A critic wants to have Christian Scientists straighten a crooked limb before his very eyes, to be convinced. He may be respectfully recommended to read anew the rebuke of Jesus to Satan when the latter asked him to prove his power by throwing himself from the pinnacle of the temple; also, to study anew the character of doubting Thomas; also, the refusal

of the established religionists of Jesus' day to believe, even when the blind were made to see, etc., before their very eyes; also, to consider whether there may not be in this day scribes and Pharisees, and established religionists jealous of every change or progressive step.

CLARENCE A. BUSKIRK.

Marion (Ind.) News-Tribune.

The courts have held that "if there are distinct and different schools of practice, as allopathic or old school, homœopathic, Thompsonian, hydropathic or water cure, and a physician of one of those schools is called in, his treatment is to be tested by the general doctrines of his school, and not by those of other schools." This rule applies to Christian Science practice; and that its practitioners possess skill and knowledge of Christian Science is shown by the large percentage of cases healed.

If Christian Scientists used drugs and material remedies, it would be perfectly proper for them to study the same text-books and pass the same examinations as the regular medical practitioners, for they should have a thorough knowledge of what they practise. But as Christian Science is essentially a religion, and its teachings and practice are spiritual and mental, the course of study required necessarily differs from that of the medical student. Those who practise Christian Science have given the subject years of study, before and after class instruction, and are thus qualified to minister to those in need of help. Christian Scientists are not violating any law, and the practice of Christian Science can only result in benefiting humanity.

FRANK W. GALE.

The Wasp, San Francisco, Cal.

One cannot help conceding that to attain its growth there must be in the teaching of Christian Science something very satisfactory and wholesome. Mere theory would have long since uncovered its own emptiness, and those who had been attracted by its vain promises would have deserted it for something more satisfying.

The reformation which inevitably accompanies the study and application of Christian Science is of even greater importance to the individual than the physical healing, and in nearly every instance this reformation has not only proved lasting, but has been found equal to the tests put upon it. In casting about, therefore, to find a reason for the large amount of interest evinced in this Cause, it is found that this teaching prevails because it fills a human need, and fills it effectually.

The optimist finds much in the growth of Christian Science to justify him in believing that the future will contain for our race a greater happiness than has the past. In the midst of our materialistic beliefs we find the "still small voice" urging us to turn our thoughts to things spiritual, and in listening to this voice we are rejoiced to find practical those sacred promises which assure long life and happiness to those who follow Him.

ALBERT E. MILLER.

Philadelphia North American.

[Written for the *Sentinel*.]

God is All.

MRS. J. F. TOWNSEND.

How sweet to know that God is all,
To feel His presence near;
To always listen for His call,
And never doubt or fear.

How sweet to know He always hears,
And never turns away;
That 'tis His love dispels our fears,
And keeps us every day.

The Lectures.

Fort Madison, Ia.

There was a good-sized audience at the Opera House last night [September 13] to hear the lecture on Christian Science by Mr. Bicknell Young of Chicago.

The speaker of the evening was introduced by Prof. W. L. Barrett, principal of the high school, who said in part,—

I am not a member of the Christian Science church, and unfortunately do not know as much about its history and doctrine as I should; but I do know that it is a growing religious and moral force come upon the world's stage of action; that it has many devoted followers, who, through its instrumentality, have been made happy and hopeful; and for these, if for no other reasons, it is deserving of twentieth-century fellowship and Christian courtesy.

Fort Madison Democrat.

Detroit, Mich.

Rev. Irving C. Tomlinson of Concord, N. H., addressed an overflowing audience at the Detroit Opera House, Sunday afternoon [October 23]. The speaker lives in the home town of Mrs. Eddy, Founder of the denomination, and his allusions to her personality were awaited with interest. Rev. Mr. Tomlinson was at one time pastor of a prominent Universalist Church in the east, and his conversion to Christian Science was one of the surprises in church circles. He is a plain, direct speaker, and the object of his lecture was to correct misconceptions and give reliable information concerning the tenets of the Christian Scientists. Mrs. Annie M. Knott, former Reader of the Detroit church, introduced the speaker.—*The Detroit News.*

Mrs. Knott's introduction was as follows:—

The pleasant task has been assigned me of introducing to you the lecturer of this afternoon. Before coming to Christian Science he was a minister in a denomination which embodies in its doctrines the belief in the ultimate salvation of all mankind. In Christian Science we also believe that salvation is for all, however much we may differ from other religionists in our concept of it, or of the best means for its realization. In our text-book, *Science and Health*, salvation is thus defined, "Life, Truth, and Love, understood and demonstrated as supreme over all; sin, sickness, and death destroyed" (p. 593).

In one of George Macdonald's admirable stories he tells of a Scotch lad with a deeply religious character who longed to know God, but who failed to find Him through the iron-bound creeds which he had been taught. His heart cried out, in the despair of a noble nature, "I dinna care for Him to love me, if He doesna love ilka body." In response to such a cry our text-book says, "The Christian Science God is universal, eternal, divine Love" (p. 140), and we learn that this Love is not helpless in the presence of human wretchedness, but is ever ready and ever willing to save from sickness and sin alike. That this is no mere theory is proved by the steady stream of testimonies which are coming from every part of the world, some written in a homely fashion, others indicating culture and learning, but all eloquent with gratitude to God and to the messenger who has shown us the Christ-way to reach His omnipotent aid.—Mrs. Eddy, the Discoverer and Founder of Christian Science. The lecturer is here to tell you of its glorious promise to humanity, and I beg to introduce to you the Rev. Irving C. Tomlinson, member of the Christian Science Board of Lectureship of The Mother Church, who will now address you.

It is the office of a true teacher to show us that God is, not was; that He speaketh, not spake.—EMERSON.

Among the Churches.

Church Opening in Independence, Ia.

First Church of Christ, Scientist, held services Sunday morning for the first time in its new church home. The auditorium has been remodeled and newly decorated, and presented a pleasing appearance. The church was incorporated in November, 1896.

Independence (Ia.) Conservative.

New Church in Fairbury, Ill.

The new auditorium and reading room of First Church of Christ, Scientist, in this city, was dedicated with appropriate services Sunday morning and evening, October 2, and the dedicatory address was delivered by the First Reader, who welcomed those in attendance and gave an outline of the Christian Science organization, referring to Mrs. Eddy as the one woman of our time who was pure enough to see through the clouds of materialism and brave enough to face the whole world alone with God and show to others the true way to health and heaven in Christ.

The church was dedicated free of debt, according to the custom of this denomination, and one hundred dollars was subscribed for the building fund of The Mother Church in Boston, Mass.—*Fairbury (Ill.) Blade.*

Australia.

The work is growing very extensively in the Sydney Field. A few weeks ago we had the "Record Gathering." At the service on Sunday morning last our hall was crowded out, some people having to stand during service. What impresses one is the earnest and attentive manner in which the congregation listen and try to imbibe the spiritual meaning of the Lesson-Sermon, which is new to many of them; it is just lovely to look at them. The literature is being disposed of freely and going to all parts of our large state. A beautiful reading room, well stocked with Christian Science literature and handsomely furnished, is maintained in the Bank of Australasia Chambers, one of the finest new buildings in Sydney, and most centrally situated in Martin Place.

It might interest you to hear that many people who want to learn this truth wish to know something of the early life of our beloved Leader, and how this wonderful revelation came to her. I lend them "Retrospection and Introspection." This I find to be the best way of answering their questions, and they are much pleased with the book, and seem to become quite acquainted with the author through it. One to whom I lent this book remarked to me, "I am so sorry I did not study Mrs. Eddy's works, and come to the meetings instead of remaining away and listening to error."

The little children seem to grasp the teaching very easily. A little girl who has always been a Scientist, and who goes to a school some distance away, was asked how she liked to go so far away from her home. She replied, "All right, because God is beside me all the way and all the time." All our Leader's hymns are much loved and are sung with great joy. We have some excellent testimonies of healing at our Wednesday evening meetings.

ALEXANDRA C. E. GIBBS.

The Thanksgiving Day Services.

WE have been asked to give the order of services to be followed in our churches on Thanksgiving Day, but as there is no regular order provided in the Manual, we can only refer inquirers to the report of the services held last year in The Mother Church, published in the *Sentinel* of December 5, 1903.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The New By-laws for the Sunday School.

The following letters show true appreciation of the new By-laws relating to the Sunday School, and our Leader's deep interest in the spiritual welfare of the children as well as her estimate of faithfulness in the Sunday School workers.

Boston, Mass., November 13, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Dear Leader and Guide:—We, the teachers in the Sunday School of The Mother Church, desire to express to you our gratitude for, and appreciation of, the new By-law and Amendment, Article XIX., Sections 5 and 6 of the Church Manual, in regard to Sunday School work. We recognize that the subject for lessons given in this By-law is the basis of Christian Science and is therefore of the greatest importance in our foundation work.

From past experience we have all learned the wisdom of your guidance, and our desire is that we may more closely follow and obey your teaching.

Faithfully and lovingly yours,

CALVIN C. HILL, *Superintendent.*
For the Teachers.

MRS. EDDY'S REPLY.

Mr. Calvin C. Hill, Superintendent, and teachers of the Sunday School of The Mother Church, Boston, Mass.

Beloved Students:—I read with pleasure your approval of the Amendments of Article XIX., Sections 5 and 6,—in our Church Manual. Be assured that fitness and fidelity such as thine, in the officials of my church, give my solitude sweet surcease. It is a joy to know that they who are faithful over foundational trusts such as the Christian education of the dear children,—reap the reward of rightness, rise in the scale of being, and realize at last their Master's promise, "And they shall be all taught of God."

MARY BAKER EDDY.

Pleasant View, November 14, 1904.

A By-law Amended.

Article XXVI., Section 14, has been amended to read as follows:—

CHURCH ORGANIZATIONS AMPLE.—SECTION 14. Members of this Church shall not become members of organizations which exclude either sex,—except they are Free Masons, or Press Clubs that give the toil-worn aged Journalists a Home. God requires our whole heart, and He supplies within the wide channels of The Mother Church dutiful and sufficient occupations for all its members.

Occasions for Thanksgiving.

AN eminent minister once said, "So many are God's kindnesses to us that as drops of water they run together, and it is not until we are borne up by the multitude of them, as by streams in deep channels, that we recognize them as coming from Him. . . . We cannot recall all the

things He has done for us," and it is with this thought that Christian Scientists contemplate the approaching Thanksgiving Day services to be held in all their churches. While this day is set apart for the formal and ceremonial giving of thanks, every day must of necessity be a time of thanksgiving for our people, for surely the promises of the Bible are being fulfilled, "Prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it." "Unto you that fear my name shall the Sun of righteousness arise with healing in his wings."

The following excerpts from testimonies published in a recent issue of the *Sentinel* indicate the wide scope of the blessings which are coming to humanity each day through Christian Science. They show ample reason for the faith that is in us.

One of these testimonies is from an old soldier. He writes:—

"In 1885 I came to Southern California in search of a climate that was milder than Utah, feeling that I had only a short time to live, on account of the condition of my lungs. I had been a soldier in the army, and at the close of the war I came home a physical wreck, and a victim of the alcoholic habit. I located at Colton and soon afterwards my wife came to me. She too was an invalid, suffering from heart trouble, and often it would seem as though her life would go out, so grave and distressing were the symptoms. I did not find the help I had expected from the climate, and being very much discouraged, would try to drown my trouble in drinking and gambling, until we were reduced to the verge of poverty. My wife's mother, who was with us and in poor health, heard of Christian Science and was healed by it. Afterwards my wife was treated, and she too was made well. . . .

"After this, my cough became much worse, and knowing what Christian Science had done for my family, I thought I would have a few treatments, to see if I could be benefited, but had very little faith. . . . I was completely healed. My appetite for drinking, chewing and smoking, gambling, and the terrible sin of profanity had passed into oblivion, and soon all pulmonary trouble was destroyed; and glasses, which I had worn for ten years, were laid aside, and have never been used since. For these blessings, with many others that have come to us through this beautiful Christ teaching, I am very grateful to God, and to our Leader, Mrs. Eddy, who has so faithfully pointed out the way of Truth and Life to all mankind."

Another is from a woman who had been given up to die. She writes:—

"Neither words nor pen can express the love, joy, peace, and health I now enjoy. Just one year ago this month I was taken sick and was confined to my bed for three months with typhoid fever, tuberculosis, and peritonitis. . . .

"I must now state how I came to call the Christian Scientist. A few days previous, four of our best and most esteemed physicians held a consultation and fully diagnosed my case. They reported to my husband and mother that I was beyond any help, that all had been done that could be done, and that I could live but a short time. They also said my bowels were paralyzed. At the time the practitioner called I was under the influence of an opiate, to deaden the pain. She asked if we were ready to give up the medicine. I replied, all but the opiate, as it did not seem that I could do without it. I allowed her to go. . . . [Later] I gave up the drug, the false god, and recalled the Scientist. Mortification was then plainly visible. She came, gave me a treatment. . . . I began improving at once. The following Tuesday I was sitting up. On Wednesday I was in the dining room dressed and at the table eating dinner with my family. On Thursday I went to the table alone and ate whatever I wanted. In one week my mother took me out riding in a wheel-chair, in three weeks I rode

into the country several miles, and the day following I went with my mother to her home, sixty miles distant, on the cars; changed cars at Rochester, rode three miles in a carriage after leaving the train, ate a hearty dinner, had a rest, and felt refreshed. I improved right along and am now doing my household work. Other diseases have disappeared: liver trouble and severe headache having all gone now." M.

The Higher Kinship.

To old-fashioned home-lovers, the dearest time of all the year is—

glad Thanksgiving, gathering in
The scattered sheaves of home and kin.

Expressing a religious spirit and preserving a noble tradition, it would bring to all, grateful, self-subduing thoughts of the mindful provision and safe guidance of overshadowing Love. More than this, it has a childhood joy which is its very own, for on this day gladness and affection are enthroned, the tender ties which bind us to the parental fireside and the home circle grow to be strong and enduring, and memories are stored which will make men courageous and true in the far-away years, when, but for them, they would lose heart and fail.

Wherever it is observed, Thanksgiving has become the great kinship day, and if its sweeter joys are untasted, its richer blessings unwon, it is because we have not yet come to understand that only as the sense of human attachment is being merged into the consciousness of spiritual relation, can it yield us a real and abiding happiness.

In this life's experience "that was not first which is spiritual," but with our awakening to truth the mortal concept gives place, and our eternal kinship in Christ appears. This means the redemption of every human relation through the understanding that "There is one God and Father of all," and that "we be brethren," related not through the history and affiliations of the flesh, but in the bonds of Spirit.

The practical significance of this elimination of the mortal grounds of attachment from our thought, cannot be overestimated, for it rebukes the sense of physical personality, with all its allurements and repulsions, and supplies the only basis for a friendship and love which can conduce to our spiritual advance.

Fleshly ties have ever failed to bring satisfying joy and at-onement. Not only have nations and clans forgotten their common origin and common weal, to fall into world-wearying contentions, but members of the same family and household are oft at variance. Their common paternity did not stay the murderous jealousy of Joseph's brethren nor repress the bitter resentment which, in the parable of the Prodigal, crowds itself into the foreground, to desecrate a picture that was to have suggested the gladness of heaven. The petty, unloving impulses of selfishness,—pride, passion, and prejudice,—how they still desolate, as of yore, the nearest and dearest relations of human life! And yet it is blessedly true that home ties may be exalted, become channels for the expression of spiritual sense and affection, and in this possibility the genuine happiness of every family circle is grounded.

Christian Science reaffirms the teaching of Jesus, that as man is born of Spirit and hence spiritual, all his relations must likewise be spiritual, and that the holier sense of these relations, is to invest with new dignity our every thought of self and of others. Said he, "Call no man your father upon the earth; for one is your Father, which is in heaven." This does not authorize us to ignore our human relationships, but it does point us to the true basis of individual recognition and regard. Thought of our dear ones is thus lifted above the seeming and transient, above all that appeals to the weaknesses of fleshly impulse, and becomes for us a prayer, for them a benediction. Grounded

in spiritual thought, every affection gains in wholesomeness, refinement, and constancy. Our sense of the brotherhood of man takes on a deeper, more inclusive, meaning, its channels are filled with the tide of an ever-increasing affection,—a love which reflects infinite Love so far as to be indifferent to human incidents, yes, even the incident of entire unworthiness,—while the tender ministries of the Master toward every needy one by the way, begin to find more frequent repetition as we go about our daily tasks. To be more spiritual in our thought of kinship, is to be not only more loving and kind, it is to be more vitally helpful to those most dear, and many loving hearts are more thankful for this than for all else to-day, that through the teaching of Christian Science they have been led to understand and to prove the healing power of a spiritual consciousness and affection. W.

Thanksgiving.

We give thee thanks, O Lord God almighty, . . . because thou hast taken to thee thy great power, and hast reigned.—REVELATION.

OUR anniversary days come betimes and bring unfailingly messages from the past which point us to the heights beyond. Sometimes on the ascending path, thought is tempted to look back to the plane of sense, where perchance dear ones still linger, where we once sought peace and pleasure, but found only disappointment and defeat. With every such backward glance it would be well to recall the Master's words concerning the one who had started spiritward, "Let him . . . not return back. Remember Lot's wife."

In leaving behind the supposed treasures of mortality we lose, in fact, nothing but the sense which makes the unreal seem real; and if we ever entertain the suggestion that we have given up something for Truth's sake, we may be sure that such a belief is indeed "the measure of our imperfection." Rather should we give thanks that we have come to know materiality, at its best, as nothing more than a counterfeit of spiritual reality; and no one who is wise could lament such a discovery did he know that the real and perfect is within the reach of all God's children. Jesus illustrated this when he declared that those who had left all "for the kingdom of heaven's sake" should receive "manifold more in this present time" and "everlasting life," thus teaching that the unrealities of sense should be gladly and thankfully given up for the realities of Soul.

In one of our Leader's most impressive paragraphs, she says, "For victory over a single sin we give thanks, and magnify the Lord of Hosts" (Science and Health, p. 568), and another has written, "Far hath he gone whose foot treads down one fond offence." As beginners in Christian Science we give thanks for physical healing and for a new and brighter outlook upon life, and with added days and experience, the faithful give thanks for the truth which takes away sin and the desire for its supposed satisfaction. With one real overcoming, however, the price paid for spiritual victory seems small indeed. Christ Jesus gave his all for the Cause of Truth. To it he gave himself. For it he counted no effort too great. "With the great glory of an everlasting victory overshadowing him, he gave thanks" (Science and Health, p. 33). Illumined by the Truth of being we share his cup, partake of his victory over sin, disease, and death, and give thanks for his sublime career of which we may become partakers, in the revelation of Christian Science which leads us toward the sinless and deathless goal of divine Love. As we press on we may sometimes pause to ponder the poet's words,—

Cease the sin with the sorrow! See morning begin!
Pain must burn itself out if not fuel'd by sin.
There is hope in yon hilltops, and love in yon light;
Let hate and despondency die with the night!

At this Thanksgiving season we measure our gratitude for the blessings of the year, and though the clash of arms

on Eastern battlefields is still heard, and earth cannot "cover her slain," yet we may be thankful that humanity is awakening to protest against the horror and sin of it, and is demanding that the reign of the Prince of Peace be recognized and honored as something more than a theological tenet. When all Christians are united on any question of right, the day is won, whatever be the issues involved.

To-day we give thanks for the Christ-truth which takes away sin and sickness, and we pray that with another Thanksgiving we may give thanks that there is an end of war, and that the plowshares and pruning hooks of Science have supplanted the swords and spears of so-called civilization. Then in the councils of the nations will be heard, "Be still and know that I am God."

K.

Letters to our Leader.

Hastings, Neb., October 6, 1904.

Beloved Leader:—Though these words may never meet your gaze, it will be a relief to my overcharged heart to write them. When I read this morning the account of the beautiful new book, "Bohemia," and the just recognition which it accords to you for your service to mankind, the grateful tears came to my eyes. In thought I saw the little attic room, the lonely days and the lonelier nights, when you kept your steadfast vigil that we who sat in darkness might see the great light. I thought of the years when you stood alone against the whole world, and I said, "Father, I thank Thee that Thy faithful servant has been permitted to receive in this world, some slight reward for her fidelity to Truth."

Gratefully and lovingly,

AWANA H. K. SLAKER.

Fort Smith, Ark., October 18, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—Because this blessed truth you have given the world, has come to me, a Jew, I ask the privilege of telling you that I recognize how clearly and truly Christian Science intervenes and mediates, reconciling the belief of Jew and Gentile, which is so beautifully shown in your Message to The Mother Church in 1902. It is generally believed among Jewish people that they could never accept any Christian doctrine, but the fact that so many of the Jewish faith have accepted Christian Science, truly shows "that Christ is the Messiah, the true spiritual idea, and this ideal of God is *now* and *forever*, *here* and *everywhere*" (Message to The Mother Church, 1902, p. 21), and that Christian Science is demonstrating that "by one Spirit are we all baptized into one body, whether we be Jews or Gentiles, . . . and have been all made to drink into one Spirit."

"Blessed are the peacemakers." I am most grateful to you for this reconciliation.

Lovingly yours,

SAMUEL KAUFMAN.

Rochester, N. Y., October 20, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader and Teacher:—It is sweetly, vividly, and renewedly borne in upon me that your teaching and work is a fulfilment of the Christian ideals of the past. When you said, some years since, "I love the orthodox church," etc., I had the confirmation that the ideals I had found through associations of the "orthodox" church, the ideals of Christian history, were not to be discredited, but honored and cherished; while all the more we should have gratitude and rejoicing for the understanding of Science, which shows how these ideals can now be to us the most vital and practical realities. That which impressed me most in the noble church at Concord was that it fulfils a type. As I entered and stood within, waiting for the first distinct impression, I felt strength, beauty, the historic associations of Christian architecture, and in the midst of it

all, a simplicity that just escaped severity. Here, I said, is the fruition and fulfilment, in type, of the Puritan ideal,—its rugged strength, its unswerving fidelity to conviction, its severe ideal of righteousness, all this is suggested, and yet there is added to it, freedom and beauty. That which our thought is to seek and hold shall be, and is, not only the things that are "true," "honest," "just," and "pure," but likewise,—what our sterner ancestors omitted,—the things that are "lovely" and of "good report."

With loyal and loving greeting, and with desire for a still closer, truer walk with good,

Yours most faithfully,

ARTHUR R. VOSBURGH.

New York, November 1, 1904.

Reverend Mary Baker Eddy.

Beloved Leader:—With deepest gratitude I wish to express my appreciation to you for making possible, in this city, the Central Christian Science Reading Room.

The wisdom of your words has been proven, "Nothing is more needed for the good of the Cause, than this Central Reading Room in New York City, except better healing." Since your letter with this message came to this Field, a year ago, the work in the Central Reading Room has steadily increased, and beyond expectations; the attendance has numbered eighty and eighty-one persons in a day, the demand for literature has been in proportion; most interesting experiences have been the cause of rejoicing, and there have been cases of healing, by simply reading our literature.

Scientists have registered in this reading room from every state in the Union, from Maine to Florida, from Washington to California, the West Indies, England, Germany, Switzerland, and the Philippine Islands. Above all does my heart rejoice that members of the different churches are here brought together to work with one interest for our beloved Cause, and to realize we are all members of the one Church of Christ, Scientist, destroying any unconscious selfish interest for merely one church, in thus working for the good of all. We are thus enabled to do better work for each branch church by individually bringing out the spirit of unity.

As a natural result of this united work, better healing is being manifested and will continue to be, in proportion as we gain a clearer and higher realization of our relation to God and to each other. Only love and harmony have been evidenced from the beginning in the meetings of the Board of Directors. This Board is made up of two members from each church. Each church has shown the most loving interest, and a willingness to sacrifice individual opinions for the good of all. Second Church has found that what might have seemed a sacrifice, in closing the reading room in the church edifice, has proved to be a blessing, if the growth of the church is an indication, for never has the attendance grown so rapidly as since this step was taken, in following, as they thought, the demands of divine Principle.

It has been a great joy and privilege to work for the interest of this enterprise, and thereby for the Cause at large, and each day I feel more grateful to you, dear Mrs. Eddy, for the wisdom which supplied this great need in New York City.

Most lovingly yours,

ELLA BERRY RIDEING.

Doubt and fear are twin brothers. Doubt always arrives first, and fear follows closely after. All that doubt affirms, fear confirms. When doubt falters and wavers, fear trembles and turns pale; when doubt stumbles and falls, fear cries out in terror; when doubt gives up in despair, fear is paralyzed with fright, until the light of Truth shows that there never was any reason for their seeming existence. Then their nothingness is seen and they "leave not a wrack behind."—J. W. B.

Testimonies of Healing.

When a knowledge of the work of Christian Science first came to me, I was a student of medicine, having had a strong desire, almost from childhood, to do something to relieve the sufferings of mankind. In healing my parents, Christian Science accomplished for them what no system of medicine had been able to do. This impelled me to investigate the claims of this new religion, which had made them whole again and caused them to renew their youth, although they made no effort to change my plans in respect to my chosen profession. Being an enthusiastic student of homœopathy, I was almost startled by the statement in *Science and Health*, page 156, that "Metaphysics, as taught in Christian Science, is the next stately step beyond homœopathy." Then I recalled Hahnemann's teaching in the *Organon*, that it is the dynamic or spirit power of the drug that heals, and not the crude drug itself, and that in the college we were constantly instructed to look for the peculiar or mental symptoms of disease in the patient, some of the professors even going so far as to state that certain forms of disease considered most malignant had their origin in a mental shock. After this it was not difficult for me to understand that if disease had a mental cause, its cure should also be through mind without the intervention of matter. Thus the transition from a drug system of treatment to a metaphysical system was easy and natural, though I did not yet see what religion had to do with it.

While in no special need of physical healing for myself, having for the most part always enjoyed good health, I was painfully aware of a need of spiritual healing, spiritual awakening and growth. I was a member of an orthodox church and tried conscientiously to conform to its requirements, but this did not satisfy my highest spiritual desires. I felt there was something in the Bible that would bring me peace and joy if once found, but I failed to find any one who could give me the key which would unlock the Scriptures.

After a few weeks' study of the text-book, in which time Truth seemed no clearer or nearer than at first, I took up *Science and Health* one evening in sheer desperation, being much fatigued at the close of a hard day's work, thinking if my father could get so much out of it there must be something in it for me. Too tired to turn to anything wholly new, I opened to the Lord's Prayer and read it through with its spiritual interpretation, then began to question myself after this manner, "If there is a God, what is He? What must He be to satisfy me?" The answer came, "Good, not half-way good, but all good, the infinite good; if infinite, then He is limitless, boundless good, and must be all-knowing and all-powerful, always and everywhere present; and that means that this infinite Being is with me now and at all times; in fact, that I live, and move, and have my being in Him." Then I knew that the light which is brighter than the day was shining unto me, and my burden was lifted; for in that light I saw the nature of God and man and their relation to each other, and I have been able since then to do any amount of work required of me without any recurrence of the old tired feeling. The meaning of *Science and Health* and the Bible had dawned upon my consciousness, and this glimpse of Truth brought the peace for which I had been longing. Shortly after this experience, my father asked what preparations I was making to return to the medical college, and I replied that I saw no use in continuing the further study of an inferior system of healing.—I had found the Great Physician who healeth all our diseases.

Let me say here that in the beginning of my research I was quite critical of Mrs. Eddy, but after gaining this my first understanding of God, I had found what she wants everybody to find.—God, infinite good,—and I could only be grateful that, after nearly nineteen hundred years, one

had had the courage and faithfulness to stand alone and again present this truth to the world. That Christian Science is the Word which God has sent to heal the people, I am glad to be able to testify through the works that have been wrought in this community, for through that Word the lame have been enabled to walk, those who sat in darkness to see, the deaf to hear, the dumb to speak, those sick with so-called incurable diseases have been healed, and the poor have had the gospel preached unto them.

RITTA MAY METCALF, Anderson, Ind.

My cause of gratitude for all that Truth has done and is doing for me increases so rapidly, that every week I wait before giving my testimony, will make it more difficult to compress the testimony into reasonable limits; whereas, rather more than two years ago, the outlook upon life was one that often brought me into a state of mental depression which sometimes involved an actual physical sense of pain and heart-heaviness. Since the light began to break for me I have not once felt this, nor the attendant result of looking to self-destruction as the only possible way of escape. During the two years and four months since divine Love led me to open *Science and Health* for the second time (after an interval of some years from reading it through prayerfully, but as it then seemed in vain), I have drunk deeply of the hemlock-cup that means warfare with the false self within; but this has never caused me to swerve from the certainty that "God's in His heaven: all's right with the world," whatever the seeming may be, and this assurance does help one through everything. The way grows brighter, one's sense of the encompassing arms of Love grows in spite of outward manifestations that are slow in being made.

Since accepting the Christ-truth as Mrs. Eddy has revealed it to us, I have never touched medicine, and the result has been two years of almost unbroken good health, a capacity for hard work, and an endurance previously unknown. Clear proof has come to me that the harder the mental work, the greater the capacity to fulfil the day's duties aright, however arduous they may be, the "consciousness of truth" (*Science and Health*, p. 278) being our best rest. In June of last year I became a member of The Mother Church, a cause for much joy and humility. No words can say what I owe to the periodicals for the help they give. Gratitude for all this must henceforth be the motive-power of my life, and I know that gratitude expressed in selfless, impersonal love will lead to the outward manifestation which seems to be hard to attain; that sight, hearing, all the spiritual senses of man are eternal and are therefore mine now, since the Comforter, Divine Science, has been sent to show us the way of healing.

Great blessings make great demands upon us, and second only to the debt that must ever be owed, that must be daily and hourly repaid to our Leader, my chief cause for gratitude and the most potent incentive to work is found in the example of those whom God has selected for His service here in this English university town, those who conduct the Sunday and Wednesday meetings, under, perhaps, very exceptional difficulties, and who have been enabled to "strengthen, sustain, and cheer" all who have come under the influence of their pure and selfless ministrations. I have also other Scientists to thank for healing work done for me. Words alone, expressing thanksgiving to God, would be idle, but "prayer is the heart's sincere desire," and I know that I have the sincere desire so to live that others may through me be led to Christ.

EVA S. W. WILLIAMS, Cambridge, Eng.

Christian Science was brought to my notice several years ago by a dear friend, who had investigated it. I hold her

in grateful remembrance for the self-sacrifice and patient love with which she endeavored to help me in time of need. I am also truly grateful to my strong and loyal teacher, who guided my thought into the way of understanding, when I learned the beauty of holiness and the true sense of healing from sin and sickness, which is embodied in Christian Science. Only my heart can tell God how grateful I am for His goodness in giving us dear Mrs. Eddy, even choosing one from among us to lead us out of bondage, that we might know our Father and gain the true birthright of every child of God. We owe our dear Leader untold love for listening to the voice that called, and for obeying the commands from on high. What a work has been hers! With long-suffering patience, loving and true to her calling, she has gently led us on and on, and to make our journey safe, that we may not go astray, she has given us the guide-book of Truth, "Science and Health with Key to the Scriptures." We treasure this blessed book in our home, for we have proved by our healing that it is divinely inspired. It gives us an understanding of the Scriptures, which indeed makes it a book of revelation. The *Sentinel* and *Journal* are also great benefits to me and mine. We have found help and comfort many times from the contributions, so filled with admonition and love, and we have a kindred affection toward all who contribute aid to the needy, strength to the weak, food and drink to the hungering and thirsting ones, through those sacred pages. The gospel of Truth and Love, seems to fill the cup of salvation to the brim, until nothing is left but God,—good. For all these manifold blessings we are unspeakably grateful.—ALICE LURA JONES, Chicago, Ill.

Having received so much benefit from reading the many beautiful testimonies in the *Sentinel*, I feel in duty bound to add my mite in the hope that some suffering brother may pluck up hope and come and drink of the waters of Truth, and find rest as I have done. I am a miner and work in the mines for my living. A few days ago I was taken with a very severe case of grip. I had suffered from it in February or March of each year for the past fourteen years and was quite well acquainted with its symptoms. When treated by *materia medica*, which has always been the case up to two years ago, the attack usually lasted from two to four weeks, and then left some after-effects, such as cough, shortness of breath, etc., which would remain with me until the following summer. This time I was taken with it in the morning, and it appeared more than usually vicious; however, I did not allow it to stop me from going to my work, but I kept growing worse, and by evening I was scarcely able to walk to my home, about a mile from the mine. As soon as I arrived there I asked my little daughter Ruth, who is only eleven years old, to give me a treatment in Christian Science, which she did at once. I sat down by the fire and attempted to read Science and Health, but instead of reading I fell asleep and slept for an hour. When I awoke I found that my headache and sore throat had entirely disappeared; in fact, I was feeling perfectly well, and my belief in grip had vanished into its native nothingness.

I am indeed grateful for the truth as presented by our beloved Leader, Mrs. Eddy, and to our Christian Science friends who have so kindly assisted us in gaining an understanding of the truth that makes men free. Truly did the prophet say, "A little child shall lead them."

J. G. GRADY, Georgetown, Col.

It is over ten years since I first heard of Christian Science. At that time my husband, who is a hardwood finisher, was wearing a strap upon a weak and painful wrist. He had used this many years in order to do his work. One evening he came home saying he had heard of something new.—Christian Science. A fellow-workman had

given him a treatment in the afternoon, which had entirely healed his wrist, and from that day he never again wore the strap. I was very glad for his relief from pain and inconvenience, but took no further interest in the matter for some time. My husband was, however, greatly interested, and soon brought home a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I read the book with interest, but did not understand it, and I felt that it was not for me,—that I could never attain to such purity and goodness as the book demanded.

Shortly after this, things began to go wrong in the family. Work became scarce, money less plentiful, and at last it seemed that we had lost all we ever had. I became fearful, discouraged, impatient, discontented with myself and every one else. My husband, however, was happy through it all, and often said, "If you could see this as I see it, everything would be different for you." I, however, continued in my discontent, making no effort to do otherwise, until one day the conviction came home to me that if I would derive any benefit from that which was helping my husband, I must study and do my own mental work,—that no one else could do it for me. I left my housework at once, found a Bible, the copy of Science and Health, and a *Quarterly*, and for hours I sat reading and thinking. When I got up, I realized that I was free. A great peace had taken possession of me, which then I could not explain. Within a week my husband had work, and has not been without it since.

Six years have passed since then, and in all this time we have had cause only for rejoicing. In our family of five the temptations have been many and varied, and the way has seemed dark at times, but by going to the Bible and Science and Health we always learn more of God, and have always found Him a help in times of trouble, and a shelter in the time of storm. We have found a church home which is a source of great comfort and strength to us, and we have gained much from class instruction. The study of each week's Lesson-Sermon brings the thought of Christ feeding the multitude, and the bread is still fresh.

Words cannot express my gratitude to Mrs. Eddy for the way in which her book has lifted me from dark despair into the liberty of Truth and Love. The light which shines from Science and Health is glorious. The *Sentinel* and *Journal* are truly welcome visitors. My heart is filled with gratitude, first to God, for raising up one who could proclaim His gospel of Love, then to Mrs. Eddy, for so nobly fulfilling this mission. I am also grateful to our editors and contributors who give us so many loving lessons, to the Readers and every member of our home church, who are so happy and loving that I feel I miss a feast if I am not regularly among them.

MRS. SUSIE HENDERSON, Portland, Ore.

I wish to tell of a little demonstration I had one day. I broke the bone of my third finger and crushed two of the others very badly. I at once went into a room alone and realized the truth. The words of our Leader in Science and Health, p. 424, came to me: "Accidents are unknown to God, or immortal Mind." I knew that as God's child I could not be injured, neither could a bone be broken. Within a few minutes all pain had ceased and I proceeded about my duties as if nothing had happened. The fingers were very discolored for some days, and people in the house wondered how I could use them, but I felt no inconvenience whatever. This is only one of many testimonies I might give if space permitted. Some seeming business troubles of many years' standing were met and brought to a satisfactory termination through my little understanding of Truth.

For all these many proofs of God's love to me and to others, above all for the great spiritual uplifting and the understanding of the Bible I have received through the

reading of Science and Health and Mrs. Eddy's other works, I wish to express heartfelt praise and thanks to God. I also wish to express my gratitude and love to our Leader, who, through her pure life, has given us the revelation of truth that has brought such joy and peace to the world.

ALEXANDRA C. E. GIBBS, Sydney, Australia.

As I have been greatly helped and encouraged by the reading of other testimonies, I find it a privilege, rather than a duty to obey the words of the Master, who said, "Freely ye have received, freely give." I have the most of our Leader's works, also our periodicals, and derive pleasure and profit from the study of them. We have no Christian Science church here, so have not the helpful influence of church association, but I have an abiding faith that in God's good time the seed will fall on good ground, spring up, increase, and bring forth fruit, the same as it has done in other places.

I would like to say, for the encouragement of those who distribute Christian Science literature in different places, that I was led to the truth by taking up *The Christian Science Journal* while waiting in a public reception room. I became deeply interested, and from that reading, now six years ago, I feel that I have found the truth as never before in the church of which I was an interested member, and which I still hold in love and respect, as the stepping-stone to the higher and more spiritual truths of Christian Science. I became interested for the physical healing, of which I was greatly in need, as well as the spiritual up-building of thought, and it has been my experience that the spiritual is the first necessity, and that the physical healing follows. I feel that it has been one demonstration since coming to the Christ, Truth; not that I can say that I have been able to work out of all the claims of error, but I have to such an extent that I can say Christian Science is an ever-present help in all the conditions of daily life.

In consideration for all the physical and spiritual blessings I have received, I feel there is no better way for me than to make constant endeavor to follow in the faith our Saviour taught. I would express my deep-felt gratitude to Mrs. Eddy, the one whose heart was pure and whose ears were spiritualized to hear the call of Christ Jesus. I also wish to express my love and appreciation of my practitioner, who first told me of the truths of Science and turned my material thought toward the spiritual; and last of those who work so faithfully to send out the different publications into the Field. It is my daily prayer that I may live up to this beautiful truth and bring no discredit upon Christ's teachings.

MRS. LAURA L. CORBIN, Rockville, Conn.

This morning, after reading some testimonies and being helped so much by them, I cannot wait longer but must write mine. I was a church member, and I tried to be faithful until these commands would come up to be honestly obeyed, "heal the sick" and "preach the gospel to the poor." While in a state of uncertainty our little baby girl was born. We used to give her paregoric and other drugs to cure the colic, and at last we gave her whiskey and water enough to strangle her. The thought occurred to me, Here am I, a Christian, and yet depending on these poisons to relieve my little darling. It is a pretty weak god that I am serving. My mother and sister were Christian Scientists and had helped me more than once, and they asked me to try Christian Science for the healing. I finally took the whiskey, drugs, etc., and threw them out doors, then repeated the Lord's Prayer with its spiritual interpretation, also the scientific statement of being (Science and Health, pp. 16, 468). Needless to say, our darling baby was relieved, and from that day till this, nine years,

Christian Science has been our only physician. Space will not permit me to write of the many different forms of error that have been healed by knowing what God is, and by abiding in divine Love.

E. W. DICKERSON, Blaine, Wash.

I became suddenly and seriously ill in the night and suffered excruciating pain. In the morning, when I looked at myself in the mirror, I found to my dismay that my face was quite crooked and one eye very much enlarged and protruding. A friend seeing me exclaimed, "You have had a stroke of paralysis; you must have galvanic treatment at once. I once suffered from the same thing and was under medical treatment for a year." My friends were all very anxious and wished me to send for a physician, but I firmly refused, and as soon as possible I sent a telegram to a Christian Science practitioner, asking for absent treatment. The result was marvelous, for in five days I was healed. The declaration on page 375, Science and Health, "Muscles have no power, . . . Mind is supreme," helped me wonderfully. Those around me who had been so adverse to my having Christian Science treatment had to acknowledge that it really was very extraordinary how quickly I recovered.

Words fail me when I try to express how grateful I am to Mrs. Eddy for her wonderful book, "Science and Health with Key to the Scriptures." It is through the understanding which this book has brought me, that I am able to realize what the Christ love is, and to understand the spiritual meaning of our Master's teaching.

I. M. G., Manchester, Eng.

I wish to testify to the healing power of God, which came to me through Christian Science. I had a spinal trouble, which brought on nervous prostration of twelve years' standing. I was in bed sometimes six weeks. Words cannot express how I felt: I could not sleep, would go as long as forty-eight hours without a moment's sleep, in fact I was a physical wreck and grew very despondent. I had the best physicians, and each in turn would say that he could do me no good; then, of course, I gave up all hope.

About two years ago, when first I knew of Christian Science, I went to church. I enjoyed the services very much; on Wednesday evening I went again, and am now a member. I got Science and Health by Mrs. Eddy, and began reading it, and so I was healed,—I am perfectly well without taking a single treatment from any one.

I feel very thankful that our Leader has shown us the way so perfectly by giving us the "Key to the Scriptures." I strive each day and pray for a better understanding of this truth, which has done so much for me. I owe my life, all I am, to Christian Science.

MAGGIE L. LIGON, Atlanta, Ga.

If I wait longer to acknowledge the benefits received from Christian Science, I shall feel that I do not deserve more. During the last five years I have been studying Christian Science, and in that time, through the reading of Science and Health, granulated eyelids have been cured, sore throat has left me, colds are much less frequent and less severe, fatigue has become unknown, and the "blues" have taken their flight. The discipline of pupils in my school is no longer difficult, and a good many times I have been able to help others. These are only a portion of the blessings received, for a day does not pass in which there is not a manifestation of the omnipresence of good.

Each day I realize more and more how pure Mrs. Eddy's life must be, that she can give us through her writings an understanding which so truly meets our need.

MABEL K. PETERS, Carbondale, Ill.

From Our Exchanges.

If every public officer were really a Christian, if every employer and every laborer were really a Christian, if every merchant, every householder, every man, woman, and child were really a Christian, of course the kingdom of heaven would not be far away.

If that is true, then the sensible thing to do is to make Christians just as fast as we can, and in proportion to our success will the kingdom of heaven approach the earth. The point of all this is that the most vital element of life to-day, from the standpoint of the world itself, is religion, for if there is any truth in the observations of pessimists who find conditions so deplorable and hopeless, it is because religion has been pushed into the background while we experimented like our brethren of olden time in Egypt, in making bricks without straw; we have the clay and sand and water, needed properties, but nothing to hold them together!

The chief need of the world to-day is religion; we need it in our officials, high and low, we need it in our voters, we need it in our rich men and poor, we need it in our stores and factories, we need it on our streets, we need it in office and study and studio, we need it in society, we need it in the newspapers and in our literature, we need it in our amusements, we need it in our schools and colleges, we need it in our homes, we need it most of all in our churches.

The Universalist Leader.

We make a great mistake when we think that Christianity has won its way in the earth because its preachers have been such strong logicians. The secret of its power and its triumph has been that it has actually done something for men in the transformation and re-creation of the inner life of thought, desire, and purpose. It has brought peace and strength and life. No matter how much discredit skeptics throw upon documents, so long as men by following the directions of those documents come to a spiritual experience that purifies and expands and vitalizes their souls. Christianity is unassailable, and the spiritual experience reflects back a new and strong evidence upon the documents.

But, it is said, this spiritual experience is only valid for the individual soul that shares it. It cannot be imparted to another. That is certainly true. But it is also true that the soul that is born from above bears a witness to the truth in the certainty and intensity of its conviction that is of the highest moment in propagating its own convictions. Carlyle truly says, "Soul is kindled by soul, and to teach religion the one thing needful is to find a man who has religion."—*The Watchman*.

Religious union is in the air, and Christian unity is on the way, but consolidation will never come excepting among religious denominations that have advanced toward central truth so far that forms of baptism, methods of communion, systems of church government, and the authority heretofore delegated to consecrated persons shall be classed among the non-essentials of religion. We are glad to see that the *Churchman* is approaching this point of view in a recent editorial. As, for instance, when it said that "converting congregations to the Prayer Book is hardly more intelligent than converting individuals to the processional cross and the litany desk. The first principle of a real programme of religious peace is the recognition of what the religious life of America is and has been, with a generous recognition of the part that each fraction of the Church has played in its development."—*The Christian Register*.

No philosophy, no theory, no art, can change eternal verities. To-day, as ever, it is true that the pure in heart shall see God. Nothing can change the nature of that truth. Jesus, as ever, leads to purity of heart, leads to God.

W. B. FLANDERS in *Christian Messenger*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Items of Interest.

National.

The Italian Foreign Office has informed United States Ambassador Meyer that Italy is quite favorable to the conclusion of an arbitration treaty with the United States, and will empower Ambassador Mayor des Planches to sign it in Washington.

The arbitration treaty with Denmark will follow the lines of that already signed with France and other countries. A similar treaty negotiated with Switzerland awaits the signature of the high contracting parties. Mexico is prepared to negotiate an arbitration treaty with the United States.

It is announced that all the players in the Boston Symphony Orchestra have resigned from the Boston Musicians' Protective Association, and their resignations have been accepted. The orchestra has ninety-four members, and of these seventy-seven were members of the Association. The reason why the union officials have declined to discuss the matter is said to be that they did not wish to antagonize the Boston Symphony Orchestra or Major Higginson, who stands back of it.

As the result of a recent experiment made at the World's Fair grounds the practicability and accuracy with which wireless messages could be received at high altitudes and long distances were satisfactorily demonstrated. More than twenty messages were transmitted from the World's Fair wireless tower to an operator in a balloon. The highest altitude reached was estimated at about two miles.

Eighty thousand acres of land will be rendered suitable for farming purposes by the construction of a large irrigating system in Laramie and Weld Counties, Colorado. The main tunnel will be over two miles long, seven feet deep, and six feet wide, and the whole system will cost about \$375,000.

Miss Annie S. Peck, the American mountain climber, who has just arrived at New York from Colon, has been in Peru, where she succeeded in ascending Huascaran mountain to a height of 21,000 feet. Immense

crevasses prevented her from reaching the summit.

The State Department at Washington has been informed by the chargé at Caracas that Frank Plumley of Vermont has been selected as umpire to settle the French claims against Venezuela not adjusted by the Mixed Commission.

Great Britain, Mexico, and Denmark already have indicated their willingness to participate in another peace conference. France's response has not been made officially, but the plan and general purpose of the meeting are acceptable.

The sum of \$191,850, the last installment on the federal loan of \$4,600,000 made to the World's Fair several months ago, was paid into the United States sub-treasury last week by the Exposition officials.

The 36½ ton meteorite which was brought to this country some years ago by Lieut. Peary has been removed from the Brooklyn Navy Yard to the American Museum of Natural History, New York.

Although favorable in general to the reconvocation of The Hague Peace Conference, Italy has not yet answered the proposal of the United States officially.

Foreign.

The Canal Committee of the Prussian Diet has decided to support the measure for canals connecting Hanover with the Rhine, and the canalization of the Weser, from Hamelin downward, provided Bremen will bear part of the expense. The proposed canal uses about sixty miles of the existing Dortmund-Ems Canal, and will have two outlets into the Rhine. The total length, exclusive of the Weser, will be one hundred and sixty-five miles. The cost will be about \$50,000,000.

The Ecuador minister to Colombia has signed at Bogota a treaty submitting the Ecuador-Colombia boundary dispute to the arbitration of Emperor William of Germany.

Switzerland will shortly conclude arbitration treaties with the United States, Great Britain, France, Italy, Austria-Hungary, Germany, Sweden, and Norway.

The Anglo-Portuguese treaty of arbitration was signed at Windsor Castle last week.

Industrial and Commercial.

The highest tunnel in Europe, says the *Scientific American*, is undoubtedly that of the new Jungfrau electric line which is to reach the summit of the mountain. According to recent reports the tunnel, which is now in construction, has passed the altitude of three thousand meters (1.8 miles). As the road is entirely underground after reaching the altitude of twenty-four hundred meters (1.04 miles) it may be safely affirmed to be the highest tunnel in Europe. The work, which commenced over ten years ago, is very slow. The second station, that of Rothstock, was opened to the public on the 2d of August, 1899, and the third, the Eigerwand station, not until the 1st of July, 1903. The next station, that of Mer de Glace, will not be opened before next summer, and perhaps only during 1906. The great length of time needed for the construction lies in the fact that the rock is especially hard, and it is impossible to use quick-working drills. What is favorable is that there has been no water flow up to the present, as is the case in the Simplon tunnel. It is estimated that it will be ten years before the road finally reaches the summit of the Jungfrau.

In 1898 there were 74,000 miles of roads in New York State owned by the towns and maintained by the labor tax. In that year the Higsby-Armstrong law was passed by which the State provides the machinery and the county may or may not have State roads. If a county decides to have its roads improved by the State, the State builds the

roads and pays one-half the cost. Of the remaining half of the cost thirty-five per cent is assessed upon the county and the remaining fifteen per cent upon the towns. Under this law the State has built about seven hundred miles of road and has planned improvements that will cost \$6,300,000. About six thousand miles of road have been improved by the towns and 31,000 miles are being maintained by a money tax.

The objections to carbon filaments—disintegration, fusing with strong currents and therefore waste of energy through the necessary employment of weak ones—have led to many attempts to construct a filament for incandescent lamps of greater efficiency and durability. Filaments of iridium wire, which is neither vaporized nor oxidized at white heat, have been suggested, but the metal is extremely brittle and cannot be drawn into wire. By mixing a fine iridium powder, however, with vegetable glue, forcing the paste through a perforated plate by hydraulic pressure, drying the filaments, and heating them to whiteness in an oxy-hydrogen flame, filaments can be produced that have a bright metallic lustre, and are flexible enough to be used in electric bulbs. They are said to be very durable and economical of power.

The total quantity of sugar brought into the United States in the nine months ending with September, 1904, is 4,250,000,000 pounds against 3,750,000,000 pounds in 1903. Of this practically one-fourth came from the non-contiguous territory of the United States—Hawaii, Porto Rico, and the Philippine Islands; more than one-half came from Cuba, and the remainder chiefly from other islands of the East and West Indies. All this is cane sugar. In addition to this there was 223,211,168 pounds of beet sugar, which came chiefly from Germany, with a small quantity from Belgium, and a still smaller quantity from Austria-Hungary. The value of the sugar is \$101,116,717, of which \$32,223,075 was from the island territories of the United States, \$23,139,212 being from Hawaii, \$9,083,863 from Porto Rico, and \$34,240 from the Philippine Islands.

The corn crop of 1904 is estimated at approximately 2,574,000,000 bushels, the total slightly exceeding the crop of 1902, which up to that time was the largest on record.

Contracts have been let very recently for the shipment of fully two million dollars' worth of American machine tools to Japan.

General.

The total deposits in all the savings banks of the world, according to the latest official information received by the Department of Commerce and Labor through its Bureau of Statistics, amounted to over ten and one-half billion dollars, contributed by 82,640,000 depositors. Of this total the United States shows aggregate deposits of \$3,060,179,000, credited to 7,305,000 depositors. Of the total number of deposit accounts, the share of the United States is somewhat less than nine per cent, while the average deposit per account is more than four times, and the average savings per inhabitant more than three and one-half times the corresponding averages for the rest of the world.

"It is believed," says Chief Manney in his report of the Bureau of Equipment of the United States Navy, "that the development of wireless telegraphy will enable time signals to be distributed over water as well as over land, and that before long every ship at sea, in addition to every land station, will receive daily noon signals from the standard observatory clock." This will eliminate the last element of uncertainty from the problem of finding the position of a ship at sea.

Cut off from the East by the recent storm's destruction of telegraph and telephone wires, Chicago brokers had to communicate with their New York offices by sending messages around the world by way of Yokohama.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Mental Corrections.

M. G. KAINS.

To the Christian Scientist who has been a student of natural science, it is a matter of surpassing interest to note the statements of other physicists, as Truth compels them to discard theories formerly cherished, and accept more advanced views. Probably no recent utterance so strikingly illustrates this abandonment of whilom natural science tenets as does Mr. Balfour's speech delivered as President of the British Association and reported in full in the *London Times* of August 18. For instance, in explaining the basis of the natural sciences, he said,—

"In the order of logic, sense-perceptions supply the premises from which we draw all our knowledge of the physical world. It is they which tell us there is a physical world; it is on their authority that we learn its character. But in the order of causation they are effects due (in part) to the constitution of our organs of sense. What we see depends not merely on what there is to be seen, but on our eyes. What we hear depends not merely on what there is to hear, but on our ears. . . . And what is true of sense-perception is of course also true of the intellectual powers which enable us to erect upon the frail and narrow platform which sense-perception provides the proud fabric of the sciences."

In making these statements Mr. Balfour has not intended to overlook the important adjustments and corrections which have been made by reason in order to arrive at truth, for a little later he says,—

"Our organs of sense-perception were not given us for purposes of research; nor was it to aid us in meting out the heavens or dividing the atom that our powers of calculation and analysis were evolved from the rudimentary instincts of the animal. It is presumably due to these circumstances that the beliefs of all mankind about the material surroundings in which it dwells are not only imperfect, but fundamentally wrong. It may seem singular that . . . our race has, without exception, lived and died in a world of illusions; and that its illusions, or those with which we are here alone concerned, have not been about things remote or abstract, things transcendental or divine, but about what men see and handle, about those 'plain matters of fact' among which sense daily moves with its most confident step and most self-satisfied smile."

But what are these illusions? Are they not the very sensations which our senses assert to be true and which we take for granted are true until we examine them critically? Are we not obliged mentally to correct every sense perception in order to arrive at truth? Let us examine a few cases which may be taken as typical.

A person who will close his eyes and cross his second finger over the first will believe he feels two objects when only one is placed so as to touch the tips of both fingers, especially if the surfaces brought in contact be respectively

rough and smooth. The assertion, "Oh, I knew (or saw) that I was touching only one thing," is virtually an announcement that the mental correction had been made.

A person standing with his back to a stove and warming his hands held behind him will usually start suddenly if his hand be touched unexpectedly on the surface next the fire. And he will generally be unable to declare whether the sensation was hot or cold.

Taste and smell present probably less striking phenomena than touch and hearing; but sight affords perhaps the most remarkable of all. If a stone be dropped from a rapidly moving train it appears to a passenger to fall vertically to the earth; to a spectator standing beside the track, it seems to fall obliquely; but the mental correction shows that it takes a curved course.

If one eye look through an opaque tube about a foot long, and the other eye look at the hand held, palm or back toward the eye, at the remote end of the tube, there will seem to be a hole through this hand. Again, if one look intently for half a minute at some bright solid color and then look as intently at a white wall or paper the color will be reproduced more or less prominently.

Such cases are so numerous that many physicists now literally "do not believe their senses," and in reviewing the history of the natural sciences progress will be seen to have been slow mainly because the testimony of the senses was believed; effects were frequently (and still are) attributed to wrong causes simply because the observer has failed to rise high enough to make the mental correction or to accept it when a more advanced thinker has grasped and published the fact.

Now in a court of law, a witness need tell only one untruth to have his testimony discredited; but the testimony of these physical senses must be reversed item by item in order to reach the facts in the case. This being true, it is evident that "the proud fabric of the sciences" is indeed supported by a "frail and narrow platform."

Is it presumptuous, then, to conclude that reason will so adjust still more "plain matters of fact," that the "platform" of these sense-perception sciences will be seen to have no foundation in truth, and hence to be an illusion? Upon this phase of the subject let us turn again to Mr. Balfour's address. In a masterly manner he summarizes the history of the sense-perception sciences, and then makes destructive onslaughts upon the whole fabric. He says,—

"Extend the boundaries of knowledge as you may; draw how you will the picture of the universe; reduce its infinite variety to the modes of a single space-filling ether; retrace its history to the birth of existing atoms; show how under the pressure of gravitation they became concentrated into nebulae, into suns, and all the host of heaven; how, at least in one small planet, they combined to form organic compounds; how organic compounds became living things; how living things, developing along many different lines, gave birth at last to one superior race; how from this race arose, after many ages, a learned handful, who looked around on the world which thus blindly brought them into being, and judged it and knew it for what it was,—perform, I say, all this, and, though you may indeed have attained to

science, *in no wise will you have attained to a self-sufficing system of beliefs.* [The italics are Mr. Kains's.]

"One thing at least will remain, of which this long-drawn sequence of causes and effects gives no satisfying explanation; and that is knowledge itself. Natural science must ever regard knowledge as the product of irrational conditions, for in the last resort it knows no others. It must always regard knowledge as rational, or else science itself disappears. In addition, therefore, to the difficulty of extracting from experience beliefs which experience itself contradicts, we are confronted with the difficulty of harmonizing the pedigree of our beliefs with their title to authority. The more successful we are in explaining their origin, the more doubt we cast upon their validity. The more imposing seems the scheme of what we know the more difficult it is to discover by what ultimate criteria we claim to know it."

This is the fateful jeopardy in which the natural sciences find themselves cheek by jowl with extinction. To seize one horn of the dilemma the physical scientist must avoid the mental correction, and retrogress to mere empiricism—chance. This is absurd. To grasp the other horn he must make the mental correction and progress to the ultimate total extinction of the present false basis of these sciences—sense-perception—and the establishment of a basis in Truth. According to his own records the sense-perception sciences have this trend. For the testimony upon which they are based is more and more discredited, mentally corrected, reversed, and stated in terms of at least approximate truth, more and more nearly approaching actuality as the scientist becomes more intelligent and augments his ability to make mental corrections.

Thus the exponents of the physical sciences more and more nearly approach the realization which Mrs. Eddy attained a generation ago; namely, that "All the evidences of physical sense, or of the knowledge obtained thereby, must yield to Science, to the immortal sense of things;" that "all Science is divine;" and that "there is no physical science, inasmuch as all truth proceeds from the divine Mind" (Science and Health, pp. 493, 126, 127).

The Value of a Good Name.

RICHARD P. VERRALL.

THE success of a business enterprise often depends entirely upon the fact that well-known names are connected with its promotion. The world recognizes the priceless value of a good name, and it is worthy of note that true and lasting success is invariably built upon this sure foundation.

Shakespeare, the great student of humanity, fully realized this situation when he penned the familiar lines,—

Good name in man and woman, dear my lord,
Is the immediate jewel of their souls;
Who steals my purse steals trash; 'tis something, nothing;
'Twas mine, 'tis his, and has been slave to thousands;
But he that filches from me my good name
Robs me of that which not enriches him
And makes me poor indeed.

True knowledge, or the knowledge of Truth, is the secret of success, and he who possesses this pearl of great price will not only have a good name, but will be able to maintain it and apply it to right uses.

In the first chapter of Genesis, it is said that God gave names to all His creatures as they were brought forth, and He pronounced them "very good." In the second chapter we read, "And out of the ground the Lord God formed every beast of the field, and every fowl of the air; and brought them unto Adam to see what he would call them: and whatever Adam called every living creature, that was the name thereof. And Adam gave names to all cattle, and to the fowl of the air, and to every beast of the field."

Thus in the belief of a material creation man was made

responsible for naming not only the animals, but his fellow mortals and their characteristics,—a practice which has led to an infinite number of subdivisions of manhood, with a false concept attached to each.

In modern times Adam has no new physical species to name, but the multiplication of beliefs has kept him busy with his Greek and Latin roots, formulating titles for this progeny of mortal mind. The sensations of sickness are constantly asserting themselves for recognition. If they are received by a learned profession, dignified with high-sounding names, and entertained with medical treatment, they will remain indefinitely. If, on the other hand, they are met with an understanding of Christian Science and are rebuked in our Saviour's language, "Get thee behind me, Satan," they will disappear into their native extinction; then disease will be forgotten and become a thing of the past.

At this period Christian Science has come to the rescue of a suffering race, and is emphasizing the words of the Psalmist, "Behold, how good and how pleasant it is for brethren to dwell together in unity."

If men were measured by the good they do, and our eyes were trained to deny every suggestion of evil, life would be like a garden of flowers, growing so close together that there would be no room for the weeds to flourish. Let us overcome every temptation to accuse our brethren, knowing that we can see the true image of God if we will but look for it steadfastly, and with a single eye.

An Allegory.

KATHERINE M. YATES.

A MAN once lay immured within a prison cell. The walls of darkened stone close-shut him in upon all sides. The narrow window, crossed by blackened bars, sifted the sunlight in scant, niggard rays. The door was also barred, and weighted well by heavy bolts and locks.

Long time he lay there thus, bemoaning his sad fate; and people passing by the door and window looked upon him with sad, pitying eyes, and some had kindly words of sympathy or tears for him; for his imprisonment was undeserved, since he had done no felony, but had become immured through mere mischance; and many had compassion on his plight, but knew no way to help him; and he groaned and prayed for death.

At last one passed his window in the sunlit noon and carelessly glanced into that dim cell; then paused and closer came. "Good friend," he said, "why weepst thou?" The prisoner raised his head. "I have I not cause to weep?" he said. "Years have I lain here, though I did no wrong in all my life, except the insignificant and paltry errors of a man the world calls just. I tried to do my best, and yet I lie in this dank hole, scarce living and yet, woe is me, not dead."

Compassion filled the other's eyes. "But see, good brother," came the kindly voice, "since thou art then so wretched in this darksome cell, why not fare forth into the joyous world amid the birds, the sunlight, and the golden fields?"

The captive clenched his hands. "You, in your freedom, dost dare jest and mock at one so deep in misery?"

The other shook his head. "I do not jest, my friend; the way is clear, and always has been. Your engulfing walls are only painted canvas and the bars are blackened, brittle chalk; the bolts upon the door have never been shot home. Man, you are free. All you need do is simply, Know God's truth, and walk forth, your bonds are but beliefs; be free!"

His hearer gasped. "The man is mad, forsooth. He knows not what he says. So many have passed by and seen me here, and none have told me this, though all have pitied me. It surely is not true."

"The others did not know," his friend replied. "The stones and bars seemed to them real; but I have tested, and I know the truth."

The prisoner half rose. The light of hope began to flicker in his eye. "Prove me your words," he said, in tensest tones; "Be those bars chalk, break even one."

The other shook his head and smiled. "And dost thou, then, place so slight a value on thy freedom that thou dost deem it not worth while to try thy strength upon a single bar?"

The man stood up, his palsied knees weakened, and tottering beneath his trembling weight. His hand shook like a leaf as he reached forth and grasped a blackened bar. It crumbled to his touch.

He stared in wonder, then he straightened more, his limbs grew firm, his eye flashed forth with hope, with *knowledge* that the world was his.

Down fell the bars before his eager hands, the canvas walls were rent, the door flung wide, and forth a *man* walked 'neath the open skies. And as he walked he pondered deeply, while his friend watched long his face, with question in his gaze.

At last the one-time captive raised his head and met the gaze, met it unflinching and with level eyes.

"My work?" he said.

"Dost thou not know it?"

"Aye, I do. It is to tear and scatter all these flimsy walls which seem to gird about so many on my way."

"And did I tear down yours?"

His hearer caught his breath. "But I must work," he said. "I feel it in me that I've much to do. I long to do it. Tell me where I err."

The other laid a hand upon his shoulder. "Friend," he said, "you *have* a work to do,—a grand and glorious work. It is to live the life of freedom, and to show by your example what is good and pure and brave. To have your hand ever held forth to help your fellow when he feels the need; your eye ready to see the wisest way to give that help; your ear eager to hear the truth and make it yours; your lips ever alert to voice it; your whole life active, earnest, loving, clean, thus showing forth the man your Maker made."

The Results of Obedience.

F. F.

HEARING that a church member has said recently, "Our church does not yet see the necessity for giving a lecture," I would like to tell of the experience of a small church which made this demonstration in the face of many seeming difficulties, and which is now rejoicing in the blessings which follow from obedience to this wise and loving provision of our Leader, as set forth in the Church Manual.

The church was organized less than two years ago and has fifteen members. A lecture was given soon after the organization of the church, but when the subject of a second lecture was brought up we found so great misapprehension in regard to the meaning of the By-law and the purpose of a lecture that we asked a Scientist whose wise counsels had guided us before in times of doubt and difficulty, to come and make clear to us our duty in this matter. This was most faithfully and lovingly done. We immediately began to make preparations for the lecture, but it was some months before the lecturer whom we had chosen could come to us. There was no money in the treasury, but we worked and prayed, knowing that God would supply every need.

When the time for the lecture was arranged we discovered that we were unfamiliar with the details of the work which must be done, and we wished to make this demonstration as complete as possible in order that the "good news" might reach a large number of people. We then called

upon the First Reader of an older church, who most kindly gave us the benefit of his experience.

Again the way was made clear and the preparations proceeded rapidly, many seeming obstacles giving way before the understanding of the power of Love. Many sacrifices were lovingly made by the members of this little congregation in order that each might contribute liberally to the lecture fund. Contributions began to pour in. Through the good friend who had at first aided us by her advice, a contribution of fifty dollars was sent to us by a Scientist whom we had never seen.

The invitations were received with the greatest pleasure. On every side we heard expressions of interest in the lecture and gratitude for the opportunity of hearing this subject discussed. The house was filled, many coming from long distances to attend, and three cases of healing were reported as having taken place during the lecture. Enough money was contributed so that after all the expenses had been paid there was more money left in the treasury than there had been at any time during the year.

No mortal can estimate the blessings which came to each one who in any way aided in making this demonstration; they are known to God. The truth was brought within reach of a large number of people, the church gained in unity of thought and in spiritual understanding, while in the community there is a greater interest in Christian Science and a better attitude of thought toward the church, as prejudice and misapprehension have given place to the statements of Truth. The editor of the local paper had unwillingly promised to give half a column for a synopsis of the lecture, but he gave over two columns to it. The good accomplished was entirely beyond all expectation and beyond human estimate.

"What eye had not seen, and ear had not heard, and what had not entered the human heart, God had prepared for those loving Him" (Ferrar Fenton Translation).

Strength.

A. J. F.

And his strength went from him.—JUDGES, 16: 19.

THIS text made such a deep impression that I often thought upon it and read the chapters relating to Samson again and again, but could not at once see the lesson which I wished to gain. Not long ago the text came to me again and a clearer sense of its meaning showed me that when Samson, who was noted for his strength, was faithful to God, when "the Spirit of the Lord" was upon him, he could easily kill the lion, and when evil would bind him and cause the Philistines to come against him, he was able to conquer error with the same ease and by the same means. He thus proved that the true victory is gained "not by might, nor by power, but by my spirit, saith the Lord of hosts." Later, when he yielded to the sins of worldly ease and apathy,—pictured as Delilah, he was beguiled, and when asleep "his strength went from him," he lost his sight and was bound and ridiculed by those who caused his downfall. This affliction was, however, a lesson to him; he afterwards repented, asked God for strength, and his prayer was answered.

We are taught in Science and Health that if we obey Principle we also can destroy error, and perhaps the most dangerous enemy would be as readily destroyed, as was the lion by Samson. We should be watchful, and guard lest we too cherish some idol which may cause our downfall. Our beloved Leader has given us so many helpful lessons to guide and to shield us that we should show our gratitude by the faithful study and following of her teachings; knowing that "we shall reap, if we faint not."

Selected Articles.

The Healing Leaves.

I have been requested to reconcile the non-use of medicine with the Scriptural statement, "And the leaves of the tree were for the healing of the nations."

St. John's picture of the New Jerusalem with its golden streets, the river of life and the tree of life, is without doubt intended to illustrate the beauty and harmony of spiritual life. The description of the tree of life should be taken in the same figurative sense which properly applies to the description of the Holy City. No Bible student expects to witness a material city, fifteen hundred miles in height, coming down through the air. We are accustomed to accept these apocalyptic forms of speech, as they were surely used by the author; namely, as figuration.

If we take the Scriptural reference to the leaves of the tree of life only in a literal sense, we must confine ourselves strictly to such an interpretation throughout, and must not apply the teaching to the leaves of any other tree. If this text is intended to suggest the use of material medicine in the healing of the sick, we should note that only the leaves of this particular tree, the tree of life, are recommended, and to carry out the recommendation literally we must first enter the New Jerusalem, then find the river of life, and find the tree in the midst of it, and on either side of the river, when in fact we have not yet seen the descent of the city. The text does not read "trees" but "tree," and a tree large enough to grow on both sides of the river. Note that we must find the tree "that bears twelve manner of fruits and yields her fruit every month," then pluck the leaves thereof. Let him who is disposed to take the Scriptures in a literal sense first find the tree and procure the leaves before advocating their use.

What we have said on this subject is not for the purpose of ridiculing the Scriptural teaching, for we regard this description of St. John as one of the most beautiful figures of speech to be found in all literature, but we insist that it was simply his material illustration of the spiritual fact. The Gospel of truth brings forth fruit, constantly and in sufficient variety, and even the leaves of this tree, the smallest and most insignificant offspring of the tree of life, serve the purpose of healing the nations, overcoming sin, sickness, and death.

While we raise no objection to the use of medicine on the part of our brethren who are not ready to depend alone upon divine power, we deem it wise to enter a kindly protest against the effort to represent the Word of God as being in the support of any material practices, whether medical or otherwise.

It is commendable that, in spite of their belief in the efficacy of materiality, many hold fast to the supremacy of God. Christian Scientists, however, are proving that better results can be obtained by an implicit and exclusive dependence upon the divine power and a complete abandonment of material remedies.

ALFRED FARLOW.
Boston Times.

Does it Please God?

In looking over our exchanges we find columns of "resolutions of condolence," and in most cases they start out with the stereotyped clause, "Whereas, it has pleased God," etc. It matters not what follows, those resolutions start out the same way. A loving mother may have been removed from the family circle; a father, the bread winner, may have been stricken down by some fatal accident, or some little child, the idol of the household, may have been called away, leaving fond parents with broken hearts; and the lodge says, "Whereas it has pleased God to afflict," etc. Does it please God to afflict His children? Does not the

great loving heart of God throb in sympathy with the poor, broken-hearted mother? Let us quit saying that it has pleased God to afflict any one. God is love, and it does not please love to cause sorrow. You are only an earthly parent, but when your little child comes to you with breaking heart you share its sorrow and find no pleasure in its distress. Is God's love less than your love? The next time you draft resolutions ask yourself this question, and leave out the "Whereas it has pleased God to afflict," etc.

Odd Fellows Review.

Growth of Christian Science.

The growth of the Christian Science Church in this country during the past few years has been remarkable, a fact which we believe is not fully appreciated by the general public. In Buffalo the increase in its membership, wealth, and influence has been very large. The attendance at all the meeting-places is always large, and the reading rooms maintained by the church are almost constantly filled with seekers of the knowledge their publications contain.

In 1897 the whole denomination contained only three hundred and sixty churches and now it contains eight hundred and fifty. In 1897 Science and Health, the text-book of the denomination, written by Mrs. Eddy, had only passed its one hundred and thirtieth thousand, and now it has reached its three hundred and fifteenth thousand, and more copies of it were sold in the last twelve months than were sold in the first twelve years.

Seed Sowing has Begun.

At Berkeley Temple, yesterday morning, the Rev. Allen A. Stockdale had as a topic "The Reign of Peace."

He said it is the consistent ideal for the civilization of the twentieth century. Peace is a matter of the heart and conscience and can be accomplished. How far distant the day no man can tell, but this is sure, that the day will only come by the faithful, persistent sowing of the seeds of peace, even while the roar of the cannon growls out a seeming paradox. The sowing has already begun.

The reign of individual peace has a large exponent in the Christian Science movement. We are coming to the time when war will not be recognized by public conscience as a legitimate and rational way to settle disputes. Arbitration must take the place of butchery and life be considered instead of death.

We must clearly understand that peace must never mean compromise of principle, indifference to principle, or an age of sentiment. True peace must be the fruit of true education of mind and soul.—*Boston Herald.*

The following is taken from a sermon preached by Rev. T. J. Mackay, Rector of All Saints' Church, Omaha, published in the parish paper, *Church and Home*.

"No wonder that the Leader of Christian Science has demanded of her followers that they abstain from club life, simply because she sees clearly that the tendency towards clubs and organizations of all kinds, threatens the life of the Church and of the home. Thoughtful men in the Christian church everywhere have felt this danger for years, but few have had the courage of Mrs. Eddy in openly declaring that the Church should be first in the thoughts, and interests, and affections, of Christian people."

Human life to-day, according to recent medical discoveries, seems to be dependent upon microbes. To dodge "germs," unless you are a Christian Scientist, is impossible. The latter, at the mention of disease germs, simply smile, ignore them, and go on their way rejoicing.

Hartford (Conn.) Times.

The Lectures.

Aurora, Ill.

More than four hundred listened to the lecture on Christian Science at the People's Church, last evening [October 21], by Judge Septimus J. Hanna. Judge Hanna was introduced by the Rev. Parker Stockdale, who spoke in part as follows:—

Ladies and Gentlemen:—True religion is not one of creed, but one which embodies and manifests a good life, it is not a thing of dogma or ecclesiasticism, but it is born of divine love.

Traditional, orthodox theology has long held that the incarnation of the divine was limited to one man of the race, but the noblest instinct of the religious world, as well as the profound thought of the intellectual world is beginning to see that all souls incarnate some measure of the life of God.

For centuries men have believed that the inspiration of the Holy Spirit was confined to one chosen people and one infallible Book, but we feel to-day that all truth comes from God and every man who discourses and preaches a truth is a prophet of the Eternal.

A living God continually manifesting Himself in human life is the great religious truth that must be recognized and received in this twentieth century. The religion which is to endure and to bless must fill human life with God and bring to humanity health, happiness, and heaven here and now.—*The Aurora News.*

Dover, Me.

A good-sized audience assembled in Central Hall, Thursday evening [October 6], to listen to a lecture on Christian Science by Bicknell Young.

The speaker was introduced by Rev. A. Gertrude Earle, pastor of the Universalist church of Dover and Foxcroft, who spoke in part as follows:—

Ladies and Gentlemen:—There is one watchword of the church at whose invitation we gather here to-night, which ought to be a rallying cry for all; that watchword is "truth," for we know that it is only the truth that can make us free. . . . Yet how slow men have been to receive new truth, how bitter in their denunciation of each new sect as it has arisen. A few years ago, the church which I represent, the Universalist church, was everywhere ostracised. Men denied to us the name of Christian. A few hundred years ago every Protestant was a heretic, and through the horrible tortures of the Inquisition and the baleful fires of Smithfield the Protestant reformation was accomplished. In the first century of our era, the name of Christian was given in derision, and he who bore it must look forward to persecution and martyrdom, while around the greatest Teacher who has ever lived, the man who said, "I am the truth," gathered a bigoted mob, shouting, "Crucify him, crucify him!" In every age, even this enlightened twentieth century, men have needed the advice of a Gamaliel.

I like the custom of the Christian Science church which offers to the public each year a lecture upon its doctrines. I see also a value in the custom which invites one not of the faith to preside at these lectures. When you invited me to preside at this meeting, you expressed your faith in brotherhood and your need of sympathy with all who seek after the light. We meet upon a common platform, the desire to know the truth, however much we may differ as to what the truth is.—*The Piscataquis Observer.*

Chicago, Ill.

Mr. William D. McCrackan of New York City lectured on Christian Science in Second Church of Christ, Scientist, Chicago, Ill., November 1, to a crowded house, many standing throughout the entire evening.

Mr. McCrackan's pleasing address, and his simple and logical way of presenting his subject, was commended by all who heard him, and has awakened much added interest in Christian Science.

Mr. Warner, First Reader of Second Church, introduced the speaker in part as follows:—

Friends:—Our Master told us to "Rejoice, and be exceedingly glad," but it is impossible for us to manifest joy while weighted down with sin, sickness, sorrow, suffering, and fear. His command therefore would be impossible to obey if there were no way to rid ourselves of these burdens. But, thank God, there is a way and Jesus showed it, and through the light that Christian Science throws on the Scriptures the teachings of Jesus are made practical to this day and age, and the burdens of humanity are being lifted.—*Correspondence.*

Toledo, O.

The largest and most representative audience that ever assembled in Toledo to hear a lecture on Christian Science met at the Valentine Theatre yesterday afternoon [October 30] to hear Edward A. Kimball of Chicago. He was introduced by Attorney Clarence B. Hadden.

The Toledo Times.

The introduction was in part as follows:—

When asked to give the reasons for my faith in Christian Science, I can but answer in the words of Jesus, "Ye shall know the truth, and the truth shall make you free." I have experienced the healing power of this marvelous truth and I know that if I am a "doer" of the Word and not a hearer only, I shall indeed be free from sickness and sin; and I know further, that if the whole world would absolutely rely on God and follow Jesus and his teachings, sin and sickness would be entirely banished from this earth. This in itself is a sufficient reason to me for my faith; but, in addition, it has given me a new spiritual understanding of the Bible, that priceless Book of books; and, whereas, in the past years of agnosticism, I even disliked to read it as literature, I now love to study its pages, and the more I study it under the light shed upon it by Christian Science, and the more I search for its precious truths and apply them to my life, the deeper this love becomes. I have learned to regard the miracles of the Bible as the superb fulfilment of the spiritual law of God, as understood partially by the prophets and as perfectly understood and proven by Jesus himself. They are no longer supremely unnatural and incomprehensible to me. Christian Science gives me the most logical and consistent idea of God as Spirit, all Life, all Truth, and all Love; of Christ Jesus as His Son, our Exemplar and Wayshower, pointing us steadily onward and upward to the paths of righteousness and peace; of the real man, made in God's image and likeness,—perfect, without sickness or sin,—deathless and immortal. It gives me a complete and adequate spiritual interpretation of the universe and everything in it, and to me is the final word of Truth and the most satisfying and workable religion revealed to man. It is an illimitable, exact, and exacting Science,—Scientific Christianity,—to me the most wonderful and all-inclusive study for all time.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

Charity and Invalids.

MRS. EDDY endeavors to bestow her charities for such purposes only as God indicates. Giving merely in compliance with solicitations or petitions from strangers incurs a liability to work in wrong directions. As a rule, she has suffered most from those whom she has labored much to benefit—also, from the undeserving poor to whom she has given large sums of money, worse than wasted, she has, therefore, finally resolved to spend no more time nor money in such uncertain, unfortunate investments. She has qualified students for healing the sick, and ceased practice herself in order to help this work in other of its highest and infinite meanings, as God, not man, directs. Hence, letters from invalids demanding her help, under such circumstances, do not reach her, they are committed to the waste basket by her secretaries.

"Charity suffereth long and is kind," but wisdom must govern charity, else love's labor is lost, and giving is unkind. As it is, Mrs. Eddy is constantly receiving more important demands on her time and attention than one woman is sufficient to supply; hence, it were as unwise for her to undertake new tasks, as for a rentor, who has not an empty apartment in his house, to receive more rentees.

MARY BAKER EDDY.

Pleasant View, November 18, 1904.

The Circulation of our Literature.

A GREAT deal of time and labor have been expended by Christian Scientists in the distribution of our authorized literature, and while it is impossible to follow up each piece of reading matter and tabulate the good it has done in correcting misapprehension and in breaking down prejudice, we can safely say that the value of this work cannot be overestimated. We have but to turn to the pages of the *Sentinel* and *Journal* for evidence of the good results of this distribution of our literature; we there find many testimonies which contain the statement that the attention of the person healed was first directed to Christian Science through the reading of *Science and Health* or one of our periodicals, which had been loaned or presented by some friend. Much of this work is being done in a systematic manner by the local Publication Committees, and their efforts should have the earnest support of all our people; but this does not mean that individual effort along this line, and with personal friends should be diminished.

In the preparation of our periodicals, much thought is given to the needs of those who are making their first inquiry as to what Christian Science is, and what promise it holds out to those in search of health, peace, and a satisfying religion. The articles published in these pages have all been written by persons who have proved the truth of Christian Science through demonstration, and therefore, they are not the promulgation of mere theory or hypothesis. They carry a practical message to any one who wishes to know somewhat of this truth, and they are the outgrowth of individual spiritual experience. The testimonies of healing are the fruitage of the religion of Christ Jesus, and are written by living witnesses to the healing power of his gospel as revealed to the world to-day in Christian Science. The number of letters received at this office from persons who have been helped by these periodicals, witness to their

usefulness, and we believe that if they were given still wider circulation, much more would be accomplished.

Another interesting fact disclosed by some of the testimonies published in our periodicals is that quite a number who have been healed through Christian Science owe their first knowledge of this truth to a copy of *Science and Health* which they found in some public library. It therefore seems desirable that considerable attention should be given to this feature of the work, and those who are in charge of the distribution of literature in the local fields, should see to it that a sufficient number of copies of *Science and Health* and the other works of our Leader are placed in their public library. Reports of librarians show that but few books are called for more frequently than *Science and Health*, and it is therefore important that every library should be supplied with a number of late editions which will meet this demand. M.

Brotherhood.

ALL through the ages humanity has sought for something to satisfy its craving for affection, and in the face of temptations to gratify self-interest men have found happiness in sharing their spoils with others. Indeed there are few who can long be content with the solitary possession of any good thing, and family feeling has therefore been in all time a powerful influence in the state, and at this day we hear an ever-widening appeal for an extension of the ideal of brotherhood until it shall include all men. The sincerity of those who advocate universal brotherhood is undenied; the question is whether their apprehension of a subject so vast and comprehensive is sufficiently clear to be of practical value to humanity at large.

With all that is being said on this subject we may well ask whether even the average civilized family presents conditions which would serve as a model for universal brotherhood. Do not the vices of indolence, selfishness, hatred, and lust spring up even in childhood or youth, and are they not fostered in many cases, by parental incapacity, indifference, or sheer wickedness? We cannot forget that, according to the Bible, the history of the first human family was darkened by fratricide, and with conditions confessedly imperfect in the average family to-day, what hope could we have of good results from merely merging the material interests of many individualities, and expecting thereby to advance mankind? Nevertheless, let no one think that the realization of the larger sense of brotherhood is deemed impossible, for "with God, all things are possible." Ah! that is the secret, "with God," all good is possible, without Him, no good is.

The Christ prayer begins with "Our Father," not *my* Father, and Paul in his great spiritual appeal to God, names "the whole family in heaven and earth." Surely no one is fitted to be a member of this family until he understands his own mental and spiritual capabilities as a child of God, neither can he hold another in the bonds of true brotherhood until he has proved his divine sonship in the overcoming of evil, as did our Elder Brother, Christ Jesus. Any attempt to express a helpful ideal of brotherhood apart from this spiritual basis must result in disappointment. When, however, the sacred joy of the sense of Divine relationship comes with our healing, there comes also an ardent desire to have all others share it, and at any cost.

From one of the pulpits in this city there came recently these words,—

"Men abhor hypocrisy, and they demand practical results. Cain's old query: 'Am I my brother's keeper?' is weighing more and more heavily upon our hearts, and we are disposed to give a very different answer to it from that which satisfied our fathers. The more we are impressed with the solidarity of the human race, the more responsibility we feel for the woe and guilt of man. The time has already come when it is impossible for the noble-minded to be happy

in a world in which they are obliged to lower their eyelids in the presence of the misery of their fellow-men."

This sentiment awakens a responsive chord in the hearts of all Christian Scientists, and they rejoice that they walk in clearer light than did their fathers. The healing of sickness, which attracts so many sufferers to the truth, is but the beginning of their awakening from the long dream of materiality, and this awakening brings every man face to face with himself. As he learns to know and love his Father, he learns also the better to know his brother man. Like the great Teacher, he finds his work "in bringing many sons unto glory,"—the glory of knowing and expressing their true being, for he now understands as never before that "With one Father, even God, the whole family of man would be brethren; and with one Mind, and that God, or good, the brotherhood of man would consist of Love and Truth, and have unity of Principle and spiritual power, which constitute divine Science" (Science and Health, p. 469).

K.

Humanity's Hunger.

THERE'S a big and blessed promise of humanity's redemption in the universal desire of honest men to get at the truth of things. Selfishness, the self-satisfaction of ignorance, and the prejudices of a narrowing education, always hamper and sometimes seemingly enslave the truth-loving instinct and quest, but it will not down, and in every age, as in every individual life, it ultimately claims its own and enters that protest against dogma and conventionalism which lights the torch of progress.

Every age of possible reform has been characterized by that disregard of tradition and of the opinion of others which marks the supremacy of the man, his emergence from the indifferent level of creedal loyalty. This superiority to the faith of the fathers, contains no element of disrespect for that faith, though often so charged. In all sincere men it is rather a conscious and purposeful endeavor to measure up to precisely the same standard of loyalty to conviction which has led all Christian reformers to break with the dominating thought of their times. Said a loyal Christian Scientist recently, "I was never so good a Wesleyan as I am now, and this for the reason that I was never so Wesley-like in my willingness to be misjudged and condemned by others, rather than be untrue to my highest spiritual concepts."

The assertion of this spirit of daring for truth's sake is very pronounced to-day, and while it can but shock and alarm those who identify spiritual truth with some human attempt at its statement, it is a sign of better things to all those who apprehend the place and necessity for error's uncovering in the order of our spiritual advance.

Under the heading, "What is Religion?" a writer recently expressed himself in terms whose searching frankness is fairly represented by the following excerpts. He says,—

"I was religiously brought up. . . and till long after I was of age regarded the Bible as one consistent narrative, to be taken literally, with the exception of the parables in the New Testament. After I grew older and got out in the world and began to reason for myself I began to doubt, and now I am simply in a state of bewilderment. The first thing that shook my faith was that my prayers were not answered. I had always been taught at home and at church to believe in answer to prayer, and when I prayed for that which I knew then and know now to be good for me and got it not, no amount of Christian sophistry could convince me that I had not been cruelly deceived. . . .

"So also about the Bible; I came to feel that I had been deceived, for I had been taught Hebrew legends and allegories as true. . . . I have the highest respect for the Bible, and would like to read it if I could understand it. . . . I

wish that some wise man would talk to me as he might to one who had spent his whole life in a lighthouse and had never had any religious instruction whatever. I want to hear about the fundamental, elementary principles of religion. . . . What is the Christian religion, reduced to its simplest expression? . . . Is there any proof of God or immortality other than the longing in our own souls? . . . I want to be treated with sincerity. I want to hear the simple truth, not 'as a little child,' but as to a grown man, who must reason as well as feel,—a man who has sinned and suffered and now vainly would find a safe anchorage for his soul in this sea of doubt and trouble."

This brother has dared to lay vigorous hands upon the thorny hedges of belief, and he is likely to suffer somewhat before he has wholly passed their venerated pale; but his face is set toward Jerusalem, and while all who have escaped his present thrall would gladly aid him in his struggle toward the light, the true Christian Scientist alone is adequately fitted to render this service, and for the reason that he alone can speak unequivocally of that for which the well-meaning, and hungry hearted in all the world are seeking; viz., demonstrable truth. Such inquirers may be dismissed (as they often are) with the counsel that they be patient and trust all to the hands of a God whose "ways are past finding out," but their want is not thus satisfied, and their condemnation of both creeds and professed Christians is likely to be phrased in the words of the Master, "I was an hungered and ye gave me no meat."

Everywhere is heard this pitiful plaint of those who have a right to expect bread from the representatives of him who fed the multitude. The expressions of human sympathy and hope will do no more to satisfy this longing of a troubled heart than would the platitudes of perfunctory prayer. Men long for certitude, they ask not for theories about bread-making, but for bread, and the Christian Scientist who is demonstrating the present and practical availability of the Christ-truth to heal sickness and sin has a privilege and opportunity to-day which exalts him above princes. If tempted ever to be content with a voluble acquaintance with the letter of Christian Science, let him listen to the cry which wells up from the heart of the world, and he will be driven to his knees by a sense of condemnation whose intensity is known only to those who have sinned against great light. Every true Christian Scientist must find an impelling inspiration in the fact that upon him is laid this exalted demand, that like the Master, he be able to point to his own works of healing and spiritual regeneration in confirmation of the truths for which he stands. Meeting this requirement, he becomes indeed a minister of Christ, a comfort and blessing to the suffering and the heartsick everywhere.

W.

Letters to our Leader.

New York, October 16, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader.—With glad hearts we note every pulsation of love and gratitude that flows through the great arteries of human thought touched by the spirit of your life purpose "to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207).

We wish to refer in particular to the recent delivery to you by the International League of Press Clubs, of the splendid and specially prepared first volumes of "Bohemia."

The peculiar and beautiful significance of this incident, from the spirit of its presentation to the uniqueness of the "Bohemia" itself, is more than gratifying to us; and we feel sure we are voicing the sentiments of our church and of Christian Scientists everywhere, when we sincerely and reverently thank God for this sign—one among many—that the world is awake to the beneficence of Christianity as taught by Jesus and revealed to this age through "Science and Health with Key to the Scriptures."

That a composite of the best in journalism has made a setting for to-day's pearl in religious thought, is strong evidence of Christianity's supremacy in the hearts of men, and of the world's increasing recognition of your great labor and success in the achievement of a better and more practical understanding of the religion of Jesus Christ.

We know that "Gratitude is much more than a verbal expression of thanks," and that "Action expresses more gratitude than speech" (Science and Health, p. 3). We are glad, therefore, to add our testimony of works which we know will be more to you than words of praise, and to tell you of our healthful growth in understanding, of the increasing number of our congregation, of the healing work done and testified to at the services, and of the rapidly increasing number of practitioners located now in every part of the city,—business, residential, and suburban; also of the good work done by the Central Christian Science Reading Room.

For all this we are deeply grateful to our heavenly Father, divine Love, and to you, His messenger, who, going before us, have scaled the steep of Christian Science and made these things possible.

Sincerely yours in the fellowship of Christ,

J. EDWARD SMITH,
S. GERTRUDE PALEN,
CAROLINE MEAD FOSS,

Committee.

By order of the Board of Trustees of Second Church of Christ, Scientist.

Hammersmith, London, Eng., October 13, 1904.

Beloved Leader:—Whilst reading the correspondence which has been appearing for some time in one of the chief London dailies, concerning the question, "Do we believe?" I was forcibly reminded of the deep debt of gratitude we owe to you, who, in Christian Science, have restored to us the religion of Christ in all its beauty, simplicity, and power. A correspondent writes thus: "What is needful above all things for the twentieth century is not an intellectual but a moral revolution; that what we need is not so much another Newton as another Luther, a reformer with all Luther's intense earnestness and moral courage but without his defects of narrowness and intolerance; one who shall rescue the well-nigh forgotten religion of Christ from the oblivion into which it has been suffered to fall; who shall make known the all enfolding, all upholding 'Father of the Universe,' who for the well-bred indifference with which the average Englishman regards his religion shall substitute some of the deep-seated moral earnestness which is the sole ultimate source of the greatness of nations."

The need of the century has been met. Dear Mrs. Eddy, you cannot but feel the love we bear you for all the blessings that are ours to-day; miles of ocean cannot separate us; we are *one* in the great heart of divine Love.

Lovingly yours,

H. BOARDMAN.

Mill Valley, Cal., September 25, 1904.

Revered and Beloved Leader:—I address these few words to you personally because, for so long a time, in the old days and old ways, my antagonistic thought was directed wholly towards you. Now I know something of Christian Science and, in a way, I know what a day that was when you stood forth alone, a Christian Scientist, and it is with the deepest gratitude that I thank you for your words and work. It is a great satisfaction thus to retract what I have said in the past, and a greater satisfaction to know that the foolishness of mortal mind could never hurt your noble womanhood.

Through you I have found the truth that divine Love always has been and always will be, and that there is a "new heaven and a new earth." Faithfully,

FLORA DAVIS.

Testimonies of Healing.

In November, 1901, I had a dear friend from Indianapolis, Ind., make me a visit. Her coming caused exclamations of delight and wonder in our family when we saw her so free and happy, but more astonished were we when she told us she had been healed through Christian Science, as she had the year previous walked with crutches, and been a great sufferer. I laughed at her statements as absurd, yet realized she was telling the truth, for I could not doubt what my eyes beheld. Her purpose in coming was that I might apply the same truth that had set her free, yet I argued and rebelled, making all kinds of excuses,—that my trouble was chronic and different from hers,—but my protests were overcome by her persuasion, united with my entire family's earnest desire to give it a trial.

When I went to the reading room my body was filled with pain and my mind distressed and anxious. There I found a practitioner who talked very beautifully to me, helped me to believe that I would be restored to health, and gave me courage to trust in God. I had been a sufferer for thirty-five years, had very severe headaches, besides many other troubles caused from spinal meningitis, which I had in my early married life. I had taken morphine, by physician's advice, as the only means to find even relief. All the different schools of medicine, besides electricity, had been tried, but without any benefit. In addition to these troubles I had for the past fifteen years, catarrh of the bladder, suffered constant pain, unless asleep, so that most of the time I was in bed, and absolutely unable to walk or stand without extreme pain. In the summer of 1900, I was operated on with some relief for a few months, only to have the suffering return.

In this condition Christian Science found me, and I was beautifully and positively healed of the catarrhal condition after nine weeks' treatment. Since that time my life has been one endless song of gratitude and praise to divine Love that prompted my friends to come and tell me of Truth's power; gratitude to the dear practitioner who was so faithful and loving to me, and to our God-inspired Leader, who has so tenderly showed us how to apply the Word. I am also grateful for help from other dear Scientists.

In June, 1902, our family, consisting of my husband, two daughters, a son, and myself, united with First Church of Christ, Scientist, Cincinnati, O. They all gladly and willingly joined with me, from a sense of gratitude. We have had many trials, but have learned that they are "proofs of God's care" (Science and Health, p. 66). We have also had many victories, and to-day we rejoice that we can say, "He is my refuge and my fortress: my God; in him will I trust."

ELIZABETH BATTELLE HOLDEN, Cincinnati, O.

Lying on my couch, the body seemingly racked with pain, alone so far as any human companionship was concerned, with no friendly hand near to give assistance of any kind, I reached for my Science and Health, opened it, and read a number of passages which were in line with what I needed. Being in too much pain to hold the book or read long, I closed it and began to realize as best I could the meaning of the passages I had just read, together with many others that came into my thought from the Bible and Science and Health. The trouble was severe pains in chest, side, and head, together with extreme fatigue, seemingly caused by over-exertion, in doing a great deal of work, to which I was unaccustomed, together with my usual daily tasks. I knew, however, that the cause back of this was a sense which I had been struggling to overcome for months; it was the thought that I had no home, was absolutely alone in the world, without personal friends, and I suffered almost constantly from homesickness and loneliness, try as I would to realize the truth.

This morning, after reading *Science and Health*, and while realizing the truth, a passage in our text-book which always seemed to stand out before me in letters of fire in my test-times, again came before me. It was this: "There is *no* power apart from God, . . . and to acknowledge any other power is to dishonor God" (*Science and Health*, p. 228). With this there came before my vision the picture of my old home where I had lived fifteen years ago with my parents, brother, and sister. In this home were two mottoes which I had made of gilt letters and placed on the walls, and they were the first thing that met the eye as one entered that home. One motto was, "God is Love," the other, "God is the Power." I did not then know that He is the *only* power.

As memory went back to that time, when I was without any knowledge of Christian Science, yet had so realized the truth of these two mottoes that I had been impelled to place them on the walls of our home where others might derive some benefit therefrom, I remembered what a constant inspiration they had been to me, and how they had become my mottoes throughout my life. With the memory of past victories sweeping over me like a great flood, together with the gratitude which I feel constantly to-day for my clearer understanding of truth gained through Christian Science, there came to me a strong desire to arise at once from my couch of pain and write this testimony for our *Sentinel*, the first I have ever written, and I knew that with this effort would come the strength to do it. I arose, and as I proceeded with my writing the pain left, the demonstration was made, and I realized that I was not alone, but that as God has been my refuge and strength in times past in hours of extreme mental suffering and loneliness, so He is to-day the same ever-present help and companion. I am proving daily the truth of that beautiful hymn, "No, *never alone*." I am very grateful for all that comes to me through the study of our literature, and that I am living in an age when the truth has been so fully demonstrated as it has, through the life labor of one gentle, loving woman.

IONA MCCAIN, Cincinnati, O.

My heart is so full of gratitude to divine Love, to our Leader, and to all the Christian Science friends who have so patiently borne with my egotism and eager questioning, that I will try to give my testimony to the great blessing which Christian Science has brought me. One year ago I began reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I borrowed the copy from the Christian Science rooms in Olean, N. Y. I had been reading so-called mental science, and wished to see how Christian Science differed from what I had read. I became absorbed in the reading of *Science and Health*, and for months read nothing else. I soon bought a copy, subscribed for the *Sentinel*, *Journal*, and *Quarterly*, and have faithfully persevered in their study.

From the first of my study of *Science and Health* I have been able to realize the truth sufficiently to meet nearly all the manifestations of error of a physical nature which appeared in myself and family.

Two tumors have disappeared; a partially paralyzed arm is restored; grip of a violent nature has been overcome, a sty on the eyelid disappeared in a few hours; lumbago, the periodic attacks of which were my terror, was met about the first thing and has never returned. These are only a few of the troubles which were seemingly established in my mentality, and which have vanished before the light of Truth. I have twice employed a practitioner with most satisfactory results. A few weeks ago I was overcome by a sense of fear in a case of uterine hemorrhage, with great nausea and congestive chills. This was overcome with my practitioner's help in twenty-four hours, and after a week's treatment all of the usual after effects of pallor, heart disturbance, and weakness entirely disappeared, while in a

like attack with a regular physician I was in bed two weeks and unable to do much of any work for months.

I however regard the spiritual illumination that has come with this great revelation as of far more value than the physical healing. Although I had been for many years a church member, and thought I was a fair Christian, it now seems that I was in great limitation on account of my ignorance. There is no Christian Science church where I live, but in warm weather I go to Olean, six miles distant, where there is a small organization. I have been able to attend but very few Wednesday evening meetings, therefore I desired to give this testimony through the periodicals.

MRS. J. S. BARNES, Portville, N. Y.

I do not know how long I should have suffered had it not been for Christian Science, which shows the nothingness of the pains and agonies of sense. The more material remedies I took the more hopeless I was. I learned, however, that my suffering was not bodily but mental, and I now see that all this time God was answering my secret prayers, and I was gradually coming into the truth, though not aware of how much there was in store for me. I suffered from infancy until I was about forty years old. I had never heard of Christian Science, but had tried every material remedy and had given them all up.

A lady took me to visit some of her friends in the country one day, and the way I then heard the Scriptures explained made me feel there was something for me that I had not known before. I was told that these people were Christian Scientists, and I thought that name was so grand. At my first opportunity I asked one of them what I could do to get an understanding of the thought that she had, and she told me that I had to read, and that she would loan me a book until I could buy one. I began to read, and it just seemed like raindrops on a wilted flower. I did not ask for treatment, as I did not know how the healing was done. I was very much under size, and by my glorious uplifting my body responded, and a new sense of life sprang up in me, as it were. I rejoiced as never before, and I have been able to overcome every trouble by realizing that "Divine Love always has met, and always will meet, every human need" (*Science and Health*, p. 494).

May all earnest seekers after truth find this way out of the material into spiritual light. I have been so blessed that it seems like a new world to me. I cannot be grateful enough for this truth that makes us free, and enables us to overcome every difficulty. I do thank God and our beloved Leader, Mrs. Eddy, for the light and liberty that she has brought to us, which enables us to walk in the footsteps of our Master.

MRS. PHILENA MATTESON, Argos, Ind.

"To those leaning on the sustaining infinite, to-day is big with blessings." This first sentence in the preface of *Science and Health* means much to me, as I was drifting without an anchor, without God, until about seven years ago when I came to Christian Science for physical healing. I received more, as I got the spiritual also. Since then I read my Bible in connection with our text-book and love it; together they are my daily companions. I feel that I am a living monument to the healing power of Christian Science, as there was a time in my illness when it did not seem possible for me to live, but the demonstration was made for me. I have proved many times that God is an ever-present help, in trouble, in sickness, and in accident.

I was visiting in a strange house and made a mistake in a door. It was at dusk, and the next thing was that I found myself on the cellar bottom. All was blank for a moment, then the first thought came, God is my Life, I can't be hurt. Then came quickly the thought that I must impress it upon the others that I was not hurt. They helped me upstairs; my arms were badly bruised, but no one saw

them except my husband. The shock had seemed very dreadful, but after going to my room, for just a few moments (all the time declaring truth for myself), I went to the table and ate my supper. They said they never saw such grit, but I knew it was the power of divine Love. I overcame the suffering in my head the next morning while out driving. I went on as if the accident had not happened, and in a very few days was all right.

I have had the privilege of class instruction with one of Mrs. Eddy's students, and have found her a true friend. For the many benefits I have received I wish to express my gratitude to God, to the great Wayshower, and to that noble woman, our Leader, for this wonderful truth.

JENNIE A. RICHARDSON, Somerville, Mass.

It gives me pleasure to testify to the love of God, who forgiveth all our iniquities; who healeth all our diseases. When Christian Science was first brought to my notice, I was suffering from a fibroid tumor of great size, accompanied by severe hemorrhages and consequent anæmia. I had no hope of recovery except by the knife, and finally I was told that I had not sufficient vitality to survive an operation. I was then, and had for a number of years been a church member, but was without a correct understanding of God or our relation to Him. I had been instructed that affliction of every kind was given by God to chasten us and bring us nearer to Him. This thought was very repulsive to me, and though I did not understand, I could not believe that our sufferings were directed by the Divine will. In Job we read, "Touching the Almighty, we cannot find him out: he is excellent in power, and in judgment, and in plenty of justice: he will not afflict."

I thank God for revealing Himself to us through the teaching of Science and Health by Mrs. Eddy, in which we learn that God does not afflict, but that God is Love in whom we live, move, and have our being. From the study of the Bible with Science and Health, and five absent treatments, the tumor disappeared, the hemorrhage ceased, and health was restored.

Since coming to Christian Science I have had other ills to meet, but have found divine Love sufficient for all my needs, and I have also been enabled to work for others. Words cannot express my gratitude to our dear Leader, Mrs. Eddy, for so patiently and carefully leading us along this beautiful path toward the realm of perfect day.

MRS. ALICE CAMPBELL, Granton, Wis.

Christian Science came to me about eight years ago. When in mental darkness, I was led by a dear and true Scientist to see God, as He has been revealed to human apprehension by our wisdom-guided Leader, Mrs. Eddy; He is Truth, Life, and Love. My physical healing has been slow, but sure and certain. I had throat trouble, catarrh of the head, and a weak and sickly body. I had tried medicine and will-power, but to no avail. Truth has now made me free, and I have a reason for the faith and understanding that is within me. I can testify that Christ, Truth, has indeed appeared to heal the flesh. In our family we have had many proofs of God's sustaining care, and I have learned to trust, as did Saint Paul, in the assurance, "My grace is sufficient for thee: for my strength is made perfect in weakness." With him I say, "Most gladly therefore will I rather glory in my infirmities that the power of Christ may rest upon me."

About one year ago we had a case of diphtheria to meet with our youngest boy, a child six years old. The conditions were such that we thought it best to call in a medical practitioner and an assistant. They treated the child for some time and finally decided that they could do no more, and that he could not live. We then turned to Christian Science with what understanding we had, and the result was that God sustained us, for within twenty-four hours our child

was up and playing,—brought from death unto life. I can truly say, "Glory to God in the highest," for this salvation is made so full when understood in Christian Science.

I cannot close without expressing our grateful thanks to those who are at the post of duty in publishing to a waiting and hungering world the good news that Divine goodness is indeed a present realization. May the good work go on, and may our daily lives be found blameless before our fellow-men.—W. E. LONG, Port Hope, Ont.

I was healed of a tumorous growth of five years' standing. As this was thirteen years ago and there is no indication of its return, it can be said to be a permanent cure. The first three days' treatment seemed to have no effect, but on the fourth day there was some inflammation and swelling, which continued until the sixth day, when it broke and discharged, giving me no more trouble. On the tenth day it came off entirely, leaving no scar.

T. P. JUDD, Drayton Plains, Mich.

About three months ago the baker's wagon had stopped as usual one morning in front of my house to leave me some bread, and as I turned to go into the house there came a young man on his bicycle, at a rapid pace. It struck me and lifted me entirely off my feet, so that I landed on the pavement. I instantly declared the truth, that God is here, got up quickly and started to go into my house. There were several passers-by who were ready to assist me and who asked if I were hurt. I told them that I would be all right, though to mortal thought I was badly hurt, my jaw seemed to be broken, and my knee, arm, and shoulder badly bruised. I sat down and ate breakfast while constantly declaring the truth; went to my business as usual, and lost no time. When I looked myself over two days later I then saw I had been very roughly handled. I am sure that my apprehension of Truth as revealed in Christian Science saved me from death. I am now in my seventy-fifth year. I have been in this truth a little more than five years.

My companions are Christian Science literature, and they cannot be overvalued. Not a sparrow falleth to the ground without our Father's notice. "He shall give his angels charge over thee. . . . With long life will I satisfy him, and show him my salvation."

FRANK WATSON, Albany, N. Y.

An evil spirit (belief) was cast out of my consciousness recently so quickly and so completely, that I wish to send forth the healing angel (thought) in order that it may, perchance, expel this intruder, should it try to gain lodgment elsewhere. While engaged in work at the office not long ago, I began to feel sick and chilled, with violent pains in the stomach. The indications were that the ailment would bring me much suffering. It seemed as though I would have to stop work and submit to this painful and weakening condition, but I resisted. During the week my attention had been held by the words in the Lesson-Sermon (Science and Health, p. 406), "Sickness, as well as sin, involves weakness, temptation, and fall,—a loss of control over the body." I determined that I would not permit myself to think that matter had the power to give me pain any more than I would permit myself to think that matter had the power to make me sin or give me pleasure through sin. I saw that it was wrong for me to think thoughts of inharmony that made me suffer, in the same way that it was wrong to permit thoughts of evil to give me pleasure; that both sickness and sin are founded on the belief that matter governs us, and even dictates our thoughts; so the thoughts of sickness were combated with the same determination and vigor that thoughts of sin would have been. The evil thoughts were not yielded to, and found no place wherein to abide, and the fear of them then vanished; in

other words, a severe attack of colic was destroyed in a few minutes by Christian Science, and the spiritual uplift followed, which always attends the overcoming and dethroning of the pretentious matter-king.

V. A. H., Washington, D. C.

I am very thankful for all the blessings I have received since coming to Christian Science. It is a little over two years since a dear friend (God bless her), knowing my feeble, nervous condition, urged me to try Christian Science. I had been in ill health for several years, had tried many doctors and many remedies, and while they gave relief temporarily, I was not cured. I was very much discouraged, but I rejoice that I did turn to Christian Science and found God an ever-present help in time of need. I never turn to my Bible and "Science and Health with Key to the Scriptures," without receiving comfort and strength. I have been cured of a rupture from which I had suffered for twenty years, also stomach trouble. I was afraid to eat because I dreaded the distress it caused; now I eat what I want. I am grateful for the spiritual uplifting. Error tries every way to tempt us, but Truth does and will protect us, and with every temptation I feel a stronger desire to know more of divine Love, that I may resist evil and do good.

I wish to express my gratitude to our Leader, Mrs. Eddy, for the revelation of Truth she has given us, also to my dear teacher who has been so patient and kind, and to all the friends who have encouraged and helped me to understand and love Truth.—MRS. ELLA HIGLEY, Chicago, Ill.

The following testimony was given by Mr. John Goodwine of Wichita, Kan., in connection with the introduction of Mr. Kimball, who lectured in Wichita, October 7.—EDS.

I am permitted to stand here to-night because of the practical application of this truth in the healing of what the medical profession pronounced incurable diseases, including indigestion, neuralgia, rheumatism, atrophy of the muscles, and paralysis, which rendered me unable to wait upon myself. Many kind doctors did what they could to heal me during a trial of over thirty-one years, for which they have my sincere gratitude. Having been a member of an orthodox church all these years, many prayers were also offered in my behalf by kind ministers and others, but I continued to grow worse until healed through the power of God as taught in Christian Science, by one in your city, over eight years ago.

It is this truth which heals from every phase of sin and sickness, that this church, prompted by love for humanity, is endeavoring through these lectures to present to you, that you too may know thereof.

Through the power of Truth and Love I was healed of constipation, which had held me in bondage since I was a mere boy,—some twenty years. I was always seeking relief from this trouble by the use of material means, but without receiving any lasting benefit. A short time previous to this healing, our family physician said that I had paralysis of the brain, but I was completely healed of both of the diseases in less than a week. I am very thankful for this help. Some time afterward I was cured of the tobacco habit. I had gotten so deeply into it that I smoked almost continually, but I began to realize its nothingness, and that I must rise above it. My wife and I concluded to take class instruction and that settled it in my mind that I must stop smoking, but resolved in my own consciousness when I should take the last luxury, as it then seemed to me. I gave it no further thought that day, which was Friday. I had resolved to stop smoking on Monday, as that was the day we were to start for Chi-

cago for class instruction, but on Monday I awoke to the fact that I had been healed of that habit on Friday, when I realized that man has dominion and is not in subjection to error.

I am very thankful to God for this precious truth which does cast out error and heal the sick. I am very grateful to Mrs. Eddy for the wonderful revelation given in Science and Health, by which we are able to comprehend the teachings of the Bible.—HARRY STRAIT, Muncie, Ind.

I wish to express the deep gratitude I feel for Christian Science. About three years ago, I took treatment and bought a copy of Science and Health, in which I became very much interested. After reading for a few days, I found that I could do without my glasses, and I was also healed of constipation of over twenty years' standing. Many blessings have come to me since knowing Christian Science, and I feel thankful to God for all the healing, and to Mrs. Eddy, the Discoverer of this truth.

J. C. L., Berkeley, Cal.

I would like to add my name to the list of those who have been helped by Christian Science. It has healed me of goitre, also of eye trouble, so that I was able to remove my glasses and have not had them on for six years. I had discharges from the ears for twenty-eight years as a result of measles, and this too was healed.

For all these blessings and others which I have received, I want to express my gratitude to God, to Mrs. Eddy, and to friends who have helped me over many rough places. I consider Christian Science the greatest blessing that has ever come into my life.—GRACE B. HATCHER, Chicago, Ill.

Our oldest daughter was attacked by pneumonia in its severest form. For three days and nights she seemed unable to lie down, and she feared that she would die if she did. On the fourth night the same trouble presented itself, so, with my understanding of Truth, I rose up in arms against the error and went to work in truth, and when morning came the higher light came with it, and the disease was overcome. I am very grateful to God and to our dear Leader for Christian Science. My daily prayer is that I may gain more of this blessed truth each day.

MRS. ALICE KIDNEY, North Topeka, Kan.

[Written for the *Sentinel*.]

"God Rests in Action."

(*Science and Health*, p. 519.)

DIADEMA FOSTER.

SEEDS bring lilies from the mould,
In the sowing.
Harvests white yield wealth untold,
In the mowing.
Oh, the newness of the old,
In the knowing!

Gentle winds waft fragrance sweet,
In their blowing.
Hands grow strong with good replete,
In their doing.
Feet attain the height's retreat
In their going.

Streams bear burdens to the sea,
In their flowing.
Hearts respond to Love's strong plea,
In its showing.
Men turn Godward, Christ, through thee,
In the wooing.

From our Exchanges.

The sessions of the Peace Congress in Boston leave the impression that there is a probability that, within a few years, there may begin in America and in Europe a reaction against war in all its phases, which may take the form of a passionate assertion of the rights of humanity and the principles of peace. Wars that are approved by the people always begin in a delirium of passionate excitement disguised under many names, as patriotism, moral enthusiasm, or humanitarian sympathy. The real impulse always is and must be a wave of emotion. Reason, as Professor James showed at the peace banquet, plays but a small part in the affairs of men and nations. No war, not even the most sacred, can begin or be carried on without arousing all the sensibilities of the people. Their sympathies, their hopes, their fears, their love of adventure, their joy of battle, the love of overcoming, and, above all, belief in the leadership and protection of the God of battles, make war possible, and have at times swept into the current of warlike enthusiasm the wisest and best of the nation's sons and daughters.—*The Christian Register*.

Five hundred and twenty years ago John Wyclif completed the great work of his life, the translation of the Word of God into the speech of the common people of England. He realized something of the greatness of the achievement, for he knew the power of that Word to overcome the spiritual tyranny then regnant in Christendom. But of the full splendor of the work he had accomplished he could have had only a faint conception. For he then gave to the common people the *Magna Charta* of their liberties, the one true foundation of religious and political freedom. It is as much so to-day as it was five centuries ago. The English Bible has been of more value to the English speaking people than common law, statutes, declarations of independence, and constitutions all combined. Take it away, destroy the people's faith in it, and political as well as religious liberty would soon begin to decline.—*The Examiner*.

Not till the overburdened shall be able to see that happiness, restfulness, and contentment lie not in conditions but in the desires of one's own heart, in the practice of that simplicity which is the central note in the teaching of Jesus and the beauty and strength of Christianity, will they find a new world in the midst of daily struggle. With these principles governing life, it is surprising to find how many things we do not want in order to be happy. Happiness does not depend on an earthly income but on a heavenly endowment. Let no one grow discontented over the little he may possess, but seek that which has real and permanent value.—*The Standard*.

The opening sermon by Bishop Doane at the Episcopal Convention, Boston, was a revelation of the change in attitude of the Episcopal Church. This single sentence shows its trend: "To doubt the presence and the power of the Holy Ghost in the message and the ministry of men who deny our orders, or the man whose orders are not according to our liturgical and canonical law, is false to all experience and all evidence of religion and Christianity."

Universalist Leader.

The Church has its high duty to perform as a maker of opinion favoring peace, and especially opinion favoring a method of gaining a just verdict in international disputes by which both justice and liberty can be conserved without bloodshed. The strife should be transferred from the battlefield to the court, from warriors to jurists, from force to reason.—*The Congregationalist*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Rhodes scholars at Oxford University assembled Thanksgiving Day for a dinner, at which Henry White, Secretary of the American Embassy, responded to the toast "The Day We Celebrate."

At Berlin the day was observed by two hundred American residents with a banquet at the Kaiserhof. Consul General Mason presided and addressed the company on the prosperity of the United States.

At Copenhagen Minister and Mrs. Swenson gave a dinner at the American Legation, which was attended by the staffs of the Legation and Consulate, a number of Americans, and a few Danes.

At Rome Ambassador Meyer entertained the American colony in honor of the day.

Ambassador and Mrs. Storer held a reception at Vienna. The Ambassador's residence was crowded with members of the American colony and many American tourists.

The day was generally observed by Americans at Constantinople by a short church service in the forenoon and a holiday at the American colleges at Hissar and Scutari.

Americans residing in Havana held union services and in the evening there was a ball at the American Club.

One by one the Powers are giving their support to President Roosevelt's suggestion that another session of The Hague tribunal be convened to complete the work outlined by the first Peace Congress. Secretary Hay has just received cordial acceptance from Sweden and Mexico. The Netherlands Government has notified the American chargé d'affaires that Queen Wilhelmina would be glad to see a second peace conference meet at The Hague.

The bronze statue of Frederick the Great, presented to the American people by Emperor William, was unveiled last week by the Baroness Speck von Sternberg, the wife of the German Ambassador. The statue was presented on behalf of the Emperor by his personal envoy, the German Ambassador, who made a brief address. The President made the chief address of the day, and ac-

cepted the gift on behalf of the American people.

Ambassador Choate's speech at the banquet of the American Society in London on the 24th ult., is cordially approved by the English press, and it is taken for granted that the arbitration treaty to which he made allusion will be concluded and ratified promptly by the United States Senate. It will follow the lines of the treaties with France, Switzerland, and Portugal already entered into.

During the last fiscal year nine forest reserves were created, increasing the aggregate area of forest reservations to 62,765,494 acres.

The patents issued for the year numbered 56,386 and exceeded those for any other twelve months in the history of the office. The receipts were \$9,283,341 and the land disposed of aggregated 16,405,821 acres.

Secretary Hay and Mr. Probst, the Swiss chargé d'affaires, last week signed an arbitration treaty on behalf of the United States and Switzerland. It follows the lines of the French-American arbitration treaty.

The naval estimates for the fiscal year ending June 30, 1906, aggregate \$114,530,638, an increase of \$17,372,443 over the last appropriation.

Announcement has been made of the completion of the fund of \$600,000 for the erection of a national monument to President McKinley.

Foreign.

An important move tending toward a more liberal Government in Russia was made last week by the meeting of prominent members of the Zemstvos, or local assemblies, at St. Petersburg. The Zemstvos formulated and presented to the Czar, through the Minister, the following memorial: "In view of the importance and difficulty of the internal and external situation through which Russia is passing, this informal conference expresses the hope that the sovereign power will summon freely elected representatives of the nation, in order, with their co-operation, to obtain for the fatherland an evolution of the state in the direction of establishing a new basis of law for mutual co-operation between the imperial authority and the people."

The Czar's interest in it resulted in his requesting an audience with four representatives of the convention. During the meeting of the Zemstvos the public interest was intense, almost eclipsing that of the war.

By the forced resignation or removal of General Huertas, and the disbandment of his little army, a movement for the overthrow of President Amador's Government in Panama has been prevented. Huertas's army consisted of 182 men and boys.

It has been announced at Heidelberg that the director of the observatory of Koenigsstuhl Mountain has discovered a new planet of the thirteenth magnitude by means of photography.

Industrial and Commercial.

Although the total mileage of the railroads of the United States, says the *Scientific American*, exceeds 200,000 miles, the building of new roads shows no sign of abatement. The net increase on all railroads during the year 1903 was 4,774.61 miles. The liabilities were made up of capital stock, amounting to over \$6,000,000,000, a funded debt of \$6,000,000,000, and other smaller items that served to bring up the total liabilities to about \$15,000,000,000. The principal assets consisted of \$11,000,000,000, representing the cost of the railroads and equipment, and over \$2,500,000,000 representing investments. On this huge system there were carried over 696,000,000 passengers, and about 1,300,000,000 tons of freight. The earnings derived from passenger traffic amounted to \$429,000,000, while the earnings on freight reached a total of \$1,338,000,000, other items bringing

up the total traffic revenue to \$1,908,857,826. The net earnings reached a total of \$592,000,000, and other receipts brought up the total available revenue to \$682,000,000.

The operation of the system requires the services of 44,529 locomotives, 28,648 passenger cars, over 10,000 baggage and mail cars, and no less than 1,524,150 freight cars. In the year 1830 there were 23 miles of railroad in operation, in 1850 9,121 miles, in 1860 over 30,000 miles, in 1880 over 93,000 miles, and in 1895 181,065 miles. The largest annual increase of mileage was in 1887, when 12,876 miles of new track were built. The next largest increase was in 1882, when 11,569 miles were added.

It sometimes happens in the world of engineering, remarks the *Scientific American*, that a system is condemned in the earlier stages of its exploitation on the ground that it is wrong in theory, when, as a matter of fact, it is the mechanical appliances through which it is endeavored to render the system practicable that are at fault. It would seem as though a case in point were that of the jet propulsion of vessels, which was so uniformly unsuccessful in its earlier attempted applications as to lead to the general belief that it was inherently wrong in theory. Vessels were propelled by the hydraulic jet; but under such low efficiency as to render the system useless for commercial purposes. The improvements which have been made of late years in hydraulic apparatus, and the better understanding of hydraulic principles, have led an English firm to make an extensive series of tests, which have enabled them to instal a system of jet propulsion, whose efficiency, according to available figures, rival the performance of the screw propeller. The hydraulic jet propulsion involves the use of a water pump which draws in water through an inlet in the bottom of the vessel and expels it astern as a jet, the reaction of the water driving the vessel ahead. In the jet propellers tried in the British navy there was a loss of efficiency, first, at the inlet of the water; second, in the pump, and thirdly, in the jet.

It is reported that the United States Steel Corporation is preparing to build a trunk line railroad from Chicago to Pittsburg and thence to the seaboard, the object being, it is said, to avoid controversy with the Interstate Commerce Commission. The reports say that a number of small roads now being built east of Chicago are to be combined and made a part of the new system. The United States Steel Corporation now pays something like \$120,000,000 to the railroads annually in freight charges. It has even been hinted that under certain contingencies the Corporation might decide to buy the Nickel Plate instead of building its own line.

The unmanufactured india rubber, including gutta percha and gutta joolatong, imported in the nine months of this year ending September 30, was valued at more than \$32,000,000 as against \$27,000,000 in the same period last year, and \$18,000,000 in the corresponding period of 1902. In the last three years these importations have about doubled. Nearly half of America's great volume of rubber manufactures consists in footwear.

The Chicago Subway Company, with a capital stock of \$50,000,000 and composed of men who represent 90 per cent of the railroads having Chicago terminals, was organized last week and took over the \$30,000,000 company which has built 15 miles of freight tunnels under the streets of Chicago.

The losses in wages to the striking mill operatives at Fall River approximate \$1,750,000, and this does not take into any account the losses which have followed in the withdrawals from savings and co-operative banks. The losses to landlords through the non-payment of rents have been very heavy.

Exports of mineral oils from the United States promise to exceed in value \$75,000,000 in the calendar year 1904.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Thanksgiving Service of The Mother Church.

THANKSGIVING DAY found The Mother Church crowded to the doors with a grateful throng of worshipers, and the entire service was characterized by great earnestness and joy.

The order of service was as follows:—

Hymn 150; reading of the Governor's Proclamation, and the Scripture Lesson, Isaiah, 35, followed by silent prayer, and the Lord's Prayer with its spiritual interpretation; Mrs. Eddy's hymn, "Shepherd, show me how to go," was then sung as a solo, and the Lesson-Sermon followed. After the singing of our Leader's hymn, "O'er waiting harpstrings of the mind," the First Reader, Professor Hering, said,—

"Opportunity will now be given for members of the church to offer testimonies appropriate to this occasion. As Christian Scientists we certainly have reasons for being especially grateful for what God's goodness has brought to us in ways hitherto unknown and unbelieved, and on this national day of thanksgiving it is very fitting that our service should include verbal expressions of thanks from the recipients of the Divine bounty, coming to us through the spiritual consciousness, self-immolation, and untiring labors of the one whom we are privileged to call Leader.

"As a church body, we find great cause for gratitude in the new auditorium rising in strength, dignity, and beauty before our eyes: for evidences of growth and progress on every hand; for the increasing sense of man's at-one-ment with God; and for the loving care and unceasing vigilance of our beloved Leader,—continually guiding us nearer to divine Truth and Love.

"As individuals we rejoice in health, happiness, harmony, and spiritual understanding, which are visibly replacing the fear and discord of former days, and these surely are sufficient reasons for our being especially grateful to-day."

A large number of earnest and impressive testimonies of healing were given, concerning which the *Boston Globe* has said,—

"The testimonies were uniformly expressions of gratitude for a clearer and more satisfying understanding of the Scriptures, a new and more practical religion, and consequently a higher degree of contentment and happiness."

The following telegram expressing appreciative regard and loving remembrance was then read, and by unanimous vote sent to our Leader,—

Boston, Mass., November 24, 1904.

To the Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—In glad response to the proclamation of our President and of the Governor of the Commonwealth, we are met in The Mother Church to offer heartfelt praise and thanksgiving for the unnumbered blessings which have crowned the passing year.

With our fellow-countrymen we have great reason for gratitude that peace reigns within our borders, and that the condemnation of war, and all the conditions which are wont to precipitate war, is finding more general and

more emphatic avowal among all peoples, and we recognize the significant fact that the assertive growth of these nobler ideals has been coincident with the years of your ever-expanding ministry to mankind.

With deep thanksgiving we recall the unmeasured good which has ever shamed humanity's selfishness and fear, and which now fills our every garner, but our sense of indebtedness to our heavenly Father mounts highest, when we remember the spiritual blessings He has bestowed upon mankind through the channels of your faith and "righteous endeavor." In Christian Science we recognize the embodiment of all that is good, beautiful, and true; that its sacred teaching is healing every human ill, and that in all the world it is proving the power of God unto salvation. We rejoice to witness before men that in the measure of our apprehension of this teaching, and of our conformity thereto, we have found escape from sickness and from sin, and are entering into the glorious freedom of "the faith which was once delivered unto the saints." We are devoutly thankful for the success of the Cause which is so dear to your heart,—that in so many lands the truth which Jesus taught and demonstrated is being savingly revealed to those who are ready to part with error. We are especially thankful for the completion, this year, of the beautiful church presented by you to your home city, and for the quickening thought of your address, upon the occasion of its dedication.

In the contemplation of these richer benefactions, we are led to exclaim, "Thanks be unto God for His unspeakable gift;" and when we think of the loving patience, unswerving devotion, and self-forgetting constancy of your Christian ministry, as the Founder and Leader of this great healing and spiritualizing movement, we begin to realize something of what it all means to the world to-day and to the generations to come. We therefore bring to you that return of grateful affection and sincere regard which we know will find its fullest expression in unfeigned love for one another, and in honoring Christ and our profession by that daily life which you have outlined and illustrated for us as "meek, merciful, just, and pure."

WILLIAM B. JOHNSON, *Clerk.*

The service closed with the singing of Hymn No. 71, the reading of the scientific statement of being, and the benediction.

Thanksgiving Day Service at Concord, N. H.

THANKSGIVING services were held Thursday by the Christian Scientists of this city in the beautiful church edifice, a gift from the Reverend Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. This was the first service of the kind held in the new church home, and a welcome feature of the exercises was the reading of a letter of greeting from the beloved Leader, Mrs. Eddy.

The Thanksgiving service in the Concord church followed the custom of this denomination in the observation of this holy day. The sermon had been specially prepared and was impressive and helpful.

At the conclusion of the sermon opportunity was given for testimonies from those who had been healed in Christian Science. Many remarkable cases of healing were given, and all expressed their thankfulness to God for the benefits received.

At the conclusion of the regular service the members of the church sent the following grateful letter to their beloved Leader and Teacher, Mrs. Eddy,—

Thanksgiving Day, 1904.

Beloved Leader and Teacher:—We, the members of the church in Concord, whose beautiful edifice is your precious gift, earnestly desire, this first glad Thanksgiving Day in our new church home, to thank God for all the blessings that are ours through your wisdom, self-sacrifice, and patient devotion to Truth's holy cause.

We are grateful for the revelation which you have given us, which has so blessed our lives and is blessing the whole world. We thank you for your unselfish labors, and we are grateful because of their rich fruitage in nobler thinking and holier living. We share with you the joy in the general recognition by Concord's representative citizens of your unsullied life and of the abundant evidences of your successful endeavor to lead mankind to God and to the knowledge of His Son, our Lord and Master, Christ Jesus.

Concord Evening Monitor.

The letter referred to in the above article was as follows:

Pleasant View, Concord, N. H., November 24, 1904.

Rev. Irving C. Tomlinson, C.S.B., and Miss Mary E. Tomlinson.

Beloved Students:—May this your first Thanksgiving Day, according to time tables, in our new church edifice, be one "acceptable in His sight," and full of love, peace, and good-will for yourselves, your flock, and the race. Give to all the dear ones my love and my prayer for their health, happiness, and holiness, this and every day.

Lovingly yours,

M. B. EDDY.

[Written for the *Sentinel*.]

Otherwhere.

GRACE DIETRICH GROESBECK.

BLOSSOMS cluster round our feet,
But the fragrance seems more sweet
Over there.

We are sure the violet's brighter
And the lily-blossom whiter
Otherwhere.

In our hands life's best we hold,
Yet gaze with envy all untold
Over there.
Our foolish hearts are not content,
But ache for joys that have been sent
Otherwhere.

After all things have been tried,
Shall we then be satisfied
Over there?
Shall we murmur, yearn, and pine
For a heaven more divine
Otherwhere?

Man, through Love Divine unfolding
Is true harmony beholding
Far and near.
While the Mind of Christ shall win us,
To the heaven that is within us.
Now and here.

From our Contributors.

The Ninety-first Psalm.

E. HOWARD GILKEY.

MUCH has been written by Christian Scientists concerning the wonderful helpfulness of the 91st Psalm to those who are trying to demonstrate, in daily life, the exact and purely scientific teaching of the Holy Scriptures. I am moved by the helpfulness of these publications in my study of the word of God, to tell of the inspiration which came to me one evening from that Scriptural masterpiece, during an hour devoted to the treatment of an absent friend, who is seeking the light of perfect healing in Christian Science.

As every one knows, the 91st Psalm begins with the uplifting declaration, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty;" and in Christian Science we learn that the "secret place" is divine Mind, and that they who dwell in this Mind "abide" (live uninterruptedly) "under the shadow of the Almighty." Passing on from this thought, to which I had been a stranger until my attention was called to the teaching of our beloved Leader, Mrs. Eddy, my eye was caught by the words in the second verse, "I will say of the Lord, He is my refuge and my fortress: my God; in Him will I trust," and the thought arose at once, against what is God a fortress? from what do we flee to Him as a refuge? He is Truth, Life, Love, He must therefore be our defence against, not wicked persons, not fleshly enemies, only; his defence would go deeper than that, even to defending His child against mortal error of every sort, and with this thought there comes a new consciousness, that this Psalm is addressed to each individual man or woman who is seeking the "way of the Lord," and that it bears directly upon the conduct to be pursued in the ordinary affairs of life. Can one imagine a more effective shield and buckler against the malicious lies, the midnight designs, the pestilential inventions of business and social competition, than is afforded by the blessed influence of the truth lived and demonstrated in the every-day affairs? As the arrows of error strike against the bucklered arms of spotless integrity and fall broken and incapable of further harm at the feet of the innocent, as the "adder" of darkness and dark purpose bites ineffectively at the mailed heel of one clothed in "the whole armor of God," so the one who seeks valiantly to combat error with Truth, to meet material evil with spiritual rightness, this one will see, in his own personal experience, a thousand (errors) fall at his side, and ten thousand (errors) fall at his right hand, but none shall come nigh (to hurt) him, nor pierce his armor of Love and understanding.

This thought helped me surprisingly to see the nothingness of the several errors which I was combatting at the time. Previously, possibly like other Scientists who have been members of the orthodox churches before coming into Christian Science, the seventh and eighth verses of this Psalm had seemed to refer to mortal personalities. "A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee. Only with thine eyes shalt thou behold and see the reward of the wicked." In the old thought, these verses had presented the mental picture of a vast army in battle array, out of which army thousands of the wicked had been stricken down to every righteous man who had escaped. In Science we are taught, however, that man is the perfect child of God, and that "It is the sense of sin, and not a sinful soul, which must be lost" (Science and Health, p. 311). This teaching proves the old picture to be false, because, in Truth, no individualities are slain. What, then, is the real meaning of this passage of this helpful and uplifting song of David? What dies? The sense of sin. What lives and conquers? He that dwelleth in the secret

place of the most High. With what does he contend in every waking hour in which he realizes that God is his refuge and his fortress? Error, only.

These and similar questions thronged for utterance as the old mental picture faded out, and in its place I saw another battlefield on which there stood a man (representative of every single one of us) armed only with the "sword of Truth," and protected by Truth as his "shield and buckler," and at his side, instead of fallen "thousands" of wicked men, I saw fallen "thousands" of the darts and arrows which impersonal error had shot against the impervious armor of Truth; and at his right hand were "tens of thousands" of error's shafts which had been stopped and broken by the sword of Spirit with which he was armed. The man was unharmed, and his armor unscarred; error had indeed "not come nigh," him, but instead, even in the stress of battle, he beheld with his eyes "the reward of the wicked" (thoughts) with which he had been assailed; namely, their annihilation. Science and Health says, "Mind is Truth. Error is its opposite, a belief without understanding" (p. 472). And this last consideration of the subject brings to mind that other saying of our Leader which has comforted me so many times when, a new comer in Science, I knew not many of her wise and helpful sayings, and therefore leaned hard on those I knew: "At all times, and under all circumstances, overcome evil with good. . . . Clad in the panoply of Love, human hatred cannot reach you" (Science and Health, p. 571).

Distinguishing Features of the Christian Science Church.

EVELYN SYLVESTER KNOWLES.

It is sometimes asked, "What are the distinguishing features of Christian Science churches?"

Many answers to this question might present themselves, but we may consider briefly three important points: First, this church stands for belief in (or "reliance upon," as this phrase has been finely interpreted) and acknowledgment of one power only,—God, good. Scholastic theology has claimed to teach this for centuries, since to have done otherwise it must have discarded the Scriptures, but really it has not done so. It has encouraged the belief in a power called evil as opposed to good. It has led us to think either that there were two creators, or that God created evil. This reliance upon one power, as taught in Christian Science, results in a unity between God and man, and between man and his fellow-men not otherwise attainable. Through this unity the elements of discord which inevitably tend toward separation are annihilated, and the home,—that stronghold and sanctuary of the affections,—and the church, which is but a wider home, is firmly fixed upon a stable basis. The first essential point, then, is the belief in one perfect God, and man, made in His image, who is necessarily perfect also.

Secondly, the corner-stone of this church is Christ, Truth, manifested to human apprehension by the works,—the promised signs which follow faith. The healing of disease is a primal fruit but not necessarily the most important. It comes with startling distinctness to this age, because for so long it has seemed a lost element of Christianity. Other fruits are, "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." These are equally important and often harder of attainment than the destruction of mere bodily ailments, but Christian Science unfolds the possibility of obtaining all these fruits as present realities. It teaches that "love is the fulfilling of the law;" it teaches that joy is not a concomitant of the physical senses, for it proves that we are happiest when these senses are most in abeyance; it shows us that peace is not to be sought among material surroundings, nor looked for in some dis-

tant place called heaven, but is found in the consciousness of right doing; it points the way of "longsuffering, gentleness, goodness, faith, meekness, temperance," with no uncertain finger and bids us daily, yea, hourly, walk therein. Unless these fruits are brought forth in some degree, one is unworthy to be called a follower of the Christ-truth; i.e., a Christian Scientist.

A third characteristic of churches of Christ, Scientist, lies in the division of responsibility among their members. In other churches the work as well as the success devolves largely upon a single individual,—a pastor or rector,—with some aid in a material way from church committees and the like. In Christian Science churches the work properly belongs to each and every individual of whom they are composed, and the meekness and conscientiousness characterizing the performance of this work determine the true success of the church. There is no possible shifting of this responsibility. In the eternal structure of which this is a type, every stone is requisite to perfect the form, every delicate filigree essential to express the beauty and complete coalescence of each with all to produce the consistency of the whole. There is "No last nor first, no best nor worst," as Browning says. Each may become the "greatest" by adhering strictly to the rule found in the twenty-sixth verse of the twenty-second chapter of Luke's Gospel: "But ye shall not be so: but he that is greatest among you, let him be as the younger; and he that is chief, as he that doth serve."

The Readers in the Christian Science churches stand upon their merits and are respected and loved only as they reflect Truth and manifest brotherly-kindness and humility. If called to a high position a true member of this church accepts it meekly; if removed from it he steps down willingly, well knowing that the only height a Christian Scientist may hope to attain is the height of goodness. He strives to overcome self daily and to become a reflector, not an obstructor, of the radiant Truth. He finds it essential to sow the seed of peace and good-will, and can hardly conceive of greater distress than that borne to him by the knowledge that he has failed to work conscientiously for his church. Realizing that not only his visible acts, but the thoughts governing his inmost life are what really color the life of the church, he does not squander the precious moments but earnestly strives for that Mind to be in him which was also in Christ Jesus. In short, he knows that the church of Christ, being "the structure of Truth and Love" (Science and Health, p. 583), has no false basis upon which to stand, and that unless, as individual members, we support our churches by the fruits of righteous living and the constant pursuit of infinite perfection, they must collapse.

Indeed, it may be said of the Church of Christ, Scientist, that it owes its existence to a practical application of the Scriptures, based upon the understanding of divine Principle. If it ceased to do this, it would cease to be.

May divine Love so "stablish, strengthen, settle" all the branches of this Church, that with unerring eye, buoyant faith, and intrepid endeavor they shall climb the heights of holiness until, at the summit, they awake in His likeness, never to dream again.

Inspiration.

FRANCES ELIZABETH WILLEY.

THE hope of humanity is in the statement that man is the image and likeness of God. We need to learn what this means, then all the shadows will be seen as delusions of evil, which hide Truth from our consciousness. Christ Jesus was conscious of the true relation of God and man, and as we understand this and hear and obey God's voice we come into the same consciousness and know that man is created spiritually and is free. All the human theories

are fruitless which attempt to make the material man (so-called) express harmony. To know the truth about man melts every form of evil which would keep us in slavery to the god of this world, the five material senses. Paul says, "And ye are complete in him, which is the head of all principality and power." This reveals Jesus the Christ as our Wayshower. He was the "head" because of his full apprehension of the real man, and proportionately as we grasp this truth the light grows brighter.

A Sermon in Stone.

EUGENIE PAUL JEFFERSON.

WHILE looking one day into the excavation made for the laying of the foundation of the enlargement of our Mother Church, I found the lesson that we who are working to erect "the structure of Truth and Love" within, must start aright, by first pulling down the buildings which mortal mind, false education, has erected, "the strongholds of materiality and personality" which have encumbered the place of truth; and having cleared away the rubbish we must dig down deep to make room for a sure and firm foundation on the solid rock, the Christ-truth.

Mind is the builder, we the workmen, and our tools are good, keen, and well tempered: the trowel which is to serve us in laying the substantial blocks of truth must be pure and unselfish purpose; the cables which lift the great blocks to their places must be scientific demonstrations; our plans—the Bible, our text-book, and our literature—must ever be open, they will guide us aright, while our great architect watches over all, directing by day, guarding by night. As we work we must know that the building is already complete in Mind. Having studied the plan, we know the ideal to be perfect, but others have not yet had the meaning of these plans revealed to them, therefore we must work to express the perfection which we know, that they, seeing the beautiful structure rising "in the strength of Spirit" (*Science and Health*, p. 393), may admire it and be led to seek the same great Builder to remodel, enlarge, and beautify their own lives.

The lesson was complete when, after looking down into the excavation in Boston, my eyes were raised to the glistening pinnacle of the finished spire of the church in Concord. Our mental building cannot be too beautiful. The windows must be clear and transparent, letting in the sunshine of Truth, gilding every shadowy corner of consciousness; the carving must be of pure and noble lives, the chimes must tell of harmony, the whole interior of peace and of the beauty which our Leader says "is a thing of life, which dwells forever in the eternal Mind, and reflects the charms of His goodness in expression, in form, outline, and color" (*Science and Health*, p. 247).

If we stand idly by and use the past achievements of our forefathers as a boast, and excuse ourselves from effort because of their great deeds, then we show that we are not worthy of the sires of the people who went before us in the history of our land. What we as a people need more than anything else is the steadfast performance of every-day duties of life, not to be prompted by reward, but because they are our duties. I think that one of the primary thoughts that should come to you when the names of our two great national heroes are mentioned, is that they did what they did not for glory, but for duty; not for what it meant for themselves, but for their fellow-citizens. They set a commendable example and they also lived up to it. They were practical, and a man to do anything must be practical. He must do things, accomplish things; not by talk, but by earnest, good, hard work.

PRESIDENT ROOSEVELT.

Selected Articles.

Who Believes the Scriptures?

There are millions of persons who believe that they believe the Scriptures, yet careful consideration discloses that among these millions who count themselves as believers, a very large percentage have but a limited knowledge of what the Bible contains, their belief in it being largely sentimental and traditional,—because their fathers believed in it before them; while still another large percentage, either intentionally or unconsciously, select from the Scriptures only such portions as are useful in supporting special doctrines and creeds, ignoring other and perhaps more important teachings.

The antagonism encountered by Jesus the Christ was not because he disagreed with Moses and the prophets, but because his teaching and practice were in fulfilment of the prophets. The people of Jesus' time expected a Messiah, yet they rejected him when he came; they believed the prophecies, but rejected their fulfilment.

Likewise a few of to-day are more ready to believe in the Christ-teaching than they are in its practice; they endorse Jesus' declaration, "Be ye therefore perfect, even as your Father which is in heaven is perfect," but forthwith insist that it is impossible to attain perfection, instead of recognizing its inevitable necessity, however slow the process of attaining it. They believe it is proper for Christians to observe the commandment, "Thou shalt love thy neighbor as thyself," yet they make little effort to practise accordingly. They make no charge of unreasonableness concerning Jesus' assertion, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father;" yet they seem to overlook the fact that one is a believer according to divine requirement only in the ratio of his ability to do the works which the Master did. Some even go so far as to assert that it is un-Christian to expect Christian healing or any result whatever out of harmony with material laws, thus directly antagonizing the teachings of Christ Jesus.

It is the mission of Christian Science to save the Scriptures from this mutilation by revealing their practicability. While Jesus demonstrated what can be done by a correct knowledge and application of truth, Christian Science shows how good results can be accomplished by restoring "the stone which the builders rejected" to its rightful position as "the head of the corner," thus furthering the building of a church which includes the Bible teaching in its entirety.

Speaking from his own standpoint, a good clergyman declares that Christian Science may be all right as a remedy for the sick, but it is not sufficient as a religion, while an honest physician admits that Christian Science is a good religion but is not safe as a medical dependence, while those who have gained a fuller and more practical insight into this Science recognize that the same spiritual understanding which reforms the sinner also heals the sick.

ALFRED FARLOW.
Boston Times.

A Good Rule.

THE following editorial commendation of the recent by-law of The Mother Church, "Church Organizations Ample," is further recognition of Mrs. Eddy's wise leadership of the Christian Science movement, and gives evidence of the editor's keen appreciation of the deeper needs of the home life, so often lost sight of in social organizations.—[Eds.]

If any large proportion of the people of the country were members of the Christian Science church, and if they obeyed the by-law, there would be a decided overthrow in "jinerdom," and it would be a good thing. There are good

reasons for such a by-law, which are so obvious as hardly to need particular mention. If Mrs. Eddy wishes to discourage these organizations among those members of the church within her immediate reach, she should rather be commended for good judgment than criticised for arbitrariness.

It would be good for society at large if some influence could go forth to turn men on the one hand from their legion of lodges and clubs and other such things from whose membership women are excluded; and on the other hand to turn women from those various organizations which no male may enter. These things are not so bad in themselves, many of them have the worthiest of objects, but the tendency of their multiplicity is to deteriorate and disintegrate the home. For coming to its rescue with all the power which she possesses,—assuming that such is her purpose,—one can only praise Mrs. Eddy. The action commends her foresight and clear judgment.

New London (Conn.) Telegraph.

There is no emotion in a Christian Science treatment, either intense or suppressed. A Christian Science treatment is given with an abiding consciousness of the ever-presence of divine power and its activity in the destruction of sin and the erring beliefs which prevail in human thought, and the practitioner who is conversant with the system or practice approaches his problem as complacently and with the same quiet confidence as does the mathematician his problem in mathematics. In every line of work that person is successful who has an understanding equal to the problem to be solved, and no one is better equipped with a knowledge of what is to be done and how to do it than a thorough Christian Scientist.

Christian Science is infinitely more than a system of healing. Based on a perfect Principle, with correct rules for practice and demonstration, it is applicable in the solution of every problem of life, and it is already reduced to "order and system" and given to the world in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

A. V. STEWART.
Pcoria (Ill.) Star.

The Lectures.

St. Johnsbury, Vt.

Music Hall was well filled Monday evening [October 10] to listen to an address on Christian Science by Bicknell Young of Chicago. Mr. Young was introduced by Rev. A. F. Walch, who spoke in part as follows:—

Ladies, Gentlemen, Brethren of the Christian Science Church:—For the second time it becomes my pleasant duty to stand on this platform and welcome to the generous hearing of a St. Johnsbury audience a speaker for the faith of Christian Science. I do this gladly because I believe good will come from the full and free discussion of the subject at hand. I am something like the lady who said she thought the doctrine of "total depravity" was all right if it was only lived up to. I believe our Christian Science brethren are trying to live up to their doctrine, and that they are succeeding is sufficiently proven by the fact that their faith works the most wonderful transformation in their lives.

It must be evident to every one that the religious world is in an unsettled state. Men are eagerly and anxiously asking deep and vital questions. This questioning leads some to think that they are growing irreligious, that they are losing their sense of religion; but I believe a deeper and more careful study of the whole affair will convince us that this is not the trouble at all. It is not that men have lost their faith, through losing their religious sense, but they

have somehow seen that there is something deeper and broader than the foundations upon which they formerly built, and they are insisting that these be given them. They feel that sometimes, when asking for bread, they have been given a stone.

Now any one who has a strong faith need not be afraid at such a time; an age of questioning is not a dangerous age, "there lives more faith in honest doubt, believe me, than in half the creeds." So for one I am glad to welcome any person or body of persons, who can help us to answer these deep and vital questions that relate to our best life.

Christian Science presents a definite program and points to most tangible results. Christian Scientists are at least possessed of sufficient faith in Jesus Christ to take him at his word when he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

The St. Johnsbury Caledonian.

Indianapolis, Ind.

A lecture on Christian Science was given at English's Opera House last night [November 3] by Judge Septimus J. Hanna. He was introduced by J. Guy Haugh of First Church of Christ, Scientist, of this city, who said in part,—

Though all men recognize the necessity of government by law, the conceptions of government are numberless and conflicting. Law as mere restriction is a crude, false conception; for only as it stands for freedom can it be dignified with the name of law. Men have learned in a degree this lesson,—that unrestricted will-power is not freedom but bondage, and have been compelled to turn to a higher source than themselves for the control of their affairs and their bodies. Moses, nearly four thousand years ago, through his keen spiritual perception and leadership, gave to his people a knowledge of law that freed them from slavery and oppression, and raised them to a position without a parallel in the history of ancient nations. But though the Mosaic law freed them from Egyptian bondage, it terminated in Judaic creed and ceremonial, which was wholly inadequate to liberate them from the more cruel bondage of sin, disease, and death, and required a Saviour to give them the spiritual law which was to supersede Judaism, and form a new era in the history of the world. So the greatest law-giver the world has ever known, Jesus the Christ, came to establish and prove that God in His law of love was infinitely higher than the Judaic conception of Him, and taught that their personal and national calamities resulted, not from law or God's will, but from their ignorance of Him and their unwillingness to follow Him. Two thousand years intervened, and creed and ritual, having again obscured in the minds of men, the practicability of God's law, had to be superseded by the spiritual discernment of the Christ, and Christian Science, the name given to the demonstrable knowledge of the universal and imperative government of God, was given to the world, again teaching mankind the meaning of the law and giving universal freedom from the worst taskmasters the world has ever known,—poverty, sin, and disease,—leading to a practical and demonstrable understanding here and now of man's conscious oneness with God—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

Charity and Invalids.

Mrs. EDDY endeavors to bestow her charities for such purposes only as God indicates. Giving merely in compliance with solicitations or petitions from strangers incurs a liability to work in wrong directions. As a rule, she has suffered most from those whom she has labored much to benefit—also, from the undeserving poor to whom she has given large sums of money, worse than wasted, she has, therefore, finally resolved to spend no more time nor money in such uncertain, unfortunate investments. She has qualified students for healing the sick, and ceased practice herself in order to help this work in other of its highest and infinite meanings as God, not man, directs. Hence, letters from invalids demanding her help, under such circumstances, do not reach her, they are committed to the waste basket by her secretaries.

"Charity suffereth long and is kind," but wisdom must govern charity, else love's labor is lost, and giving is unkind. As it is, Mrs. Eddy is constantly receiving more important demands on her time and attention than one woman is sufficient to supply; hence, it were as unwise for her to undertake new tasks, as for a rentor, who has not an empty apartment in his house, to receive more renters.

MARY BAKER EDDY.

Pleasant View, November 18, 1904.

Appreciation of a By-law.

New York City, November 20, 1904.

Rev. Mary Baker Eddy.

Our Beloved Leader:—We, the officers and teachers of Second Church of Christ, Scientist, New York City, desire to express to you our heartfelt thanks and gratitude for the great help given to us in our work by the new By-law, Article XIX., Section 6, "Subject for Lessons." Valuing, as we all do so greatly, every word that comes from your pen, we have kept in constant reference your article on the same subject, published in the October *Journal*, 1895, and have based thereon our entire line of work. We have also been carrying out the method suggested in the last sentence of the amendment to Section 5, and it is a great help and inspiration to us to know that in so doing we have been unconsciously fulfilling your desires. How often we are privileged to witness, in just such ways, the constant reflection, through you, of that divine Love and Wisdom "which supplieth all our needs." The sacred importance of our Sunday School work, and the great privilege of being connected with it, come to us more and more strongly each day, for in what nobler work could one be occupied than that of giving to the children of this generation the grand equipment for the future which is contained within the teachings outlined in the new By-law? Our earnest desire is to impart, adequately and faithfully, to the "little ones" in our charge, some measure of the priceless understanding of God which has been revealed to us through you.

Lovingly and gratefully yours,

DORA S. INNIS, *Superintendent*.

(In behalf of the officers and teachers.)

Mrs. EDDY'S REPLY.

Pleasant View, Concord, N. H., November 24, 1904.

Officers of Second Church of Christ, Scientist, Sunday School, New York City.

Beloved Brethren:—You will accept my thanks for your

interesting report. It rejoiced me that you are recognizing the proper course, unfurling your banner to the breeze of God; and sailing over rough seas with the helm in His hands. Steering thus, the waiting waves will weave for you their winning webs of life in looms of love that line the sacred shores. The right way wins the right of way, even the way of Truth and Love whereby all our debts are paid, mankind blessed, and God is glorified.

Yours in Christ,

MARY BAKER EDDY.

Grateful Thanks to the Field.

Beloved Brethren:—So many telegrams, cablegrams, and letters for Mrs. Eddy have come to Pleasant View this Thanksgiving season, that were she simply to read them all, she would get little else done for some days, and omit imminent obligations; and to acknowledge them separately, is more than her secretaries have time to do, hence this word to all. The evidence of growing affection for our dear Leader, and of gratitude to God for what she has accomplished and is accomplishing under divine guidance, multiplies as time measures off the years. This is as it should be. God be praised for such fruitage of her blessed life-work.

Will each and all accept this note as present and future acknowledgment of their despatches, and still go on in the work of developing the mighty movement which Mrs. Eddy has established, healing the sick and converting the sinner? Accept the compliments of the season, and our best wishes. In our Leader's behalf,

Yours fraternally,

GEORGE H. KINTER.

Pleasant View, November 26, 1904.

Our Literature.

We are in receipt of a letter from one of our subscribers asking us to state what books may properly be called Christian Science literature, also to define the status of several books which she names.

While it is possible to answer these questions in a very few words, it seems better to go into the matter in a more general way, because of the very considerable number of books of various kinds which have been issued by Christian Scientists within the past few years, and because of other books issued by persons who are not Christian Scientists, but who have mentioned Christian Science in a commendatory manner. As both these classes of books seem to be on the increase, and as they are being extensively advertised among Christian Scientists, it has become a fair question to ask whether any of these publications can be considered as having the official approval of the denomination, or as speaking for the Cause in an authoritative way. The answer which must be made to this question is that the only publications for which the Christian Science church assumes responsibility are the writings of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, issued through her own publisher, and the periodicals, pamphlets, etc., issued by The Christian Science Publishing Society. All others must be considered as not being Christian Science literature, and as having no more authority to speak for, or bind, the denomination, or to represent the Cause, than would properly be conceded to a book published by a lay member of the Methodist church, for instance, to bind that denomination, even though the book should set forth the author's views about Methodism, or attempt through fiction to present the doctrines of that faith, in an attractive manner.

This statement must not be misconstrued to mean that we are passing judgment upon these books. It simply means that they are not Christian Science literature in the sense in which that term is used by Christian Scientists.

One of the greatest dangers in their circulation is the inconsiderate acceptance of all their statements as synonymous with the teachings of Christian Science. Another danger is that they may be given out in substitution for the authorized literature which alone is representative of this great movement. M.

"I Can't" and "I Can."

THE character of a man's thought and speech is always a revelation of his dominating sense. So long as this sense is material, doubt and limitation will be expressed, and it could not be otherwise, for the declaration of freedom upon this basis is but the assertion of will-power,—hypnotism. Mortal sense does not deceive when it says, I can't, for in this it expresses its nature. We are befooled, however, in the matter of the identity of the speaker. If we recognize the voice for what it is; viz., the plea of false sense, we may remain serenely undisturbed, however clamorous and insistent it be; the knowing of the truth gives us supremacy, the freedom of the sons of God.

Much religious teaching has reckoned man, the ego, as a compound of the spiritual and the material, and seed has thus been sown of which the harvesting, after its kind, is a conviction of inherent and therefore hopeless incapacity. It is apparent that this sense is regarded by some as the legitimate consort of humility. They seem to parade it as a virtue, a proof of unpretentiousness. The Christian Scientist knows, however, that this habit springs from an ignoble self-estimate, it denies man's kinship to God, it condones weaknesses which should be condemned.

The faltering tenuity of material sense has always been a serious disability to spiritual progress. In the crises of great events, when, having done all, men are called upon to stand, to sacrifice, to suffer, and to die if need be for a world-redeeming idea, then the champions of incapacity scurry to the rear, they are frightened by a supreme opportunity, and begin to make excuse. This has burdened all reformers, and it magnifies our sense of indebtedness to those rare souls who have been loyal, when we perchance would have compromised, who have been brave when we would have played the coward, who have said, I can, a thousand times when we would have said, I can't. How the lives of these isolated heroes light up the otherwise darkened highways of history!

In enumerating some of the things which had tested his ability to do and to bear, Paul mentions stripes, imprisonments, beatings, shipwrecks, perils, weariness, pain, watchings, hunger, thirst, cold, and nakedness, together with cares unnumbered, and yet so conscious was he of his spiritual supremacy that in the midst of it all he could say exultingly, "I can do all things through Christ which strengtheneth me." Another apostle speaking of the days of sore and lonely trial has said, "I saw before me the awful conflict, the Red Sea, and the wilderness; but I pressed on through faith in God" (Science and Health, p. 226), and the world is rapidly coming to see that her great work for humanity is to be explained by her tenacious hold upon demonstrated truth, her insistent recognition of God and His man, her uncompromising spiritual assertion, her tremendous "I can."

The Christian life demands this continuous spiritual assertion, and its effectiveness is determined by the intelligence, the apprehension of Truth, which prompts it. In all his contact with human problems, Jesus disclosed a consciousness of adequacy which was instant and unequivocal, and the secret of it is revealed in his words, "Thou, Father, art in me, and I in thee."

Christian Science has come to establish the Christ-mind in us; this is the only ground of calm sufficiency. It has come to replace the "I can't's" of human sense with the "I cans" of spiritual realization, and its overcomings of sickness and of sin attest the practical value of its larger claims of sovereignty for man. W.

The Changing Viewpoint.

IN Paul's beautiful discourse on charity, or "love" as it is better rendered, he says, "When I was a child, I spake as a child, I understood as a child; . . . but when I became a man, I put away childish things." In this he declares for the law of progress, in the light of which every stage of unfoldment has a value. A man is not to be condemned because, when he was a child, he thought and acted as a child, and yet there are some who make this mistake and who condemn others that are striving to take the advanced steps demanded by scientific progression, because these steps have not already been taken.

It is sometimes gratuitously assumed, when a change is made by some requirement relating to all the adherents of our Cause, that since a new order of things is introduced the former must have been wrong; but we are sure to learn, sooner or later, that this is a mistaken sense. In our advance as Christian Scientists we have been eager to avail ourselves of everything which seemed to offer help in our work, and in some instances these helps had much to commend them, but it was found later, that continued dependence upon them was not advantageous. It was Lincoln who said, "The foolish and the dead, alone, never change their opinions." Whenever we find it necessary to give up anything, or to change our methods for the sake of progress, it should be done with the knowledge that divine Principle never takes away any good thing unless it be to replace it with a better.

Surely there are many "stepping-stones . . . to higher things." These serve their day, and though we must needs leave them far behind, we can never condemn the things which have helped us onward. We thus think with tender tolerance of the plans, the pleasures, and the pains of our childhood days, for we remember that these experiences furnished a "nutriment of wisdom" in after years; nevertheless, when these lessons are learned we have no further need of their repetition. If our supreme desire is to advance the Cause of Truth and thus serve humanity, we shall certainly be divinely guided to what is nearest right in all the changing conditions of human experience. If one cannot at once demonstrate perfectly scientific conditions, especially where the interests and opinions of others are involved, he can always choose the least of two evils, and avoid all caviling over the seeming difficulties of the situation. The most truly scientific method is that which best meets the need of the hour, and it should be adopted with the assurance that Divine wisdom will reveal higher means when progress shall have prepared the way for them.

With every new demand in Christian Science we should at once see that consistency requires of us a readiness to advance, without regret for "the things that are behind." These words of our Leader may well encourage us to go forward, "God is responsible for the mission of those whom He has anointed. Those who know no will but His take His hand, and from the night He leads to light. None can say unto Him, What doest thou?" (Miscellaneous Writings, p. 347.) K.

Letters to our Leader.

Dear Mrs. Eddy:—In June of 1902, a friend and myself were on our way to Boston to attend Communion services at The Mother Church. We met on the train a lady from Texas, who was also a Christian Scientist. Soon we were friends, and in the course of the day the lady passed to us her copy of Science and Health, and asked us to read a little clipping which was pasted in the back of the book. It was that brief article of yours, "What Our Leader Says," which was republished by request in the *Sentinel* of November 12. I had never seen the article and it appealed particularly to me. Several times during the day I borrowed the book, and read and re-read the lines until I

had them committed to memory. Many times during the next few days I had occasion to use them. Whenever the erroneous suggestion presented itself I immediately recalled the line which reads, "There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness," and I endeavored to know that I was clad in the "impervious armor" of good thoughts. The greatest blessings of my life resulted from this Communion service and the subsequent visit to your home in Concord, and I returned home truly speaking the "new tongue" and manifesting such love as I had never before known. The spirit of the little article has since remained with me, although I had seemingly forgotten the letter. Many times I have tried to recall the words, and I was greatly rejoiced when at last they appeared in the *Sentinel* for the benefit of all. I desire to express my thanks to you for the beautiful thoughts, and to the friends who were instrumental in securing their republication.

With love and deep gratitude,

Anderson, Ind.

OLIVE KNIGHT.

Dear Teacher and Leader:—I hope you will not feel too much bored if I tell you of an experience I have had recently with a patient. He is a young man, thirty-three years of age, the only child "of his mother and she a widow." He is well educated and quite clever with his pencil, also at verse-making, much of his work appearing in magazines, but for many years he has been considered a hopeless inebriate, and for nearly two years he has not earned a dollar. I came to this lovely city in northern New York a little more than a month ago, and both he and his mother asked me to treat him. He had a scirrhus of the liver and kindred troubles brought on by his wrong doing, also the most terrible nervous headaches. When he could endure the headache no longer he would drink himself into oblivion and when he awoke would call on the doctor and have a hypodermic of morphine; and by the time he was through with the headache, the drink, and the morphine, he was a wreck. His mother telephoned me that he had one of his headaches, had not slept at all the night before. I called on my way to church and gave him a treatment. He thought his head felt a little easier. I called on my return and saw at once that the condition was much worse. It was a fierce conflict for hours, and I told his mother before leaving that if the pain returned to let me know and I would come again. At 8 P.M. she telephoned that it had attacked one eye and that he was nearly wild with the pain. I returned at once and worked till the pain was gone and he felt like sleeping. He slept well the entire night, and felt refreshed though he still showed the effects of the fierce battle of the day before. The next day (Tuesday) his mother telephoned me that he had another headache, but not so severe. I soon reached his bedside. About noon he was free. He said that the night before he had the most beautiful dream or vision of God, and awoke with such a sense of the Divine presence as made him feel his base ingratitude to God, and he wept like a child. Then he thought of how he had wronged his poor, dear mother all these years, and the tears came again like a flood. As he lay there, pale of face, his eyes luminous with the light of Spirit, telling me this,—it was like the new birth of a soul,—the unfolding of a pure white flower, and was the holiest experience I ever had with a patient. It is needless to say that the physical trouble of the liver and all others, disappeared, and he arose from his bed a new man. He startled his mother the next night by telling her he should attend the Christian Science meetings, and he has not missed one since. She says he spends all his spare time reading the Bible and Science and Health. His one desire is to take up this work and do for others what has been done for him. I feel that he will be a power for good through

Christian Science in this his native city. I have been greatly uplifted by this experience myself and rejoice in Christian Science.

With dear love,

October 15, 1904.

ELLEN.

P. S., November 21.—This patient had been reading works that I endeavored to show him were not helpful but darkening as the little truth they contained was plagiarized from your works, but he could not see but that truth was truth *anywhere* and *helpful*, though he preferred Science and Health now. He was not convinced by what I said, and I advised that he ask God to show him the way. I had suggested that he burn these books. The second day following he said he opened his Bible at Jeremiah, 23, 23-32, and as he read verse 30, "Therefore, behold, I am against the prophets, saith the Lord, that steal my words every one from his neighbor," it gave him the light and he destroyed all the false literature he had, also the doctor's prescriptions. That Scripture, it seems to me, meets every case of false literature and successfully disposes of it. You will not be surprised to hear that the young man is doing well himself and is helping others.

As Thanksgiving approaches, I am reminded of one year ago now when I was with you at Pleasant View. I cannot tell you how thankful I am for that blessed experience. It has helped me in more ways than I can enumerate, and has enabled me to help others more effectually than ever before, "which is our reason for existing." Your dear words of loving admonition and inspiration are ever with me, and must bear fruit after their kind.

With heartfelt thanksgiving, your student,

ELLEN E. CROSS.

New York, November 14, 1904.

My Dear Leader:—Will you please accept this little token of love from one who was healed, ten years ago, while reading your book, "Science and Health with Key to the Scriptures." Hitherto I have felt unworthy to even approach one who had risen to such a spiritual altitude of thought as to be able to produce such a book, and now I simply ask that these carriage boots may bear to you a message of love and thanks, and may they serve to protect your feet from the cold of winter, even as your spiritual thought is protecting my understanding in its passage from sense to Soul. I would also like to tell you how grateful I am for the faithful teaching I have received from one of your loyal students. Trusting that the boots are the right size, I remain,

Lovingly and gratefully yours,

(MISS) MARY E. PEARSON.

Cleveland, O., September 22, 1904.

Beloved Leader and Teacher:—I thank you for the words sent through Mr. Kinter's letter, regarding one case of good healing as pleasing to God, etc. They are words of wisdom, as are all your statements. The healing certainly is the foundation of our work. It builds up the churches, creates a demand for teaching, and proves the truth of Christian Science. Better healing will bring better work in every direction. Oh, may we who name the name of Christian Science consecrate ourselves more fully to God, as you have done, and so do His works!

We have a member in Second Church, a little girl twelve years of age, who has done some good healing. She is now treating a case that was said to be totally blind and that could never be healed. The man now sees the sidewalk and the grass, also people passing, and other objects. A tumor on one of his eyes has nearly disappeared. He expects soon to see perfectly. Again thanking you.

Lovingly your student,

LIDA W. FITZPATRICK.

Testimonies of Healing.

Of the many beautiful experiences which have been mine in the study of Christian Science, none is dearer than that of Truth's entrance into my life. A little more than five years ago, accompanied by a sick relative who is now coming to rejoice in "the proof of healing" (Science and Health, p. 569), I was spending a few weeks in Boston. In an hour of extreme need, the present so filled with doubt and fear that the future could only seem as a night without a star, an earnest student of Christian Science placed "Miscellaneous Writings" by Mrs. Eddy, in my hands, with, I doubt not, a prayer that the blind might see, the deaf hear, and that prayer was answered. I had been reading Christian Science literature for about four weeks, but in a desultory manner, and for another's sake, when the hour came in which I realized my own need of "something better than I had known." With an appeal such as is uttered daily by many hungering hearts, I opened the book, when my eyes fell upon those joy-breathing words of our Leader on "Angels" (Miscellaneous Writings, p. 306). Shall I ever forget them? They were indeed to me an angel's song, the melody of which still rings in my ears. The peace of that hour has never entirely left me. The portals of heaven had opened at my knock, and the light which gleamed from within has been to me as the star of Bethlehem to the wise men of old,—guiding me on over rough paths and plain. May I ever follow its leading, until one day, the final battle with error won, I shall awake in His likeness and "be satisfied."

I cannot close without endeavoring to express in some measure my gratitude for our periodicals. Neither time nor space will permit me to enumerate the many articles which have served as stepping-stones, enabling me to solve correctly many would-be baffling problems. May I daily more faithfully apply, thereby more clearly demonstrate, my understanding of the Principle revealed by our textbook, Science and Health. Our Concordance and our Manual are aiding us in the fulfilment of our Leader's desire expressed in "Miscellaneous Writings," p. 312, "Oh, may the love that is talked, be *felt!* and so *lived*, that when weighed in the scales of God we be not found wanting." Our dear Leader, into whose face I was privileged to look for the first time in June, 1903,—was it not of such the Master spake, when he said, "Blessed are the pure in heart: for they shall see God."—F. M. W., Bangor, Me.

In the *Sentinel* of October 22 appeared a testimony written by myself, but signed D. W. Head. The D was a mistake. In that testimony I said I had not then been able to demonstrate over the tobacco habit. The testimony was written some six or eight months ago, and I am glad to be able now to testify that the tobacco habit, which I had from boyhood, has been entirely overcome by the power of Truth. I have no more desire for the weed, though I had used it fully forty years, and had tried nearly all the well-known, so-called cures, without avail. This victory, though it was seemingly difficult and long in being made, I prize very highly, and I wish to say to those who may be discouraged because demonstrations are not always quickly made,—persevere, keep on in well doing, your reward is sure to come.—L. W. HEAD, Galveston, Tex.

When I recall the many blessings which have come to me through Christian Science, I feel that I should no longer withhold my expression of gratitude. I have proved during the last five years that Christian Science does heal both sickness and sin. It has completely healed me of indigestion of several years' standing, also of other ailments.

I now know that they were never a part of God's creation, but an illusion of mortal mind. It has taught me to pray with an honest heart, "Search me, O God, and know my heart: try me, and know my thoughts." Truth is indeed a searchlight, revealing the dark and hidden thoughts in mortal mind, and bringing them to the light that they may be forever destroyed.

When I speak of our dear Leader, I can find no words with which to express my gratitude to her for revealing to the world this wonderful truth. I feel that nothing but absolute obedience to divine Principle can ever repay the debt of love I owe to her.

The Lesson-Sermons have been like daily food to a hungry soul, truly proving that man shall not live by bread alone, but by every word of God.

MISS ADDIE MOXLEY, Montville, Conn.

For the past three years I have enjoyed the blessings of Christian Science. These blessings have been without price and without number, and the truth grows more helpful each day. All my life I was considered delicate and was denied the pleasures of childhood because not strong enough to participate in them. When womanhood was reached I suffered from internal ulceration, and other complications. I received treatment from local physicians and used every material means I could hear of. They all failed me and I suffered four years as only those suffer who are confined to the house and held under the bondage of so-called material laws.

I read my Bible and prayed to become reconciled to what I then thought to be God's will; namely, that I should be an invalid, but I rebelled against the affliction and wondered why a God of mercy would send such pain upon me. The consequence was, I became as much troubled in mind as in body and entertained far more indignation than love for my heavenly Father. I went to church when able, but my spiritual life was all confusion. Finally I was taken to one of the best hospitals near Philadelphia, Pa., and two operations were performed. For a year afterward, I was the most miserable woman in the world. The physicians said all had been done that could be done, and advised change of climate for my general health, hoping thus to prolong a life that was not worth living. I ceased reading my Bible, and felt there was no loving Father.

Finally, in a moment of desperation, I took Christian Science treatment, though I had little expectation of being helped. I was benefited at the first treatment. I gained rapidly in strength, and soon I was healed. For that physical help and relief from pain I was most grateful, but for the knowledge that God is good and that He knows no evil, and for the light that Christian Science daily gives to me, I cannot be thankful enough. I find it a practical religion that meets every human need. My prayer is a desire to live a life that will prove my gratitude to God, to the great Wayshower, to our Leader, and to other dear ones who have let their light shine on my pathway.

L. H., Joplin, Mo.

I came to the study of Christian Science with a great desire for rest and peace of mind, and although my progress seems to be slow, I am finding them. In our "passage from sense to Soul" (Science and Health, p. 566), we seem to be like trees, grim and gaunt through the dreary winter, yet silently getting ready for the touch of sunlight and spring to burst the buds, and give a sense of freedom. With warmth and sunshine, the leaves unfold, and with still more of the warmth and sunshine of Love comes the blossom, then the fruit, and the leaves give shelter to all who desire it. I wish to add my thanks to Mrs. Eddy for showing us the only way to harmony.

ISABEL SCOTT HAMILTON, Denver, Col.

What first attracted my attention to Christian Science was the complaints of the clergy that it was taking some of their best women workers out of their churches, while the doctors complained that they were losing some of their best and most profitable patients. These things set me thinking and led me to attend Christian Science meetings. About that time, when calling on an old-time general manager of one of the leading railroads, a hard-headed, rough man, who formerly had a habit when things didn't suit him of swearing till everything was blue, I noticed Mrs. Eddy's book on his desk, and being surprised I asked him if he was interested in it. He replied, "Fifty years ago I swore that I would never enter another church, and I never did till I blundered into one of their meetings, but now I never miss a meeting, it is the only religion I have ever seen that has appealed to my intelligence."

In attending the Wednesday evening meetings, when I noticed timid women getting up in public and referring to all sorts of ailments and weaknesses, which had been healed through Christian Science, I was sure they were telling the truth.

I am only a student of the subject as yet, but I am becoming more and more convinced every day of the truth of the claims that Christian Science makes, and as soon as I am worthy of it I intend joining the church since it appeals to me as no other church has. I am like my railroad friend, I never saw the inside of a church for thirty years, but now I attend every meeting that I can.

H. B. LA RUE, Mentour Falls, N. Y.

To the many testimonies given in the *Sentinel* I should like to add mine, thinking it may help some one. When about four years old my right eye began to show symptoms of disorder, and a year or so later I had a well-developed case of strabismus, squint or cross eye, which was very disfiguring, and my parents took me to San Francisco for treatment. The oculist under whose care I was, performed an operation on the eye, and so far as correcting the strabismus or straightening the eye was concerned the operation was successful, but soon after, as I am told is the case with the majority of such operations, a much greater evil, that of astigmatism appeared. I now had a straight eye, but I could see little or nothing without astigmatic glasses, and worse than that, soon after the operation was performed my left eye became affected, and while the sight was fairly good for reading I began to have great difficulty in discerning objects even at a short distance. I went on in this condition for about ten years. Six years ago the oculist told my parents that I would have to wear compound glasses, astigmatic for the right eye and concave for the left. I could neither see nor do anything useful without these glasses. I often tried to study or work without them, but the sight was so dim that I soon became dizzy and sick at the stomach, and so resigned myself to wearing glasses for the balance of my life.

A little less than two years ago while in Los Angeles, Cal., I met an old friend who had been for many years our druggist here, but who had given up his business, principally on account of the loss of eyesight. He spoke to me about the great good his wife had received and which he himself was receiving for his eyes, through the ministration of Christian Science. He spoke so eloquently and convincingly that I promised I would take treatment for my eyes, which I did, and after the thirteenth treatment I took off my glasses and have never used them since and never shall use them again. My sight is good and I am able to do all my work and study without experiencing any difficulty.

Since my eyes were so wonderfully healed I have devoted every spare minute to the study of Science and Health and other Christian Science literature, and I am happy to say that I have been able to make some very

good demonstrations for myself, and have been instrumental in helping others. One case which I consider quite a victory, was the healing of my father from the tobacco habit of nearly forty-five years standing. He was anxious to get rid of it; I helped him to the best of my little understanding and we won the victory. To-day he is an earnest student of Christian Science.

I am not only happy and grateful for the physical healing which we receive through the understanding of Christian Science, but also for the many other blessings it brings. I feel deeply thankful to my heavenly Father for leading me into this beautiful light, and to Mrs. Eddy for her unceasing toil for the good of humanity.

MILDRED REINKEN, Elko, Nev.

I wish to tell of the benefits I have received from Christian Science. I have been richly blessed, and my cup is full. It is impossible for me to be grateful enough. For seven years I had suffered with what *materia medica* called chronic gastritis. During those years I was treated by no fewer than fourteen doctors and one specialist, and experienced only temporary relief. I would have no rest day or night. No one but myself knows, or can imagine what agony I passed through. Weeks and weeks at a time, I was not fit to be at the works, but I had a living to make for myself and family. Towards the last I became almost desperate, and but for the love of my dear little family and what it would mean to them, I should have taken my life. I then had some conversations with a friend and he begged me to talk with another who is a Christian Scientist. This talk revealed wonders to me. My friend urged me to try Christian Science treatment, which I did, and through our dear text-book, Science and Health, and with the help of the practitioner, I am glad to say that in two weeks I was entirely healed.

Words cannot express my gratitude to Mrs. Eddy, through whom Truth has been revealed to us, also to the practitioner through whose kind ministrations I was healed.

JOSEPH KENNEDY, Wilmington, Del.

We have had so much help in our family through Christian Science that I hardly know how I can tell of it. We have been studying it for about three years. Papa was healed from a severe trouble that he had ever since he was a boy. With all his doctoring he could not be healed till he came into Science. Mamma was also healed of a very severe ailment which she also had since she was a child. I have two sisters and two little brothers; they have all been healed of different troubles. Last winter I was taken with a very severe cold which left me with a cough. I was obliged to stay at home from school because of my coughing so much. One night we sent for a practitioner, and when he came, mamma told him of my not being able to sleep nights. He said the cough would not trouble me. That night I went to bed and did not cough once all night. In a little over a week it was entirely gone, and I have kept well ever since. Other ailments which I had have disappeared. We attend the Sunday School, and it is a great help to us. We are very thankful for all these blessings.—LILLIAN SOUTHALL, Buffalo, N. Y.

Through the healing of a very badly ulcerated limb, though it came slowly, I had the uplifting assurance that I was healed, that God is All in all, and I felt a joy which tongue cannot express. I have overcome many small ailments, such as nervousness or excitement over the least noise, and anger, and am learning to forgive by just realizing the nothingness of error. I have also overcome troubles for my boy.

It is now eight years since I first heard of Christian Science, and I still have some ailments which are not over-

come, but I can think of many blessings which I enjoy through this truth, and I have gained a treasure beyond all former knowledge.

I am thankful to our Leader who has shown us the way through truth to freedom.

IDA PYLAND, Wimberley, Tex.

About a year and a half ago, Christian Science found me a physical wreck, helpless with rheumatism from which I had suffered for fifteen years, chronic catarrh of twenty-five years' standing, Bright's disease, and dyspepsia. I had taken medicine most of the time for these troubles, but found only occasional relief. I was a slave to the liquor and tobacco habits, a blasphemer, and without God or hope in the world. Through the study of the Bible and Science and Health, attending the Christian Science services and reading the periodicals, the victory over these diseases is complete and lasting.

I had believed these discords to be inherited, as many of my people had been afflicted with them. I can now say, in the words of Jeremiah, "They shall say no more, The fathers have eaten a sour grape, and the children's teeth are set on edge." I have found that "peace of God, which passeth all understanding." May my every thought, word, and deed constantly be such that I shall be worthy to bear the name of a Christian Scientist.

JOHN C. DOUGLAS, Missoula, Mont.

To enumerate in a short article, the many blessings I have received from an understanding of Christian Science would be impossible. I would like, however, to give my present realization of its benefits. One of my greatest troubles for the past two years has seemed to be a want of time. There was no time to think, no time to act, no time to plan, and no time to carry out plans if I did make them. I am fond of music, and teach it, but never found time to do any practising or study for myself; I was fond of reading, but never had time to read the many books I had bought, or to take proper advantage of our library facilities. If I got a book from the library, I could not find time even to take it back, until there would be a fine to pay on it.

Since I have studied Christian Science all this is changed. I began to find time to read by reading Science and Health last summer. Hours and days seem added to my life, and with them came understanding and additional pleasure in my music, my books, and my home. I now see, through my understanding of Christian Science, that I allowed myself to be bound or held by the influence of other minds around me, which seemed to cause me to stand still, my own thought not seeming to have proper volition. Since I have realized that there is but one Mind, and that the divine Mind, or, in other words, since I have known the truth, it has made me free indeed. I lack no time, there is time for everything and everything is done in its time. Domestic affairs adjust themselves without worry. I am at rest, and the peace that passeth understanding fills my life.—MRS. C. B. SUMMERS, Pittsburg, Pa.

I have just been reading a number of the *Sentinel*, which is so full of joyful, heartfelt acknowledgments and songs of thanksgiving, that I feel I must join the others who give thanks, for my life is so full of blessings that I can never express my gratitude. When I think of the unbounded goodness and self-sacrificing spirit of our dear Leader, my words seem weak and ineffectual. Christian Science came into my life like a burst of sunshine. From being critical and sarcastic I became a lover of all humanity, from being uncharitable I learned to follow the example of our Master and our dear Leader, and the charity that thinketh no evil came to dwell with me. If I were to spend every day

in writing of my thankfulness, there would still be many songs of praise to sing,

One day last fall my little boy came into my room and told me that some boys of the neighborhood with whom he had been playing had induced him to eat of a plant which I knew from his description was to mortal sense poisonous. I treated the little man for fear, declared the truth, and there were no ill effects. He apparently forgot all about it until evening, when he seemed very happy and expressed much faith in Christian Science.

I could tell of many tokens of divine Love in the few years that I have been in Christian Science. It has become my "shield and buckler;" I can never express my gratitude to divine Principle.

ELEANOR S. SMITH, Chicago, Ill.

It is now a little over two years since I came into some understanding of the glorious truths of Christian Science. In that time I have had many proofs that divine Love is ever ready to meet our need. One day my little son came home from school and said his teacher had sent him home, that he had had three chills, and that he had fever, ached all over, and felt very sick. I told him to go upstairs and lie down, that I thought he would feel better after a little. There seemed to be symptoms of typhoid fever and I asked for help. That night he was a very sick child, and the next morning I reported his case to the practitioner, and treatment was given at once. Very soon he fell into a sweet sleep which lasted some hours. He was taken sick on Monday and on Wednesday he returned to school in full possession of his birthright,—health.

Every day of my life I am more and more thankful to God and to our dear Leader, Mrs. Eddy, for the understanding of this truth that lifts us out of bondage into freedom.

MRS. BLANCHE G. MUNGER, Houston, Tex.

After the birth of my first child, twenty-one years ago, I was attacked with a pain in my back which caused me great suffering during nine years. In that time I consulted eight physicians and the only relief obtained was from the hypodermic needle, which I was forced to use very frequently. I became very much afraid of the morphine, dreading the awful habit, and having heard of Christian Science I decided to try it. After the first treatment the pain left, but I continued treatment until all fear was destroyed. Since then I have found inexpressible comfort, peace, and the greatest help through the understanding of Christian Science. With the deepest sense of love I wish to express my gratitude to God, to Mrs. Eddy, and to the practitioner and teacher who has so patiently led me, step by step, into an understanding of this redeeming truth.—H. R. B., New York, N. Y.

The thought has often come to me when I read Science and Health, the *Sentinel* and the *Journal*, that I would send in my thanks for the helpful articles which are all, seemingly, for me. Could the writers know the help and comfort which have thus come to me, they would be well repaid for their efforts. I try to live up to my highest understanding of Truth, which is, I think, the best return for help received, and my daily prayer is to grow in grace that I may be worthy to receive more. I enclose a mite for The Mother Church Building Fund.

MARY McFEETERS, Paulina, Ia.

A man must not choose his neighbor; he must take the neighbor that God sends him. The neighbor is just the man who is next to you at the moment. This love of your neighbor is the only door out of the dungeon of self.

GEORGE MACDONALD.

From Our Exchanges.

Man's true prayer,—the prayer which is true for him,—is the expression in words of the trend of his life. Man's effectual prayer is that petition which has in view and embraces the will of God. In all obediences to God and to righteousness, man is, as he should universally and continuously be, co-operating with God for the establishment of His kingdom on earth, and for the blessing of mankind. In all sinning and failure to obey he is resisting the will of God and limiting the blessedness of men. The true human attitude in prayer is that of Christ in his hour of great distress, "If this cup may not pass from me except I drink it, thy will be done." Importunity in prayer which has in view the accomplishment of the will of the petitioner and the bending of the will of God to our wills, is an impertinence. Rather is it the petitioner's place to seek to know and to come into harmony with the will of God. The various objects of prayer, personal, social, general, and world-wide, should be subordinated to the one desire that the kingdom of God may come and His will be done in earth as it is in heaven. That which is best for mankind as a whole is really best for each individual. The prayer which is selfish is prayer against the true interests of self and against the interests of mankind.—*The Examiner*.

The *Journal and Messenger* (Cincinnati Baptist) is amazed to find the following paragraph in the *Sunday School Times*, headed "Sin's Worst Punishment."

"It is often noted that punishment in the next world used to be more preached a few generations ago than it is to-day. Perhaps that is because men are coming to realize that religion is more a matter of this world than of the next,—certainly while we are here. But can punishment in the next world for sin be any greater than sin's punishment while we live? Sin's worst punishment is loss of power. We need not look into eternity to see this. Continued sin has only one end here: the power-current ceases; lights go out; wheels stop. Has any man so much power that he can risk the atrophy of one of his energies? Then he cannot afford to sin. Even God's forgiveness of sin does not restore all the lost power. 'The wages of sin is death'—death even while we live."—*The Universalist Leader*.

It is becoming more and more apparent that scholarly scrutiny of the Bible is not destroying it, not relegating it to any secondary place in bringing men to know God and cultivating the Christian life. Some things formerly believed about it have been shown to be untenable, some statements of theological doctrine are being changed; but fundamental things abide. To those growing into the likeness of God it is not a disappointment to learn that knowledge of him grows in living organisms and that such growth, as in nature, involves the sloughing off of dead matter and the taking on of new knowledge.

The Congregationalist.

The question every one ought to ask is not, Have I power? but, Is my influence for good? This influence is felt in little things. Not the great things we do express the amount of force we are exerting. A look or an intimation may start another life either on the right or wrong way. It is my act that counts after all, whatever may be the common sentiment.—*The Standard*.

It were well to pray so effectually in advance that the conflict may be avoided, the horrors of war made impossible. That indeed were a prayer of holiest import leading to concession, to peace, to human brotherhood, and the infinite good-will that does not destroy, but builds up human life in bonds of amity and kindness.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckle edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckle edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The case known as the Fayerweather will case, which has been in the courts since 1890, was decided by the Supreme Court of the United States last week in favor of the colleges. The case involves a bequest of about \$2,500,000, made to twenty different colleges by the late Daniel G. Fayerweather. The opinion of the Court was delivered by Justice Brewer, and held that the case had been previously adjudicated. The beneficiary colleges are: Bowdoin, Dartmouth, Amherst, Williams, Wesleyan, Hamilton, Rochester, Lincoln, University of Virginia, Hampton and Maryville Colleges, \$100,000 each; Columbia and Cornell, \$200,000 each; Yale, \$300,000; Union Theological Seminary, Lafayette, Marietta, Adelbert, Wabash, and Park Colleges, \$50,000 each; Northwestern University, \$100,000.

The annual report of the Commissioner of the Internal Revenue Bureau shows that for the fiscal year ended June 30, 1904, the receipts of the bureau were \$232,903,004, an increase of \$2,163,079 over the collections for the year preceding. The cost of collection was 1.98 per cent, as against 2.07 for the year 1903, and 2.83 per cent, the average cost of collection since the formation of the bureau. The leading States in the payment of internal revenue taxes for the past year are: Illinois, \$52,464,271; New York, \$26,375,125; Indiana, \$24,102,371; Kentucky, \$21,757,733; Ohio, \$21,001,416; Pennsylvania, \$18,874,540.

The Treasury statement of the Government receipts and expenditures show that the total receipts for the month of November, 1904, were \$45,576,877 and the expenditures \$49,697,547, leaving a deficiency for the month of \$4,120,670.

The pension roll of the United States now contains 1,000,781 names, an increase of more than four thousand since June 30.

Foreign.

Russia has made reply that she is unwilling to join the Powers in a second peace conference at The Hague until her war with Japan is ended. Although she heartily accepts in principle the invitation, and gladly associates herself with the American Govern-

ment in its effort to complete the mission of the first great assembly convened under the leadership of the Russian Emperor, and welcomes the evident appreciation of the beneficent results of the first conference, she considers the moment inopportune until her war in the East is finished. Practically the same response was made to the other Powers.

The Prussian Diet has been debating a bill appropriating \$17,500,000 to take over the shares of the Hibernia Coal Company, which the Dresdener Bank bought on behalf of the Prussian Government. This move is taken by the Government in order to give it a position in the coal syndicate where it can watch developments on behalf of the public interest, and see that the syndicate does not act in the exclusive interest of capital.

Rear Admiral Charles H. Davis has accepted President Roosevelt's appointment of him as American member of the North Sea Commission, which is to investigate the recent Russian bombardment of the North Sea fishing fleet. Admiral Davis speaks French fluently and has a good knowledge of international and maritime law.

The French Government has designated Admiral Fournier to sit with the Commission.

The viceroy of the Chinese province of Homan is the first to carry out the instructions of the Dowager Empress of China in clothing his soldiers in European dress and cutting off their queues.

Industrial and Commercial.

The Secretary of Agriculture has just transmitted his eighth annual report to the President. It makes very interesting reading. The corn crop of 1904, according to the report, yields a farm value, from the proceeds of which could be paid the national debt, the interest thereon for one year, with enough left to pay a considerable portion of the Government's yearly expenses. The cotton crop, valued for lint and seed at \$600,000,000, comes second; hay and wheat take third and fourth places. Combined, these two crops will about equal in value the corn crop. The present crop of rice promises a yield of 900,000,000 pounds—300,000,000 more than ever before. Horses and mules reach the highest point this year, with an aggregate value exceeding \$1,354,000,000. The farmers' hens now produce one and two-thirds billion dozens of eggs and at the high average price of the year the hens during their busy season lay enough eggs in a single month to pay the year's interest on the National debt. The value of the products of the farm during 1904 is placed at \$4,900,000,000. This is 9.65 per cent above the product of 1903, and 31.28 per cent above that of the census year 1890. The farmers of this country have in two years produced wealth exceeding the output of all the gold mines of the entire world since Columbus discovered America. This year's product is over six times the amount of the capital stock of all National Banks; it lacks but three-fourths of a billion dollars of the value of the manufactures of 1900, less the cost of materials used; it is three times the gross earnings from the operations of the railways, and four times the value of all minerals produced in this country.

The exports of farm products for 1904 amount to over \$859,000,000. The increase in farm capital is estimated at \$2,000,000,000 within four years. The farmers' deposits in banks in typical agricultural States, Iowa, Kansas, and Mississippi, increased from June 30, 1896, to October 31, 1904, in Iowa, 164 per cent, in Kansas 219 per cent, and in Mississippi 301 per cent—in the United States ninety-one per cent.

The total number of animal products in the past fiscal year exceeded \$223,000,000.

The present situation as regards forestry in the United States the Secretary regards as exceedingly hopeful. The lumber industry seems to be awakening to the present and prospective desirability of scientific treatment of forests. Altogether 334 planting plans have been made for lands in 52 States and Territories. In this work co-op-

eration is confined to giving expert advice; the expense is borne by the owners.

Speaking recently on the question, "Is there any Solution of the Labor Question?" Hon. Carroll D. Wright, President of Clark University, as reported in the *Boston Transcript*, advised the application of the Golden Rule as the best solution of the problem. He said that arbitration is not all that is needed. The application of the Golden Rule would do more to promote confidence between the employer and the employee than labor legislation has done in a century in this country and in England, for nothing can be done that will have such a softening effect between the hosts of labor and those who hire them than confidence. The truest remedy is righteousness in business affairs.

All the Fall River cotton mills in the wage agreement save two were running some portion of their plants last week. It is expected that all will be running this week. The feeling seems to be growing that the long strike will break generally within a short time.

Irrigation plans already outlined in California, Oregon, and the Dakotas will involve the expenditure, in round numbers, of \$27,000,000, and reclaim a million acres of land capable of supporting a population of 500,000.

The largest grain elevator in the world has recently been constructed at Port Arthur, Ontario, at the head of Lake Superior, for the Canadian Northern Railroad. It has a total capacity of seven million bushels.

General.

A letter has been received from the superintendent of the athletic department of Waseda University, Japan, expressing a desire to arrange an international baseball match between Leland Stanford University and the Japanese University. Waseda University won the intercollegiate championship of Japan. There is a strong probability that the match will be arranged.

Sixteen arbitration treaties have already been made between European Powers among themselves and with the United States. Other conventions of the same sort are being negotiated. These treaties form an almost universal pact, favoring if not guaranteeing the preservation of peace for many years.

One of the big threshing machines in Kansas, under full pressure and with a full crew, recently threshed, winnowed, and cleaned fifty bushels of wheat in eight minutes, or at the rate of six and one-half bushels a minute. In 142 minutes 418 bushels were turned out, the machinery being three times stopped for some necessary adjustments.

"The total length of subway which Paris will possess when the present system is completed will be no less than forty miles," says *The Electrical Review*. "The work is now being carried out in sections, and at present two of the sections have been completed."

Up to November 25, thirteen deaths have resulted from football this season. The casualty list is the same as last year, but the number of serious injuries during the season just closed will exceed that of any previous year, totaling 296.

The Yale academic catalogue for 1904 shows that the four classes total 1,251, or two more members than last year. The university library has been increased by 20,000 volumes, making its total 300,000 volumes.

The art treasures at Windsor Castle are said to be worth over \$60,000,000. The King has had them rearranged, but has not been able to insure them as yet, owing to their great value.

The record for the twenty days of the open season for deer hunting in Wisconsin was twenty-nine men dead, fifteen seriously injured.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Spiritual Leadership.

REV. WILLIAM P. MC KENZIE.

THE world cherishes with greatest care some painting or single example of a sculptor's work, yet greater than the work is the doer of it. "He who hath builded the house hath more honor than the house." The artist, sculptor, or writer is famous because of some picture or carving or story which men value, but there was one whose plastic material was men. He did not give form to marble, but transformed men so that he could reply to an inquirer, "Tell . . . what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." If the thought of Phidias or Michael Angelo or Homer seems wonderful, how much more admirable, joy-giving, lovable, is the thought of Christ Jesus, which brings sufferers into health and the poor into mental enrichment. Of him it has been well said in prophecy,—

I have given him for a witness to the people,
A leader and commander to the people.

There is always a wide difference between a leader of men and one who is merely a controller of others. In some time of trial, when invasion besets a nation, when there is no head, no one to dare, the patriotic need is satisfied when a leader appears, one who, because he is a leader, becomes commander, that is, disposer of forces. When peace is gained such an one may become king and may wisely rule. Choice, however, is always implied when a spiritual leader finds a following.

The story of Vittor Pisani gives us an instance of the choice of a military ruler. He was a general of the Republic when Venice was at war with the Genoese. Returning from a victory he was met by the Genoese fleet in superior force against which he knew it was useless to contend. His plan was to provide a larger armament before engaging, but the Venetians were careful to let no man rule or decide alone, and with the fleet were a number of councilors (*provveditori*) with authority from the Senate, and they demanded that he engage the enemy. He did so and twice broke their line, but his fleet was shattered, and with a few galleys he drove through the circle of his foes and escaped to Venice. There he was promptly arrested and cast into prison for having been defeated. Meanwhile the Genoese came nigh and the people of Venice were thrown into a state of great fear and anxiety. No one was found who could be trusted to lead, and finally the people gathered to the prison house of Pisani, and with united voice demanded his liberation that he might lead them. The authorities delayed, but so persistent was the clamor and so united the demand, that they at last yielded, and Pisani was allowed to prepare the defences of the city and organize the willing citizens. He led them in his flagship, followed by galleys and smaller ships, and defeating the Genoese he

saved the Republic. The people made their choice for their own welfare and safety.

In the habits of such animals as have a social or communal life we find similar illustrations. The topaz-eyed big horn of the Rockies, the white haired wild goats, the elk, various kinds of deer, and the gracile antelope, are found in herds of various sizes, and a naturalist has noted an interesting fact respecting them; namely, that the leader of the herd is not necessarily the strongest or largest, nor always a male, but quite often a female whose wisdom has been shown in cases of emergency. What, then, is the reason for the selection of a leader? Does the herd consent to the control of one who assumes the rulership and fights down opposition, as is said to be the case among wolves? Among the harmless tribes this rule seems to prevail, that the wise one is followed, because this is the safest course. There is no demand made of any one to obey, no punishment administered by the leader; obedience has proved to be beneficial, and so the wisdom of one who is followed saves the herd.

A spiritual leader is sometimes spoken of as kindred to a military commander, but the analogy is misleading. The work of the soldier is to compass the defeat or death of enemies. In the process death may come to him, but if he desert he knows that the punishment is death. The commands are arbitrary, and to be obeyed without question. Such automatic and unquestioning obedience maintained by penalties and sanctioned by death, has made it possible for one man—king, ruler, or tyrant—to utilize the force of myriads of men for selfish and unworthy purposes, to oppress other nations, take possession of their territory, extort tribute, destroy their patriots, and annihilate their freedom. Such power has often been used to stamp out the religious life and obliterate the faith, hope, and love of a nation through cruel persecution, but it is characteristic of the spiritual leader that he is considerate of religious aspirations, and the gentler sentiments of men. He is more like the artist in his endeavor to reveal and sustain beauty. "A bruised reed shall he not break, and the smoking flax shall he not quench."

The motive of the spiritual leader is not desire for power. He does not seek to control men, but to enlighten them. His followers accept for themselves the leading he gives, and if any fall away, the only punishment is the loss of inspiration or enlightenment involved in defection. It is self-deprivation, as when a man leaves a lighted room and steps out into the dark. He presents the condition, not the light which makes no change in its shining. Like the light, the true leader remains serene in his love for humanity, he offers his best vision of truth to all who will receive it, and deprives none of his good-will, condemns none, but ever strives that men may be uplifted, blessed, saved.

It was through the wisdom of one man who found guidance from God, that the children of Israel were delivered from the house of bondage. The leading characteristic of Moses was not arbitrariness of personality but steadfastness, for with all his trials it is on record that meekness remained also a characteristic. It was his sureness of divine Principle which gave him that steadfastness

whereby he stood for God against enthroned tyranny and priestcraft in Egypt, and later against timorousness, idolatry, and rebellion in the wilderness.

His course and training is interesting. He went through the learning of Egypt, but did not rest in it. There came to him a perception of something beyond it whereby man could be blessed. But in attempting to bless his friends he began with a wrong method, with war. The killing of one or many of the slave drivers could not bring emancipation. So he was driven into solitude, that by meditation he might clarify his thought and gain a discernment of Principle. By revelation or unfolding of divine power which seemed miraculous, the divine Principle was perceived by him; and in turn he was called to make demonstration of this power to convince others. The footsteps then, whereby he prepared for his task as leader, were discernment, perception, reflection, or demonstration. Then came the final period or self-obliteration, the dedication of himself to the cause, when as spiritual leader he bore with the narrowness, crudities, and exasperating conduct of a selfish people. His love for them became so great that he prayed God to blot his name out of the book of life if the people could not be forgiven. He did not set himself above his people, but was one with them and labored for their good primarily, not his own.

In this age we see again the phenomenon of spiritual leadership. Again "a mixed multitude" is being guided through purifying experiences until sufficient stamina is gained so that the promised land may be occupied. The preparation of Mary Baker Eddy for her world-blessing task had in it the footsteps of perception, reflection, demonstration; that which is before the world's notice now, however, is her splendid self-obliteration, whereby her whole life is occupied in service,—that self-dedication and self-offering in which the divine urgency finds unobstructed channels and flows through her life like sunshine permeating the clear waters of a flowing river. Guided of God, she therefore is the friend of man, a safe counselor, one whose rebuke signifies love; and her leadership of those who choose to follow, brings them to liberty as children of God.

The Illusion of Fear.

ALICE M. SWARTHOUT.

A LITTLE child whose father bought him a toy dog seemed to be filled with great fear when it was brought near him. He drew back, trembling and screaming. At first he would not be persuaded that his fears were groundless, but loving words and the knowing that there was nothing to fear soon banished the tears and trembling, and the little hand reached out to take the dreaded toy. Had the toy dog changed in appearance? No. What, then, had been changed? The child's sense of fear was destroyed by the truth about the plaything.

This little incident brought to my thought the groundlessness of human fears. How the dreaded monsters of mortal sense are as harmless as the little toy dog when divested of their false disguise by Truth, and I was led to compare the child's experience with my own in teaching school. My first experience found me at the head of a large country school where order seemed to be an unknown quantity. It was my problem to solve the equation and bring out the unknown quantity. As in the case of the child, mortal mind invested the school with many grotesque and fearful qualities, among other things, an undercurrent of rebellion that might bring failure to me as it had to former teachers. Sometimes these evil suggestions seemed very real, very vivid, but a constant denial of their reality, their supposed power, the knowing that they were no part of God's creation,—this annihilated their claims, and, as in Moses' time, "The serpent, evil, under wisdom's bidding, was

destroyed through understanding in Science, and this proof was a staff upon which to lean" (Science and Health, p. 321).

I was then led to inquire what had been the battleground. Had the boys, the school, or the teacher been changed? No. Outwardly there were the same boys, the same school, the same teacher, but mortal mind had been seeing God's ideas through a distorted sense, just as had the child with his toy. It had invested God's creation with qualities which He never intended, then feared its own mind pictures. The battleground was therefore in this same mind; all the fear, the dread and the trembling were here in mortal belief. In reality these fears had never existed as anything or anybody, and when the serpent, error, was handled, when mortal sense was divested of its fears, the visible manifestation was order. I had found the unknown quantity, and had learned that, "To fear sin is to misunderstand the power of Love, and the divine Science of being in man's relation to God,—to doubt His government, and distrust His omnipotent care" (Science and Health, p. 231).

Healing an Integral Part of Christian Science.

HARRIET R. WHITE.

WHEN we look about us, and into our own lives, we are impressed with the marvelous reforming and regenerating influence of Christian Science. We are also impressed by the fact that many knotty problems which did not lend themselves to any solution, are now explained and can be understood by the teachings of Christian Science. Having ourselves once been in the unsatisfied condition which is experienced by mankind generally to-day, and having almost despaired of finding peace or a satisfactory solution of the problem of existence, we are overjoyed when we find the demands of reason satisfied, and that reason and revelation both witness to the infinitude of Truth.

At times we are tempted to rest on this mount of vision, feeling that it is surely the greatest height we may reach; then comes some word or message from our beloved Leader, or some article in the periodicals, which sounds a trumpet-call to better and yet higher achievements,—not alone in proof of discipleship but for the sake of mankind. Much good has been gained by the writer, and some valuable lessons in Christianity learned, in the attempt to answer some questions as to the importance of mental healing and the reason for it.

The world at large admits that a power is operating in behalf of humanity, to save from sin. Upon this premise has been established that colossal structure known as the Christian Church. Steadily, throughout its history, this Church has worked for the improvement of morals, for the alleviation of the sorrows and distresses of its adherents,—for the betterment of mankind in general. Mankind is practically a unit in its faith in the operation of Christianity in the direction of morals, but the point where faith is weak or lacking, is the discernment and acceptance of the full salvation taught and exemplified by our Master,—the salvation that includes physical as well as moral safety.

When divine Truth was revealed to Jesus, in the words, "Thou art my beloved Son, in whom I am well pleased," he was impelled to prove that Sonship. After going through a series of temptations or of tests, he came forth victor over every form of evil that is common to mankind, and he thus became "Not an high priest which cannot be touched with the feeling of our infirmities," but a compassionate Elder Brother. Then, with a heart which yearned to lift the burden from mankind and to establish faith in his Father as the giver of all good and the preserver of man, he went about doing good, "healing all manner of sickness and all manner of disease," lifting up the "hands which hang down," strengthening "the feeble knees," binding up the brokenhearted, feeding the hungry, restoring the dead and

dying to life and activity, thus meeting every need of humanity.

This healing of the sick was the distinguishing characteristic of the work of our great Master,—evidence of his divine mission, and it is also the distinguishing characteristic of Christian Science,—the evidence of its divine mission.

In the text-book of this Science, "Science and Health with Key to the Scriptures," page 373, we read, "If we are Christians on all moral questions, but are in darkness as to the physical exemption which Christianity includes, then we must have more faith in God on this subject, and be more alive to His promises." Christian Science comes teaching, as Jesus taught, that the healing of sin is the healing of disease, and *vice versa*. Many good Christian people in the churches and out of them may not yet have awakened to all that Christianity includes; they may have overlooked the fact that health is a concomitant of spirituality; many others may be doubting and questioning whether the "signs" which in the beginning of the Christian era followed the "beloved Son" shall now "follow them that believe." The necessity, then, is upon all who have discerned this full salvation, promised and exemplified by Jesus, to convince longing, questioning, hoping humanity that God still operates in behalf of man, even to the extent of caring for the body. "The divine Mind, which forms the bud and blossom, will care for the human body, even as it clothes the lily; but let no mortal interfere with God's government by thrusting in the laws of erring, human concepts." "Immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so-called, as well as in the spiritual" (Science and Health, pp. 62, 427).

St. Paul says, "For the earnest expectation of the creature waiteth for the manifestation of the Sons of God. . . . For we know that the whole creation groaneth and travaileth in pain together until now, . . . waiting for the adoption, to wit, the redemption of our body."

[Written for the Sentinel.]

The Church of Christ.

JULIETTE M. MINK.

A TEMPLE to be reared in thought,
That never may be sold or bought;
Its firm foundation laid in Mind,
With open doors for all mankind.
The corner-stone, so strong and fair,
Chiseled, and carved with patient care,
And bathed with tear's repentant flow,
Till spotless, bright it gleams below,
Its purity,—rare pearl of price,
For it, the world we sacrifice.
Its walls of truth,—tried, sure, and strong,
A refuge safe from every wrong.

The entrance into Soul's retreat,
Is by humility, so sweet.
Within, the light shines from above,
Soft, radiant splendor, fraught with love.
Oh holy place, so pure and calm,
Thou hast for us a healing balm.
In grateful love our hearts we raise,
And sing in notes of joy our praise.
Then forward to the altar led,
The sacred oil, poured on our head.
Fitted to serve,—made king and priest,
We'll lead the hungry to the feast;
Supporting, cheering all the way,
Until for them, too, dawns the day.
Our house is built, but not of stone,
Christ is the model, Christ alone.
'Tis stately, fair, without defect;
For God Himself is Architect.

Selected Articles.

A Christian Scientist's View of the Proposed Medical Practice Law.

The text of the proposed medical bill by Dr. S. D. Van Meter, styled, "A Model Act to Protect the Public Health and Regulate the Practice of Medicine," has been read carefully by the writer. Noting also your kind invitation for a Christian Scientist to give his impressions of it, I hasten to respond.

No rational, fair-minded person questions the need of laws regulating the practice of medicine. The public who trust their lives in the hands of physicians have the right to know that the law protects them from quacks and charlatans. Furthermore, the writer does not doubt, although not conversant with the details of existing laws governing the practice of medicine in Colorado, that the laws could be amended to the betterment of medical practice, and this Christian Scientists cheerfully grant. They have no desire to oppose medical legislation *per se*, and beyond the peradventure of a doubt no Christian Scientist will utter any word of protest against any just, wise legislation dealing with the control of the practice of medicine in itself. Christian Science is a religion and not a system of medicine, and the attempt to include it under medical legislation is both unwise and unjust. Christian Scientists are a people who pray, who believe the Bible is true when it declares that God healeth all our diseases. They prescribe no drugs, they use no electricity, no massage, no will-power; they simply pray. They pray as Jesus prayed for the healing of the sick, the recovering of the sinful. Surely they should be protected in this right, a privilege the dearest the heart could desire.

Furthermore, it is a rule of universal acceptance that we must give if we would receive. We must pay for services rendered. Jesus enunciated this doctrine when he said, "The laborer is worthy of his hire." Emerson in his great essay on "Compensation" applies profoundly this law to the affairs of life. Here are a few of his sayings:—

"Experienced men of the world know very well that it is best to pay scot and lot as they go along, and that a man often pays dear for a small frugality.

"A wise man will extend this lesson to all the parts of life and know that it is always the part of prudence to face every demand and pay every just demand on your time, talents, or your heart. Always pay; for, first or last, you must pay your entire debt."

Mankind has accepted these truths, as enunciated above, and has been following them ever since civilization began. They are the basis of law, of justice, of order, of love, for love is just. The doctor gives his skill and knowledge and receives just compensation. The lawyer receives his fee, the grocer his margin of profit, the farmer the price of his grain in return for his toil; the minister who prays for his flock, his salary in return for his labor of love. The Christian Scientist who gives time and talent, the fruit of chastened experience, also requires a reasonable return for his services. But our medical friend here objects. It's all right for the doctor, the lawyer, the minister, the farmer, and all other men to accept and follow the law of compensation, but for the Christian Scientist, no; that would not do at all. Hence these proposed medical bills.

Sections XI. and XII. of this bill deny the right of any person to heal the sick unless licensed by the state board of medical examiners, as follows:—

"Any person who shall in any manner hold himself out to the public as being engaged within this state in the diagnosis and treatment of diseases or injuries of human beings, or who shall suggest, recommend or prescribe any form of

treatment for the intended palliation, relief or cure of any physical or mental ailment of any person with the intent of receiving therefor, either directly or indirectly, any fee, gift or compensation whatsoever."

When our Lord sent forth the seventy as recorded in Luke, 10, he said, "Go your ways: behold, I send you forth as lambs among wolves. Carry neither purse, nor scrip, nor shoes, and salute no man by the way. And in the same house remain, eating and drinking such things as they give, for the laborer is worthy of his hire. Go not from house to house."

What is this but a plain statement of the law of compensation? This proposed law would require a disciple of Jesus, in order to obey his commands, to pass an examination in anatomy, physiology, chemistry, toxicology, pathology, surgery, obstetrics, and symptomology (exclusive of *materia medica* and therapeutics). Otherwise he would be subject to a fine and imprisonment.

Only one basis can be assumed to defend such a bill, and that is, that *materia medica* has grasped the whole healing art. Unfortunately for such a basis of reasoning, facts do not prove it to be so. The list of diseases termed incurable by *materia medica* is a long one and is constantly growing. Complicated forms of disease have arisen with which *materia medica* sadly confesses itself, in many instances, utterly unable to cope. After four thousand years of trial, *materia medica* has not yet formulated a consistent basis of practice. The remedy of yesterday is thrown aside to-day, and the discovery of to-day is useless to-morrow.

In the face of this state of affairs can our medical friends with any degree of justice ask that the entire care of the sick be given them? Christian Science, despite bitter opposition, has proved the healing power of rightly directed prayer, and thousands have found relief in its gentle ministrations when medical skill and knowledge were confessedly in vain.

If Doctor Van Meter in his public statement includes the Christian Scientists of Denver among the "hordes of medical impostors that infest our city" he certainly does not know what he is talking about. There is no finer body of people in Denver or in Colorado than the Christian Scientists of Denver, and this the gentleman can easily verify. The plea of the gentleman that the public health must be protected does not apply to Christian Scientists. Their healing compares favorably in efficiency with *materia medica* and in many cases surpasses it. Accepting the gentleman's statement of pure disinterestedness for the public, is it not a confession of weakness to wish to bolster a cause by such sweeping legislation? Why should one class of the community be entrenched behind legislative enactment at the expense of another? Both the state and the United States constitution prohibit such legislation, and this has been the almost uniform ruling of the courts. The writer is not conversant with the motives which actuated the two governors to veto the former medical bills. Since great pressure in both cases was brought to bear to secure the governors' signatures to their bills, it is not reasonable to suppose their acts of veto were due to political reasons. The simplest explanation is that the bills were unjust as well as unconstitutional.

Let it furthermore be clearly understood that the Christian Scientists of the state are seeking no exclusive legislation for themselves. They only insist that they be protected in those cherished rights guaranteed to all citizens by the constitution of the state and United States. This insistence upon their rights being maintained harms no one, and certainly benefits all. Their record as citizens, law-abiding and just, is known all over the state, and to assume for a moment that they or their religion harms the state is preposterous.

EZRA W. PALMER.

The Critique.

Favorable Comment.

The following excerpt is interesting in that it shows the trend of advancing religious thought and its estimate of Christian Science. The adherents of Christian Science are glad to note an appreciative sense on the part of their ministerial brethren, and cheerfully await a fuller recognition of the truth of its teachings, which will surely come as these are better understood.—Eds.

In an address at the First Unitarian church yesterday morning, the pastor, Rev. J. D. O. Powers, found much to commend in the doctrines of Christian Science. He said in part,—

"Christian Science is one of the most remarkable and significant religious manifestations of our times. In the short period of thirty-five years it has built several hundred costly churches and gained thousands of loyal adherents prominent in social and business circles. Unlike any other sect since the time of Christ and his disciples, Christian Science presents itself under two distinct phases. First, as a religious system, and second, as a sanitary, or healing system."

After a discussion of Mrs. Eddy's doctrines, in some of which he agrees with the Christian Science Leader, Rev. Mr. Powers continues,—

"We may separate out as distinct to Christian Science this alkaloid, or active Principle—The divine Spirit, or divine Mind, or divine Life is All in all. It is the only source of healing. Its healing system differs from all others in this: The human mind and medicine have nothing to do with it. You must, if you would be healed, give yourself up entirely to the divine source of all health. Mrs. Eddy accepts the New Testament and takes Christ at his word. She challenges believer and unbeliever alike, 'Do you believe in the New Testament gospel? Is it sane and practical? Did the miracles really happen? If so, why not to-day?' She says they did and do now happen. However much we agree or disagree, we must recognize that in Christian Science we have a profound and needed protest against the deadening materialism that has fallen over religion and medicine alike."

Sioux City (Ia.) Journal.

"Self-Denial" Day.

The following account of a collection taken in the Baptist Temple in Philadelphia is interesting because of the spontaneity which seems to have marked the occasion, and the unselfish thought which was expressed by this "self-denial" day. We congratulate Dr. Conwell and his brethren upon the prospect of so speedily wiping out their church debt.—Eds.

Stacks of fat white envelopes containing the offerings from the much-talked-of "self-denial" day which the three thousand members of the Baptist Temple congregation were to observe last Thursday, are locked up in the safe in Dr. Conwell's office in the Temple. The money and checks will be counted to-morrow and the total amount received announced on Thanksgiving Day.

Ushers in the Temple yesterday were almost overwhelmed by the deluge of envelopes which transformed their usual offertory duty into a real working task.

Dr. Conwell is gratified by the size of the envelope pile, but he will not hazard a guess as to the amount that the contents will foot up. He feels sure virtually every member of the congregation gave the amount of his salary for the one day, or a pro rata share of his yearly or monthly income.

It is expected the offering will go far toward making up the \$35,000 needed to clear the church of debt. The entire mortgaged indebtedness on the Temple is \$75,000, but \$40,000 of this has been provided for.

The North American, Philadelphia, Pa.

Among the Churches.

Stuttgart, South Germany.

A little Band of Christian Scientists began holding Christian Science services in Stuttgart, South Germany, last March. A large and pleasant room was secured, Friedrichstrasse 9, and furnished with a view to simplicity and harmony. On Sunday morning the service is held first in German and then in English, and on Wednesday evening there is the usual testimonial meeting. The attendance only averages twenty-five to twenty-eight, but this little band is filled with an earnest desire to be faithful and obedient followers of our beloved Leader, Mrs. Eddy, and to keep steadily in the path marked out for us by her. We strive to preserve the spirit of unity and to overcome personality. Several of us have had class instruction, and this has been a great help to us.

Circumstances seemed to make it wise to give our assembly a strictly private character; only those join us from time to time who have been healed, or who are drawn by a sincere interest in Christian Science. Healing work is being done, and many dark mortal mind pictures have disappeared before the light of Truth.

Those of our number who do not yet know English show considerable eagerness in learning it, in order to be able to read "Science and Health with Key to the Scriptures" for themselves. *Der Christian Science Herold* is a boon which is much appreciated, and it is steadily gaining subscribers. It is a regular little missionary. Of all the numbers I have received since its first appearance, only three or four are in my possession; all the rest are out doing work among those who are awakening to an interest in Christian Science.

To those of us who read English, the *Quarterly*, *The Christian Science Journal*, and the *Sentinel* are never-failing sources of instruction and help, and we are deeply grateful for them. They always bring the help needed at the particular moment when they come; and especially every item in them written by Mrs. Eddy comes like a fresh inspiration to spur us on with increased courage to renewed efforts in the fight against seeming error.

The other day when reading about the Scientists' visit to Concord, the thought came to me, If only we too could hear Mrs. Eddy speak; but then directly came the realization: Every word uttered or written by her in America reaches us here, and goes as straight to our hearts as if spoken directly to us. We know her loving guidance is all ours too, and we treasure it and seek to follow it in practice. We think of her with loving and grateful reverence.—*Correspondence*.

Quincy, Ill.

Our little church is rejoicing in the proof that divine Love does meet every need. For some time we had felt the need of a quieter, more suitable place to hold services and also for a reading room. Recently the Jewish Temple was offered us at a reasonable rent, and we were glad to accept it. It is a neat little structure, the auditorium seating about four hundred. We were also offered a large, airy room for a reading room, which we accepted, and September 30 we moved to our new quarters.

For two years we have taken up a special collection for The Mother Church Building Fund the first Sunday in the month. We have also started a building fund for our own church which is steadily growing.

The press is manifesting a kindly attitude to us, and very few erroneous statements with regard to Christian Science are found in their columns. For all these manifestations of progress we are very grateful. We are very thankful to our Leader, who in wisdom has provided us our means and opportunities of growth.

Correspondence.

Akron, O.

The children of our Sunday School of less than twenty members wish to tell of the blessing that followed after giving to the Building Fund of The Mother Church. Some time ago they sent to the Treasurer, Mr. Chase, fifteen dollars, one half of the collections on hand, thinking it best to do so at the time; with some of the balance they placed copies of Science and Health and "Miscellaneous Writings" in the new public library of our city.

Immediately after giving, the collections increased fifty per cent, and they have continued to grow, despite the fact that some of our generous givers moved away. As a result of this increase they forward to-day to the Building Fund of The Mother Church sixty dollars, and they rejoice to have learned that when we open the door to give we open the way for receiving. We have received freely from our Leader, and we should give as freely to our beloved Cause.—IDA HERBERICH, *Sunday School Secretary*.

Breckenridge, Col.

It is with pleasure that we write of the organization of First Church of Christ, Scientist, in Breckenridge, Col.

In December, 1902, meetings were started and the lessons regularly read, at first to an audience of one, and it did seem for a time as if we were making no progress; but we continued our efforts, and God has blessed us abundantly. We now have as many as thirty at the meetings, with an average attendance of over twenty.

Great interest seems to have been aroused in the little town, and we are making arrangements for a lecture, as we are of the opinion that the time is ripe for vigorous exposition of the merits of Christian Science.

Several wonderful demonstrations have been made of which I will mention one in particular.

A little boy of nine years was entirely cured of rupture in one treatment. He had continually worn a truss from the time he was three weeks old.—*Correspondence*.

Merrill, Ore.

It may interest the Field to know that Christian Science is steadily gaining ground here in Merrill, Ore., and that we have purchased a most desirable lot for our church which is to be. A little band of earnest workers meets at the public schoolhouse every Sunday morning, and goes over the Lesson. We also have a growing and earnest band of little workers in our Sunday School.

Four years ago there was only one Christian Scientist in Klamath County, and she was looked upon as peculiar. Since that time there have been many beautiful demonstrations of healing, and every day brings greater gladness for the blessed truth that makes men free. We are realizing more and more what a grand privilege it is to be a Christian Scientist.—MATTIE E. RHODS.

Kirksville, Mo.

Christian Science has been exerting its healing influence in Kirksville since 1897, but a society was not organized until April last, when eleven charter members were enrolled.

We have a good attendance with increasing interest, and the distribution of literature has brought good results. It has brought many inquiries as to what Christian Science is. Some good healing work has also been done, and we are taking steps toward establishing a reading room and giving a lecture, as we consider it a blessed privilege to be in full obedience to the requirements of our Church Manual.

MRS. ROSE A. WEBSTER, *Clerk*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A New By-law.

ARTICLE XXVI.

PRIVATE COMMUNICATIONS.—SECTION 15. A strictly enjoined private communication from the Pastor Emeritus to an officer or to a member of her church shall not be made public without her written consent. A breach of said trust shall be sufficient cause for removing an officer from his office in church and for subjecting any member to discipline.

The Teachers' Association in London.

THE following cablegram, conveying an expression of the love of the English students, was recently received by our Leader.

London, November 28, 1904.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Members of Teachers' Association, London, send much love, and are striving by doing better to help you.

DUNMORE.

MRS. EDDY'S REPLY.

Concord, N. H., November 29, 1904.

Earl of Dunmore, and Teachers' Association,
London, G. B.

Increasing gratitude and love for your lordly help and that of your loving Association.

MARY BAKER EDDY.

Brotherliness.

CHRISTIAN SCIENTISTS have been criticised from many different standpoints and for many alleged sins of commission and omission, but one of the most novel indictments yet brought against our people is that of a Congregational clergyman in an article contributed to his denominational paper. He says, "The attitude of Christian Scientists toward the churches of our order is at heart undoubtedly critical and hostile."

The editor of the *Concord Patriot*, who is in a position to know whereof he writes, answers this and other criticisms in an able editorial from which we quote as follows,—

"I have been a good deal among Christian Scientists, and have attended many Wednesday and Sunday services in Christian Science churches, but never, either inside or outside, have I heard a sharp criticism made by a Christian Scientist upon the Congregationalists, nor have I observed any hostility on the part of Christian Scientists toward other denominations.

"In many publications throughout the country, idle and thoughtless charges made against Christian Science are met by Christian Science writers and refuted, but never have I found in these defences aught but a broad charity and loving forbearance for those who assailed the doctrines of Christian Science or the beliefs of its devoted members."

The editor very pertinently says that where this critic "got his knowledge of what Christian Scientists 'at heart' thought

of the Congregational denomination, is an avenue yet to me unexplored. As the fruit of a tree is its truest manifestation, so the church may be known in the same way, and criticism of or hostility towards other denominations are not fruits of Christian Science teaching."

The reverend critic also says in the same article, "Some Congregational ministers fraternize with their Christian Science brethren, and some do not. In the very nature of things, this state of affairs cannot be permanent. . . . Toward the ministry of the Christian Science church, if such it may be called, the attitude of Congregationalism must be one of disapproval, and to a certain extent of disfellowship," a declaration which we think will hardly meet with the approval of any large number of our critic's brethren. To this the *Patriot*, without going into the question of whether this statement is an authoritative declaration in behalf of the denomination to which the critic belongs, says,—

"If there is not to be brotherliness among the ministers of our Christian churches, how are we to expect true brotherliness—fraternity—among the brothers, and if our Christian churches refuse to teach and practise fraternity, what becomes of the temple we have striven through nineteen centuries to rear?"

"When Jesus was notified on one occasion that his mother and brethren waited without to see him, he looked about and said, 'Who is my mother or my brethren? . . . Whosoever shall do the will of God the same is my brother and my sister and mother.'"

In spite of these occasional criticisms we have faith to believe that kindlier and more tolerant views regarding Christian Science and its adherents are now held by both the clergy and the laity of the older churches, and that there has entered into their estimate of our work a clearer recognition of our loyalty to the Master's teachings.

It is a noticeable fact that newspaper men, who have the widest possible opportunity for observing the character and growth of the Christian Science movement, have largely revised their estimate of it, and do not hesitate to speak of its work for humanity in a just and kindly manner. We surely have a right to expect no less justice from those who, by their very position, avow their purpose to labor for the realization of that true brotherliness which has ever been recognized as a distinctive characteristic of the true Christian spirit.

M.

A Right Look in the Wrong Place.

IN speaking of the larger possibilities for good which have come to the church in modern times, a religious leader has recently said,—

"We have no doubt that the conception of God which looks into present phenomena, present events, and present experiences for the revelation of God, is a better incentive to faith than one which looks only or chiefly to a history of past phenomena, past events, and past experiences."

That present observation and experience must take rank over traditions as a basis of thought and determination, no one will question, but Christian Scientists have come to see that a healing and saving concept of God is not to be secured by peering into the phenomena of mortal life, whether past or present. The false sense of one age is equally false with that of every other, and our religious advance is not to be found in the study of present events, but in the demonstration of divine Principle. This idea that salvation is to be secured through the more careful observation and more technical analysis of human conditions is a most pervasive fallacy. In the domain of literature and art it has led to a realism which seems to exult in deformity, while in the field of physics it would honor the microscope rather than the miracle as the key to our spiritual inheritance.

Jesus specifically rebuked this hope and undertaking. Clearly and continuously he taught his followers that they must turn away from the material and the human if they would find the spiritual and the divine, and this is where Christian Science presents one of its most striking contrasts to general thought and habit. It does not undervalue any increment of wholesome information, but it does emphatically declare that the spiritual is not to be reached by a "more intelligent" utilization of the material. "Mortals must look beyond fading, finite forms, if they would gain the true sense of things. Where shall the gaze rest, but in the unsearchable realm of Mind?" "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, pp. 264, 261). Over against the vain struggle of the centuries, in which spiritual aspiration has ever been fettered by its regard for matter and mortal man, Christian Science presents the promise and the demonstration of freedom through the apprehension of spiritual truth. To Job's query, "Canst thou by searching find out God?" it answers promptly and positively, Yes, but the eye must be fixed, not upon the mutations of matter, but upon the unchanging verities of Spirit.

W.

The Vitality of an Idea.

THE world cannot overestimate its debt to those who, in any line of research, endure "unto the end." Their "foot-prints on the sands of time" assure those who come after them that the multitudinous ideas of Mind have an inherent vitality which inspires all those who are identified with their unfoldment in human consciousness.

The daily papers tell the sad story of the recent passing on of an inventor when he was seeking to bring to successful completion a daring experiment in navigation. The incident recalls the experiences of many brave men who have striven to liberate themselves and others from the limitations which are incident to a material sense of existence, the pathetic and inspiring experiences of those who have discerned new ideas and made them practical.

In the unfoldment of a new idea, whatever the nature of the discovery which leads away from the beaten path, the experiments necessary to its demonstration are usually fraught with difficulty and danger. The belief in material law, like an insurmountable wall of rock, seems to bar the way to progress, and the discoverer must challenge the popular sense of the authority of processes which have long passed current as laws. Then there is often a long and lonely period of experimentation, attended by self-sacrifice and privation, and when at length the discovery is offered to the world, there is doubt and incredulity on the part of friends, and cruel mockery, if not actual persecution from the public whom it would benefit. It sometimes happens, too, that at the first sign of assured success, a dishonest claimant comes forward to demand another's hard-won reward.

In our text-book we are encouraged to "so improve material belief as to destroy it, by thought-germs tending spiritually upward" (Science and Health, p. 545). Thus shall we learn that all right ideas give life to the one who apprehends their spiritual origin, and it is this which has sustained all truly great men and women, and enabled them, like St. Paul, to endure "necessities" "distresses," "stripes," "imprisonments," "labors," "watchings," "fastings;" and this, too, through "evil report and good report; as deceivers, and yet true."

In Christian Science we learn that all true ideas have their origin in the divine Mind. The Bible declares man's birthright to be dominion, and Christian Science teaches that the divine ideas which emanate from "nature's God" are all united in one Principle, and their recognition and unfold-

ment tend to establish and maintain this dominion in human consciousness. This was proved by the great Teacher who stilled the sea, walked the waves, healed the sick and the sinful, and raised the dead by his understanding of spiritual law. With this understanding the difficulties which attend the giving of a new idea to the world are lessened, and in time overcome; and what is of yet higher importance, our dependence upon the protection of spiritual law is shown to us. In our Leader's wonderful definition of man, she says, "He is the compound idea of God, including all right ideas" (Science and Health, p. 475). The world *feels* this as never before, but its need is to *know* it scientifically and spiritually, for thus alone can ideas be seen in their relation to divine Principle, and to man's unfoldment and dominion.

K.

Thanksgiving Day Services.

MANY reports have reached us of "overflowing" Thanksgiving services, and it would be a pleasure, were it possible, in our limited space, to refer more specifically to them all. Our growth in gratitude must ever find more and more loving and continuous expression, until every day shall have become a Thanksgiving Day, and every word and act shall reveal to all about us our deepening sense of joy, our keener appreciation of indebtedness to divine Love.

A Correction.

In the issue of December 3, page 217, first column, line thirty, for temerity read timidity.

Board of Lectureship.

Mr. Clarence C. Eaton has been elected a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. Mr. Eaton's address is Room 514, Chamber of Commerce Building, Tacoma, Washington.

Letters to our Leader.

Evanston, Ill., November 13, 1904.

My Dear Mrs. Eddy:—My heart so overflows with gratitude to-night, that even at the risk of trespassing upon your valuable time, I feel I must write you. It is nearly eight years since Christian Science rescued me from a fate which I dreaded more than death,—insanity.

I had suffered for years from insomnia and extreme nervousness, and as my trouble was thought to be hereditary, it seemed as though there was no escape for me. I had been under the care of eminent physicians in Switzerland and in Paris, and they had exhausted all means at their command, but without avail. During all this dark period my one unfailing refuge was my faith and trust in God, and He does not leave His trusting ones without relief. As my reward, Christian Science came to me with its wonderful light, and has truly transformed my life. From being a timid, suffering, helpless woman, I have become a strong and vigorous one; my executive ability has been greatly augmented and broadened; my powers of endurance greatly increased; the depression which in the past had so often weighed me down, has been lifted, and now every day is a happy one, because I feel that I have the strength to accomplish what I undertake.

The study of Christian Science I find most beautiful; even a slight understanding of it is priceless, because it leads on into greater light. To say that I love Christian Science and its Discoverer, expresses only in part what my

heart longs to utter. In the words of our text-book, "Gratitude is much more than a verbal expression of thanks" (Science and Health, p. 3). No privilege could be so precious, no honor so great, as that of following patiently, faithfully, trustingly in your footsteps as you have followed the Master; and what could bring such glorious rewards! With a thankful heart I can say in the words of quaint old Samuel Rutherford, "God forgive them that raise an ill report upon the sweet cross of Christ; it is but our weak and dim eyes that look but to the black side, that make us mistake; those that can take that crabbed tree handsomely upon their backs, and fasten it on cannily shall find it such a burden as wings unto a bird, or sails to a ship."

Truly could the Saviour say, "My yoke is easy and my burden is light." My pathway in Science has sometimes seemed thorny, as I have seemingly had bitter opposition to meet, but all these experiences have taught me valuable lessons which I could not have spared, and I am happy in knowing that all is well, for "The Lord God omnipotent reigneth."

With reverent, grateful love, your follower,

ELEANOR NOYES ORR.

Philadelphia, November 18, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—Two little happenings of the last few days may contain some atom of interest for you, to whose labors is due all Christian Science achievement. To-day a young man, a splendid fellow, visited me, and in talking with him I learned that he had been practising law down in Texas, but had become imbued with the idea that he ought to study for the Presbyterian ministry. He came North last week with the intention of matriculating at Princeton. Meanwhile he heard of Christian Science and bought a copy of your work, Science and Health. Through reading it he was healed, uplifted, and convinced of the truth of Christian Science.

Yesterday I learned that a newspaper reporter for one of our big papers here, who has, from time to time, been engaged to write up sensational stories on Christian Science, has become a convert to our faith, and is now earnestly studying your book. The returns from the recent election show that Judge Love of this state, who, two years ago, rendered a most outrageous decision in a Christian Science church charter case, was defeated for re-election by his own party, and Mr. Williams, the lawyer who helped us win our fight in the legislature, has been elected judge for his county.

These things cheer us on in our efforts "to heal and to save."

Lovingly yours,

ALBERT E. MILLER.

Notice in Regard to Practitioners' Cards.

In sending back their blanks with office hours indicated, many practitioners have omitted to say whether they wish these hours to be announced in their cards or not. It is desirable that those who wish to inquire regarding Christian Science, or desire healing, should be able to know when they may find the practitioner at the address given, therefore it is desirable that office hours should be announced, though this is not made a requirement. Any change of this kind will be made without extra cost, unless it involves an additional line or lines; in that case the additional space will be charged for at present rates, \$3.00 per line. But these changes can only be made when requested specifically by the advertiser. The Publishing Society therefore asks for definite instructions from practitioners when they wish additions or changes made in their cards.

Testimonies of Healing.

It is five years since Christian Science was first brought to my notice. I had been under a physician's care for eight months when it was thought best for me to have an operation. I went to Hahnemann Hospital and was there ten days trying to recover my strength sufficiently to stand the operation, as I suffered from great physical weakness, had very bad night sweats and then a chill, indigestion so bad I could not eat any solid food,—raw eggs, milk, and ice cream being the only food I could eat without its distressing me. The nurse got me ready and the doctor who was to perform the operation came in to see me and asked how I was. I told him I was all right except that my side hurt me and my limbs were very sore, that I thought I had taken cold. He said I had better wait a few days until I got over the cold. I seemed to get better and in a few days I was again made ready for the operation. I took another cold, but in a more aggravated form. I perspired all night, suffered with pains in my side and could hardly breathe. My flesh was so sore I could not move in the bed. The operation was to be at 10 A.M. My husband came to be with me during the time and the physician told him that unless he was willing to assume all responsibility he would not perform the operation, as he could not tell how successful it would be. My husband said that it had better be postponed for a while, until I got stronger. I asked the physician if I could not go home for a week or ten days, and he said I could. I stayed at home about two weeks and then went to see the physician again. He asked how long I had been suffering with this pleurisy and taking cold so easily, for it seemed that I took the very best of care of myself. I told him I had the grip and pneumonia about two years before and always had to be careful that no fresh air blew directly upon me or I would suffer. He said I was too delicate for an operation then. This was in May, 1898, and the physician thought I had better wait until fall,—that my husband did not want to lose me.

I am happy to say that I never needed an operation, as a Christian Science practitioner came to room at the place where we were living and used to talk to us about Christian Science. I went to see this lady and asked if she thought I could be healed. I told her she need not think I would believe in Christian Science unless she healed my body. She took my case and gave me some understanding of my relation to God, and it seemed so beautiful to me that I thought, if Christian Science is the truth I want it. She treated me once a week for five weeks and during the treatment she asked me what was worrying me. I told her I had had one child, who had been stolen from me when she was six years old and I could not find her. My practitioner assured me that there was no loss in the divine Mind, that God is good and infinite, and that my daughter was in His care, safe in divine Love. This gave me great peace of mind, for I had not thought of her in that light before, but was fearful that something would happen to her if I did not find her soon. I was healed of a muscular disease, of physical weakness, indigestion, constipation of long duration (bowels had not moved for three years without medicine or enemas). I had headache all the time, but it left me immediately, also severe uterine trouble, and I had not been without a backache for many years. These ailments all left me and I continued to be perfectly well for three years. I read Science and Health every day, and it was my only physician.

Suddenly nervous prostration and mental depression manifested themselves, caused by a desire to see my daughter and have her with me. I seemed to be in the deepest despair. I was nearly without hope; but the darkest hour is just before the dawn. It took a year for me to recover from this nerve exhaustion, but I knew that God was my health and strength, and in Him I trusted

faithfully. I knew that I would find my child, since God's ways are not as our ways.

A year ago I received a letter from a man in Illinois telling me he had found my daughter. I was indeed happy and lost no time in trying to hear from her so I could go after her and bring her home with me. She was in Miller, S. D., living with a lady who was also a stolen child, and who has been looking for her mother for many years.

I trust that all who read these lines will find courage to renew their strength and be patient. My burden at times seemed heavier than I could bear, but, thanks be to God for His goodness and mercy to me, I am again well and fast regaining my strength; I have my daughter, who is now fifteen years old, and Truth as revealed in Christian Science is helping me daily to overcome error. I am grateful to Mrs. Eddy for Science and Health, and the blessing and comfort I have received through reading it. I thank my practitioner for the help she was able to give me in my time of need. I pray daily "Not my will, but thine, be done."—MRS. OLIVE M. DETWILER, Chicago, Ill.

Before I came into Christian Science I had been an invalid for years, but for the last seven years I have seldom had a pain or an ache, and now, after having passed the eightieth milestone, I am in perfect health, and after having used glasses for twenty years, I am now reading and writing without them. For all this I am very grateful to God, to our dear Leader, Mrs. Eddy, and to my teacher for lifting me out of darkness into light. Through my little understanding of the truth I have been able to help some others out of sickness into health.

P. H. WILCOX, Los Angeles, Cal.

For three years before I came to Christian Science, now nearly six years ago, I suffered day and night with asthma. I did not know what it was to have a well day. I tried everything that medical aid had to offer, but to no avail. One day a friend said to me that she could tell me what would help me if I cared to try it. I answered that I would try anything to get well. She said, "Christian Science will heal you." I had never heard of it before, but decided to try it at once. When I called to see a practitioner she told me that God would heal me. I then took a treatment, and after five treatments I was well.

I have a little son, three years old, who has never been given medicine. At one time when he was very ill with all the symptoms of typhoid fever, and seemed to be sinking rapidly, I sent for a Christian Scientist, who remained with us all night. A few hours after her arrival he rested quietly, and the next day played with his toys, proving that he was well again. Then my heart was again uplifted to God in gratitude and love, and words fail to express my love for dear Mrs. Eddy, who has revealed to mankind this blessed truth. I am also grateful to the Scientist who was so patient and loving in her ministrations.

MRS. MAUD B. JACKSON, Cincinnati, O.

Christian Science was presented to me in the year 1892, but I did not accept it fully till two years later. I had not a healthy organ in my body, but the treatment was given for a very badly sprained ankle, which kept me in bed. I was healed of that quickly and was a changed woman, because He whom I had always tried to worship from a child, had been brought near to me. Science and Health was put in my hands for the first time, and I knew that God had revealed Himself to me through that book. I read it every moment of the time that I could spare. When my duties as a wife and the mother of five children were attended to, I would pore over its pages, drinking in the truth as fast as I could. I just lived on it for

months and months, not thinking of anything but the truth contained therein, till when I next thought of myself I was healed of every trouble and was a free woman. Oh, the joy of that moment none can tell but those who have been through similar experiences.

There came ample opportunity in the next ten years to demonstrate Christian Science, both for myself and others. The demonstration of the power of Truth has been enough to cause life-long gratitude to Mrs. Eddy, who has made it possible. My desire is so to live that people, seeing my good works, may be led to glorify my Father in heaven.—SARAH L. McDONNELL, Toledo, O.

I feel very thankful for a beautiful demonstration over an injury to my left eye. A few weeks ago, I suddenly struck my eye with a penholder. At first I did not think anything of it, but in a few moments I felt a dart of pain, and immediately declared the truth. I am a bookkeeper, and those associated with me in business are not Christian Scientists. My employer was standing near by and said, "Oh, how you have hurt your eye!" and in great fear exclaimed, "What will we do without you?" (as stock was being taken at the time). I answered that my eye would soon be healed. The mortal mind thought held over me was very great. They declared, "You must go to an oculist at once." I kept as quiet as possible, and when I arrived home the practitioner was called. She said afterwards that at the time fear crept over her, the eye had such a frightful appearance, as the entire ball was covered with blood, and from the corner hung a small sack of clotted blood. This happened in the evening. The practitioner worked all during the night to destroy the manifestation as well as her own fear.

I slept well all night and the next morning the worst conditions had disappeared without any symptoms of inflammation, although the eye looked very bad. I was asked, "Do you feel anxious, and would you like to consult an oculist?" I said, "No; I am willing to trust Truth and feel that I will come out all right." The good work went on and in ten days the trouble was overcome. In two weeks every trace of it had disappeared. I will add that I only remained away from work two days.

I gladly acknowledge the benefit received from the treatments. The love reflected by my dear practitioner reassured me, for I was touched by the mortal fear around me on the evening of the supposed injury. There are no words strong enough to make it clear how truly thankful I feel to God, and to our dear Leader, Mrs. Eddy, also to the practitioner for showing me so lovingly the way out of all human fear, and I realize more and more how thankful I should be for Christian Science.

My employer and family are looking into Christian Science since they witnessed this demonstration for my eye. They are reading Science and Health and other literature on Christian Science.

One who was present at the time my eye seemed almost put out, asked me, after the error had been overcome, "What did you use for your eye?" I replied, "Christian Science healing was alone used." There was great surprise expressed, and a silence followed which means much, I believe.—LOU LEE, New Orleans, La.

It is a pleasure to send my testimony to the *Sentinel*, though words fail when I would express the gratitude that my heart speaks. I had long felt a yearning for the peace which passes understanding, but I never found it until I read our text-book, Science and Health, which is illumined with the light of Love.—the Love that never faileth.—then I felt the attraction of Spirit, and the understanding of what good is, tenderly unfolding to me, and animal magnetism losing its false attraction. My first visit to the practitioner I shall never forget. I lost all

sense of time, and left her presence joyous in strength. When visiting London in previous years I took my pleasures sadly, seeing many doctors, and finding much rest necessary between those visits. Now, with rejuvenated thought, I can go along trustingly, finding eternal youth in the fuller understanding of the one Mind, and the knowledge of good as our birthright which gives us our true self-government.—EVELINE ARCHER, Cornwall, Eng.

With the hope that the story of my healing will help some one, I send these lines, too long delayed. Six years ago I was healed in two weeks of a severe attack of rheumatic fever, after having been treated by an eminent physician for five weeks, and seemingly growing worse all the time under his care. This so-called rheumatic trouble had first afflicted me when a boy. It had seemed to grow worse in all the intervening years, and the physicians from both the old and new schools, without a single exception, claimed that I should never be free from it. I was also treated by them for valvular heart trouble, supposed to follow the rheumatism, and for dyspepsia, but none of these troubles yielded to the medicine. After I had been treated in Christian Science and healed of the painful rheumatism, I discovered that these other ailments had been overcome as well; and for six years we have relied entirely on divine Love as revealed in "Science and Health with Key to the Scriptures."

It would take many pages to tell of all that Truth has done, and is doing for us, physically, morally, and spiritually, and our hearts go out in unspeakable gratitude to our dear Leader, Mrs. Eddy, for what she has done to lift the world from pain, sickness, and sorrow, into the glorious light of Truth.—C. W. MANNING, Norfolk, Va.

I wish to express my heartfelt thanks for benefits received through a knowledge of Christian Science, gained by the earnest study of the Bible and Science and Health, also the periodicals of Christian Science. We were attracted to Christian Science by the healing of some of our neighbors,—cases that were pronounced very difficult to heal and which had received no permanent benefit from doctors or medicine. I was then a member of an orthodox church and was very reluctant to give Christian Science an impartial investigation. I thought in my blindness that it was not of God. After being "beaten with many stripes" and after I had seen many convincing proofs that God's ways are higher than man's ways,—then I was willing to turn to Christian Science, but not until by a sad experience we were forced to leave all for Christ, Truth. The turning-point was reached when our little girl, then four years old, was taken with what the doctors called diphtheritic membranous croup, from the effects of which she succumbed. Our other and only little girl, who was eight years old, was then taken very ill and the doctor said she was just like the first, who had lived only five days. The first one died on Friday, and we had the doctor on Saturday with the other, but he gave no hope or encouragement. We appealed to a Christian Science practitioner Sunday morning, and we have our child with us now. Since that time we have been sustained by Truth, independent of material remedies.

Words are inadequate to express our thanks to God and to Mrs. Eddy for the many blessings received by us. We have had many proofs of God's loving kindness and some beautiful demonstrations for ourselves and others. I desire to be a faithful servant in the Master's vineyard.

L. COOPER, Gober, Tex.

I first became interested in Christian Science about four years ago. At that time I had many ills. I was sent home one evening from my work by a doctor who told me

that I must be very careful or I would have the grip, and, to mortal sense, I was very badly off. On my way home I stopped at a drug store and purchased some medicine, and when I was about to take a dose, some one suggested to me that I try Christian Science. I said I would do so. I notified a practitioner and went to bed, not expecting that Christian Science would do me any good; but as soon as the Scientist had my case I went to sleep and slept well all night. When I awoke next morning, to my surprise, the trouble had nearly all left me. I ate a good breakfast and went to my work.

I was also healed of granulated eyelids, for which I had tried many material remedies, even to blue vitriol, and they got no better; but with one treatment in Christian Science the ailment was healed. I have also been healed of stomach trouble, from which I always suffered until I came into Science, and that has been entirely overcome, also the use of profane language, to which I was addicted, and many other errors. My wife was healed of milk leg, which troubled her very much. I also had mumps, but it was driven out by the truth. We have two boys, aged three and five, who have been healed of many troubles by Christian Science. With the little understanding I have of this blessed Truth I am able to overcome a great many ailments, and I am thankful to know that God is ever present and ready to help all who put their trust in Him.

There is no church here, but we enjoy the study of the Lessons at home, and I trust that before long there will be more Christian Scientists here. I am sincerely thankful to God and to our beloved Leader for this blessed truth. I am also grateful to those who helped to lift me out of darkness into the light.—J. W. C., Norwich, N. Y.

Christian Science came to my notice almost ten years ago, and since that time the truth of its teachings has been slowly but steadily growing in my consciousness, until now it would be impossible to conceive of doing without it. During this time I have had many proofs for myself and others that God is all and in all, and that He healeth all our diseases. I did not come into Christian Science for the physical healing, but because it appealed to me as being so practical,—a religion for every day and hour. I had always been what people would term healthy, but I soon learned where I was to look for my health and strength, and that it had to be established in Truth. The daily temptations of fatigue, cold, headache, and the many suggestions of mortal mind came to me to be met and mastered, and to-day I rejoice and am glad to say that I have never lost one day from the schoolroom since I have known of Christian Science. The overcoming of colds and a cough from which I was seldom free during the winter months, was the first demonstration of physical healing that I experienced. I rejoice that now the suggestion of cold is met in its first stages, and usually does not manifest itself longer than a day, whereas in the past I have had it last two or three months.

I wish to express my gratitude to our beloved Leader, Mrs. Eddy, through whose unselfishness and love these things have been made possible to me; also to my teacher.

ETHEL L. BARGUET, Mount Vernon, N. Y.

About fifteen months ago, when our baby was but a few weeks old, I was awakened one night by my wife, saying, "Send for the doctor, quick, the baby has an attack of croup and is choking to death." I told her that God was the best Physician, and that He would heal the baby. In a few minutes the little fellow was sleeping peacefully,—God had indeed healed him. A few weeks ago we found our child lying in his crib, in spasms. He was a pitiful looking sight,—unconscious, his body quite rigid, with mucus over his nose and mouth, his face pallid, and breathing so faintly, that to mortal sense he was surely dying. I com-

menced to treat the child. In a few minutes there was a slight improvement, but fear was being manifested so strongly that it was thought best to send for a practitioner. About one hour after the latter's arrival, the child began to regain consciousness, and two hours later was smiling and cooing in his baby way. A friend who is not a Scientist saw the child just before the practitioner was sent for. The next morning when he called and found him healed, he said, "I firmly believed the child was dying, and did not retire until three o'clock this morning, expecting every moment to receive a message saying he was dead. It seems wonderful, wonderful."

I thank God for the blessings He has bestowed upon us. I also wish to express my sincere gratitude to our Leader, Mrs. Eddy, and to the kind practitioner who has done so much for my family.—FRED H. HILL, Concord, N. H.

How can we express gratitude enough for what Christian Science has done for us? A number of years ago, while going through a class in Christian Science, I had a severe attack of scarlet fever. During the second night of the conflict, life seemed to be nearly extinct, but with the day came an enlarged understanding of what Life really is. Then I fell into a gentle and peaceful sleep and awoke ravenously hungry and ate a very hearty breakfast. The day was spent in studying Science and Health by Mrs. Eddy, and in giving thanks for my great relief. The following day I went down stairs, and the next night I attended the closing lesson of the class. The thought of contagion was handled so thoroughly, that during that winter there was not another case of scarlet fever in the school which I attended. Since then I have seen ailments of all kinds yield to this great truth, and often wonder what we had to turn to before knowing of Christian Science.

A. H. C., Wilmington, Del.

"He shall give his angels charge over thee. . . . They shall bear thee up in their hands." In Science and Health we learn that angels are "pure thoughts from God, winged with Truth and Love" (p. 298). Their power was proved to me recently by a little experience. On returning to my office after lunch one day, I found that the elevator had ceased running, and it was necessary for me to walk up twelve flights of steps to reach my office. Instead of thinking, as I had many times before, what a shame it was that I should have to climb such a distance, and looking to my feet to raise me from step to step, I remembered the right thought, "Whatever it is our duty to do, can be done without harm to ourselves" (Science and Health, p. 385), and knowing that Mind, not matter, lifted and supported me, I started up, and reached the top floor without having to stop once. On previous occasions I had been obliged to pause at the end of every flight of steps, and sometimes oftener, as my knees seemed to ache so that I could not move. Truly the wrong thought was heavy, and held me down, whereas the right thoughts bore me up, for they were winged with Truth and Love, instead of error and hate.—MISS MARGUERITE TEBBS, San Francisco, Cal.

I am beginning to see how selfish I am in receiving so much from the *Sentinel* and *Journal*, expecting to receive more all the time, and yet giving nothing in return, when my cup is full and running over with blessings. In regard to physical suffering, none but those who have had to go through with it, know what an awful thing a tumor is. I was relieved in one treatment of a tumor which had caused me very much uneasiness and suffering. It was removed, wholly destroyed, and I have been freed from bondage in a great many other directions. I have been healed of a great many ailments, and have been enabled to overcome evils in others. It has been pleasant to do this, and

it gives me a very grateful feeling to know that I am working in the vineyard where the fruit is so satisfying.

I have known of Christian Science for sixteen years and am trying to live it. Divine Love never fails me when I call upon Him in time of need. I want to acknowledge my gratitude for the Bible and the means by which I am enabled to understand it, for through the text-book, Science and Health, we find man's true relation to God. We are not many in number in our little church, but as I look around me, I find that we are doing good work and are daily proving that we know where to go and how to go for everything needful.—A. A. R., Watertown, N. Y.

When I wish to write of my demonstration over self I wonder where I am to begin. The growth is constant, and while each overcoming of self may not be large we know in Christian Science that the smaller demonstrations are just as important as the larger ones and prove the Principle just as fully. One of the very first errors that I was called on to destroy was pride; but when that was overcome and I was able to take the brother next to me by the hand and to feel that we were both children of the one, loving Father, I felt as though I had indeed conquered a mighty error. I was able a few years ago to overcome a severe attack of pneumonia. I was aroused, soon after retiring, with intense pain, but the Great Physician was at hand and by constant work I was able to free myself by daylight. I went to my teacher as soon as possible that morning, and met there a Scientist who had been a practising physician for many years. He said to me, "I wonder whether you realize how near you have been to passing on?" I replied, "I only know that whereas I was sick now I am well, for God is my Life." My constant prayer is that I may realize more and more that I have no life, but what cometh from God, good. I feel that the only way we can show our appreciation of our Leader, Mrs. Eddy, is in living the truth and proving by our works that this Science is all in all to us.

E. G. C., Wilmington, Del.

I must tell some of the blessings that have come to me through Christian Science. I was in an orthodox church thirty-five years, and was sick much of that time. I have been healed in Christian Science from sickness, and also from sin, as it teaches that we must live pure lives. It has helped me each day and hour to live more spiritually. I have learned that God did not make sickness, and that we have a right to deny its power over us the same as in sin. In this way I have been able to overcome much suffering in the six years that I have been studying Christian Science literature. I cannot tell half the blessings it has brought into my life. One is, to look always for good, and I have found much of it by so doing. Another is that God is Mind, and we must have this Mind to overcome the mortal belief which leads to all wrong doing. My daily prayer is that I may be worthy of all the blessings received through our beloved Leader.

MRS. E. R. MOFFITT, Arnold, Neb.

[Written for the *Sentinel*.]

Hidden Treasure.

MARY J. ELMENDORF.

THE raindrop trembles on the thirsty leaf;
The first star sentinels the darkling sky;
'Neath withered leaves the April violets blow;
Along the west-wind breathes the heliotrope;
And on the wave-washed sands of pain or grief—
Fairer than raindrop or lone star on high,
Sweeter than leaf—or wind-wooded bloom below—
Lie Love's white pearls, Love's lustrous pearls of hope.

From our Exchanges.

But to what avail have I a spirit separate from the men and women around me, if I must take my temper from theirs, be happy only when they are gay and serene only when they are kindly? Is it a proof of my affection for them if I thus take to heart their harshness and reflect it in my life? It would far better prove my affection for them if I should dissipate their clouds with my sunshine and smooth away their frowns with my smiles. But I cannot do this unless, with all my love for them and my joy in them, I hold myself regally independent of them in my spirit life.

And then, how dare I permit another mortal to spoil even a day or an hour of that life which I am living to God alone? In Him I should seek my sufficiency, my all in all. When He frowns upon me, then indeed the world should be black about me, but when He looks graciously upon me, it is enough; I have no business heeding the ungracious looks of His creatures.

My spirit shall dwell apart. I will be alone with Thee, and let Thee interpret the world for me. In whatever house I live, or in the thickest crowd, my spirit shall make an abode for itself where it may be serene.

Christian Endeavor World.

The readjustment comes here, that, while our fathers believed they must wait for another life to find God, we have come to the deep conviction that just here and now we live in Him, move in Him, and have our being in Him. Those who wait for eternity to discover the presence of infinite life and love will certainly have made the serious blunder of skipping the joys of immediate intercourse with the Father of our spirits. If we cannot find God and glorify Him here in this world, in what sort of a world are we likely to discover His presence? If we cannot see Him and hear Him in such a world as this, with its duties and its obligations, its moral purposing and its mighty achievements for the good, what probability is there that on some other planet or in some other stage of existence we shall be able to comprehend the One who is life and love? The trouble with our old theology was that it used up all our imagination on things remote, and so lost the full meaning of our present existence. To know God as ever present, and to realize our present childhood in Him, is the highest reach of holy aspiration.—*Christian Register.*

Pessimism breeds pessimism. Faith breeds faith. If for one six months we should all simply stop talking this black stuff about the slump of the world into the ditch, and for that six months should say to every man we meet "in lane, highway, or open street," that men can and will do right, and can be led as easily in that direction as in the other, and peoples can act honorably and disinterestedly if we insist that they shall, at the end of six months this kind of talk would develop an entirely different atmosphere in which nations would live and move and act. It is our suspicion of the "other fellow" that curses us.

The Universalist Leader.

The church as an ark of safety, a sort of life-saving station, a beacon for storm-tossed souls, is no longer a conception that commends itself as adequate to intelligent men and women. The church that is to hold its own in the future must develop power as well as rescue the perishing. It must teach a religion that makes a man stronger in his business and professional life, a more potent influence, a center of a wider circle, a man of richer character and wider view.—*Homiletic Review.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 30 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

The differences between the United States and Panama, which made necessary the visit of Secretary of War Taft to the Isthmus, have been settled by the issuance of an executive order signed by Secretary Taft for President Roosevelt and assented to in a letter by President Amador of Panama. The order provides that no trade for the canal zone or the republic of Panama can enter the ports established by the United States at either end of the canal, supplies for the construction of the canal and articles in transit being excepted. This turns the customs receipts of these ports over to the Government of Panama. Absolute free trade is to apply between the Canal Zone and the republic of Panama. Complete jurisdiction is granted the United States in the harbors of Colon and Panama as to sanitation and quarantine regulations. Panama reduces her rate of postage to two cents. The order of Secretary Taft is to be ineffective unless Panama shall put into effect the gold standard, according to the currency agreement of June 20, 1904.

Extension of the Rural Free Delivery Service has resulted in an increase of 1,125 in the number of postoffices discontinued during the fiscal year ended June 30, 1904. During the year there were 2,549 postoffices established and 5,587 discontinued. The total number of discontinuances was 3,750 postoffices, with a saving in salaries of postmasters aggregating \$171,121. At the close of the fiscal year there were 71,131 postoffices in the United States—265 first class, 1,204 second class, 3,896 third class, and 65,766 fourth class. It is likely that twelve hundred routes will be reported within the next two months. An appropriation of \$3,000,000 for the establishment of new routes will be asked by the department for the fiscal year ending June 30, 1906. There are now in operation 28,073 routes. To maintain service on these routes during the fiscal year from July 1, 1905, to June 30, 1906, will require \$21,360,000.

President Roosevelt, in his message to Congress last week recommended, among other things, rigid scrutiny of Government

business, encouragement of labor organizations so long as they duly respect the rights of others, Congressional action on railroad casualties, intelligent conservatism in dealing with great corporations engaged in interstate commerce, regulation of congested population in cities, legislation concerning child labor, a better consular system, careful revision of naturalization laws, and a large navy.

The Comptroller of the Currency, in his annual report, says that the people of the United States have become the wealthiest in the world, and that the natural resources of the country are so great that this distinction "is sure to continue and increase for many years to come." The banking power of the United States, made up of the capital, surplus profits, deposits, and circulation of banks of the United States and island possessions aggregates \$13,826,000,000.

It is stated that Senator Kittredge of South Dakota, the active head of the Senate Committee on inter-oceanic canals, intends to propose measures whereby the Isthmian Canal shall become a sea level waterway.

Another armored cruiser, the Tennessee, was launched last week at the yards of the William Cramp Ship and Engine Building Company.

Foreign.

The annual report of the British Marine Department shows that Britain and its colonies headed the maritime states of the world with a total tonnage of 11,014,790 on the first day of the present year, or a little more than four times that of the United States, which stands second on the list. Canada's tonnage was 683,147 which places it eighth on the list or immediately behind Russia and ahead of Sweden and Spain. The tonnage of Canada is growing. During the past year 184 new vessels were added to the list. This increased the tonnage by 30,534 tons. At the beginning of the present year the total number of vessels on the register books of the Dominion was 7,020, measuring 683,147 tons register tonnage. In 1878 Canada's tonnage was 1,333,015. This was the highest year. It was also the year in which Canada adopted protection. From 1878 to 1900 there was a gradual decline each year. In 1900 the tonnage was at its lowest mark, 659,534 tons.

The resolutions recently adopted by the representatives of the Zemstvos at their meeting in St. Petersburg have been submitted to the Council of State for the purpose of a report. The Council consists chiefly of superannuated heads of departments appointed to the Council after their removal from active official life. This action is regarded as shelving the proposals, so far as early imperial action on them is concerned and was anticipated by the leaders of the Zemstvos.

It is stated as probable that the British Admiralty will place only two vessels on the whole North American coast, one in the Atlantic and the other in the Pacific, with headquarters at Canadian ports. There may not be more than two vessels in West Indian waters. The reason given is that "while the relations between the United States and Great Britain remain as they are, there is no need of any war ships over there."

The Reichstag, after two days' debate, last week adopted a resolution asking the German Government to introduce a bill for the protection of the middle commercial classes against great accumulations of capital in the retail trade. The resolution contemplates a further extension of the law against unfair competition and the regulation of closing-out sales, so as to prevent bogus advertisements.

The reduced postal rates between Mexico and Canada, agreed upon by both Governments, are expected to go into effect soon.

The rate from Canada will be two cents gold and from Mexico five cents silver, as is now the rate to the United States.

Industrial and Commercial.

The strike in the cotton mills of Fall River, Mass., is now twenty weeks old. Had the mills been running all that time, the strikers would have earned \$4,500,000 in wages. However, this loss and the great withdrawals from savings banks, the losses in rents and the accumulations of debts at grocers' and butchers' stores have not been sufficient to break the spirit of the strikers.

The number of establishments manufacturing rubber and elastic goods has increased from 90 in 1880 to 262 in 1900; the capital employed, from \$6,000,000 in 1880 to \$39,000,000 in 1900; the cost of materials used, from \$9,000,000 in 1880 to \$33,000,000 in 1900; and the value of products, from 13½ millions in 1880 to 52½ millions in 1900. In the ten months ending with October the quantity of crude rubber imported was practically fifty million pounds.

It is reported that a scheme is on foot which contemplates the organization of a gigantic telephone manufacturing combine involving a capital estimated at \$700,000,000 invested in independent telephone manufacturing companies in this country.

It is estimated that the catch of seed oysters on the Connecticut natural beds in Long Island Sound was about 300,000 bushels, and that the price for the yield averaged approximately 72½ cents per bushel.

Preliminary returns to the Department of Agriculture show a total production of cotton in the United States in the year 1904 of 12,162,000 bales.

It is estimated by experts that the mines of the Pennsylvania hard coal region will produce 57,000,000 tons for 1904.

General.

The artificial propagation of lobsters, one of the most interesting of biological problems, and of great economical importance to the United States, has been successfully solved. This noteworthy discovery, says *The Scientific American*, which has baffled scientists up to the present, has been practically worked out by the Rhode Island Commission of Inland Fisheries. For the past three years or more a floating laboratory has been anchored in Mill Cove and turned into a lobster experiment station, with specially-devised apparatus, and is to-day the first successful lobster-hatching plant in the world. New life is now assured to the declining lobster industry, which otherwise seemed doomed to extinction. The annual output is smaller each year, due partially to the unceasing trapping and reckless destruction of the female egg and short lobsters by certain of the crafty and ignorant fishermen, who fail to observe the regulations, and evade the fishing laws.

The Lackawanna Tunnel Railroad has filed articles of incorporation with the Secretary of State proposing the building and operating a tunnel railroad from some point in Manhattan under the Hudson River to New Jersey, where connections will be made with the railroads.

It is now planned to build a railroad up Gray's Peak in Colorado. The railroad will be the highest in the world, the last station being two hundred feet above that on Pike's Peak.

The Copley Society of Boston has begun preparations to make a representative showing about the middle of March of paintings by Claude Monet.

It is stated that a contract is to be made which will dispose of for \$380,000 structures at the St. Louis Exposition which cost \$15,000,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Fasting and Feasting.

WILLARD S. MATTOX.

THE religious instinct of our Puritan ancestors is preserved in more or less of its original form on those occasions when by state proclamation we abstain from labor and give ourselves over to fasting or feasting and prayer. Much of the austerity of the primitive customs of our forefathers is lacking in our modern observances, and this is very evidently a development along the lines of broadening concepts, a preface, as it were, to a larger advance, when we shall recognize that because "All is infinite Mind and its infinite manifestation" (*Science and Health*, p. 468), man has no need to afflict himself in order to prove to God that he loves Him and is obedient to Him.

The true sense of fasting must be learned before we can righteously expect that the act itself will bring any reward. If the real purpose and meaning of fasting have been perverted, then we must needs find the original intent before the blessings attendant upon it can be made available. Apparently mortal mind has not omitted to lie about the act of fasting and to deceive the whole world regarding this function of man. We know what Jesus called evil, or an evil mind. He said it was a lie and the father of lies, and in Revelation this same mortal mind or liar is described as "that old serpent, . . . which deceiveth the whole world." If, then, we have been deceived as to what constitutes fasting, where may we discover the truth about it? The Bible contains the truth about God and man, and it needs only to be spiritually understood. The Christian Science text-book, *Science and Health*, throws upon the sacred pages the clear white light of Spirit, and makes plain what mortal mind would becloud and bedim.

The primitive notion that literal fasting, that is to say, an abstaining from material food, is a means of grace or an aid to spirituality, should have been outgrown by this time. It should have been given up for a more spiritual sense or more metaphysical interpretation. Isaiah, 58, gives excellent instruction on this point, and David said, "For thou desirest not sacrifice; else would I give it: thou delightest not in burnt offering." The sacrifices of God are a subdued (material) sense; "a broken and a contrite heart, O God, thou wilt not despise." Jesus told his disciples that when they fasted it was not necessary to assume a sadness and dejection which were purely external, insincere, and hypocritical. He advised them to fast joyously, to anoint themselves with oil, and to be happy. To Jesus, it made very little difference whether men fasted or feasted, whether they ate much or ate little, if the thoughts were sinful or material. Merely to refrain from food for a day or period of days, is no evidence of piety. Add to that a long countenance or the most approved unction, and still you have not the proof which our Master required. Add to that daily attendance at religious services, and altogether, these signs do not weigh one jot with Him who knows all the thoughts of men, and judges their motives. "Thy

Father, which seeth in secret, shall reward thee openly," whenever thought is meek, loving, sincere, honest, and true. John came fasting and he was said to have a devil. Jesus lived a normal, natural, simple life, he ate and drank, and the same critics who denounced John for fasting, reviled Jesus for eating. Mortal mind is inconsistent and unreasonable, and no matter what we do, we cannot please it. Then let us do as Jesus did, detect, uncover, and rebuke error and live in the calm consciousness of an ever-present God, caring nothing for the praise or condemnation of mortal mind.

Fasting, to the Christian Scientist, is a mental, not a physical process. It is an aspiration rather than an effort at repression. It is the recognition that the true man is whole, is pure, is good, and has dominion. To fast is to deny the appeal of materiality, it is to know that God is all, and that there is nothing to be desired beside Him. To fast is to know that God's man has no need to fast! To fast is to seek to be conscious only of Spirit and the spiritual universe, it is to strive to rise superior to sin and disease, to live in the secret place of the most High, to love God and all His children.

Fasting thus becomes a daily, hourly affair of the heart, of the mind, and before we have been at it long, we begin to see that Fast days and Thanksgiving days are synonymous. The debilitating scholastic or priestly concepts of both these occasions are slowly fading from the canvas, and gradually in their place the outlines of a fairer picture are seen to grow. In the new light of Christian Science, we part with the enfeebling and gloomy notion that we bring heaven nearer by cultivating a cheerless and melancholy state of mind, and we gain the understanding that to fast truly is to give thanks, "always for all things unto God and the Father in the name of our Lord Jesus Christ."

A Lesson from the Trees.

ELIZABETH C. WICKERSHAM.

RECENTLY while traveling I looked from my car window out into a noble orchard adjacent to the track where our train was waiting. There were many fine trees laden with fruit, and two, standing side by side, especially attracted my attention. Every branch of one was covered with red ripe apples, while the other, springing from the same soil, watered by the same beneficent showers, and gladdened by the same warm sunshine, had spindling, crooked branches, with scant and imperfect foliage, and no fruit whatever.

On looking closely, I noticed that on one side of this tree there was a large hole, and within were evidences of decay and death. The whole heart of the tree was rotted, and the trunk, being thus lifeless and impoverished, had little life-giving nourishment for the branches, and therefore they neither blossomed nor bore fruit. Soon, as I thought, the husbandman will be coming, and will say, "Behold, these three years I come seeking fruit . . . and find none: cut it down; why cumbereth it the ground."

After my return home, I was walking through one of our beautiful parks, and I felt a sense of sadness come over

me as I saw the trees stripped of their leaves. Picking off a branch I noticed that the sap had returned, as it seemed, to the trunk, there to be stored, enriched, and resupplied to the branches in due season, and then there was unfolded to me my lesson. In all these phenomena as thus understood, I saw a prophetic order. Now that winter was approaching, the trunk must be made strong and well nourished, so that it may be able to resist the fury of storm and wind, and every leaf, twig, and branch must give back its quota of nourishment into the parent stem, there to be husbanded, so that in the coming spring it may again furnish abundance of food to the branches, which will thus be furnished for their blowing and fruitage. Jesus' teaching, "It is more blessed to give than to receive," must be manifested by the branches as well as the vine, and through this mutual reciprocity all are blessed and nourished and strengthened.

The lesson helped me to see the true relation which exists between the branch churches and The Mother Church, and made me feel that for all Christian Scientists this is a season of thankfulness and great joy that they are able and privileged to follow the natural order and bring their tithes into the storehouse, knowing that the promise is sure, that God will, through this Mother Church, pour out yet greater blessings, until both vine and branches are quickened with the mighty influx of Truth, and all are of one accord in one place, in fulfilment of the prayer of our Master, "as thou, Father, art in me, and I in thee, that they also may be one in us; that the world may believe that thou hast sent me." This demonstration of unity of thought and effort in the Church, will result in a gladdening increase of efficiency and fruitage for all the branches, and the storm-driven and sin-tossed will be drawn to its sheltering arms, and there find holiness, health, and peace.

Is Matter Slowly Dying?

WENTWORTH B. WINSLOW.

THE *Electrical Review*, one of the leading electrical papers, in the issue of March 12, 1904, contained an article entitled, "The Present Condition of Radioactive Science," which deals with the much-talked-of discovery of radium. The concluding paragraph opens with the question which is the caption of this article and continues as follows: "Another interesting side of this subject is the explanation of how it happens that these unstable compounds have persisted through the ages until to-day. These changes are taking place with extreme slowness, and it is even possible that the radioactive materials themselves are intermediate stages in the disintegration of a primelement. On the other hand, it may be that all matter is passing through the process of disintegration, is living its life, though the change, as compared with that of the radioactive materials is so slow as not to be detectable. As shown above, an atom might lose particles without the change in atomic weight being detectable. The change may be so slow that the electrical effects are not measurable, and the products cannot accumulate in sufficient quantities to be detected by chemical means."

In *Science and Health*, pp. 572, 264, our Leader says, "Under the supremacy of Spirit, it will be seen and acknowledged that matter must disappear;" "Matter disappears under the microscope of Spirit." On pages 279, 274, and 278, she speaks of "the doom of matter;" "Matter, examined in the light of divine Metaphysics, disappears," and "Divine Metaphysics explains away matter." She also declares that "The fading forms of matter, the mortal body and material earth are the fleeting concepts of the human mind." "The elements and functions of the physical body and the physical world will change, as mortal mind changes in its phenomena." "Every object in the material universe will be destroyed" (pp. 263, 124, 267).

When we consider that Mrs. Eddy has proclaimed this fact, to which the world is slowly awakening, for more than thirty years, and has caused it to be widely known, —so widely, indeed, that those who have not understood Christian Science in some measure, have ridiculed and lampooned it, and so far as possible discredited her theory, —it surely need not surprise any that Christian Scientists honor one who enunciated these truths so long ago, as their true discoverer. It is to be noted that now, having agreed with Mrs. Eddy up to a certain point, these men are quite unable to account for matter's unreality or unsubstantiality; while she very definitely states that divine Metaphysics causes its disappearance; that the realization of the allness of Spirit, and of the unreality of matter, convinces us of Spirit's omnipresence, and consequently matter can have neither place nor presence.

It truly seems that we are entering that final stage of thought to which Mrs. Eddy refers when she quotes Agassiz, who said, "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it" (*Science and Health*, p. 104).

Reflected Light.

ANNIE H. WILSON.

I was once privileged to hear Sir Henry M. Stanley lecture on Darkest Africa, and a grand lecture it was. I shall not soon forget the climax of the description he gave of his toilsome journey with his faithful party, composed, mostly, of natives, as they cut their way through the untried and heretofore impenetrable forest region of Central Africa. Into this forest the sun's rays had never penetrated, and it took months to hew a road which, once made, could be traversed in a few days. They were obliged to work in light which was never brighter than twilight; in the midst of undergrowth that seemed fairly to bar out progress; and to the natives, this forest was infested not only with venomous serpents and beasts of prey, but also with evil spirits, whom they believed to haunt it, and to send sickness upon any one entering this, their domain. Only unflinching courage on the part of the leader, and his determination to push forward, was able to sustain his weary and fearful, yet devoted followers. His knowledge of physical science had freed him from the superstitions which oppressed them, and he knew that the dark forest was not enchanted, nor was it endless. Loving and trusting him, they followed his leadership, and while they suffered, and many died, yet to this band of workers the world owes the opening of the heart of Africa.

Stanley told in graphic language of the close of the tremendous task, when at length there dawned before them the vision of a plateau of beautiful green grass, bordering a lake whose waters shimmered and danced in the sunlight. Their joy knew no bounds; white and black alike laughed and wept together, becoming for the time a set of uncontrollably happy children.

His experience brings to mind the labors of our beloved and God-enlightened Leader, and our trials and seeming failures in following her guidance. A sense of boundless joy and gratitude may well be ours as Scientists, in thinking upon that "patient continuance in well doing," which reached one of its happy culminations in the completion of the Concord church, our Leader's loving gift to the people of her native city. By the mental signs of harmony and progress, may we evince what it means for us and for the world. To me, as an individual, this event links itself with one of the happiest and most profitable experiences I have ever had. It is certainly true that from the first of my efforts to understand and obey the laws of Christian

Science, "each successive stage of experience" has unfolded "new views of divine goodness and love" (Science and Health, p. 66), yet the way has often seemed not easy nor clear. Jesus' words, "My yoke is easy, and my burden is light," have not always made the impression that they should. Nevertheless, I have followed on, though "faint, yet pursuing," and the way has grown brighter.

When it came in my way to attend the World's Fair, I was ready to expect good. When, however, I got to St. Louis, there was a physical foe to meet, but I did not let it keep me from going to the fair, neither did the pain nor the heat blind me to the consciousness that I could find both pleasure and profit on every hand. It seemed to me that surely God's power was behind such a wonderful aggregation of human skill and industry, and that His strength was mine, wherewith to appropriate these treasures rightly. With some mental help from my companion, my fourteen-year-old son, I soon felt superior to the physical disability. By noon of the second day, I felt it lift, like the lifting of a cloud; and from that on, the harmony, both physical and mental, was marked. We did not again notice the heat, even on very warm days.

On Sunday we looked forward with glad anticipation to the church service, and again we were satisfied. To me, the entire service was like stepping out on to a broad, sunny plateau, where one finds grass, running water, and the music of birds. It was, as I understood, the first service in the new auditorium. It was also the Sunday when the dedication took place at Concord. On comparing facts, I have become convinced that the same Mind which was at that hour flooding Concord with gladness, was bringing the reflection of that gladness to the service in St. Louis. We were of one accord; in one place, mentally though not physically, and the blessing came upon us also. The congregational singing seemed to me the most inspiring I had ever heard, especially when all sang, "Shepherd, show me how to go" (Miscellaneous Writings, p. 397).

How beautiful are the moments and hours when our life-notes resolve into harmony, when we recognize that it is simply natural to love God and feel His presence as an all-enfolding goodness and power! It is grand to be able to say, as does our Leader, with her clear, spiritual vision, that the new century "finds Christian Science more extended, more rapidly advancing, better appreciated, than ever before, and nearer the whole world's acceptance" (Message, June, 1901).

Our Angel Visitants.

MARY E. MCCALLUM.

THE last *Sentinel* and *Journal* have just been read and thoughts from the many beautiful articles remain as sweet, hallowed, and helpful memories attuning consciousness to things divine. We are prone to dream sometimes of experiences past, and to-day a sense of retrospection is much with me. I look backward over more than eight years to when I first learned that "pure thoughts are angels," and recall how this explication wrought my conversion to Christian Science.

Through the persuasion of a friend whom I greatly admired for her Christian characteristics and womanliness, and who had joined the new belief, I went to one of the meetings. The reading and interpretation seemed little more than a jumble to me. Words strangely applied, sentences and phrases so contradictory as to be quite ludicrous, I said to myself. Courtesy, nothing else, led me to remain until the end. Well was it that something hedged about my going. Just at closing time that wondrous revelation and definition from Science and Health, page 298, was read. "Angels . . . are pure thoughts from God, winged with

Truth and Love, no matter what their individualism may be." In an instant the whole scene changed. All scorn, all prejudice melted away like snow under a summer sun. Home I went in an ecstasy of delight. Over and over I repeated the words. Days and days I could think of nothing else. Indeed, naught else did I care to think of. Science and Health was procured and it has been my constant companion ever since. Did this light or vision stay on? No and yes. The human had its struggle. The Red Sea and Gethsemane have both come into experience, but always there has remained the angel thought of Love to take away the sting of hate; the thought of peace to soothe strife; the thought of joy to antidote sorrow; the thought of abundance to make poverty flee away; the thought of health to overcome sickness, until "a white-winged angel throng" (Miscellaneous Writings, p. 396) lights the gloaming, and the seeming shadows have passed away. The revelation of Christian Science which has thus taught us to perceive and entertain angels,—was ever greater given to any age! Revered forever should be a consciousness so holy that it could receive and bear the message to you and to me!

[Written for the *Sentinel*.]

The Way that He Willeth for Me.

CYRENE EMERY.

THE way that He willeth in love for me,
That is the way for me!
And I do not care how thorny and bare
The journey may seem to be,
If only afar, on the mountain-side,
In the light of the sun, I may see
The shining garments and beckoning hand
Of the Guide He has sent to me.

The place that He willeth in love for me,
That is the place for me!
I care not at all whether large or small
The work may seem to be,
If only sometimes in a quiet hour
I may hear Him say to me,
"My little child, thou art doing well
The task I have willed for thee!"

The song that He willeth in love for me,
That is the song for me,
Be it loud or light, so the tone be right
To the Master-Musician's key.
It blends and is lost in a mightier song
That sweeps from sea to sea,
Drowning all turmoil and discord and strife
In a flood-tide of harmony.

So all that He willeth shall be for me,—
The song and the place and the way.
I rest in peace till the earth-dreams cease,
And utterly vanish away.
For His eye doth see, and His voice doth speak,
And His power all things doth sway,
And safe in His Presence His children dwell
Forever and for aye.

The healing of the world
Is in its nameless saints, each separate star
Seems nothing; but a myriad scattered stars
Break up the night, and make it beautiful.
BAYARD TAYLOR.

Selected Articles.

Mind never did and never will depend upon matter for expression, for inherent in Mind is all intelligence, all action, all power. Christian Science is not alone in its declarations regarding matter. The idea of the unreal nature of matter is growing, and this is indicated by the conclusions of many of the leading natural scientists of this country and Europe.

A. V. STEWART.

Chicago Chronicle.

Reason and revelation are not the private or exclusive property of one individual, and Mrs. Eddy does not claim a wisdom for herself which is not equally open to all men. Wisdom, indeed, cannot be esoteric, since it is the voice which cries, "Ho, every one that thirsteth, come ye to the waters." A study of the personnel of the Christian Science Church will show that all classes of society and all grades of intellectual development have been able to grasp the truth uttered by Mrs. Eddy, since one does not need to be especially initiated to become acquainted with God, good. Unprejudiced observation of the Christian Science movement will convince one that it is worthy of all respect, and that its adherents are earnest, good men and women, who are doing their best, among other things, to mind their own business and to be less critical of those who do not agree with them.

WILLARD S. MATTOX.

Hartford (Conn.) Courant.

Mere theological discussion will never satisfy the hunger and thirst after righteousness. What the world needs are the signs which follow them that believe. These signs were enumerated in the very last words of the Master, just prior to his ascension, and were recorded by St. Mark as follows: "In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

The healing and reformatory work which is being done in Christian Science is the best possible proof of the soundness of its doctrine. Shall not a tree be known by its fruit?

A Universalist minister, in a recently published sermon, recites his experience in Christian Science, after having spent many months of fruitless search for health and strength. He says,—

"In order to be healed, it was necessary for me to study Christian Science and learn its Principle and practice. I did little else for some weeks. It was very difficult for me to drop some of my former beliefs and to grasp certain ideas in Science, but, until I did, the healing did not commence. I now understand Christian Science quite thoroughly and believe it wholly. I know it is true. I have come to know that Science and Health, the Christian Science text-book, embodies truth of the highest and most valuable character and is almost verbally inspired.

"Because of the great gifts which she has brought to this and succeeding generations, Mrs. Eddy is entitled to be generally esteemed and revered, as she already is by the people of the Science churches, as a great prophetess of God.

"The reason that Christian Science is not better and more easily understood is that it is a system of thought by itself, unlike anything that has before appeared,—at least since Bible times,—and with a somewhat technical vocabulary in which the meaning of several frequently recurring words has to be carefully studied before the thought of the text can be understood. In fact, to sympathetically understand Christian Science, is, for one approaching it as a learner, a task requiring as much careful and unprejudiced study as would be required of a person reared and grounded in orthodoxy to understand and believe the whole philosophy

of Universalism. I have come to know that, if one really gains a full knowledge of Christian Science, he cannot choose but believe, and I have learned that those who have not studied it long and sympathetically, to the point of understanding it, should not condemn it; for in this age it is the good news of God unto salvation."

RICHARD P. VERRALL.

Poughkeepsie (N. Y.) Courier.

In the teachings of Christian Science as to the unreality of all material existence and its diseases, it uses the word unreal in the sense of knowing that God is not the author of anything but the good and harmonious, and that His works are as perfect and immortal as Himself. It is through realization of this fact that Christian Scientists are enabled to cure the physical ills that are, and will remain, very real to mortals until the recognition of the true "image and likeness of God" brings health and harmony.

The body is only the reflection of the individual consciousness, and will be sick or well accordingly. Jesus gave abundant authority for doing the works he did, and "greater works," and when through earnest work we attain, as we shall, to the knowledge of God and man that he possessed, then it will be true, as our critic in a spirit of ridicule suggests, that man can dispense with the many articles that are now deemed very necessary for human comfort.

Jesus did not dispense with food and clothing, but he fed the hungry, healed the sick, and raised the dead by spiritual means which were in direct contradiction of all so-called "scientific principles" of his time. He used no drugs, but he did know God and His perfect image,—man. All the sophistry of human reason cannot controvert the fact that Christian Science does heal the sick and regenerate the sinful, as thousands now joyfully bear witness.

C. H. FAHNESTOCK.

Philadelphia (Pa.) Press.

When men commence to investigate and study Christian Science they are speedily impressed with the fact that there is something to do. Christian Science teaches that man must live in absolute obedience to God, that he must learn what this duty includes, and that he must begin his work to-day. The demand of Christ Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is recognized by the followers of this faith as a legitimate demand on man and not one impossible of fulfilment if the rules of the Master are faithfully and scientifically followed. It will be conceded that in view of humanity's foibles and frailties absolute consecration of thought and energy is required in this consummation, and that all processes of thought which would tend to retard one's progress Godward must also be discerned and corrected. If a man thinks right he will act right, as thought always precedes action. Christian Scientists find that in proportion to their diligence in uprooting such evils as hate, malice, envy, jealousy, etc.,—having love for God and their fellow-men, can they properly be considered in the line of duty. While recognizing the vast amount yet to be accomplished in the work of regeneration, they are thankful for the present fruits of worthy endeavor,—better health, more harmony, and a higher understanding of God. A Christian Scientist, like the student of mathematics, is privileged to prove the correctness of his problem at each and every stage of the same, but he does not, either in Science or mathematics, attain much proficiency through "vain imaginations" or by giving chimerical wings to fancy. Summed up briefly, the practical utility of Christian Science is in its power to dethrone evil and enthrone good, and scores of people in your beautiful city can testify to its beneficent influence in their lives.

CALEB H. CUSHING.

Portland (Me.) Express.

The Lectures.

St. John, N. B.

Mr. Bliss Knapp of Boston, delivered a very interesting lecture in the York Theatre Sunday afternoon [November 6]. The subject was Christian Science. The seats in the pit of the theatre were nearly all filled, and the lecture was followed closely throughout by the audience. C. N. Skinner, K. C., acted as chairman and introduced the speaker.—*Daily Sun*.

Providence, R. I.

A large and representative audience greeted William D. McCrackan of New York City at the Providence Opera House, Sunday afternoon, November 6; the occasion being the semi-annual lecture under the auspices of First Church of Christ, Scientist, in Providence.

The undivided attention of the audience was held throughout, and earnest expressions of appreciation were given by the friends of Christian Science and strangers. Mr. Gilbert C. Carpenter of First Church briefly introduced Mr. McCrackan.—*Correspondence*.

Ottumwa, Ia.

Edward A. Kimball of Chicago, delivered an interesting lecture before a large audience at the Christian Science Church Sunday afternoon [October 16].

The speaker was introduced by Judge M. A. Roberts, who said in part—

While I do not know much of Christian Science, I am fully convinced from the abundant proof to be seen on every hand, that it is a mighty power in this country for the encouragement, improvement, and uplifting of the human family. I shall be pleased on this occasion, as I am sure that you will be, to learn more of the subject from the lips of one so able to speak thereon, whom I now take pleasure in introducing to you, Edward A. Kimball of Chicago.—*Ottumwa Courier*.

Creston, Ia.

There was a large audience at the Temple Grand Opera House Tuesday evening [November 15], to hear the lecture on Christian Science by Hon. Clarence A. Buskirk, former Attorney-General of Indiana. It was under the auspices of First Church of Christ, Scientist, of this city, and the subject was "Provable and Practical Power of Love." The speaker was introduced by Prof. William Bell.—*Creston Advertiser Gazette*.

The introductory remarks were in part as follows:—

The crowning triumph of civilization to-day is that which has brought men to recognize the common brotherhood of man, and to extend the hand of fraternal greeting to all who have for their aim the lifting up of mankind to a higher life. In this day we recognize that no one organization has a monopoly on truth; that each in some degree is a bearer of this beacon light; and we are glad that in this day of independent reading and thinking we are not afraid to lift the curtain and bare our standards to the test of discussion and comparisons, and are ready to discern truth and to accept it from whatever source it comes.—*Correspondence*.

Albany, N. Y.

Judge Septimus J. Hanna of Colorado Springs, explained the doctrines and purposes of his church before a large and cultured audience last evening [November 15],

at Odd Fellows Hall. The lecturer was introduced by Deputy Attorney-General William Harold Wood, who said,—

Ladies and Gentlemen:—Ever since the human intellect became capable of abstract thought, man has endeavored to penetrate the mystery of existence,—its source and its destiny.

What am I? Whence came I? Whither am I bound? are questions which press for solution upon every thoughtful mind; and the effort to answer them satisfactorily has resulted in the establishment of many systems of religion each claiming a divine origin for itself and pronouncing the others false and misleading.

All religions, however, agree in one fundamental essential article of faith, and that is the belief that there is a supreme, divine, omnipresent, omniscient, and omnipotent power which governs the universe.

That limitless eternal energy which all human reasoning postulates has been typified in many forms by mortal and finite fancy, and in none in more gracious and gentle guise than in the simple and beautiful creed taught by Jesus of Nazareth. While my own mind refuses acquiescence in any theology which purports to catalogue the attributes of divinity, or state the conditions under which the unconditioned infinite acts, nevertheless I realize that Christianity has brought peace, comfort, and happiness into millions of otherwise wasted and unhappy lives.

But it is not my province to discuss these matters before you to-night. I am here rather to present one whose mission it is to expound the doctrines of Christian Science. Whether we accept its tenets or not, it must be conceded that its followers lead happy, useful, and altogether commendable lives, and I bespeak a fair and candid hearing for the exposition of its creed.—*Albany Journal*.

Milford, Utah.

Bicknell Young lectured here November 15, on Christian Science. He was introduced by Judge P. Lochrie, who said in part,—

We have reached an age in the history of the world's civilization when the doubting and investigating mind is at work as never before. Old prejudices and superstitions of the centuries "dead and dust beneath our feet" are fast being dispelled,—never more to materialize,—under the effulgent light of divine Truth.

We know that this is true for the reason, among others, that the Christian churches everywhere are making strenuous efforts to free themselves from the circumscribed creeds by which they have been imprisoned, and live in the light of the one great immortal truth: that God is Love and the Creator of all good. This is one reason why Christian Science teachers and lecturers are listened to respectfully and not scoffed at as in the earlier days of the dissemination of divine truth, a truth which teaches that it is within the power of all in this life to "make of their minds, palace halls of heavenly thought," free from error, from sin, and happy in the consciousness of divine Love.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Basis of True Healing.

WHEN Jesus was asked whether he was the Christ, "he that should come," he answered, "Go and shew John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." It is only by these same "mighty works" that the church of to-day can prove its divine origin. Ritual and ceremony are not sufficient, the sick must be healed and the sinful reformed, otherwise what proof is there that the religion of Christ Jesus is preached?

That these phenomena of Christianity are valued as proof of discipleship is shown by the attention paid to occasional cases of healing accomplished by the ministry of some devout churchman, reported from time to time through the press. It is somewhat saddening, however, in such instances, to see that there is no recognition of the divine Principle which was the basis of Jesus' works, but instead, the healing is almost invariably attributed to some specially conferred power or endowment of the individual, and the result is looked upon as an abrogation of divine law, rather than its fulfilment.

An example of this failure to recognize that God, the divine Principle of healing, acts through unchanging law is before us in the following excerpt from a despatch from London which appeared in a recent issue of the *Boston Herald*. It contains an interview with an Anglican clergyman who speaks as follows of his own work:—

"Be it understood that I do not claim in any way to have performed miracles of myself. All I say is that several times in my life the spirit of God has taken possession of my whole being, and ordered me to heal the sick and raise the dead, in the name of Our Lord Jesus.

"To me there is nothing wonderful in this. The apostles worked miracles, not because they themselves had the power, but because the power was given, and the power is given oftentimes to the weak and to the foolish, and wisdom cometh out of the mouths of babes and sucklings."

Jesus' words, "And these signs shall follow them that BELIEVE," name the only demand placed upon those who would release their fellows from the bondage to which a false sense of God, and man's relation to Him has condemned them. Christian Scientists differ from all other religionists in this,—they insist that all true healing must be scientific, that it is in demonstration of an unvarying Principle, that it is not a special or occasional gift to a few, but an open fount to which all may come, and at all times.

M.

The Study of the Manual.

THE reference by our revered Leader to the study of the Manual which appeared in the *Sentinel* of November 12, deserves more than a passing notice. The purpose of all the rules contained in the Manual is to aid Christian Scientists in becoming "a law unto themselves,"—a condi-

tion indispensable to the establishment of true democracy alike in Church and State. In Christian Science we come to understand the inherent goodness of divine law, even if, to mortal sense, its provisions seem restrictive. To the Truth-enlightened thought it means liberty and progress. The study of the Manual also aids us in apprehending and applying to present conditions the infinite provisions of this spiritual law so as to benefit others as well as ourselves.

A number of these By-laws aim to bring out the greatest possible efficiency in our church services. It is desired and provided that the Readers shall be consecrated Christians, examples of Christliness in their words and deeds. It is also required that they give proof of their fitness for this office by expressing intelligence in their reading, their bearing, and deportment. The Manual says, "These Readers shall read well and be well educated" (Art. IV., Sect. 6). This provision is surely a most reasonable one. In the Bible and Science and Health thought is phrased with simplicity and sublimity, with pathos and power, and it becomes us to see that it is also expressed at our services in an adequate and dignified manner.

To-day no one can complain of lack of opportunity to acquire the education thus demanded, for the measure of mental freedom now enjoyed unfetters the intellectual capacities and opens the way for all, to large achievements. We think with pardonable pride of President Lincoln, who, in his early struggles, conned the classics by the fitful light of blazing pine knots, and of the many in this and in other lands who, in spite of adverse circumstances, have won their rightful place in the aristocracy of learning.

For truest inspiration, however, we may think upon the achievements of Christ Jesus who, in early boyhood, astonished the learned doctors of the law, and who not only did the mighty works which fill us with awe even at this distant day, but whose individuality, in every particular exhibited the rounded symmetry of a perfect character. Of him, our Leader speaks to us through the Manual, as "Christ Jesus the Ensample" (Art. XX., Sect. 3).

In striving to follow where we are divinely led, we should never forget the high value of "diligence, promptness, and perseverance" (Science and Health, p. 514). The honor and the success of our Cause call for the demonstration of great and noble qualities on the part of all its adherents, and mere personal likes or dislikes should have no weight in the choice of those who are best qualified to serve as Readers. God is guiding the destinies of this great movement, and fitness and faithfulness should characterize all who serve in its ranks. Through a glad and intelligent responsiveness to this guidance it is theirs to obey the command, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."

K.

Quality in Living.

A CLEVER critic of western civilization, who writes under the caption, "Letters from a Chinese Official," hews close to the line when he says that instead of thinking of the quality of the life lived, we are ever thinking of the means of living. All students of our time will agree that the life of the many is altogether irrational in view of the fact that thought is focussed upon the endowment and prolongation of life's satisfactions, rather than upon their refinement and spiritualization. The initial impulse of conduct may be, and often is, a desire to reach an ideal goal, but in so far as material things are thought of as conducing to its attainment, the trend is invariably toward absorption in the means, and forgetfulness of the end. How subtly the demands of the body, of social life, and of fashion insinuate themselves upon our attention until, as our critic has said, it becomes wholly subservient, and then the curse upon ignoble living is pronounced,—decadence has begun.

In this connection one can but recall the founders of this great American republic. They are sometimes spoken of as narrow, and not altogether lovable in the angularity and austerity of their faith, but all will allow that the quality of their living was very splendid. In the most trying circumstances of poverty and of peril, they succeeded in preserving inviolate a fine, high sense of life's true meaning. Their children have multiplied a thousandfold the means of enriching human experience, but absorption in these means, has tended to render our daily living commonplace and unheroic. Quantity and variety have been gained, but at the expense of quality.

The only remedy for this drift and condition is found in the realization of a truth to which Jesus constantly referred, and which is distinctly emphasized in Christian Science; viz., that spiritual ends are to be achieved by spiritual means, and by these alone. "Spiritualization of thought lets in the light" (Science and Health, p. 407), and the problem of being can be solved in no other way. Our human efforts and material sacrifices may have very much to do with our escape from materiality, but they count not a whit in the demonstration of real being.

The oneness of reflection with Principle, was declared by the Master, when he said, "The Father, . . . He doeth the works," and in all his touch with men he tried to lift their thought to the realization that the overcoming,—every real gain or growth,—is the result of the activity of Spirit, and "there is none other name, . . . whereby we must be saved." It is here that organized Christianity has come so far short. Jesus made it clear that his feeding of the multitude, his healing of the sick, and his raising of the dead, were all the result of the same spiritual activity or knowing, but, in contrast with this teaching, Christian people have recognized the mortal and material in a way which has made these a part of the divine provision. They have thus been permitted to effect that domination of thought which is the most sad and fateful of all enslavements, and the fetters of this materiality cannot be broken until we come to understand that it has no place in the divine ordering, and hence no claims upon human recognition.

The worship of "the goddess of getting on," to use Ruskin's phrase, has many devotees to-day, and the world is ready to pay court to what it calls success, regardless of the means by which it is achieved. At such a time Christian Science has come teaching that there is no effective doing save through truth's assertion and unfoldment in consciousness. When this is apprehended, the seductive glamour of materiality is escaped from, the spiritual ideal is brought into touch with every least undertaking, and the true Christ-life is revealed as men are helped "to raise themselves and others from spiritual dulness, . . . into the perception of infinite possibilities" (Science and Health, p. 34).

Letters to our Leader.

Beatrice, Neb., November 24, 1904.

Our Dear Leader:—Thought has been busy, this beautiful Thanksgiving morning, taking a retrospective glance over the past twenty years and more, thinking of the many blessings that have been ours, all of which we owe to our dear Father. In this our thought turns to you as the one on earth to whom we owe most gratitude and love, you who have patiently sacrificed so much that your followers may partake of the joys of Soul. Few can know of the great work you are daily doing for us better than can we, who spent four years so near your home, and saw your patient toil, your humility and love. Through such a consecrated life God speaks and the sick are healed. Your beautiful prayer, "Shepherd, show me how to go," is with

us daily, and to our heartfelt desire there comes the answer, "This is the way, walk ye in it."

More than twenty years ago I was given up by eminent physicians. Hope had well-nigh faded out, and when the last straw of material relief had floated from my reach Christian Science was mentioned to me, and Science and Health was placed in my hands with the comforting assurance that I could heal myself by the study of it. I had not read many pages before I saw that it gave the correct view of the Bible, and at this point I was ready to part with *materia medica* forever. I studied this dear little book and the Bible faithfully. At the end of one year I realized that I was healed, and not a symptom of those troubles have ever returned. How just and right, therefore, that we should gratefully remember you this glad day, when the people of our nation are giving thanks? You already know we love you, but it may bring added comfort to your dear heart to know that my wife and I are giving our whole effort to this Cause that means so much to us. We thank God and are grateful to you that we can help the sinful out of their bondage and the sick out of their suffering, by doing as you have taught us. That we may faithfully imitate the example of Christ Jesus, as do you, is our daily desire.

We join in love to you.

EZRA M. BUSWELL.

[Telegram.]

Boston, Mass., December 3, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—The association of students of Eldora O. Gragg, in annual meeting assembled, desire to express their great love and gratitude to you. By your words, your works, your unselfish life and constant devotion to the great Cause of Christian Science, life has been made sweeter, grander, nobler, and more spiritual for us; our prayerful desire is to follow meekly and in humility the path which you have pointed out to us. Our watchword shall be, love for God and man, and our goal, the manifestation and demonstration of this love in the healing of the sick and the sinful.

Lovingly yours,

ELDORA O. GRAGG.

[For the Association.]

[Telegram.]

Brockton, Mass., December 8, 1904.

Reverend Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

We, the members of First Church of Christ, Scientist, of Brockton, Mass., in meeting assembled, send to Stephen A. Chase a check for \$785.45, the amount of our church building fund. It is an offering unto our God,—a Christmas gift,—a major peal in the ascending scale of the Christmas chimes. We listen "not for the backward ringing of the bells," but for that thought attuned by love which bids us follow Christ our Lord, and to hear through all the earth the glad tidings of joy that Christian Science brings. With hearts filled with love and loyalty to you, our beloved Leader, we consecrate ourselves anew unto God.

C. MORSE WESCOTT, Clerk.

Burwell, Neb., November 17, 1904.

Dear Leader:—On reading the Church By-law in *Sentinel* of November 5, I at once resigned membership in two lodges, one of twenty-three years' and one of five years' affiliation. Christian Science has done so much for me that I intend to obey every requirement so far as I understand it.

Lovingly yours,

W. E. PAINTER.

Testimonies of Healing.

Six years ago when Christian Science found me I was a wreck, morally, physically, and spiritually, and was without hope or God in the world. I had become addicted to the liquor habit and many times would drink to excess. I had often tried to reform and to get free from the many immoral habits which were taking away my health and life, but moral courage would always fail and sin seemed to be ever the victor. But, thanks to God and to Mrs. Eddy, I was led to investigate Christian Science through the healing of a relative, not thinking it would be of any benefit to me, being only curious to learn what it taught. Before I had gone far with the investigation, to my surprise, my old habits began to let go of me one by one, until all had disappeared and I found myself free. The last to let go was the liquor habit, which clung to me almost two years after I began to study Science and Health. We had no other help than the text-book, for my wife and I at that time were alone on a farm. It has been four years since I have tasted liquor, and I can truthfully say I am healed, since I have not had a desire for it in that time, nor have I had a desire to indulge in any other immoral habits. I also had many physical ailments that have all been healed, and I am thoroughly convinced of the efficacy of Christian Science to heal in all cases, both acute and chronic, if scientifically applied.

I will here give to the Field a demonstration over a fracture of the spine from a fall, which to me is a great proof of God's care for His children who have learned to know His name. On October 7, 1902, I was helping to remove the roof from a one-story factory building, when, in a moment of forgetfulness, I stepped backward into the space where the roof had been removed and fell to the floor below, a distance of about fifteen feet, with head down, alighting on the edge of a pile of bricks just across the small of my back. As I started to fall I realized in a moment what I had done, and the thought came to me, "God is with me, I cannot be injured." I was not unconscious for a moment, neither was I frightened, but began to realize the allness of God and the nothingness of matter as I never had before. In a few moments I arose and walked a few steps and sat down; then I lost the use of my body but not of my consciousness. I called to a fellow-workman who was in another part of the building, and told him what had happened. I was taken to my home, and my wife, being a Scientist also, did not become frightened, but dismissed the men who brought me and went to work to help me, dressing my wounds as best she could, for my head was cut and both elbows were jammed. There being no practitioner in the town where we resided at that time, we telegraphed to a friend in Chicago for help. This was about four o'clock in the afternoon, and I was perfectly helpless so far as my body was concerned, being more like a corpse than a live man until about eight the same evening. I then arose and walked across the room; the next day I walked in the yard, and on the third day I walked a distance of half a mile. On Sunday following, which was the sixth day, I rode in a buggy to Richmond, Ind., a distance of eighteen miles, to hear Judge Ewing lecture; and in just two weeks after the accident I was at work again without any sense of the injury whatever. This to me, as to all others who saw or knew of it, was a beautiful demonstration and a positive proof of what Christian Science will do for those who stand firm in time of need.

I am very grateful for Christian Science, for it has made me free and made life worth living. It makes no difference to me what others do, but as for me and my house, we will serve God.—LEWIS WALTZ, Anderson, Ind.

My healing was so wonderful, that as I receive more light I feel I must add my testimony to those of others. Fif-

teen years ago I had blood poison and other serious troubles. For over a year my suffering was intense; then I was cured of the blood poison and that was all the help I received. I can honestly say that I never saw a well day for fourteen years. Three years ago last January I was taken seriously ill from the old trouble, and for over two years I was very sick. I could not do my work or even plan it, could not sleep, and longed to die. Our family had to be broken up. I spent nearly six months away from home, and when I was brought back I was no better. I stayed at home from October to April, 1902, then went to one of the best hospitals in New York, where a celebrated doctor said I could not be any better unless I submitted to an operation. He said I would be well in five weeks if I had the operation. I was at the hospital five weeks and came home worse than when I went there. I stayed at home eleven months and could see no way of being any better till I heard of Christian Science through a kind friend who had been wonderfully healed. She wished me to go with her for treatment. I knew very little about Christian Science and had no faith in it, but in four weeks I was entirely cured. It is over a year ago and I have not taken a drop of medicine since. I have four children, and we have had no doctor in our home since, excepting the Great Physician.

My husband had a tumor removed from the back of his neck which had been there nearly six years. Every day the way grows brighter and I feel very grateful to Mrs. Eddy, also to my practitioner for her kind help in this wonderful truth. I give God all the glory, and take Him as my Physician,—my All and all.

MRS. F. N. ASHLEY, Noank, Conn.

During the eight years I have been in Christian Science, we have had many seeming trials. One in particular I recall wherein I suffered mentally, and could not then see that any good could possibly come from the experience; but I can now see it, and can trace to it our escape from the most glaring error that we had to contend with. This demon has never returned, for it was uncovered and destroyed through Christian Science. What then seemed an unbearable trial, now seems the greatest blessing. We have had many proofs of God's care, for when error has appeared, we have always been able to overcome it, and when the battle is won what a difference from our old thought! When error in the form of sickness appears it no longer wears me out to care for the sick. Instead of being in low spirits, I am happy over the victory that has been won, for I know that God has been with us. I realize the great gain that has been made in my life, from inharmony to a life of peace and love. All our needs are abundantly supplied, not because our income is greater, but because we have found out in Science how to live, and our pleasures are in our home.

We have had many beautiful cases of healing. A few weeks ago our little boy was healed of a pronounced case of pneumonia by Christian Science treatment, and one week from the day he was taken sick, he was at school again. Before coming into Christian Science I suffered a great deal from a very weak back, but this trouble has entirely left me. I also suffered from indigestion, and my life was a burden to me from nervousness, but all these ailments disappeared through the reading of Science and Health before I knew how treatment is given. Here in St. Louis we subscribed to the building fund of our new church what seemed to me a considerable sum, but when the time came that we felt it should be paid, we did so without an effort,—the money came in a natural way, as my husband's receipts were unusually large, proving that "God is our source of supply." We can indeed say, "In him we live, and move, and have our being," for all we are and all we have we owe to God. I am striving and praying each day to become more worthy of the many blessings I have received. I wish to

express my thanks to our dear Leader, who has shown us the way, and also to our teacher, who has worked so hard and continuously to keep us in the straight and narrow path that leads to harmony.

MRS. M. E. CORD, St. Louis, Mo.

I want to give my testimony to the Field, it may help some one who needs the understanding of God as I did. Over three years ago I was a very sick girl, mentally and physically, when one day a friend asked me to try Christian Science. I laughingly remarked that I did not believe in it. After I reached home I began to think about it. I knew that medicines could do no more for me, as some prominent physicians had told me to take walks, be in the sun, and then, when I could walk no more, I must die. I realized that I had exhausted every material remedy. I went to a Christian Science friend and asked for the name of a practitioner, but with no hope of getting help. I went, and in a few weeks I was healed,—made a well woman. The physical healing seemed then the most wonderful, and for it I am very grateful, knowing it could not have been accomplished in any other way, but I am indeed grateful for the spiritual uplifting which followed.

Is it any wonder that we love our dear Leader, Mrs. Eddy, who has revealed to us through Science and Health what God is. I am grateful to the dear ones who so lovingly helped me to see the right way to Life eternal, when I was weary and heavy laden. I am striving to be worthy to be called a Christian Scientist.

IRENE PETERSON, Los Angeles, Cal.

I desire to voice the thanks with which my heart has been filled ever since the truth came into my consciousness, which it did with such clean-cut, logical reasoning, that after my first reading of Science and Health of an hour or more, I arose, knowing that I should have no more use for my small library of medical books, and my several cases of homœopathic remedies, of which I had made such diligent use that among my friends I had gained the title of doctor. Not only in my home and social circle, but also among our domestic animals and even my canaries had I found subjects on which to practise what I then believed to be the most scientific of healing arts, and until I read Science and Health I was so satisfied with these remedies that I had no desire to try other methods. My love for the Bible and my faith in its teachings were so great that I did not seek Christian Science expecting to gain more. Ever since I began to think for myself, the Bible had been the Book of books to me, yet during the past seven years Science and Health has been of the greatest benefit to me in reading my Bible. It has revealed truths before unseen and has made plain many obscure places. Now that I read the Scriptures in the light of Christian Science it is as though scales had fallen from my eyes, so that I am enabled to find treasures undreamed of before.

Each chapter in Science and Health supplies a specific need, but the glossary was for me the last one to be recognized at its true value. Now as I read and mentally digest it, the spiritual sense, which gives the original meaning of the Bible, is made clear.

When I remember how satisfied I was with both my religion and my medical beliefs, and how the truth revealed in Science and Health overthrew in an hour what mortal mind had been forty-six years in learning, I find it proves that truth—"the Word of God"—is quick and powerful and sharper than any two-edged sword. To God, to our Leader, and to my teacher I give most grateful and loving thanks.—S. D. S., Berlin, Germany.

For six years I suffered with backache and lung trouble. I got but little rest night or day. I was troubled badly

with indigestion, rheumatism, and catarrh, and for six summers in succession I had hay fever and bronchial trouble so that sometimes I could not lie down at night because of smothering. As soon as I began to be free from the hay fever, my lungs would trouble me the other months of the year. I was also troubled with constipation and piles, and a chronic female trouble, which my doctor said required a surgical operation so that I could be a well woman. I went through the operation but it was not a success; then the doctor wanted me to make up my mind, as soon as I could, to go through another surgical operation. I felt sure I could not live through another, as I was much worse after the first, and all I could think of was death. It was very hard to think of leaving a dear child and a loving husband. I prayed faithfully and waited patiently for an answer to my prayers, but none came. My prayer then was for God to direct me to the right remedy. I remained under the care of my doctor three months after the operation.

A neighbor who heard that my operation was not a success sent me some of her Christian Science literature. I found it very interesting and I obeyed some of the good things I read. Later, I was sent a copy of "Miscellaneous Writings," and while reading that book I was made free from constipation. I had stopped taking any medicine. I thought if it had any power I had taken enough the past six years. I also had a feeling that some way I would get well yet. This was the thought I got from this book. I went to talk with a practitioner and took treatment. The first night I slept better, the second I was much better. It was with a grateful heart I could answer on the third day that I slept all night, only waking once or so to give God thanks. In two weeks I felt well enough to think I could do my housework. I feel very grateful to my practitioner for his clear realization of the Truth as found in Science and Health, and to Mrs. Eddy for reviving the healing work of Jesus.

MRS. FANNIE S. ELLIOTT, Concord, N. H.

[Translation.]

I shall endeavor to express my sincere gratitude for what I have thus far received in Christian Science. Before a dear lady gave me treatment in such an unselfish way, I had suffered much pain for several years. This has all disappeared through the love of God expressed in Christian Science treatment. It has not only been of great service to me physically, but I have found much comfort and peace for which I had formerly searched in vain. Although I have had many a battle to fight, I now await the future with much more confidence and I hold fast to God's glorious promises.

Next to God and our dear Saviour, Christ Jesus, my gratitude is due to the Founder of Christian Science, Mrs. Eddy, whom God has shown the right way which she so unselfishly communicated to her brothers and sisters through her self-sacrificing labor. I am also grateful for the faithful one who helped me so lovingly, and for *Der Christian Science Herald* which is so filled with interesting and helpful matter. It certainly must already have done a great deal of good, and I hope it may find a vast field of usefulness.—M. S., Dresden, Germany.

Christian Science has done more for me than I can find words to express. My healing was slow but much has been accomplished. About four years ago I was healed of a cancer which was inward; it passed away from me, and what a relief! I had another ailment from which I had suffered for years.—at times, there was a sense of pain in the limbs, from the knee down, which seemed to be awful, and it only appeared when I was about to sleep at night. The only relief was to jerk my limbs, but the pain would come again, and so it went on, night after night. The doctor said there was no help for it, but through Christian Sci-

ence treatment it has gone, and that indeed brought a great sense of relief. I had never known what it was to have a healthy action of the bowels until Christian Science healed me. I therefore have very great reason for thankfulness. Best of all, however, is it to know that sin, sickness, and death, are not sent by God, and that the right understanding of Him destroys them. I am grateful to those who gave me treatment; their faithfulness and kindness I shall never forget. I am deeply grateful to Mrs. Eddy for giving us the message of Truth contained in Science and Health. The study of this book with the Bible has given me the desire to cultivate those spiritual qualities which our Master brought to light, purity and goodness, thus reflecting the one Mind.

MRS. FRANCES E. MORSE, St. Louis, Mich.

Having derived much benefit from reading the testimonies in the *Sentinel* and *Journal*, I am moved to add my own in the hope that it will help some one who may perhaps be in a similar condition to that in which I was eight years ago. Five years previous to that time I had enteric fever, which so reduced my strength that for a long time I could not turn myself in bed. My convalescence was so very slow that I finally became a chronic invalid, having neurasthenia with all its accompanying troubles. I lay for weeks in a perfectly dark room, not being able to bear a ray of light, and could take nothing but liquid food for long spells at a time. I tried many of the best physicians, but without success. I finally went to a sanatorium, where I remained six months in bed. Here my mind became badly affected, and I asked to be taken away where I could be alone and quiet. I was taken away on a stretcher.

It now seemed as if there were nothing further that could be done, as I had hoped I might get help at the sanatorium. About this time I heard of Christian Science, and like a drowning man I grasped at a straw, as I then thought, but I soon found I was being drawn into a very secure boat wherein lay my rescue. I began taking treatment, and in the short space of two weeks I returned to my home, ready to take my place in the world again, to do as other men. I had found that for which I had been looking for five years,—health and, best of all, God. Since this time I have had some troubles to meet, but with the help of Christian Science they have always been overcome promptly, and to-day I am well and able to do work I never dreamed possible. I sincerely hope any reading this may be prompted to investigate Christian Science and find Truth for themselves.—E. G. R., New York, N. Y.

[Translation.]

Through my too great self-reliance and the belief that nothing could fail with me, I gave up a very good position in order to become independent, but my venture turned out very differently from what I had expected; it proved a failure and I suffered heavy losses. I struggled with destiny, but not being able to keep abreast of the times, I had to give up my undertaking. I was discouraged and exhausted, and I believe that I would not have lived through it if I had not been directed through Christian Science to the all-power, the ever-presence, and the all-wisdom of God and His great love for man. I not only gained an absolute trust in God after a stubborn resistance, but I have since gained an understanding that all evil, all imperfection, is not sent by God, but that we bring this evil upon ourselves through our own offences, for "whatsoever a man soweth, that shall he also reap."

I am a changed man. I am back in my former position and very happy that I may read *Our Christian Science Herald* and thereby learn of Truth. I am deeply grateful to our Leader, Mrs. Eddy, through whom the way of salvation has been revealed to us in Christian Science.

I have also experienced the healing power of Christian Science for myself and family. In December of last year, I was taken ill one Sunday with what seemed to be influenza. I had a high fever and difficulty in breathing accompanied by great fear of death, for my brother-in-law had died suddenly, a few years before, under similar circumstances. I immediately had Christian Science treatment. The next morning I could attend to my business; and the following day all discord had disappeared. Myself and family, eleven of us, have had neither physician nor medicine for the last four years for which we are indeed grateful to God!—CARL UTZ, Stralsund, Germany.

It is not a year since I came to Christian Science, yet I feel as if I had never lived before and that all my blessings have come through it. Prior to my acceptance of this truth I had never belonged to any church, but attended one quite regularly. I had early found bewildering and startling inconsistencies, and awoke to the knowledge that the whole truth was not preached from the pulpit. The minister would preach that God is all powerful, yet taught that there is another power opposed to God, called the devil. I would listen to a sermon, thinking perhaps I might be helped to meet a problem that had presented itself to me, but spiritual food I did not receive, and I came away feeling there was nothing practical in what I heard.

I studied Science and Health over two years before I gained much spiritual insight. I was eager and intensely anxious to understand the truth, but I wanted to grasp it all at once, and I see now that the intensity of my thought kept me longer from the understanding, as Science and Health says we must "Emerge gently from matter into Spirit" (p. 485). I made another mistake in trying to understand God intellectually, and thus I found only confusion. I then prayed earnestly for light, and gradually the clouds lifted and admitted such a radiant light and understanding that all anxiety vanished and I saw clearly that "This understanding is not intellectual, is not the result of scholarly attainments; it is the spiritual fact of things brought to light" (Science and Health, p. 505). Through Christian Science my disposition has been changed, and from being gloomy, melancholy, and morbid I have come to a sense of complete happiness, rest, and contentment. I have loftier desires and ambitions, and I have found in Science and Health the grandest conception of God, the highest ideal of manhood and womanhood, and the most consistent and demonstrable explanations of the statements contained in the Bible, that I have ever met. As a public school teacher, I find Christian Science to be an invaluable help, and I know that a spiritual recognition of man's true relationship to God, held constantly in thought, gives us strength and power.

I love Christian Science more every day, and am grateful to the pure, noble woman who has shown us the way to obtain that consciousness which gives a peace that passeth understanding.

LILLIAN M. STEPHENSON, Rowayton, Conn.

I thank God that I have found in Christian Science a new discovery of Christianity. Through the kindness of a lady who is a Christian Scientist a member of my family was healed. This lady sent some *Sentinels* to her; I took them and read them and I, too, was healed of many maladies and I am thankful to say that Truth is helping me every way, and I believe He ever will. Yes, I know I shall be safe while I am a follower of Truth and Love.

H. C., Cornwall, Eng.

When I heard of Christian Science about three years ago, I did not know what it was, but I was willing to try anything, for I had outgrown all belief in medicine. I think

the world cannot be too grateful to Mrs. Eddy, for only those who have passed through a struggle can realize the burden that is lifted from them. Was it any wonder that when the practitioner told me on my first visit to stop all worry, I laid down a great load, which I had carried many years. I was able to see the light and did not have to walk in darkness any longer. I am the mother of eight children. The baby was born in Science and the younger children have never had to learn the old way. I try to bring my children up in love instead of fear, and during these years we have had many proofs of the power of Truth in our family. I am also thankful that my husband has always stood courageously by me in all our trials and victories. I find the Comforter always present. My husband and myself had the privilege of joining the church here several years ago and The Mother Church last fall. The children were all ready to accept this blessed truth. Space would not suffice for all the demonstrations we have had, but one I would like to tell. My father, some seventy years of age, had a very sore leg, as long as I can remember, and no medical aid could help in the least, even to relieve the pain. I did not then understand the power of Truth, but thought if I could get him a copy of Science and Health in the German language he might be relieved. While I was reading Science and Health through the first time, the leg was healed entirely and he has had no trouble since. For this and all else, I am most grateful to God our Saviour,—the only true Physician,—also to Mrs. Eddy, our dear Leader, and to the practitioner who worked so patiently to show me the way. I am also thankful for all the Christian Science literature.

ELIZABETH HOBE, Pittsburg, Pa.

If we have received just the faintest glimpse of what divine Love is and what it can do for us, ought we not to give thanks for that, and not be tempted to withhold any good thing, no matter how small it may seem to mortal sense? Has not our dear Leader, Mrs. Eddy, given all to us, working patiently and lovingly, sacrificing self in all ways, to give the hungry human heart that which we are all seeking,—peace, health, and happiness? Surely we cannot be too thankful to God and our Leader for the blessings revealed to us through Science and Health and all her other writings. Many trials, physical, financial, etc., have been overcome, and are being overcome daily, through the little understanding which I have of Christian Science. For this I am truly grateful.

HERMINA F. BERGER, Denver, Col.

It is now nearly six years since I began studying the text-book of Christian Science, and I would like to tell what it has done for me and my family. It has taught me the truth, and I have been striving to understand it more and more all the time. I know now that God is all power, and I am very thankful for the understanding I have of God's revelation through Christian Science. The doctors told me that I had lung trouble, that one lung was almost gone, and that I would have to take medicine three times a day, else I would not live long. Christian Science has healed me of this trouble and I no longer ever think of taking medicine for anything. I have also been healed of constipation, which used to give me a great deal of trouble. Some time ago I had a tooth pulled and it quite surprised the doctor to see how little pain there was. We have three children in our family and they all love to study Christian Science. They never think of going to bed without repeating their little prayers.

I am very grateful to Mrs. Eddy for giving us Science and Health. I know that the way will become brighter as I continue to gain more understanding of the truth that has come to us through her.—MRS. KATIE OHRT, Manning, Ia.

There was a long, dismal waste of night in which I had little hope of any good in this world. I could only lie upon my pillow and, looking up through the window, watch the clouds arrange themselves in the sky. In this state of captivity I would search the past and apply every theory I had ever read or heard of to find the cause of my broken health. Drugs had ceased to work, dieting had become actual starvation, sounds were a terror to me at all times. All that could be done for me in my own home, had been done, and yet "all was vanity and vexation of spirit." The sentence of invalidism for life passed upon me by my friends was becoming more real with each storm, so when the night was thickest, the suggestion came to my rain-washed window that a change of climate would do what other remedies had failed to accomplish,—a rarer atmosphere, a higher altitude where malaria was unknown. My trouble was nervous prostration, and dread of malaria was one of its noxious growths. There came a morning when the sun made the pinnacles of "Old Cheyenne" stand out sharp and clear. A new-found friend leaned over the sweet-pea hedge between us and told me, oh, so timidly, that my sentence of death was not lawful, was not of God, and that I could go and see. I did go and see. I gave myself up to the wonderful Christ Science for correction. I learned of its laws, its Principle, its revelations. I rejoiced, I walked, I ate, I slept, I did whatever duty demanded with no ill results. I shall never forget the sunshine of that morning, that dawn, that awakening.

There came at last a day when the dew of morning had dried and the shades of night had become my dream. I painfully realized that I was absorbing all too little of the spirit of Christian Science, although the letter was well memorized. My cure and its glad surprise had faded away into the past, and I yearned for other victories. I desired the deliverance promised in the 91st Psalm. I wanted the extended privileges said to be the natural inheritance of a child of God, but, oh, the barriers! I had read most of Mrs. Eddy's books and many numbers of the *Sentinel* and the *Journal*. All these seemed to tell me that God is no respecter of persons, that barriers exist only in the false human concept. It was just what I wanted, so I broke through the belief of impossibility to the daring extent of consulting a practitioner several miles away. This practitioner declared the whole barricade to be self-built, and that only Truth could destroy it. No man or woman could do it for me. This practitioner had taken degrees in the institute of experience.

I have worked away ever since that time and self has been overcome at many points. The view is becoming quite clear. I am thankful to Mrs. Eddy and her students for the hard work they have done for me. I am thankful to God the infinite Healer, who healed me and gave me salvation.—MRS. VIRGINIA ELLIOTT, Fort Madison, Ia.

[Written for the *Sentinel*.]

Morning Prayer.

MAUD E. ENDICOTT.

HAIL, again the dawning day!
Darkness now has flown away;
We behold the dewdrops bright
Shining in serenest light.

Dearest Lord, on bended knee
Now I offer prayer to Thee;
Let me hear Thy loving voice,
Thee, I'd make my only choice.

Help me, Lord, Thy will to do;
Lead me where Thou'dst have me go,
Till Thy truth, and love divine
Through my every action shine.

From Our Exchanges.

The day of the belief in a personal God is gone, according to Dr. Lyman Abbott of New York, who preached in Mandel Hall at the University of Chicago recently.

"Science has broken down this belief and philosophy has destroyed it. God is the source of all life, all thought. He is the source of life, with the plowman as well as with the poet. This is far from the idea that God is a great big man, seated on a white throne in the center of the universe. Old churchmen stick to this belief because they are afraid to lose the humanity element in God. They want the personal element. But they need not have a personal God to feel this.

"When we see a painting of a great master and study its lines, as the beauty of the masterpiece overcomes us we feel the power of the master without knowing him personally. So it may be when we study nature. God paints the leaves autumn colors with His invisible hand, but the painting is going on. Thinking men no longer believe in a personal God. God instead is about us, without us, within us.

"A great many people in universities think they are losing their religion because they are getting a new one. They shudder to think of this. But theology follows experience.

"We don't have to go to church to find God. The great question with the church to-day is not how to get men into the churches, but how to get God into men. You can worship God as well with your flowers in the garden as with your friends in the church.

"The new birth is not a sudden transformation. It comes in successive awakenings. It is a gradual growth in truth until the dawn of righteousness breaks upon you."

Chicago Examiner.

The Christian life is a temper and a spirit in which all life is to be lived, and not a unique and special mode of activity. The farmer, the mechanic, the merchant, is not necessarily, or even probably, summoned away from these vocations by becoming a Christian; he is to live the Christian life in the performance of the duties which his existing relations to human interests involve.

All men, except those whom the Master commissions to a special service, are to find in the arena of ordinary human relations and tasks and responsibilities the sphere in which they are to serve the Lord. For most of us the call to a Christian life does not mean a summons to break away from the human activities and relationships in which our capacities and the providential ordering of our careers has placed us; it means a summons to put into our tasks and into all our associations with our fellow-men the Christian spirit so that even the commonest activities shall be inter-fused and interpenetrated with the disposition of Christ.

The Watchman

The need of a great religious awakening in our churches is apparent to the most superficial observer. The multitudes that are unreached by the Gospel, the self-satisfied supineness of so many of the churches, the comparatively small number added yearly to the membership, all pointedly emphasize the fact of the need and the greatness of it. We are compelled to recognize the need, yet how sluggish are our pulses at the call of God to awake to duty and a living sense of responsibility!—*The Examiner.*

The secret of a richer peace among our restless workmen lies in an improved spirit of industry, for the shirk knows nothing of the contentment of labor, but only its weariness and impatience. Nothing satisfies like honest performance; for still, character, in the marketplace, the shop, the field, the kitchen, the studio, is the prime source of contentment.

Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

National.

Dr. W. S. Woodward, Dean of the Faculty of Pure Science at Columbia University, New York City, has been elected president of the Carnegie Institute by the Board of Trustees to succeed Dr. D. C. Gilman.

The executive committee reports that it made 114 grants during the year, aggregating \$355,071, to aid persons connected with various universities, colleges, observatories, and laboratories in all parts of the country. In addition twenty-four research assistants were appointed, with \$25,000 allotted to them. Two special grants were made, one for an archaeological expedition to the Trans-Caspian region and the other for geophysical research.

Seven thousand farms of one hundred and sixty acres each in the Big Horn and Yellowstone valleys of Montana, with irrigation ditches prepared in advance by the Government, will be offered for sale during the coming summer. It will be the first distribution of irrigated lands, and the plan is to apportion among those who take the lands the cost of the irrigation works. It has been declared by the engineers that this is the most nearly ideal piece of territory for irrigation purposes that investigation has yet discovered. There is a sure supply of water, the grades are just right for its distribution, and the land is of great fertility.

A favorable report has been submitted by the Committee on Forest Reservations on the bill to establish a White Mountain Forest Reserve. New Hampshire's entire wooded area in 1900 was 3,228,000 acres, and from this 570,000,000 board feet of timber was taken, or 177 board feet per acre. This is the largest recorded anywhere in the Union. Wisconsin comes second and Pennsylvania third. The pending bill appropriates \$5,000,000, of which \$1,000,000 will be made immediately available for the establishment of a forest reserve not to exceed one million acres.

Charles P. Neill, Commissioner of Labor to succeed Carroll D. Wright, has long been identified with sociological studies in con-

nection with the Catholic University of America. He was made one of the officers of the Anthracite Strike Commission, although not a commissioner himself.

An announcement, not yet confirmed, has been made that Andrew Carnegie had given to the city of Boston the sum of \$540,000 and desired to become joint founder with Benjamin Franklin of an institution for industrial training to be managed along the lines of the Cooper Institute in New York.

More than 22,824,200 acres of the public lands were turned over to private individuals during the past year. This means that an area almost equal to Indiana has been added to the productive region of the United States.

A number of prominent railroad men have already signified their approval of a Government regulation of rates, a matter suggested by the President in his message to Congress.

The arbitration treaty between Great Britain and the United States was signed last week.

Foreign.

Emperor William will offer additional prizes to be competed for in the Transatlantic Yacht Race, according to the number of yachts competing. One-third of the starters will receive trophies. Any yacht losing a man overboard will be excluded from the award of prizes, this condition being intended to safeguard the crews as much as possible. The date selected for the start of the race, May 15, 1905, has been chosen so that the yachts may reach British waters in time to participate in the Dover-Helgoland race and later in the Kiel regatta, at which the Emperor personally will present a cup to the winner.

In consequence of American and British representations, the Porte has renewed its instructions to the provincial authorities to allow colporteurs to sell Bibles in towns and villages, but still objects to their traversing the disturbed rural districts of European Turkey, on the pretext that their safety cannot be guaranteed, and also to the sale of Bibles in the Anatolian provinces in Asiatic Turkey, because of the alleged fear that the colporteurs may distribute seditious literature to the Armenians.

The International Commission to inquire into the North Sea incident was expected to meet in Paris December 21, and proceed with the selection of a fifth admiral to complete the commission and arrange the procedure. The real work will begin early in January.

Lord Curzon of Kedleston reassumed office last week as Viceroy of India. There was a brilliant gathering in the Council Chamber to witness the ceremony.

Berlin has passed the two million mark in the population of the city proper.

Industrial and Commercial.

Breadstuffs exported from the United States in 1904 seem likely to be less than one-half in value those exported in 1903. Despite this fact, however, indications now are that the total exports will differ but little from those of the preceding calendar year, the eleven months ending with November showing an increase of \$10,000,000 in value of mineral oils exported, \$14,000,000 in cotton, while ten months' figures show an increase of \$64,000,000 in the value of manufactures exported, as compared with the corresponding months of the preceding year.

After a series of experiments covering ten years, Luther Burbank, the well-known horticulturist of California, has produced a spineless cactus, which is said to be half as nutritious as alfalfa and will yield more forage to the acre. The plant will grow luxuriantly on the driest desert. Its leaves and fruit are food for men and beast, and it may mean to some districts more than the introduction of the potato meant to Europe.

In the last twenty-four months there have been more than 117,000,000 tons of anthracite coal sent to market, and the gross output of the mines was probably 12,000,000 tons more. No such amount of coal was ever before mined in the same period in the anthracite regions.

Italian capitalists are said to be preparing to form a large stock company for the purpose of producing silk cocoons in the hardwood sections of Mississippi. It is the idea of the promoters ultimately to establish mills for the manufacture of the raw material.

The import trade between the United States and China in the ten months ending with October, 1904, shows a total of \$23,333,324, and the exports for the same time, \$20,557,184.

General.

In this country, at the present time, about forty million incandescent gas mantles are used annually. The industry in America is still in its infancy. A mantle is made as follows: A "stocking" is first knitted of cotton thread and then saturated with a solution of thorium. Thus impregnated, one of the stocking's ends is sewed up with asbestos thread, a loop being left by which the stocking is manipulated in the subsequent steps of the process. The sewed stocking is ignited at its top by a flame for the purpose of consuming the thread. After this treatment, all that is left is a reticulated structure consisting almost entirely of oxide of thorium. "Shaping and hardening" are the next stages through which the mantle must pass, both being effected by the Bunsen flame. Lastly, the mantle is dipped into a coating solution in order to protect it from breakage in transportation.

M. Loicq de Lobel, delegate from France to the International Geographic Congress, which was recently held at the World's Fair in connection with the Congress of Arts and Science, addressed the former body on the trans-Alaska-Siberian railway scheme, of which he is the promoter. The work is to be financed by a French syndicate, and involves the tunneling of Behring Strait. His plan is that the railway shall cross Behring Strait by means of a tunnel and then continue its route across the Siberian steppes and connect with the present trans-Siberian line at Irkutsk.

The last of the ten balloons released at the St. Louis World's Fair by an observer from the Blue Hills, Mass., Observatory has arrived home, coming from Sigel, Ill., where it was picked up by a farmer. These balloons were released in order that the scientists might learn something of the upper air currents. One went as far as Kentucky from the fair grounds before it fell to earth.

The Alaskan season for 1904 is closed so far as shipments to the North are concerned. On the whole it has been a good season for gold diggers. The gold product of the entire northern district for the present year is estimated as follows: Klondike, \$11,000,000; Nome, \$10,000,000; Tanana, \$2,000,000; all other districts, \$3,000,000.

The report of the State of Texas mineral survey gives an account of the many precious stones that are found in this State. They include common garnet, precious garnet, and black garnet, amethyst quartz, Amazon stone, onyx, opals, pearls from freshwater mussels, turquoise, and agate stones.

The Chicago Orchestra last week realized the object for which for more than a dozen years it has been hoping, a hall built to its liking and devoted exclusively to its use. The new hall is pronounced acoustically ideal.

The statement of the United States exports to Canada for the fiscal year ending June 30, 1904, shows a total of \$131,274,346.

Next summer electricity will haul the cars to the top of Pike's Peak.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Healed by Mrs. Eddy.

LAURA LATHROP.

I WAS first treated by a Christian Scientist in February, 1885. There were very few practitioners in those days, and I had to go a hundred and twenty-five miles to find one. At that time I had been a confirmed invalid for twenty-three years, and for three years, had been sitting in a chair made to order, tipped back at an angle of forty-five degrees. To sit up straight meant acute suffering. All kinds of treatment had been tried for me,—homœopathy, allopathy, water-cure, electricity, etc.; but to no avail. Every organ of my body seemed diseased and my nervous system a wreck. Five months before I was treated by Christian Science, my husband passed on, and then darkness closed in about me. For the first time all hope of ever getting well deserted me. Prior to this, in spite of the laws which doctors had made for me, that I was incurable, that I could look forward to nothing but entire helplessness, I had always felt that I had a work to do in the world, and that in some way I should be made able to do it. Now that he whom I loved best had gone, when for the first time in my life I found myself penniless as well as physically helpless, the clouds which had for so many years almost obscured the sun settled down over me in a thick, black pall, my very trust in God was gone, my only wish was to die.

It was in this hour of trial that I heard of Christian Science, and after months of persuasion I at last allowed myself to be taken to Chicago, where I was placed under the care of a dear student of Mrs. Eddy. I told her of all the diseases I believed I had save one, that was heart disease, which I was sure I had inherited from my father, who had suddenly passed on some years before. This I kept to myself, for, as I said, my one desire was to die, and I thought that would give me a sure way to escape. It had not yet come to me that death was to be conquered, not submitted to, in the hope of release from physical suffering.

When I applied for admission to the Metaphysical College the following summer, a paper was sent me upon which were various questions. One was, "Are you well?" I then knew so little of Christian Science that I supposed I must answer from the spiritual standpoint, so I said yes, although this one disease had not been destroyed, indeed, it was, if anything, aggravated.

At the close of the class, I came to New York at the request of my dear Teacher, Mrs. Eddy. This was early in October of 1885. I had been in this city over a year when Mrs. Eddy sent for me to come to Boston to spend Sunday with her. I went Saturday night, reaching the college at 571 Columbus Avenue, where Mrs. Eddy then lived, at nine o'clock Sunday morning. She asked me no questions about my heart, although she told me nine years after that she had sent for me because of what one of her

other students had said about me. One of them had called upon me in New York, and later had told Mrs. Eddy that I was in a very bad condition physically, that my heart constantly made a creaking noise, such as a gate would make when swinging on a rusty hinge. When it was time for dinner I accompanied Mrs. Eddy to the dining-room, which was in the basement of the house. On returning to the parlor she ran up the stairs like a young girl. I was ashamed not to make at least an effort to do the same, but for twenty-four years I had never run upstairs. Perhaps once or twice a year, if it were absolutely necessary, I would make the effort, going up two or three steps at a time, then sitting down to rest. This time I did go as fast as she did, but when I reached the top step I was in a sorry plight. How I looked I cannot tell. I only knew that I was seized with one of my old attacks, when it seemed as though an iron hand gripped my heart and was squeezing the very life out of it. She gave me one glance, and then, without asking me a question, she spoke aloud to the error. We are told that when Jesus healed the sick, he spake as one having authority. On this occasion Mrs. Eddy also spoke as one having authority.

As I look back on that wonderful event, I do not remember that the thought came to me at the time that she was healing me, neither do I remember that I had any special faith. The only sense I had was of her wonderful power. A few months after, I was seized with another attack, but it lasted only a moment and went never again to return. That was eighteen years ago, and during all these years of unceasing work in Christian Science, I have constantly and fearlessly run up and down long flights of stairs, when it was necessary to do so, and with no ill results. The belief of hereditary heart disease is not only dead but buried.

When I first read Mrs. Eddy's wonderful message to the church in Concord, and came to that sentence where she says, "To so live as to keep human consciousness in constant relation with the divine, the spiritual and eternal, is to individualize infinite power;" my thoughts went back to that day, over eighteen years ago, when she spoke the word of Truth, and healed me. She, our beloved Leader, had so lived as to "individualize infinite power," and the Love which "always has met, and always will meet, every human need" (Science and Health, p. 494), and which she constantly reflects, set me free. My gratitude to her for the physical healing is deep and lasting, but the encouragement gained from this wonderful manifestation of what may be accomplished by clinging "steadfastly to God and His idea" (Science and Health, p. 495) has been and is without limit. Many, many times when error has whispered to me, "You can't accomplish anything, you might as well give up trying," have I seen her in mind, as she stood before me that day,—the embodiment of power,—and I have been stimulated to new endeavor, knowing that "God works through strength, not through weakness." Through all these years I have been and am striving to express my gratitude and love for our Leader, through loyalty, obedience, and an earnest endeavor to follow in her steps.

Copyright, 1904, by Mary Baker G. Eddy.

A Christmas Offering.

ANNIE LOUISE ROBERTSON.

EACH Christmas brings to our thought a clearer comprehension of the wondrous glory which surrounded the birth of Jesus. Its matchless beauty has always appealed to all that was highest and best in humanity. Christian Science does not take away from us anything that is good; on the contrary, it broadens, deepens, and enriches our ideas, teaching us to look at all times and seasons, less from the material and more from the spiritual viewpoint. Mrs. Eddy has expressed this in her words, "Your feast days will not be in commemoration but in recognition of His presence" (*Sentinel*, Vol. I., No. 32); and so in the light of Christian Science, our Christmas feast becomes a joyous recognition of the ever-presence of the Christ, who came and still comes to save us from the burden which ages of wrong thinking and consequent wrong acting have placed upon humanity.

In accordance with our Leader's loving suggestion, our Christmas will be a season of giving to Christ and his church. Not looking out to see who is loving us, but searching our own hearts to see how well we are loving, how much we are doing to aid in the establishment of the church triumphant, looking to divine Love to feed us that we in turn may have enough to give to our less fortunate neighbor; as we strive the more earnestly to satisfy our own "famished affections" (*Science and Health*, p. 17), to enlarge our individual capacity to express the true manhood and womanhood which is our divine heritage. The beautiful Christmas season will have passed by us in vain if we have not learned to reflect more of the Christ who heals and redeems mankind, and who impels each of us to give up all for the truth.

Each experience deepens our gratitude toward our loved Leader and Teacher for all that she has given and is constantly giving to us, and especially at this season we appreciate the light which her teaching has thrown upon the marvelous appearing of the child Jesus, and its great import to each individual. Mere words may not express much, for gratitude demands worthy deeds of self-sacrifice of ourselves and our possessions, for the church which she has established, and which we all love so dearly, the church which stands for your salvation and mine, and the salvation of the whole world. No sacrifice is too great to offer, for where love is there is no sacrifice. Our highest privilege is to aid in upbuilding Christ's church. No one is so poor that he cannot give richly, for a gift of love is a noble gift indeed.

When one has the right conception of giving, and lovingly and humbly does the very best with what he has, there will always be a way provided for greater works to follow. The same Love divine which "always has met, and always will meet, every human need" (*Science and Health*, p. 494) will meet the need of each member to contribute generously and so make his Christmas one never to be forgotten. Nothing the world can offer is so joy-inspiring as the daily opportunity of expressing more of the Christ spirit, giving freely to others of the understanding of God that has been given to us; helping ourselves as we help others to rise above the myriad claims of evil, daily balancing our account with Love.

To-day all who are willing to leave the old material theories for the spiritual sense of Life, can overcome the illusions of sin and disease, and for this wonderful understanding, with the love, joy, and peace it has brought into our lives,—this incomparable Christmas gift,—we reverently thank our heavenly Father, and His minister.

The prayer which Mrs. Eddy gave in a letter to the Concord church is especially appropriate at this season. It is this: "Ask God to enable you to reflect God, . . . even the calm, clear, radiant reflection of Christ's glory, healing

the sick, bringing the sinner to repentance" (*Sentinel*, Vol. I., No. 27). This may well be our prayer to-day, that the same glory which nineteen hundred years ago shone upon the Judean hills may shine in our hearts and illumine our lives, taking away the poverty, sin, sorrow, and pain of mortal existence; and this will be if we but open our eyes to see the light of Truth. The words of Jesus, "Lo, I am with you always," become a living reality as we honestly strive to reach, even from afar, the Christ-attitude of thought, and as we put away selfishness, envy, and avarice, we shall find that our power to do good, to have good, and best of all to give good, is unlimited. The "good tidings of great joy" will be ours, not only at Christmastide, but all through the year; and in every experience that comes to us, we shall find ourselves singing the song of the heavenly host, "Glory to God in the highest, and on earth peace, good will toward men."

The Cry in the Desert.

WILLIAM BRADFORD TURNER.

Every individual character, like the individual John the Baptist, at some date must cry in the desert of earthly joy; and His voice be heard divinely and humanly. In the desolation of human understanding, divine Love hears and answers the human call for help; and the voice of Truth utters the divine verities of Being, which deliver mortals out of the depths of ignorance and vice. This is the Father's benediction.—*Miscellaneous Writings*, p. 81.

He who has reached this point in human experience and passed through to the other side, into the Shekinah of Love's "Peace, be still!" will recall with what anguish his soul's cry fell back again and again upon itself as he sought in vain to rise to the far-off God whom ignorance and tradition had placed in the indifferent skies. How he struggled to reach upward, and how, upon each frantic effort, fell, alack! so despairingly short of the vast height he strove in thought to gain. He will recall, also, how he begged and pleaded, seeking to bring God down from that heaven which he found he could not hope to scale. Failing in this, likewise, to register his appeal upon divine attention, and worn and weary with his fruitless throes, he falls now into sullen rebellion or else into dull despair. Conscious ever, and realizing in agony that he cannot get away from consciousness; finding that he does not die, praying he may, yet fearing lest he might; the ceaseless horror of life's mock and farce having, as it seemed, frozen its slow way to his very heart, in what hell is man! His soul cries aloud before God, "Save, or I perish!" In stress like this can a mortal find no light? Listen! What is that he hears within? "Thine health shall spring forth speedily; and thy righteousness shall go before thee." In the stillness of his despair, in the meekness born of weakness, there comes a thought, a memory, across his conscious night, "If I make my bed in hell, behold, thou [Love] art there." "Thou wilt not leave my soul [sense] in hell;" and to him, as to Moses, the "inward voice" becomes "the voice of God" (*Science and Health*, p. 321). "Behold, I send an Angel (spiritual intuition, p. 581) before thee, to keep thee in the way, and to bring thee into the place [the consciousness] which I have prepared."

"Evil is impotent to turn the righteous man from his uprightness" (*Miscellaneous Writings*, p. 119). Let no heart despair which has ever thought one thought of right, or done *one* little deed of good. It is enough. The memory of it now is as a light. It will pierce the gloom. Keep eye upon it! Look away from all else, and hear the words of Life and Love. "But if the wicked will turn from all his sins that he hath committed, . . . and do that which is **LAWFUL** and **RIGHT**, he shall surely live, he shall not die. All his transgressions that he hath committed, they shall not be mentioned unto him: in his righteousness that he hath done he shall live, . . . he shall save his soul alive."

From ignorance or from wilful vice, the way lies open.

God has said it through the lives of men who proved it,—men who knew. From the great burden of the world's woe, or from his own self-begotten weight of misery, each, through love and righteousness, be these but "as a grain of mustard seed," has exit from the abode of devils (evils), and entrance into heaven, the reign of conscious harmony. It is, at no time, so much the amplitude of our knowledge of things good, as it is our uncompromising trust in the little actualities of good, that find their saving way into the darkest and most loveless life, which achieves for us a further realization of unseen though ever-present grace, and ushers into a demonstration the things of Love and wisdom which make for our salvation.

"The divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, p. 25). "This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him" (p. 26). "The Principle of these [his] marvellous works is Divine; but the actor was human" (Miscellaneous Writings, p. 199). Then this self-same, changeless Christ, "without descent, having neither beginning of days, nor end of life," this ever-present Christ, must be likewise *our* divinity. Hence it is that we are joint-heirs with him who spake as such. Moreover, in proportion to our holding to the enduring and the true, will this same Christ, with increasing measure, shine through our humanity, as he shone at the last, "without measure," through him of Nazareth.

"Divinely and humanly," as the text at our beginning hath declared, "His voice" will sound to us at some hour in our long despair. It may be over the lips of another,—human like ourselves,—but hallowed by the awakening touch of Truth, that we first shall hear the "call;" or perchance from out the depths of our own consciousness, the "still, small voice" will sound, and, crying in our wilderness, thrill us to behold the answer to our prayer, and lead us forth to God, to Love, and Life forevermore. "Whatsoever inspires with wisdom, Truth, or Love—he it song, sermon, or Science—blesses the human family with crumbs of comfort from Christ's table, feeding the hungry, and giving living waters to the thirsty" (Science and Health, p. 234). Let us never forget this on our way out from sense to Soul.

The search for God in space must cease; for though the stars are His, He dwells not in any one of them. Inward and downward must we direct our quest. "Within you," and "already," said the dear monitor of Olivet; and he knew. There shall we find heaven, if we find it, and we shall find it, for both revelation and Science declare to heart and mind that "every knee shall bow," and to Him "every tongue shall swear." Man *thus* finding heaven, will not God speak there? Though not in man, yet in oneness with him; greater ever, but in indissoluble connection, God, as Love and Truth, must ever speak in the heaven of that right consciousness which is the identity of the ideal man. (See Miscellaneous Writings, p. 205.)

This known and realized, we shall be satisfied. This consciousness is His likeness. Awakened to it in part, mortals are satisfied in part; fully awakened, they shall be fully satisfied. This is the Father's benediction. Says our Leader, "He is saved through Christ, Truth, who gains self-knowledge, self-control, and the kingdom of heaven within himself—within his own consciousness. Mortals must drink of the cup of their Lord and Master sufficiently to unself mortality, and destroy its erroneous claims—therefore, said Jesus: 'Ye shall drink indeed of my cup, and be baptized with the baptism that I am baptized with.'" (Address at Dedication of Concord Church.)

Deep within ourselves, to find ourselves;
Thence, out of our dead selves to rise,
To learn that evil ne'er has wrought
Save in belief, the which is naught;
Truth ever lives; Life never dies.

The Shining Light.

M. E. B.

This learned I from the shadows of a tree
That to and fro did sway upon a wall:
That our shadow selves—our influence—may fall
Where we ourselves can never be.

THERE was a medal given at the graduation exercises held recently in the High School in one of our suburban towns. The medal was given by a prominent man in the town for the scholar who, in the opinion of the teachers, had exerted the most influence for good in the school. Their decision was kept secret till the night of the closing exercises, when it was awarded by unanimous vote to a young girl whose gentleness, courtesy, and good influence in the school were thus recognized.

This young girl is a Christian Scientist, and as I heard the above report of the matter, I remembered she was the only Scientist in that school, and I realized how closely and faithfully she must have clung to Principle in order to have worked out her problem so well. She won her reward in the recognition by others of the Principle of love which governed her actions.

Surely her influence for good has already gone beyond the schoolroom and will reach farther than she can know.

[Written for the *Sentinel*.]

A Christmas Song.

MARY J. ELMENDORF.

ALMIGHTY God, Who lit the Star
That led the shepherd-kings of old
To Bethlehem afar,
Back to His hillside fold
Gathers the sheep that scattered are.

His guiding Star still shines above
The anchored ark of peace sublime.
Behold, its shafts of love
Dissolve sin's ice and rime.
And show, beneath, His blossom-trove.

God heralds far the Holy Birth,
Razing the walls of pagan night;
He hushes winds of dearth,
And laves with healing light—
Sweet light—each darkened rood of earth.

The shadowed eye He helps to see.
The stumbling feet to seek His Son;
He bids them falter not nor flee
Until the path be done;
Yea, though it lie through Calvary.

Earthward His clarion angels call
The Christ-evangel—concord deep
And charity to all—
The while wan sorrows sleep.
And fear and pain, like dead leaves, fall.

The patient heart, starred o'er with prayer,
God sweeps with songs of radiance keen;
He makes it strong and fair—
A manger, lowly, clean—
And lays the new-born Saviour there.

Mr. Vosburgh's Lecture.

The lecture delivered in Symphony Hall, under the auspices of The First Church of Christ, Scientist, in Boston, Mass., by Rev. Arthur R. Vosburgh, C.S.B., has been reprinted in pamphlet form and is now available for distribution. The price will be six cents a single copy, postpaid; twelve copies to one address, sixty cents; twenty-five copies \$1.15; fifty copies, \$2.25.

Selected Articles.

Christian Science and the Churches.

A notable evidence of liberality as well as common sense was shown by Dr. Madison C. Peters in a recent sermon on Christian Science. Dr. Peters is pastor of the Broad Street Baptist Church, New York City. He is not a Christian Scientist, but he recognizes the Christian spirit of those who follow Mrs. Eddy's teachings and does not find them inconsistent with the gospel he preaches.

Dr. Peters sees no reason why the disciples of Mrs. Eddy should withdraw from the active membership of the Christian church. He said in so many words, "Christian Science stands as a protest against the materialistic tendency of the age, but Christianity has always been a protest against materialism and a plea for the supremacy of the spiritual life. Those who are looking toward Christian Science will find in the gospel of our Saviour the deepest gratification of all their kindly sympathies. They need not withdraw from the church, which bids men and women pity the sorrowing and lift them up to the healing touch of the loving Father, and promises the time when sickness, sorrow, and death shall be no more."

Not all clergymen, however, are so liberal-minded and hospitable in their thought as is Dr. Peters. Christian Scientists have been preached at and against. They have been denounced by the clergy and made the subject of sarcastic ridicule. What was most sacred to them was treated with a sneer.

The followers of Mrs. Eddy emphasized the tenets of Christianity and tried to put them into practice. They could not see why the Christian church should be hostile to them, but it was, and in the most humiliating ways. It ridiculed in them the attempt to carry out the commands of Christ by trying to heal the sick, and it made light of their peculiar way of leading a spiritual rather than material life.

For these reasons Christian Scientists were forced to withdraw from a church which professedly had the same ideals as their own. Had there been the courtesy, the appreciation, the Christian sympathy, which Dr. Peters manifested last Sunday, Christian Scientists would have had no reason for segregating themselves in churches of their own. As it was they were compelled to do so simply in self-defence.

Editorial Glens Falls (N. Y.) News.

The Scriptural statement, "It is the spirit that quickeneth; the flesh [matter] profiteth nothing," evidently means that Spirit is the only animating element of existence, and both primarily and finally the only real basis of health. Through this understanding of Spirit, God, the Master's spiritual healing of sin and disease was wrought in a degree that has no parallel in ancient or modern times. Paul discerned the great and important fact that in the law of Spirit, as taught and demonstrated by Jesus, man's freedom from sin and death, must, in the final analysis of truth, be found, and must be brought to light in human consciousness on this basis. It must be admitted that whatever will finally destroy death, must also be the only power that can annihilate disease, which leads to it.

This great preacher, in 2 Timothy, 1 : 10, declared that Jesus Christ had abolished death. By this he clearly meant that the Christ had revealed and demonstrated that in Spirit was found the law of life, that it would ultimately destroy the so-called law of death, which obtains only in the carnal human mind, and that as the carnal elements of sin and death are cast out of this human consciousness by the Christ Mind, man is redeemed and saved.

To the best of their understanding of this great problem, Christian Scientists adopt this same basis and are healing

the sick and sinful through their understanding of Jesus' explanation of God, as Spirit, or divine Mind. The secret of their faithful study and deep love of the Bible, is the fact that in its spiritual interpretation they have found the healing religion of Christ.

Christian Scientists know that they are yet in the vestibule of this Science, and that they must learn to remove hills before they can level mountains. Great and good ministers are not wholly discouraged because their work in overcoming sin in their congregations and throughout the world has not been wholly effectual, but apparently slow.

They press on, knowing that the word and law of Christ alone can save, and that through holy and honest study and work, the divine Spirit of Truth will be better understood, and as a result, a fuller fruition of spiritual blessings will follow. Christian Scientists have found that the way of Jesus is the sure and only way out of the carnal, human beliefs of sin, sickness, and death. They are following the command of Jesus to "heal the sick" with his Christianity, or Christliness, to the utmost of their understanding. We may differ as the cause and cure of disease, and as to the best interpretation of the teaching and works of our Lord, but may we not work harmoniously in loving forbearance and Christian unity to lift the heavy burdens of our suffering and sinning brothers.

JOHN CARVETIE.

Owosso (Mich.) Argus.

"You claim so much for Christian Science; why does it not reform every one?" is asked. In Yankee parlance, we would reply, "Much is claimed for the science of mathematics; why does it not make every one a mathematician?" There is a vast difference between a fact and the application of the fact. The Word of God is true theology. The practice of the Word is true Christianity. Without the practice of the Word there could be no Christianity.

Many people are not reformed because they don't want to be. They are not ready to be reformed. They have not suffered enough from sin and its effects, as yet, to want to part company with sin. There are, however, multitudes who are learning that sin is the punisher as well as the punishment, and they are earnestly yearning to be freed from its dreadful bondage. To such as these Christian Science offers the understanding of how to master sin by showing the Christ-like way of destroying the desire to sin; and Christian Scientists are ever ready to offer the ministry of loving assistance.

That Christian Science is an active agent in the work of reformation is evidenced by the lives of thousands of Christian Scientists. Those who practise the teaching of Christian Science find that it makes them better men and women. It makes them more unselfish, loving, charitable, and pure. The writer has yet to know of the person, from clergymen down, who has accepted Christian Science, and who does not admit that Christian Science has made him a better man.

Christian Scientists are not forcing reformation on others. They would rather be found pointing the way by example. They are not quarreling over other people's business or manner of living. They are endeavoring to elevate and purify their own. An editorial in the *Boston Evening News* sums up the matter thus: "The Christian Scientist does not believe in going about promiscuously reforming the world. He tries to reform himself, for he is logician enough to perceive that when every individual is reformed there will be a reformed world without any further difficulty."

NORMAN E. JOHN.

Wilmington (Del.) Star.

He came, bringing with him the knowledge that God is a Being of infinite goodness; that the service required of mankind is not a service of form or ceremony, but a service of obedience.—FROUDE.

Among the Churches.

Church Opening.

First Church of Christ, Scientist, Green Bay, Wis., held services for the first time on Sunday, November 6, in its new church home, corner Monroe Avenue and Cherry Street.—*Correspondence.*

A Helping Hand.

Appreciating the privilege of participating in the construction of The Mother Church in Boston, Mass., a meeting was held by members of First Church of Christ, Scientist, Prescott, Ariz., and all members present voted in favor of presenting their home church building fund to the fund of The Mother Church; this makes a total of \$591.75 contributed by this church up to date.

The growth of this little congregation has been most encouraging, and we feel thankful that divine Love is leading us and showing us the light which makes us know that God is All in all.—M. AGARD, *Clerk.*

North Yakima, Wash.

First Church of Christ, Scientist, is pleased to report that its work in connection with the State Fair was very gratifying and successful. Contributions of literature were received from many churches, and our inviting tent was visited by large numbers. The satisfactory results already seen from this first effort more than justify our making it a part of our church work each year.

Increasing love and gratitude for Christian Science is being expressed, and a livelier appreciation of Mrs. Eddy's work and what we owe to her is being manifested. No work done in the name of Christian Science is rightly done unless there is included in it a recognition by the doer of the fact that it was and is through our Leader's courage, love, and steadfastness to Truth that it is made possible for us to do and reflect the little that we do.

A. W. HERTZKA.

Corner-stone Laid in Highland Park, Ill.

First Church of Christ, Scientist, of Highland Park, Ill., was organized November, 1902, with twenty-two charter members. Since that time there has been a steady growth in the work here, the membership having increased fifty per cent. and attendance at the services has more than doubled.

On October, 1904, ground was broken for our new church, and Tuesday, November 22, 1904, at eight o'clock in the morning the corner-stone was laid, in the presence of the Readers, directors, trustees, and building committee of the church.

The service was simple and appropriate to the occasion. The box deposited in the corner-stone, contained a Bible, one copy each of the works by our beloved Leader, Mrs. Mary Baker G. Eddy, a copy of the church by-laws, and a history of the church, including a list of members and names of Readers, building committee, architect, and contractor.

We have a beautiful location on one of the principal residence streets, the lot having a south frontage of one hundred and thirty feet by a depth of two hundred and sixty feet. The church building is set back eighty feet from the street, thus giving us a beautiful lawn in front. The edifice will have a seating capacity of about two hundred, and it is to be so constructed that the auditorium can be increased in size at any time.

Directly back of the building is a heavy, natural growth of tall trees, and these, together with the extensive lawn in front, make an ideal setting for a Christian Science church.—*Correspondence.*

The Lectures.

Albert Lea, Minn.

There was a large and attentive audience at the Universalist Church last night [November 15], to listen to the lecture by Miss Mary Brookins of Minneapolis, on the subject of Christian Science, and she certainly interested all present. Maj. C. S. Edwards introduced the speaker.

Albert Lea Tribune.

Chicago, Ill.

Mrs. Livingston Mims of Atlanta, Ga., one of the pioneer Christian Scientists and teachers of the South, lectured for Sixth Church of Christ, Scientist, in Pullman, Thursday evening, October 27, on Christian Science. The phase of the subject that Mrs. Mims treated was "The Spiritual Dominion of Man through Scientific Christianity."

Mrs. Mims was introduced by Mr. Robert C. Givens, President of the Three Million Club of Chicago, who spoke in part as follows:—

I am not a Christian Scientist myself. I am, however, greatly interested in Christian Science,—some of my family being members of the church. I would say here, that from what I have seen during the last few years, the immense and wonderful spread of Christian Science tells me that if this continues for the next few years as it has in the past, we may live to see the time when the harmony created in the homes of the very many who but yesterday knew nothing of Christian Science will spread and be taken up by communities, by cities, and by nations, so that instead of pestilence, crime, and war, the whole world will be at peace.—*West Pullman Reporter.*

Charles City, Ia.

A very large audience assembled at the Hildreth Opera House last evening [November 21] to listen to a lecture on Christian Science by Edward A. Kimball of Chicago. The speaker was presented by Judge Clifford P. Smith, of the District Court, who said in part,—

It is said in the second chapter of the Epistle to the Hebrews that Jesus went through the crucifixion and resurrection to "destroy" or "bring to naught," as the Revised Version has it, "him that had the power of death, that is, the devil; and deliver them who through fear of death were all their lifetime subject to bondage." That is to say, he went through this experience to reduce evil, the cause of death, to naught in human consciousness, and to elevate human knowledge above the fear of death. Therefore if the truth which shall find utterance here to-night shall enlarge any one's knowledge of God or good; if it shall diminish any one's belief in the devil or evil; if it shall help to deliver any one from fear,—and I am sure it will,—then this lecture will accord with and carry on the work of him who said, "This is life eternal, that they might know thee, the only true God, and Jesus Christ whom thou hast sent."—*Charles City Press.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The December Class.

THE following appreciative telegram was received by our Leader from the December, 1904, Primary class of the Board of Education:—

Boston, Mass., December 9, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View.

Beloved Leader and Guide:—We, the students of the Board of Education now in session at The Mother Church, desire to express to you our heartfelt gratitude for making it possible for us to receive such a sense of the allness of God, and also to tell you of the love and inspiration that has come to us through your beautiful and consecrated life and work for humanity. We realize more than ever before that Christian Science is the revelation of Truth to this and all ages.

MRS. JENNIE H. S. ROE,
MRS. MARY E. LANDY,
CALEB H. CUSHING.

For the Class.

Mrs. Eddy's reply to this telegram is a benediction which we feel sure will encourage and sustain the members of the class in the greater responsibilities they have taken upon themselves. It should be an inspiration to every Christian Scientist.

MRS. EDDY'S REPLY.

Concord, N. H., December 17, 1904.

Mr. Eugene H. Greene, C.S.D., Teacher—and Students in the Massachusetts Metaphysical College, Boston, Mass.

Beloved Students:—You will accept my profound thanks for letter and telegram. If wishing is wise I send herewith a store of wisdom in three words, "God bless you,"—if faith is fruition, you have His rich blessing already, and my joy therewith.

We understand best that which begins in ourselves, and by education brightens into birth. Dare to be faithful to God and man, let the creature become one with his Creator, and mysticism departs, heaven opens, right reigns, and you have begun to be a Christian Scientist.

Lovingly yours,
MARY BAKER EDDY.

Progress.

"THE keynote for the world's progress for 1905 will be 'Truth.' Men and women have come to recognize that to make progress means a free mind steadfast for fact instead of tradition. In proportion as they have learned to work with untrammelled brain, there has been progress in every department of life, in Science, in Government, in Education, in Literature. Those who achieve must stand with open minds ready to receive the truth."

The above remarkable and inspiring message which appears on the cover of the Christmas number of one of the leading magazines,—*The Cosmopolitan*,—will appeal to every man and woman who is working for the welfare and enlightenment of humanity, but to Christian Scientists the words carry a far deeper meaning than can be given to

them by those who have not yet accepted the definition of God, contained in the statement, "God is divine Principle, supreme incorporeal Being, Mind, Spirit, Life, Truth, Love" (Science and Health, p. 465).

To the Christian Scientist, all right action, all progress, all that makes for the good of mankind is the manifestation of infinite Truth, God, and only as we understand our relation to Him, appeal to Him, and obey Him, can we really progress. Mrs. Eddy has said in Science and Health, "Eternal Truth is changing the universe. As mortals shake off their swaddling-clothes, thought expands into expression. 'Let there be light' is the perpetual demand of Truth and Love,—changing chaos into order, and discord into the music of the spheres" (p. 255). "To those leaning on the sustaining infinite, to-day is big with blessings. . . . Now across a night of error dawn the morning beams, and shines the guiding star of Truth. . . . The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away" (Preface, p. vii.).

Truly "those who achieve must stand with open minds ready to receive the truth," for Truth has ever been "the keynote for the world's progress." M.

The Bethlehem Joy.

Back to Thee, back to thy olive trees,
Thy people, and thy story, and thy Son,
Mary of Nazareth! So long ago
Bearing us Him who made our Christendom,
And came to save the earth, from Heaven, His home.
ARNOLD.

It was the hour when history's greatest hope had come to its blossoming, an hour whose significance to the Hebrew people, those born into the unpoetic and unracial sense of a cosmopolitan age may neither appreciate nor understand. In the long years, the Messianic expectancy had been sung and storied into their deepest and noblest thought. Their most sacred tradition, their most inspiring prophecy, their most worthy pride, all that gave them self-consciousness and distinction as a people, all led on and up to Bethlehem, while the galling irritations of a foreign yoke rendered them doubly sensitive to their national humiliation, and thus added intensity to their heart-longing for the coming of him who was to redeem Israel, and establish the throne of David forever and ever. Hope, long deferred, gave peculiar and inexpressible sweetness to that first Christmas song, and the joy of those who understood its note, who really found the Christ-child in Bethlehem, was indeed the joy of heaven, on earth.

But alas, how few were they who thus recognized their Lord "at his coming!" As a nation, they "knew not" their king, though he came to save his people, Israel. The desire for material possession and power, the love of this world, the devotion to form and letter rather than to Spirit,—how surely they robbed this people, even as they rob us to-day of our spiritual inheritance, and therefore of our song. These are the great lessons of the Christmas-tide; that concession to material sense ever filches from us our fairest and richest possessions; that there is no true and abiding joy save that of Bethlehem; and that the Christ must come, and for each, within. When these are understood, then, indeed, for all, and forever,—

"Peace upon Earth! Good Will!" [is] sung to the strings
Of lutes celestial.

How pathetic the vain and ceaseless search of mortal sense for the heart's satisfaction; but if one has truly learned that Love alone "propagates . . . the higher joys of Spirit, which have no taint of earth" (Science and Health, p. 66), how glad and how unfailing will be his song!

Christian Science is helping all the world to understand the meaning and the place of the Christmas joy. It is help-

ing all to see that "unto them that look for him" the Christ is born again,—appears in consciousness "unto salvation." This is the joy which no man taketh from us, the peace that passeth understanding.

Gladness is but the sweet exaltation of love, and love embodied in gentle innocence ever looks out upon the world from Bethlehem. If the Christ-thought is born, moment by moment, in us, joy will brighten all our faces and perfume all our paths. Then, to "rejoice evermore" will no longer be thought a *privilege* of the Christian life, it will have become its daily and characteristic *manifestation*.

"And I, if I be lifted up, will draw all men unto me," not alone upon the cross,—of that we have thought far too singly,—but upon the background of a joyous, self-forgetting service, your daily life and mine, is the radiant figure of the Christ to be drawn. Thus will we make Christmas and the Christmas joy our very own, and—

Date from that crib the Dynasty of Love.

W.

A Perpetual Christmas.

Blest Christmas morn, though murky clouds
Pursue thy way,
Thy light was born where storm enshrouds
Nor dawn nor day!

REV. MARY BAKER G. EDDY.

THE Christmas chimes tell a wonderful story to those who are conscious of their deeper meaning. They tell of the ever-deepening influence of Christ Jesus, who, when he was about to leave his disciples, said, "Lo, I am with you alway." They tell us that the Herald Angels have never ceased to send earthward their message of peace and good-will, though "the deaf that have ears" hear it not. They remind us that, in spite of the seeming persistency and power of evil, the good which is forever identified with the life and mission of Christ Jesus, has an ever-enlarging place in the world's consciousness.

A thinker once said, "I believe that Jesus was the most deeply disappointed man who ever attempted to uplift humanity." It is easy to see that such an assumption regarded only the fact that Jesus' earthly career was constantly shadowed by the evil designs of the "carnal mind" which is indeed "enmity against God." Never did earthly life open with such fair promise as that announced by the angel who told the pure, virgin mother of throne and kingdom for her son, and with his matured manhood came the words and deeds which lifted him far above the low levels of mortality. Then came his earthly guerdon, the betrayal, the desertion by friends, the cruel mockery, the bitter cup, the cross, the tomb. But the spiritual light was never quenched,—the resurrection followed,—and later, came the enthronement of the Christ in every heart which has ever sought to rise above the enslavement of sin and materiality. In the struggles of countless thousands, hope has again and again risen from the ashes of despair and has reached across the abyss of mortal helplessness, seeking aid from Christ Jesus,—the one who faced every foe, and who proved in every struggle with evil the supremacy of good. Thus has mankind been encouraged to look for the coming of the kingdom.

To the Christian Scientist every thought of Christ Jesus is unspeakably precious, and at this Christmas time we remember with deep gratitude how much we owe to her through whose teaching the healing ministry of the Christ has been brought within reach of our every need. No longer is omnipotent Truth separated from that need by two thousand years of history, but now, through the thrice blessed revelation of Christian Science the divine touch takes away our sense of pain, of sickness, and of sin, and our night is illumined by that "glory of the Lord" which shone upon the Judean plains,—a herald of the universal dawn.

K.

Letters to our Leader.

Boston, December 11, 1904. Sunday Afternoon.

Dearly Beloved Leader:—We had such interesting services to-day that I want to send you a few words of loving gratitude, for I know we were included in your prayers and received the divine blessings therefrom. There was a marked interest in the service, especially in the Lesson-Sermon, which was given the closest attention by the congregation. The subject, "Is the universe, including man, evolved from atomic force?" is a deep one, but it was clearly and interestingly worked out by the Bible Lesson Committee,—the six sections taking up in turn the creations from Spirit, from dust, from a rib, from an egg, the immaculate conception, and the new birth,—each topic being developed by most aptly chosen selections from the Scriptures and your wonderful "Key." It was very impressive to me and a great privilege to read it.

I want to thank you for having the solo sung before the Sermon. It is a great improvement in many ways, the service, virtually closing with the Sermon, leaves the predominating thought with the congregation. I am sure it will increase the efficacy of our services.

I frequently hear of the good the services are doing. Last Sunday afternoon a lady called here to tell of her healing at church that day and to express her gratitude. She had been suffering from disease that she had not been able to handle, and during the morning service was so much relieved that she went again in the afternoon and was entirely healed. At the Wednesday evening meeting a lady said that on the previous Sunday while dressing for church she burned her eyeball and cheek with an overheated curling iron, which burned the hair and fell across the face. The eye and cheek were blistered and very painful at first, but she insisted on going to church, and during the Sermon she was healed. On Wednesday there was scarcely a sign of the burn left. A lady living near the church, who had attended the services occasionally but was not a Christian Scientist, had an attack of sciatic rheumatism from which she was wont to suffer. Some one suggested that she go to our church that evening, as it might help her, so she hobbled there and to her surprise returned home perfectly healed.

I could tell you more, but perhaps I have already taken too much of your time. Allow me, however, to add a word of deep appreciation for the change in the requirements for public practitioners, also for the By-laws and messages you are giving us.

With much love from Mrs. Hering.

Your loving student,

HERMANN S. HERING.

Second Church of Christ, Scientist.

Buffalo, N. Y., November 20, 1904.

Beloved Leader:—We cannot too often express our appreciation of the By-laws, as given to us in the Manual of The Mother Church. Many times when we are in doubt as to the best way of carrying on certain branches of the work, by referring to the Manual we always find a sure guide which has been tested through years of experience. Realizing the importance of teaching the children in accordance with absolute Christian Science, the teachers of our Sunday School had decided to meet last week, to see how each teacher was conducting the work in his class, and to establish uniformity in the work. Great was our delight to find just what we needed, published in the *Sentinel* of the week in which this meeting was held; namely, the new By-law with reference to Sunday School teaching. It clearly outlined our work for the future, and enabled us to determine the best way to carry on the Sunday School work to-day. The right way to do all our work is established, and is safe and sure. It is the Chris-

tianly Scientific way, and in so far as we are Christian Scientists we will recognize it and walk therein, and the children will follow.

This is only another instance of the patient wisdom which has enabled you to establish successfully the various departments of our work, and we gratefully acknowledge our appreciation of it, and express an earnest desire to be loyal followers of our divinely-guided Leader.

Faithfully yours,

(MISS) KATHERINE M. DAMM.
Superintendent Sunday School.

Philadelphia, November 21, 1904.

Our Beloved Leader:—At this season, when the thought of our brethren at large is specially directed to thanksgiving, we feel impelled to express not only our sense of thankfulness to God for the ever-increasing acquaintance with Him, but also our deep sense of loving gratitude to you for your faithful, unselfish devotion to the work through which this true knowledge has been, and is being, revealed to us. We also desire to assure you of our earnest longing and purpose to be strictly obedient, both to the letter and the spirit of all the admonitions which continually come to us from divine Love through your communion with Him.

Gratefully your loving followers,

CHARLES H. FAHNESTOCK.
VIRGINIA PECK FAHNESTOCK.

Rochester, N. Y., November 20, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—Acting in accordance with the expressed desire of the teachers of the Sunday School of First Church of Christ, Scientist, I hereby convey to you the deep sense of gratitude and appreciation felt in our Sunday School for amended Section 5 and Section 6 of Article XIX. of the Manual. The directions contained therein come as an answer to the prayer of our hearts for more definite instruction as to conducting the work of our Sunday School. Already we are realizing the blessing of obedience. As we are firmly convinced of the wisdom which guides our Cause through you, we pledge our loving obedience to your instructions.

Obediently yours,

OTIS D. REED, *Supt.*

St. Louis, Thanksgiving, 1904.

Beloved Leader:—Your article, "Holiday Gifts," was a loving benediction to my thought and a most gracious one to the entire Field I am sure, in that our interests will all be as one at the Holiday season, and I want to tell you that at our last business meeting, unanimous action was taken by this branch of The Mother Church to raise \$10,000 for our Christmas gift to The Mother Church, realizing that, by abiding in the Vine, we cannot keep from being a fruitful branch. It will please you, I know, when I tell you of the pure thought which was felt in our services, and which is healing the sick, and for this realization of the presence of divine Love my heart is lifted up in praise and thanksgiving to our heavenly Father-Mother God for His wonderful blessings to First Church of Christ, Scientist, in St. Louis.

As we realize more perfectly the true idea of Church, it becomes a healing atmosphere of thought, wherein we drink and partake of His purity. "Every good and every perfect gift cometh down from above."

With a heart full of love, I am loyally,

KATE JOY GRAY.

Testimonies of Healing.

Several years since, my attention was attracted to Christian Science through the interest manifested in it by some of my friends. I decided to look into the new religious philosophy, as I conceived it to be, and in a very critical frame of mind, secured a copy of *Science and Health*, unknown to my friends, for the purpose of carefully examining for myself the statements and doctrine therein contained. I read the book carefully, filled the margins of its pages in many places with my comments, and put it away with the feeling that the time spent on its study was simply wasted. In the mean time, the results attained by my friends in the living of Christian Science, were more and more attracting my attention and exciting my wonder, until I felt convinced that a religious system which was capable of producing such harmonious results, was more to be desired than any ideas upon the subject that had previously come under my notice. Starting into a more thoughtful examination of the once discarded book, and with the kindly assistance of a helpful thought or suggestion now and then from my interested friends, I am very glad to say that I found it was indeed the most helpful, reasonable, and acceptable philosophy of the relation of man to his Maker that had ever come under my notice. When my eyes were opened to its beauty, I saw that it contained what I had been searching for, and was very glad to embrace its teachings.

One of the statements of *Science and Health* that excited my greatest derision in my first reading was a claim that cases of sickness could be, and frequently were, entirely cured by the reading of the book.

In the hope that my experience may come before the attention of those who may now be holding the views that once were mine, I will briefly state two cases of practically instantaneous healing of physical ailments within my own experience, which have followed the thoughtful perusal of our text-book. Some years since, I was taken with a heavy cold while at a remote point in the mountains, where my occupation absorbed all my time and attention from six in the morning until ten o'clock at night. The week had been an exceedingly busy one, and when Sunday morning came around, I awoke with a consciousness of satisfaction that at last I had a day partially to myself, where I could take up carefully the reading of the Lesson-Sermon for the week, as found in the *Quarterly*. After breakfast, I settled myself to its study in the parlor of the hotel. I was then suffering from the cold, which had received no attention, and which was, in consequence, distressingly unpleasant. I soon became absorbed in the study of the lesson, and seemed to have a very clear appreciation of the spiritual truths expounded; so much so, that upon reaching the conclusion of the lesson, I seemed filled with the consciousness of the all presence of Life and Truth. The contemplation of these thoughts filled my mind completely for some time following, and I left the room at the call for dinner, with the consciousness of having mislaid or forgotten something, and presently realized that it was the entire absence of any manifestation of the disagreeable cold in the head (my constant companion of the preceding two days) that I had missed. This brought clearly to mind and definitely proved to my own satisfaction, the truth of the injunction found in *Science and Health*, page 495: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought. . . . Let Christian Science instead of corporeal sense, support your understanding of being, and this understanding will supplant error with Truth, replace mortality with immortality and silence discord with harmony."

On one occasion, an ailment of a different character was

met and mastered by the spiritual illumination which followed a reading of "Unity of Good" by Mrs. Eddy, while on a railroad train. This was a case of throat trouble, and though not at all alarming, it had been very persistent and stubborn. I am very glad to testify to the healing of physical ailments which has followed a careful reading of these books in question, but I am entirely unable to describe adequately the satisfaction and joy which I have experienced in meeting some of the more subtle conditions of mortal mind through the reading of our various publications. I have found that the thought of discouragement, confusion, trouble, and fears of many kinds can be most promptly met and mastered by filling the consciousness with the uplifting thoughts to be found in our text-book. I have many times proved to my own comfort and satisfaction, that "a conscious, constant capacity to understand God" (Science and Health, p. 209), is a very present help in times of trouble.—W. S. T., Wilmington, Del.

It is now eight years since Christian Science was brought to my attention in such an impressive way as to command investigation. I had for more than thirty years been a member and officer in an orthodox church, and had been active in its work. I was entirely satisfied with my church relations, and did not think it possible that I could be induced to change them, but I little surmised what the future had in store for me. In the fall of 1894 I suffered from the crushing of my left foot and ankle, which kept me in bed many weeks, during which time my wife was my constant and only nurse, she being unwilling to leave me. The result was that when I recovered she was a very sick woman. She was treated by one of our best physicians for four months, and getting no better, but rather worse, I called another of our best physicians, who, after about four months' trial, did no more for her than the other, and seeing she was not improving under his treatment he recommended a noted physician in another city. She did not, however, improve under his treatment, and we decided to try a specialist in New York, who treated her for more than three months, without success. She then came home, and another physician was called in, and after a careful study of her case he told us that she had only a few weeks to live.

At this time a good neighbor recommended Christian Science treatment, which she accepted, though it was entirely new to her, and in ten days she was healed. This was indeed startling to me; but while I was pleased beyond measure, I was not prepared to accept Christian Science. I began its study, however, but not without prejudice and strong mental antagonism, which clouded my understanding and retarded my progress. I commenced to attend the Wednesday evening testimonial meetings and Sunday services, and was soon after convinced of the truth of Christian Science, and became an earnest student of its teachings. Not long after, my wife and I became members of the local Christian Science church, and of The Mother Church, and had class teaching by a student of Mrs. Eddy. This was about eight years ago. Since then I have had no use for *materia medica*, although I have had returns of old complaints, twice in very severe attacks, but they yielded to the healing power of divine Truth and Love. I have found Christian Science, a power for good to me, in business, in social intercourse with my neighbors and friends, as well as in healing sickness and sin.

It gives me pleasure to offer this brief testimony to what Christian Science has done for us. I am intensely grateful to our beloved Leader, Mrs. Eddy, for her great work for mankind, in bringing to our understanding, Life, Truth, and Love, as manifested in the life and teachings of Jesus, the Christ.

(JUDGE) STEWART T. MCCONNELL, Logansport, Ind.

In reviewing the last six years of my life, I realize that they have been rich with blessings which have come through Christian Science. I first became interested in this truth because I saw that through it a clear light was thrown on the life of Jesus and his mission on earth,—a light which made religion the understanding of an eternal Principle rather than the blind, groping belief in an "unknown God." I was eighteen years old when I first recognized Christian Science as the truth, and at that time my parents, believing that my interest in it was due to my immature thought, were opposed to my studying Mrs. Eddy's writings, but two years later I had the pleasure of seeing them both healed of physical ailments by this truth. Just as Nicodemus went to Jesus by night, so, it was, while we were traveling far from home, that my parents consented to have Christian Science treatment, as we all felt that in so remote a place none of our friends would know of what would seem to them to be an heretical act.

My mother had been a sufferer for many years from a chronic complaint and through constant fear and suffering had become a nervous invalid. Great care was used in regard to her diet until many things had been eliminated from her list of digestible foods. She also feared traveling about from place to place, as for a long time the changes in drinking water had affected her injuriously. Her healing was a rapid one, however, and in a few weeks she found that she could eat anything which she desired, with no bad effect. My father was treated at the same time for heart trouble, which had reached a serious stage within the previous year, causing the family much anxiety for him. Four doctors, selected on account of their ability, had examined him and pronounced it a serious case, telling him that any slight over-exertion might prove fatal. His thought was open and receptive of the truth, and the trouble was completely overcome in five treatments. Two years later, while in London, he was obliged to see the resident physician of the New York Mutual Life Insurance Company there. This physician knew nothing about him, and merely made a professional examination in order to issue an insurance policy. After the examination he remarked, "You are a perfect specimen of physical manhood." I mention this, not because we as Scientists need the testimony of a physician, but with the thought that it may help some one who is only inquiring into Christian Science. Since these wonderful demonstrations which have added so much of joy to our home, four other members of our immediate family have become interested in Christian Science; not all at one time, but one by one, as the light came to each individually and drove away the clouds of pride or antagonism.

Many, many beautiful proofs of the presence and power of infallible Principle have been given to us during these years, some small, some quite as wonderful to the mortal thought as those I have related, but each one serving its purpose in guiding us along the right pathway, and in reminding us that we have taken one step nearer to eternal harmony.

A. P. S., Wilmington, Del.

I wish to express my heartfelt gratitude for the many blessings received through Christian Science. I wish to give my mite with the hope that it may come to the eyes of some weary wanderer, who is as hungry and thirsty as I was. I believe if it had not been for Christian Science coming to my rescue, I would not be here to-day to testify to the healing power of Truth and Love.

From childhood I was never very healthy or strong, and when I grew up and married, my health grew worse, and I thought that I would not live long. All the medicines which we thought would do any good were tried, but without avail, until it came to the point where man's extremity was God's opportunity. Then I turned to God in earnest prayer, to show me a way out of all this sickly

and unhappy condition, for I could not believe that God could punish me so, and yet be a loving Father.

I then went to a very dear friend who was one of the first Christian Scientists here, and told her of all my troubles. She said, "Don't you know that you are God's child; and that He is a loving Father?" She read a chapter out of the Bible to me, and there came to me such a calm and peace that I took courage. A few days after that, I asked her to loan me *Science and Health*, and with a great longing and a desire to know the truth, I studied the book, and to my surprise it became my physician. While reading it, all the various ailments disappeared. I found it to be true as the Bible says, that it is God who healeth all our diseases. I also found that *Science and Health* contained the truth which I had been seeking. And how beautiful it all is! I have found that God is ever ready to help us when we turn to Him alone. I am now a member of the church here, and it is three years since I first caught a glimpse of this truth.

Since coming into Christian Science many troubles have been overcome, and I rejoice daily in having gained a practical religion by which we can do good to our neighbor and learn to love even those who hate us. For three years I have not taken a drop of medicine, neither have my children nor husband, and we enjoy good health and happiness.

For all this I thank God, and we can only show our gratitude to Mrs. Eddy by following her teachings as far as we comprehend them, for by so doing we emerge from darkness to light and gain a spiritual understanding of the Bible.—MRS. META KURSE, Sheboygan, Wis.

It is twelve years since I was healed through Christian Science of catarrh, asthma, female trouble, and hemorrhoids. For seventeen years I had suffered, oftentimes day and night. At such times, the only sleep I would get, was such as I could take while sitting in my chair. I tried many different doctors, as well as eclectic and magnetic treatment. I also tried the climate of Colorado, and came back from there but little benefited. We then moved to Western Kansas, and for five years I had relief from the asthma, but the other troubles were no better. The physician said my case was hopeless, and then I decided to try Christian Science. I sent for a practitioner and asked her to take my case. She gave me a present treatment, and for two weeks, she alternated with absent and present treatments. By that time, I was able to go to her house, which was twelve blocks away. Much of the time, I had to go through the snow. When I began my treatments, I was unable even to get across the street, but in six weeks I was entirely healed of all my diseases. I sent for *Science and Health* and began its study, at the same time doing all my work, including washing and ironing and all my sewing, even to running the sewing machine.

I have always been very thankful that I turned to Christian Science, although I had no faith in it when I began my treatments.—MRS. MARY L. ROOT, Topeka, Kan.

To one whose life had become a series of disappointments, the daily demonstration of Christian Science for several years has revealed the fulfilment of all that was noblest and best in her aspirations. Perhaps the strangest of these was for a true and lasting friendship, and yet, one by one, friends failed or disappointed her, until the name became a myth. During this period of mental darkness, the light of Christian Science came to her, and in the complete devotion to the assimilation of this truth which followed, the lack of friends was entirely forgotten. In seeking only the one friend,—divine Love,—she has found "All things else," and to-day she rejoices in a new world of love and friendship,—friends who have not been drawn by any per-

sonal attraction, but those who are bound to each other by the common interest of a Father's love. No envyings, hatred, or jealousies can dissolve these imperishable bonds, which are forged in truth and cemented with love.

S. W. A., Santa Monica, Cal.

My little son was afflicted with a terrible eruption on his head, which covered his face and settled in his eyes. Physicians pronounced the trouble eczema. I called in three of our home doctors, and after holding a consultation, they decided that they could do nothing for him, and said the probabilities were that he would become totally blind. They recommended that he be taken to Ann Arbor for treatment. He was also treated by a specialist, one of the leading doctors of the State of Michigan, without being in the least relieved. All this while the little fellow's eyes were bandaged, and he suffered great torture. Having known something of the work of Christian Science I decided at this point to have him treated by this method, and a practitioner was asked to take the case. The little one began improving immediately, and before very long he was entirely healed. This was in the winter of 1899, and the trouble never re-appeared. I thank God for Christian Science.—FRED W. GONDER, Caseville, Mich.

I wish to acknowledge the benefits I have received through the teaching of Christian Science. Eleven years ago I first heard of Christian Science. I was then a very sick man, and had been doctoring for catarrh of the head for fifteen years, during that time I was always taking medicine of some kind. I consulted specialists on that disease, and they always gave me hope that they could cure me. I had always taken their medicine in good faith, and expected that I would get well, but was always disappointed. I was always restless and anxious, always expecting the right medicine would come, never expected to get well except through material medicine. I had great faith in doctors and medicine before I knew of Christian Science, and they always did the best they could for me according to their knowledge, but they were not helping me. When I heard of Christian Science I had no faith in it but was advised by some friends to try it. They told me there was no medicine to be taken, and that it was through prayer and the power of God that the healing was done. I had no faith in God, and never paid much attention to any conversation about God or prayer, but thought I would give Christian Science a trial.

I was then in Memphis, Tenn. I went to the Christian Science meeting the following Sunday, and made arrangement to take treatment, and in a few days I got great relief and saw then that Christian Science could help me, and this gave me courage and confidence. I then took all the medicines I had and threw them away and bought "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to study the book and improved rapidly. I used to drink and use tobacco in all its forms but while studying the book the desire for drink and tobacco left me, which was a great blessing to me, for I had tried many times to overcome these habits by will-power. I would stop for a while but the appetite would always come back, and I would go to drinking and use tobacco just the same as before, but this blessed truth in Christian Science made me free, for which I am very thankful. It is now eleven years since I began the study of Christian Science, and during that time I have never used medicine of any kind, and never consulted any doctors, and to-day I can say that I am perfectly healed. I give all the credit to Christian Science. God has been the healer. I have also been made better morally and spiritually. It has given me a higher aim in life, for before coming into Christian Science I never read the Bible, indeed I didn't have any, but now I have

a Bible and it is my companion with Science and Health. I love to study the Bible lessons, it gives me a better understanding of what God is and of our relation to Him. I cannot be grateful enough to Mrs. Eddy for this blessed truth which she has given us in Science and Health. By it we can work out our problems in life from a scientific standpoint.—PAUL E. DUCOMMUN, St. Louis, Mo.

When I first heard of Christian Science I was a helpless invalid, had four operations, and had passed through every phase of *materia medica*, hygiene, electricity, and massage. I will not try to describe the suffering of those seven or eight years,—the long, sleepless nights, when it seemed as if my mind would give way under the strain of nervous forebodings. Narcotics and nervines had ceased to give any relief, and I turned to Christian Science in desperation with no other thought than the hope of physical aid. But when the wondrous beauty of the Christ-truth poured in upon my awakening consciousness and uplifted thought, it seemed to touch with new life every fiber of my being. Health was now no longer the main object of my seeking, but to learn of the things of God. As fear, superstition, ignorance, and the ugly images of human thought were blotted out, the hidden reality of good was revealed.

Though I still have many battles to fight, I have learned that each trial of my faith in God has been a stepping-stone to higher understanding, and I know that this is but the beginning of the end, when all our sorrows, sickness, and sins will be cast into the sea of oblivion. What greater joy could come to us than the realization of our unity with Christ,—the divine reflection, the captain of our salvation, our Elder Brother who goes before us, hallows the path we walk, purifies the air we breathe, and shields us from moral, and physical evil? Surely the clouds of human belief are riven, and Christian Science, the sunlight of heaven, is shining into the darkened places of mortal thought. In the five years I have been in Science there has been no material remedy used in my family, consisting of eight members. Many conditions of error have been overcome in that time, and our constant prayer is that God may enlighten all mankind, and save them from the poor conditions of thought which would limit good in any direction, and that we may become worthy followers of the one whom God has appointed to direct His Cause.

MRS. E. B. NEUBAUER, Lynchburg, Va.

Christian Science has brought me such peace mentally, morally, and spiritually, that I feel words to be inadequate to voice the love and gratitude which are in our home. I had been reading Christian Science literature for about two years when I decided to take treatment. After the first treatment I found such opposition in the home that I decided to discontinue it, at least for the present. I suffered from female trouble in its most aggravated form, and our physician was then called, and after diagnosing the case, said that unless I remained in bed for at least six months I might expect to be an invalid for the rest of my life. It is unnecessary to dwell on the suffering which followed, suffice it to say in a week's time my husband was called West, and after his departure I realized that I was alone,—alone with God to seek what I felt was contained in Christian Science. The following four months I spent in reading, and in silencing thoughts of suffering. Twice during that time the suffering was so intense that I thought of resuming treatment, but each time it ceased before I could reach the practitioner, so that I returned home and continued with my own work, and before my husband returned in September I was healed. The peace which accompanied those four months of research and introspection

I would not part with if I could. "Unity of Good," Science and Health, and other works by our beloved Leader, Mrs. Eddy, were my sole guides to health, harmony, and heaven on earth.

Before closing I wish to express my gratitude and love to our dear Leader, to the Publishing Society for its faithful labor for the Cause, and to the many earnest workers in the Field.—M. R., New York, N. Y.

A beautiful experience of healing was mine a few weeks ago in which Love's ever-presence was made manifest through the pure thought of our revered Leader. On arriving at church one cold, stormy Sunday, a seemingly discordant condition presented itself to my consciousness. My clothing had become quite damp and I was greatly chilled, and my throat painfully sore; altogether I was very miserable. I took up the Hymnal and turned to our dear Leader's hymn, "Blest Christmas morn," which had been very helpful to me at other services. I commenced reading the lines and soon after all sense of discord ceased,—I was free, peaceful, and happy. Since my childhood I had often been under the care of physicians for days from this trouble.

To God and to our beloved Leader I offer my heartfelt love and gratitude.—S. C., Brookline, Mass.

From childhood my lungs were considered weak, and as I grew to maturity I developed the dreaded disease, consumption. In the year 1901 several physicians pronounced me incurable. My sight also was defective,—astigmatism, the oculists called it. I was almost blind, they said it was only a question of time until I would be entirely without sight; my condition was one of helplessness and despair, nothing but death to look forward to,—a young wife with two little children to leave motherless. The weary days and restless nights were spent in reaching out to a power called God that I dimly believed was somewhere, but I could not find Him.

This was my condition when Christian Science found me. My brother, who had been healed instantaneously of what the doctors pronounced paralysis of the brain, visited me and told me I could live, that my babes would not be motherless, that I could get well. He said that I could learn to help others, we could have a happy home, become prosperous, and it is all coming true. In four weeks I was entirely healed of consumption, and I now see perfectly. Our financial cares are decreasing, and I have been able to help others. This is written as an expression of gratitude to God and to our beloved Leader, and as an act of justice to my practitioner.—MRS. G. F. OLIVER, Muncie, Ind.

For years I suffered physically and mentally till it terminated in nervous prostration. I had been taken to California and to Hot Springs, but at the last was confined to my bed two years, having the best medical skill and trained nurses. A member of the family heard of Christian Science and I was prevailed upon to try it, as the physicians gave me no hope of ever being well. I was up and out in two weeks. I continued treatment three months, and my fears and physical ailments were met, one of which was said to require an operation. From the first, that precious book, Science and Health, seemed to be the food and life I had been hungering for. I have clung to it through many a weary struggle, to receive the blessing of joy and peace, and my heart goes out in deepest gratitude for the unselfish love of our Leader, and to the Scientist who first came to me, as well as to the others who have helped me at times over the rough places. My daily prayer is for the obedience that expresses love.

I. G. F., Baltimore, Md.

From our Exchanges.

There is a persistent tendency to confine religion to the church and its services. If God be in us He will manifest himself in our common, every-day life. If there is any point where the religious life of the average church member breaks down, it is just here. For many there is seemingly no conception of religion as something which controls conduct and speech in the home and the place of business. These are as quick to anger, as unforgiving, as tricky, as bitter in speech as if they did not profess to be disciples of Jesus Christ. No doubt these same persons get much comfort out of their religion, for they believe that they have been saved from future torment. What they need to perceive is that we cannot confine the results of the rescue work of Jesus Christ to the future life. If religion is to mean anything anywhere it must mean something here and now. The religion of the average church member needs to become more largely a present experience of God and of the possession of the mind of Christ.—*The Standard*.

One obvious consideration remains. Jesus is unceasingly saying, "Ephphatha" to every human soul. He is saying, "Be opened" to those dormant faculties of our spiritual nature which we have overlaid with the flesh. The circumstances of the daily life of each one of us provide the medium through which the call comes. But we are not automata, we are not machines; and constantly the sigh of the divine humanity is intensified by our miserable human perversity, which enables us to go on hardening ourselves year after year against the influence of the God within us.

Human goodness or character is like the beauty that you admire in a flower; it is from within and not from without. You cannot make a flower beautiful by paint and enamel; you cannot make a life beautiful by external moralities and austerities and the like,—the beauty that is on the flower was in the flower first.

ARCHIDEACON BASIL WILBERFORCE, D.D.
Homiletic Review.

The great truth that man is a spiritual being with unseen relations of grandest import is again to find priests and prophets who will declare it with voices of power. If the age is material, sordid, low in aim and purpose, it is because the vision has been obscured, the heavens have fallen to be merely a congregation of vapors; the mystery has gone from the stars, wonder has faded from the soul, reverence no longer presses men to their knees; the universe is looked upon as mechanical, a contrivance left aside, and perhaps forgotten by the machinist. But the mystic is ineradicable in human nature. Its yearnings, its weakness, its unrest, will again bring in a purer age of faith than any known in the past; for who by searching can find out the secret of God?—*The Christian Register*.

Would there not come a wave of blessing if every Christian were to remember that Christ's life is given him in order that always and everywhere he may become an interpreter of the Christ? Men are agreed in reverence for Jesus, they will agree in honor for all manifested Christliness. They may for the moment sneer at it, persecute it, deny it, but they will feel the rebuke and the attraction of it. We have no other weapon for lasting and effective influence in the world, nor do we need another.

The Congregationalist and Christian World.

Elijah believed and trusted God, and did not fear to expect an answer to his prayer. It is because we fear and doubt that our prayers have so little assurance in them.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of **SCIENCE AND HEALTH**, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in **SCIENCE AND HEALTH**. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to **JOSEPH ARMSTRONG**, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to **WILLIAM B. JOHNSON**, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to **STEPHEN A. CHASE**, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . . \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT.

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Senate last week passed the Philippine Bill. The chief interest centered in the guarantee by the Philippine Government of interest on bonds to be issued to aid in railroad construction. The rate of guaranteed interest was changed from five to four per cent; the guarantee was changed to apply only to the actual construction of twenty-mile sections and proportioned to the estimated total cost; the guarantee limited to \$1,500,000 and to thirty years in time; the Government to be given a first lien on the property as security.

Other provisions of the bill are: to exempt from taxation all bonds issued by the Philippine and Porto Rican Governments; to authorize municipalities in the Philippines to incur a bonded indebtedness amounting to five per cent of the assessed valuation of their property, at five per cent interest; to authorize the Philippine Government to incur a bonded indebtedness of \$5,000,000 for improvements, at 4½ per cent interest; to allow administration of the immigration laws by the Philippine authorities; to establish a system for the location and patenting of mineral, coal, and saline lands; to fix the metric system for the islands, and to give the Civil Governor the title of Governor-General.

In a decision handed down by the Supreme Court of the United States last week touching the title of State ownership of some bottom lands along the Missouri River between Missouri and Nebraska, a general principle was laid down which will affect in the future similar disputes and destroy some old traditions respecting water boundaries changed by the vagaries of rivers. The Supreme Court has decided that there is a distinct difference between the gradual and almost imperceptible change in a water boundary and one which comes as the result of sudden and violent alteration in the course of running water which divides states and estates. This decision restores to Nebraska land which was torn away by a wild lunge of the Missouri River in 1867, a short time after the State of Nebraska had been admitted to the Union.

It is stated that the Administration is im-

pressed with the advisability of the construction on the Isthmus of a sea-level canal, rather than a waterway involving locks and dams, and is inclined to recommend to the Commission to proceed with plans to that effect. Secretary Taft has just returned from a mission to the Isthmus which resulted in settling several matters that irritated the Panamanian Government. He favors the sea-level plan. Should this policy be adopted by Congress it would add ten years to the time required for construction and many millions to the cost. It is claimed the cost of maintenance would be much less.

It seems probable that the House of Representatives will take action at the present session of Congress upon the subject of regulation of railroad rates, recommended in President Roosevelt's message. Two propositions are under discussion: that a joint commission be authorized to look into the subject during the summer and report to the next Congress; that the House shall pass a bill at the present session in time for the Senate to act upon it. If the Senate did not act upon the measure at this session it would at any rate give the press, the railroads, and the shippers something definite to work upon during the recess of Congress.

It now appears that Andrew Carnegie has offered to duplicate for Boston the amount of the Franklin Fund as it stood last September—\$408,396.48. His gift is to be used as an endowment for the Franklin Union or Franklin Institute, whichever name it may finally bear, on the following conditions: That the Franklin Fund be devoted to the establishment of a school for the industrial training of men and women along the lines of the Mechanics' and Tradesmen's School of New York and the Cooper Union; and that the City of Boston shall furnish a site.

A bill has been introduced in Congress "to secure full use of the rural mail equipment, and to place the rural service on a paying basis." It provides that within the limits of respective rural routes, parcels of mail matter shall be collected and delivered up to two hundred pounds in weight, and in size up to a barrel, provided none shall be over six feet in length. The rates prescribed for this class of matter range from one cent for parcels weighing eight ounces to twenty-five cents for a barrel weighing two hundred pounds.

The official report of the director of concessions and admissions of the Louisiana Purchase Exposition shows that the total recorded admissions for the period of the Exposition, from April 20 to December 1 inclusive, was 19,694,855; of which 12,804,618 were paid and 6,890,237 were free. The free admissions included from twenty to thirty thousand workmen who were admitted daily for several weeks to complete the work of construction of buildings and installation of exhibits.

Foreign.

The report is confirmed that the Sultan of Morocco has dismissed all his foreign military instructors, including the French. Following the Perdicaris affair France sought to stop the condition of anarchy by the organization of an effective civil and military force under French officers, the Anglo-French treaty recognizing French preponderance in Morocco. Some Italian and British officers were also employed by the Sultan.

The International Commission appointed to inquire into the North Sea incident met at the Foreign Office, Paris, December 22. The commission unanimously elected Admiral Baron Von Spaun of the Austro-Hungary navy, to be the fifth member, completed the preliminary organization, and adjourned until January 9.

Sweden has notified her accession to the International Copyright Convention of September, 1886, as well as to the Explanatory Declaration signed at Paris on May 4, 1896, but, like Norway, does not accede to the Additional Act signed at Paris on the latter date.

The French Minister of Commerce has decided to present a bill to the Chamber of Deputies authorizing 250 decorations of the Legion of Honor of various ranks in connection with the St. Louis Exposition. Practically they will all go to French exhibitors.

King Alfonso has signed a decree authorizing Señor Ojeda, the Spanish minister at Washington, to sign the arbitration treaty with America. The King has also signified his cordial consent to the establishment of a Spanish-American College at Madrid.

Architect Manfredi, author of the report on the condition of the Basilica of St. Mark's, Venice, says that the measures proposed in the report are sufficient to prevent further damage. The funds on hand are almost sufficient to complete the contemplated repairs.

Antonio Flores, former President of Ecuador, has been appointed minister to Germany, with the special purpose of urging Emperor William to accept the designation of arbitrator in the boundary dispute between Ecuador and Colombia.

Two scholarships, tenable for three years at the Guildhall School of Music, London, have been founded by Andrew Carnegie and presented to the London City Corporation.

Industrial and Commercial.

At the present time the United States is making pig iron at the rate of more than 1,500,000 tons a month, or practically 19,000,000 tons a year, which is the maximum output reached by this country. This is more pig iron than is being made by England, France, and Germany. In spite of the enormous output stocks at furnaces and steel works have been steadily decreasing for months, showing that the pig iron is going into actual consumption. The output would be larger than it is, but for the fact that some blast furnaces are having trouble in getting deliveries of coke.

The New York Central and Hudson River Railroad has placed an order with the General Electric Company for 60,000 horse-power Curtis steam turbo-alternators, consisting of eight units of 7,500 horse-power each. This will be, when completed, the largest steam turbine installation of any kind in the world and the first large steam turbine installation used for supplying the motive power over three hundred miles of track now operated by steam locomotives.

In a recent test conducted by experts of the British navy between similar vessels of three thousand tons displacement equipped with marine engines of the reciprocating type and of the Parsons turbine type, a study of the details shows that when running at twenty knots the turbine required thirty per cent less coal and steam than the other; at eighteen knots, twenty per cent; at sixteen knots, ten per cent; at fourteen knots about the same.

In less than twenty years Hawaii has come to rank second only to Cuba and Java in the world's sugar production. Sugar-planting as an industry there dates from the signing of the reciprocity treaty with the United States in 1876, by which all raw sugars were admitted free of duty.

General.

The Harvard Observatory announces further interesting results from the investigation of large nebulous regions by means of photographic plates, which has been carried on for some time past by Miss Henrietta S. Leavitt. One hundred and five new variable stars have been found in Scorpio. The total number of new variables discovered by Miss Leavitt and announced thus far, is 410.

The seedless orange is matched by the coreless and seedless apple, which has been produced in quantities in England. There are now about 2,000 coreless apple trees and by 1906 there will be 2,500,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Christian Science Text-book.

SAMUEL GREENWOOD.

To form an approximately just estimate of the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, one should consider the need it is intended to meet, and the success it is achieving in its own field. To read it merely for a confirmation of prejudice or preformed disagreement is a mental blindness that cannot discern its real beauty and utility. Assuming to criticise what we do not understand is bald ignorance; to condemn what conflicts with our own beliefs is egotism; to ridicule or abuse what is intended to bless and save is inexcusably unkind and un-Christian. Science and Health has survived unscathed the onslaughts of its critics, and rests secure in the gratitude and affection of its beneficiaries.

The increasing demand for this book indicates that it is satisfying the want that called for it; namely, the hunger of mankind for a more reasonable and tangible knowledge of God, and how to work out their salvation, than has been afforded by other systems of theology and healing. This fact should engage the earnest attention of those who are working or praying for the betterment of human conditions. It has outlived the prophecy of its earlier critics, that it would never be read, for its readers are now numbered by the hundred thousands, while it has been welcomed in all the leading libraries of the world. While its depth of spiritual thought and its comprehensive treatment of the problems of being have puzzled materialistic philosophers, the simplicity of children has grasped its meaning without effort, enabling them to demonstrate its statements fearlessly and successfully.

Most religious teachers and advanced thinkers have admitted that there is too much materialism in human thought, but they have not defined the limits within which men may safely and profitably believe in matter and obey its supposed laws. Mrs. Eddy alone had the courage to settle the question by declaring against matter entirely, either as creator or creation, entity or power; for she alone had reached that clearness of spiritual perception that could discern man and the universe as in and of Spirit, God, only; and hence spiritual only, in nature and substance. Nothing more at variance with human wisdom or the beliefs of mortals could be conceived of than this. That such would ultimately be the truth of being, when matter and mortality had passed away, was the general religious belief; but that it was or could be the reality of man now, for time as well as eternity, on earth as well as in heaven, had been declared only by the great Teacher. None but the purest of natures could have reached the discovery and demonstration of this Science of spiritual being,—and none but the highest moral heroism could have faced the utter materialism of the nineteenth century with a message which, if true, meant the passing of the cherished traditions of ages and the abandonment of the materialistic dogmas that had ruled the race since Adam. History furnishes us with nothing outside the life of Jesus Christ more sublime than this.

That Science and Health differs, in its deductions, from human, material philosophy and science should be no cause for criticism or disbelief, for these very philosophies and sciences, though hoary with age, admit that they have not yet found the truth. May it not be found in just this difference? Since the departure of Christian Science from the material conclusions of past and present results in something better for mankind than has ever been gleaned from the best offerings of materialism, who can reasonably deny that it is what it claims to be, the Science of being?

Before one ventures to reject or condemn Science and Health it would help him to a fairer judgment to extend his examination beyond the letter of Christian Science, at which he may stumble, and note well the result of applying its teachings to the needs of daily life. The life of the average Christian Scientist is a better argument for or against the spiritual rules he is obeying, than the bare rendering of these rules in a material language. If Christian Science were not true and practicable, its text-book would be the greatest fraud ever offered to humanity. If the hope inspired by its teachings had no fulfilment for weary mortals, it would be the cruelest mockery that has ever played upon the anguish of a stricken and despairing world; but it seems superfluous at this date to assert that these hopes have not fallen like blighted buds, but that their fruit has blessed and comforted and revived many troubled mortals when every earthly refuge had been swept away. The witnesses of these things are in such abundance, and so generally known, that it is idle to speak of them except to emphasize their corroboration of the divinity of Christian Science, and their fulfilment of our Master's prophecy. These results prove the truth and authority of the Christian Science text-book. All the subtle sophistries of material science and philosophy, religion, and therapeutics, have no more force against this array of facts than feathers against a rock. Mrs. Eddy has demonstrated that God's world and man move in the orbit of Spirit, despite the decaying belief that they are helplessly holden in the grasp of matter.

Those who practise most the teachings of Science and Health are those who understand it best, not those who find fault with it. A book that improves the morality and character of its students, that lifts them in large measure above the discords of existence, and equips them with more than human strength for their conflicts with evil, should be approved by every lover of humanity. What better means are there to judge of a tree than by its fruits? Of a surety it is the wiser way to test a rule before disputing it, for otherwise we cannot know but that it may be true and right. Critics should be tolerant of what they do not understand and have not proved, for their ignorance may hide the truth for which a world is famishing.

There is no question as to Science and Health being a "Key to the Scriptures" with those who through it have found access to the riches of that long-locked treasury. Those who declare that the Bible needs no key must be indifferent to its value or ignorant of it, else they would utilize the knowledge they claim to possess and which they so much need. The writer at one time took the same position regarding Science and Health, declaring that the Scriptures were their own best interpreter; and yet he was burdened with conditions which his highest belief in Bibli-

cal truth could not remove, but of which Christian Science relieved him through the higher understanding of God's word, contained in Science and Health. Those conversant with a language need no interpreter, but those to whom it is an unknown tongue do need to have it explained. The blessings which follow the Christianly scientific explanation of Scripture which Science and Health offers, is the evidence of its correctness. Upon this basis rests the success and continuance of Christian Science.

Although the circulation of Science and Health has passed its three hundred thousand mark, this alone is not the highest proof of its worth and appreciation, though it should impress thinking men when the nature of the work is considered. A summer novel may reach this number in a single season and be forgotten or ignored by the next. But Science and Health is a scientific work and not a novel; it deals with fact and not fancy, and is for the salvation not amusement of the world. It is the only book of its kind in any language or in any age, hence there is nothing with which to compare it. How can critics pass just judgment upon it when it deals with things which they have never learned; for no human school of science or religion has ever taught the truths contained in the Christian Science text-book. These truths have been vital enough to bring thousands back from the verge of the grave when the best medical skill on earth had abandoned its faith and hope; they have been vital enough to break the spell of immoral appetites, to save from poverty and sorrow and hereditary conditions, to give hope and joy and strength to many who were perishing for a knowledge of God's goodness and fatherhood. Who that knows these facts could in his heart deride the book or its author, or scoff at the achievements and capabilities of Christian Science?

The message of Science and Health, like that of our Master, is for those who need comfort and rest and peace, not for those who need not a physician. The dense darkness of materialism sheds no ray of light on mortals' pathway, holds no brightening hope for this world or the next, and fills the few short years between birth and death with fears and pain and unutterable miseries. To those who sit in this gloom a great light has appeared, which many seeing have rejoiced. Who would not rejoice to see his way out of the age-long darkness that has enshrouded the race, and to taste a little of the freedom which God gave to man. Those who have eyes to discern the signs of these times have seen in the discovery of Christian Science the dawning of that day of truth whose "sun of righteousness" shall never set, but shall spread its healing wings over the sin and suffering of the world, until earth and heaven are one.

Dreams.

KATE D. GRANT.

I talk of dreams,
Which are the children of an idle brain,
Begot of nothing but vain fantasy,
Which is as thin of substance as the air.
SHAKESPEARE.

Who can remember anything that he dreamed ten or fifteen years ago? Even the dream of ten days ago has in all probability faded from recollection. If a dream of long ago still clings in memory, was it not fastened there by its rehearsal, or by some closely following event which served to impress its strangeness upon the thought? Why is it that these dream experiences have no permanent place in our consciousness? Is it not because the moment we awaken we deny what we did in our dream? Do we not wake up saying, "It is only a dream, it never really happened"? Do we not arouse ourselves to our familiar sur-

roundings to convince our wandering thoughts that we are where we ought to be? We may well recall the relief experienced on waking from a bad dream to find we are not burning up nor sitting on top of the Obelisk wondering how to get down.

When a child suddenly screams out in the night, frightened by some dream horror, does not the mother run instantly to the little one, sometimes almost shaking the tiny dreamer to awaken him, speaking words of comfort, telling him not to be afraid, that father and mother are right here, not to cry but look and see that he is safe in mother's arms? To the terrified exclamation that "a big black bear is going to eat me," are not the lights turned on in order that the true surroundings, familiar and real to the waking child, may displace the illusions of dreamland? Its attention is drawn to each dearly treasured possession until the terror of the dream fades into its own dark nothingness, and the child happily exclaims, "Mother, it was only a dream." These are our sleeping dreams and our way of treating them. How about the waking dreams?

In Christian Science we learn that the mortal sense of existence is a dream, and that God and His creation alone are real. The Bible declares that God made all, and that it was good. It also says,—"I shall be satisfied, when I awake, with Thy likeness," and does it not also teach that we are made in the image and likeness of God? Then does not this mean that we shall be satisfied when we awaken to the truth of what we are, recognize as reality our likeness to God? In other words, when the ideal we see in Science becomes our picture of what man actually is, and so replaces this waking dream-mixture of good and evil, which is ever trying to make us believe that the evil appearing in mortal man is as real as the true and immortal man, created by God. If God is Spirit, man is spiritual; if God is Love, man cannot be other than loving; if God is Truth, man must be truthful, and if God is Life, man must be alive, for "in Him we live, and move, and have our being."

These then are the real, the everlasting conditions; but how about all the daily experiences which do not correspond with the spiritual reality? They are the day-dreams, but are they treated in the same way we treat our night dreams? No, they are talked about, planned for, thought of, written about, and the more weird and unnatural, the more persistent is their discussion. They are the backbone of gossip and slander; and worse yet, fear, dread, dismay, pride, envy, disease, unhappiness, and strife are nursed upon their poisonous supply of error. Mortals make these dreams very real, laugh and cry over them, and are happy or unhappy as the dream presents pleasant or disagreeable pictures. Yet if God is true and we are His children, spiritual and not material, looking to Him, then these waking dreams are no more real than are the sleeping ones.

It may be well to inquire what would happen if we treated our waking dreams the same way we do our sleeping ones? Suppose the minute we realized we were having a waking dream (an experience in which the real surroundings of God and His creation did not appear) we began to mentally wake ourselves up by declaring, "It is only a dream, such things do not really happen to God's children, underneath are the 'everlasting arms,' God is right here, there is nothing to be afraid of," and having thus denied the dream shadows, we next turned on the search-light of spiritual understanding and began to look for the things of God's universe,—our real home,—would we not thus quickly dispel the terror of the dream, and would we not see that God's children are not in lack, are not in the prison of sickness nor pursued by hatred and malice? How joyfully would we echo the child's saying, "It was only a dream."

Is not this our work in Christian Science, to wake up

from the dream of material living, to pierce the veil of sense, to see our God as ever-present, all powerful, all wise, and ourselves as His dear children, to live in the realm of the spiritually real and to destroy the dark shadows of the mortal dream? Paul writes, "It is high time to awake out of sleep: for now is our salvation nearer than when we believed."

An Experience on Shipboard.

MATILDA LEE BAKER.

On the last day of my homeward journey to England, I want to express the thankfulness I feel for all the good which has come to me. Especially am I grateful for the conquest over seasickness that followed a gale in which we found ourselves last Sunday night, resulting in a swell on the succeeding day. I am particularly glad because I had the consciousness during my outward voyage, although I worked mentally as best I knew how, that this trouble was not entirely conquered in a manner satisfactory to myself. This time I felt that the whole difficulty must be overcome by the understanding of Truth as revealed through Science and Health, and through this alone.

Then there came a temptation to let the error, which did not appear at once to yield, hold sway and simply to know that God was my Life, and that it did not matter if I could not eat during the voyage, that I would be all right. I saw, however, that in doing so I was but yielding to an impulse of the weakness of mortal mind, and not reflecting the activity of immortal Mind; that I was not holding aloft the unsullied banner of Truth, and that right here and now was the truth which would free me. In the deepest earnestness I prayed that the whole claim of the mental causation might be uncovered to me, for I knew that thus only could the error be effectually met. Clearly and distinctly stood out the word "fear," with all its claim to weakness. I looked at its shadowy pretensions, analyzed it, measured and weighed it against the perfect Love which "casteth out fear," saw its nothingness through the searchlight of truth which reveals God, and man as His reflection.

I had retired to my berth at night, a truly sorry spectacle, since for two days and nights I had scarcely eaten or slept. I arose in the morning, fresh, bright, thankfully victorious! I was first on deck, enjoyed half an hour's walk, and then ate my breakfast. A lady who had noticed my absence from the dining saloon, exclaimed how well I was looking, "better than when I went on deck," as indeed I had cause to be, for all night, instead of sleeping, I had been striving to realize the strength which Spirit gives. I knew that until the conquest was made I could not afford to spend time in oblivious sleep, and it was my joy to realize that in the consciousness of Truth we find the truest rest. How many times during this voyage, which has meant so much to me, I have remembered the thought passed on to me by a dear Boston friend whom I was bidding good-bye the morning I sailed for England, "We should pray that we may be filled with gratitude in proportion to our indebtedness." This has helped me much and it may help others. Oh, how can we measure, how can we calculate the height, the depth of our indebtedness to divine Love? The measure of our gratitude can only be truly determined in proportion as we demonstrate the truth that God is Love and man His expression and manifestation.

While attending the little service held this morning in the saloon, and singing the old, well-beloved, familiar hymns,—*"All hail the power of Jesus' name;" "O God, our help in ages past;" "Nearer, my God, to Thee,"*—my heart swelled in a joyous thankfulness for the measure of good which has come to me, to humanity, through the

truth revealed in our beloved Leader's writings. I say, in gladness of heart, because we understand more than ever before, something of the unchangeableness of divine Love, the omnipotence and omnipresence of God. I rejoiced because I had been led to understand instead of just blindly to believe.

Now I go forth to work in England, praying that I may gain a deeper sense of love for God and man and thus know better the great realities of being.

[Written for the *Sentinel*.]

The Dawning Day.

CLARENCE A. BUSKIRK.

THE world is growing weary
Of its fiendish battle-roads,
Of the wreckage of mankind
On forlorn and barren shores.
The weary world is waiting
For the light of Truth and Love,
For the light whose warmth can reach us
From the holy heights above!

O, lift us from our dungeons
Into the joy of light!
Let our fetters fall away
With the terrors of the night!
For we faint! we fall! we perish!
Our hearts are cold and dumb!
Let the morning's glad deliverance
To the needy swiftly come!

Hail! the splendor of the dawn,
Of a world-encircling light
Comes at last! and flee the shadows
Of the long and waiting night.
'Tis the bursting of the bloom
And the fruitage-time in one;
'Tis the hour of welcome-songs
To the long-awaited sun!

In the world's gaze, on the heights,
Like a picture heaven-born,
Stands the figure of a woman
In the splendor of the morn!
On her forehead shone the light
Ere it reached us from above,—
From her lips, like Memnon's music,
The glad messages of Love.

The mad fightings in the darkness,
The fierce battle-roads shall cease!
On the earth shall rest a radiance,
And the benison of peace!
Greed and hate and bloated pride,
All foul shapes, shall shrink away
From their pedestals of power
Into hiding from the day!

Haste, O haste the happier time
When men shall cruise no more
Across their phantom oceans
To seek some phantom shore!
Of this happier age, at last,
'Tis the dawning of the day;
And the woman on the heights
Smiles to us and points the way!

Selected Articles.

"There is no Matter."

If critics would be patient until they understand the exact meaning of the proposition, there is no matter, they would find it more acceptable. The difficulty lies in the fact that they do not understand what Christian Science gives in return for what it repudiates. This Science does not teach that the visible universe is an illusion, but that each created thing, from the least to the greatest, is real, though not what it seems to the concept of those who have not learned to regard it from a spiritual viewpoint.

It is said, "If we know anything at all about anything at all, it is through the aid of these five senses or a part of them, and we have no other means of knowing or assuming to know." This is an admission either that we can never know anything beyond materiality, or that there is nothing to know outside the material, and that "death ends all."

Jesus declared, "God is Spirit." The senses, to which our friend credits so much, declare, "I do not see any spirit, hence I do not believe there is any spirit." One cannot believe in immortality, in Spirit or spiritual creations, without setting aside the testimony of the personal senses; and if one may be permitted to accept testimony contrary to the senses sufficiently to believe in the reality of Spirit, there is no reason why one should not be able to indorse all the teachings of Christian Science.

Jesus declared, "When he, the Spirit of truth is come, he will guide you into all truth." Nothing short of science can impart knowledge, and we therefore conclude that Jesus meant that when a spiritual understanding concerning the truth, in contradistinction to a materialistic sense thereof, comes, you will be guided into all truth.

One may learn something from the external, material sense of the world by means of the personal senses, but the understanding of the spiritual and eternal things—the things which must govern our future welfare—must be obtained spiritually; hence the declaration of our Lord, "And this is life eternal, that they might know Thee the only true God, and Jesus Christ, whom Thou hast sent." Jesus said, "God is Spirit and those who worship Him must worship spiritually" (Twentieth Century New Testament). How can we do this without understanding spiritually?

ALFRED FARLOW.

In *Nebraska State Journal*.

Christian Science has no quarrel with those who may differ with it; but, on the contrary, it teaches its adherents to live meekly and follow in the footsteps of Jesus Christ, the Wayshower. It teaches us to trust absolutely in God,—the omnipotent, omnipresent, omniscient Father of us all,—and it is being proven daily by thousands of intelligent men and women that this trust in God brings to them results in health, happiness, and peace far beyond anything that the world has to bestow. Surely such fruits as these are blessings for which all men are seeking to-day. Christian Science requires of its disciples purity of thought and action, and sets before them the Golden Rule, the doing unto others as they would that others should do unto them, and it admonishes them to observe this rule continually; always to overcome evil with good.

Christian Science is not a "fad." Neither can it be considered as being outside of other religions in its teachings as to the good. A point, however, of difference between them is that Christian Science holds it to be as necessary to obey the commands of Christ Jesus to heal the sick, and in the same way that he did,—by reliance upon Divine power only,—as it is to preach the gospel. Jesus never separated the two, and there is no authority in his teachings for their separation. It is

largely because Christian Science enables its students to demonstrate this healing power of Truth that it has had such phenomenal growth. It is pre-eminently a practical religion. It gives to man a larger and a better understanding of the Principle of life, which Jesus taught and demonstrated; it would have man earnestly seek after spirituality, and as he finds it he is able to apply his understanding of it to the problems of human existence.

It holds and demonstrates that in the ratio that man reckons himself a son (likeness) of God, instead of "a poor worm of the dust," in that ratio does he come into the possession of his birthright of health, harmony, and happiness.

W. S. MORRIS, JR.

Newport News (Va.) Times-Herald.

Christian Science does not admit that God is the author of disease. God is omnipotent, infinite, omniscient, omnipresent; a God of love, who gives only good to His children. Disease, sin, all the myriad forms of evil and suffering are not derived from God, and therefore have not inherent eternal existence. To a sense spiritually elevated they are not real. To the material senses they appear real until a better understanding of the nature of God and His universe is gained. In the same chapter in which he saw a new heaven and a new earth, John also saw the end of the pretended reality of material concepts. He heard a voice saying,—

"And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Christian Science has been before the public only a comparatively short time. Statistics covering a long period of years, or many thousand cases, are not necessary to prove the correctness of Christian Science. Christian Scientists, thousands of them all over the world, know, as did the blind man, that they have been healed. They know that they are happier, clearer mentally, better physically and morally, and above all, have gained clearer views of God and His universe, and thus are regenerated spiritually. With these results evident before them, they have no desire to return to former modes of thought.

EZRA W. PALMER.

Denver (Col.) Post.

A critic says, of the race, "We were born in sin, we were shapen in iniquity. It is absolute folly, then, to talk of perfect deeds, perfect fulfilment of the Divine requirements as a means of salvation for any one of us, for we can do none of them, and moreover we do not attempt it." How can this most remarkable statement be reconciled to that luminous standard of Christian ethics set up by the Master in his Sermon on the Mount? Did he not plainly say to his hearers, "Be ye therefore perfect, even as your Father which is in heaven is perfect"? Jesus was evidently not unmindful of the spiritual definition of man as furnished by the Hebrew Scriptures, which described him as the image and likeness of God.

We cannot agree with this critic "that modern scholars (almost all of them) are opposed to the Bible and its beautiful Plan of the Ages." On the contrary, modern scholarship has stripped the Bible of many apocryphal interpolations and textual errors, which have tended to cloud the purity of the canonical writings with the materialism of traditional theology. Such evidence of modern scholarship as the Ferrar Fenton translation and the "Modern Reader's Bible" by Richard C. Moulton, M. A., are certainly indices of a great spiritual awakening. The human race pre-eminently needs both the spirit and the letter of the Logos and the Gospel.

RICHARD P. VERRALL.

Poughkeepsie (N. Y.) Courier.

The Lectures.

Roxbury, Mass.

A large and intelligent audience greeted Bicknell Young of Chicago, in Fauntleroy Hall, last evening [October 14], the occasion being the semi-annual lecture on Christian Science, under the auspices of First Church of Christ, Scientist, Roxbury. The remarks of the able and forceful speaker were listened to with the closest attention throughout. He was introduced by Elisha B. Seeley, chairman of the church, in part as follows:—

Friends:—It is a generally admitted truth that throughout the ages man has universally believed in a Supreme Being. Men have differed widely as to His nature, individuality, habitation, and accessibility, yet above all skepticism and infidelity is the unfaltering belief that God is.

As an earnest of this belief in God, there is also the conviction that though man seems to be a creature of chance and change, it ought not so to be, and that somewhere, at some period, there has been lost that at-onement between God and man which should enable him to approach his heavenly Father with even greater assurance of His willingness and ability to supply every need, than could possibly result from a similar attitude toward an earthly parent.

The Christian world believes the Bible to be God's word. They believe it to have been written by spiritually-minded men whose sense of hearing was sufficiently attuned to the Divine tones to enable them to receive the impartations from the Infinite, and they believe this only because the prophecies, commandments, and promises therein have their fulfilment in recorded and well-authenticated instances of the healing of sickness, the overcoming of sin, and in the defeat of death itself.

These beliefs are shared by Christian Scientists, but they do not stop here. Through the revelation of Christian Science, they are more confidently and understandingly able to call upon God and obtain an answer to their prayers. Above physical discord, above sin and its consequent suffering, above the pangs of poverty and the uncertainty of mortal effort, the voice of Truth leads upward toward the unfolding of God's law,—the law of Love, revealing that spiritual link between man and his Maker which of old fed the desert followers of Truth with manna from on high, and which, whenever and wherever discerned and obeyed, is manifested in harmony, physical, mental, and moral, and more than this, in the consciousness of God's presence, of peace and joy, abundance and freedom, gratitude and love, which the world can neither give nor take away.

The Dorchester Beacon.

Dubuque, Ia.

A large audience assembled at the Grand Opera House, Monday evening, October 17, to hear Edward A. Kimball of Chicago lecture upon the subject of Christian Science. The lecture was an interesting one, the audience giving the speaker close attention. Mr. Kimball was introduced by the First Reader of First Church of Christ, Scientist, Mr. Courtland Butler, who spoke in part as follows:—

A few years ago an acquaintance had much to say to me in ridicule of wireless telegraphy, declaring that the project was absurd and impossible of accomplishment. He resisted all my suggestions that it might be worked out at some future time, and asserted that any such prediction was foolish in the extreme. It happened that in that very hour the problem of wireless telegraphy was being wrought out in the perfecting of Marconi's discovery, and my friend had occasion shortly to acknowledge the error of his judgment. What if Marconi had taken the same stand that this man took several years ago? Might not the world have

been deprived for many years of the advantages of wireless telegraphy? Do not we have occasion to see constantly that stolidity and non-progressive prejudice are stumbling-blocks to advancement? I am confident that this audience of intelligent people is competent to divest itself of all hindering prejudices and give close attention to the lecturer.—*Correspondence.*

Webster City, Ia.

The Christian Science lecture at the Congregational Church last evening [November 14], was largely attended, the church being well filled. Mrs. Mims, the lecturer, is from Atlanta, Ga. She is a pleasing speaker and holds her audience interested till the close of her address. Mr. E. C. Stevens, of the local church, introduced the lecturer, speaking in part as follows:—

What, you may ask, is the reason of the rapid growth of this Cause? Perhaps you may listen to something here this evening, or perchance you may see in the lives of those striving to be called Christian Scientists, something that will answer the question for you. Whether you are a Christian Scientist, Congregationalist, Methodist, Baptist,—the denomination makes no difference, we are all seeking the one great thing—truth, the truth about God, man, and the universe.—*Daily Freeman.*

Troy, N. Y.

Music Hall was the scene of a large gathering last evening, November 11, the occasion being a lecture by Septimus J. Hanna of Colorado Springs. The lecture was given under the auspices of First Church of Christ, Scientist, of this city. Edgar K. Betts presided and introduced the speaker in well-chosen remarks. He said in part,—

Christian Science has come seeking the lost and cleansing the face of humanity from the accumulated rubbish of the ages, the dust of dogmatism, the must of mysticism, and the thick mould of superstition, ignorance, and indifference, revealing man as the actual child of his heavenly Father, and entitled as such to enjoy, not as a privilege or as a favor, but as his birthright, all the blessings of healthfulness, happiness, and usefulness.—*The Troy Record.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Reign of Universal Peace.

THE Christmas issue of *The Boston Globe* contained a very interesting symposium of answers to the question, "Have the events of 1904 been such as to add encouragement to the hope that the world is approaching the reign of universal peace and to give promise for a growth of the spirit of the Prince of Peace in the New Year?"

Fifteen prominent persons contributed their views to this symposium, and the majority of them are agreed that substantial progress toward universal peace has been made. Our Leader's contribution appeared as follows:—

HOW STRIFE MAY BE STILLED.

MARY BAKER G. EDDY.

Founder of the Church of Christ, Scientist.

Follow that which is good.

A Japanese may believe in a heaven for him who dies in defence of his country, but the steadying, elevating power of civilization destroys such illusions, and should overcome evil with good.

Nothing is gained by fighting, but much is lost.

Peace is the promise and reward of rightness. Governments have no right to engraft in civilization the burlesque of uncivil economics. War is in itself an evil, barbarous, devilish, victory in error is defeat in Truth; war is not in the domain of good, it weakens power and must finally fall pierced by its own sword.

The Principle of all power is God, and God is Love. Whatever brings into human thought or action an opposite element is never requisite, never a necessity, in so much as it is not sanctioned by the law of God, the law of Love. The Founder of Christianity said, "My peace I give unto you; not as the world giveth, give I unto you."

Christian Science reinforces Christ's sayings and doings, its Principle demonstrates peace; and Christianity is the chain of scientific being reappearing in all ages, maintaining its obvious correspondence with the Scriptures and uniting all periods in the design of God. The first commandment in the Hebrew decalogue—"Thou shalt have no other gods before Me"—obeyed, is sufficient to still all strife. God is the divine Mind, hence the sequence, had all peoples one Mind peace would reign.

God is Father, infinite, and this great truth when understood in its divine metaphysics, will establish the brotherhood of man, end wars, and demonstrate "On earth peace, good will toward men."

Concord, N. H.

A Welcome Change.

THE change which is gradually taking place in the world's estimate of Christian Science is well illustrated in a sermon recently delivered by Rev. Raymond H. Wilson, assistant pastor of the Walnut Street Presbyterian Church, Philadelphia.

The following excerpts are from the *Philadelphia Ledger's* report of Mr. Wilson's remarks:—

"Christian Science is based on the teaching of Scripture. It explains all cause and effect as mental, and shows the

Scientific relation of men to God. Surely this is a splendid foundation, the Word of God interpreted by the rule of Christ. In our discussion we mean to take this declaration of the sect at its full face value. We cannot estimate another's worth justly and generously unless we consider well his strength.

"We must ever remind ourselves that we are called Christians, not because we are Christ-like, but out of respect to our declaration of faith in him. Shall we deny the same charity to any of the brethren who profess their faith in the same Christ, only in another way? The sources of the materials for a religious discussion are always interesting. Whatever may be their limitations, no one can say that they lack in abundance. A very fertile source is the usual bad temper of such debates. . . .

"All the evidence leads me to the conclusion that Christian Science is not absurd, as some would have us believe. Neither is it pernicious, as many well-meaning people fear. . . .

"The root of Christian Science is the spiritual life, and its fruits are the fruits of the Spirit. It exhorts its followers to turn from the dark, dismal prison life of self to the generous liberty of the sons of God. Christian Science heals through faith interpreted as spiritual understanding. Imagine a world of happy men and women starting out to do their day's work guarded, guided, and controlled by God. In such a world all so-called material problems would be solved by Mind. And the ever-present thought of life would drive away fear of death, as knowledge of Truth dispels doubt. It is not a new truth that they who turn to God not with their lips, but with their lives, shall be healed."

Notwithstanding statements to the contrary, made by enemies of Christian Science, the attitude of our people toward other churches has ever been one of brotherly kindness and consideration, and whenever they have been compelled to define the difference between their own faith and that of other religionists they invariably have done so in a spirit of Christian fellowship. They have recognized the utter folly and wickedness of intemperate speech and vituperative argument, and the absurdity of these when applied to the adjustment of differences of opinion regarding religious matters. The important question about any religious teaching is, Is it true? and the answer to this question can be obtained only through patient, dispassionate investigation. That much of the pulpit discussion of Christian Science which has taken place during the past year or so, has displayed the kindly feeling which characterizes Mr. Wilson's sermon, is worth noting. Perhaps the example of Christian Scientists has been contagious.

ARCHIBALD McLELLAN.

The Outlook.

WITH the close of the year thoughtful people scan the horizon on which the light is dawning, though a backward glance may yet prompt the familiar query, "What of the night?" Whether we consider this query in its relation to personal experience, or to the larger fact of humanity struggling to reach the light,—we find it impossible to gain a satisfactory answer, apart from God. If we take the testimony of the material senses we have overwhelming evidence of sin and sorrow, wars and calamities which well-nigh threaten the extinction of the race, and to which is added the easy indifference of those who say, "All things continue as they were from the beginning."

In spite, however, of all that has darkened mortal experience we have clear evidence of a power unseen to physical sense, yet mighty to remedy every ill. To-day many cry out in their misery for the help which God alone can give, and say, as did Job, "Oh that I knew where I might find him!" That their cry will both be heard and

answered is sure, for there are thousands who long "walked in darkness" but who have seen "a great light,"—even the dawn of Truth's day in Christian Science. The light came to them when sore perplexed and disheartened, and with no certainty as to the divine purpose either for themselves or others. To know that their path leads to the goal is the assurance which so many seek, and which many have found, and with it the courage and endurance to walk fearlessly wherever Truth points the way.

In acknowledging our indebtedness for the many blessings of Christian Science, we cannot forget its wonderful power to interpret for each one, in the ratio of his spiritual unfoldment, the higher possibilities of literature and art, so that we are enabled to grasp some measure of the reality that underlies every expression of beauty and goodness. Without this, art appeals to the eye and ear alone, but with spiritual sense, the healing presence of Christ, Truth, will be found in its uplifting influence and effects.

A lady who had long believed herself an invalid was led by her love of music to listen to the oratorio of the "Messiah," and although she was delighted with it she had a sense of physical exhaustion at the close. She mentioned this to a Christian Science friend who remarked that if those who rendered the music and those who listened to the "wonderful words of life" contained in the "Messiah" had but spiritually understood them, it would have been enough to raise the dead, as in Jesus' time. With the teaching of Christian Science many doors are opened for us, into heaven,—harmony,—even as they were to St. John, and while mortal sense testifies to sin, disease, death, and a "world of woe," the spiritual evidence of eternal harmony predominates, and nullifies the false evidence, so that he who has made Truth his refuge, can say with assurance, "I know that my redeemer liveth."

It were well for us to remember that the mariner must needs have a chart and compass, and a knowledge of navigation as well. Our spiritual chart and compass have been provided by divine Love and it is our necessity to consult them continually on our perilous passage from material sense to the realization of universal, divine harmony. To Christ, Truth, the way is known and each step is made clear as noonday to the one who truly and untiringly seeks divine guidance. Thus we may look forward to large achievements in the new year,—the dispelling of many clouds for the whole world,—and at each step we should strive to deserve the "well done, good and faithful servant."

ANNIE M. KNOTT.

The Still, Small Voice

MEN have been accustomed to think that the most convincing things in the world are always phenomenal; that a colossal sense testimony is the one unanswerable statement of any proposition. In the parable of Dives and Lazarus, however, Jesus seems to have clearly taught that the word of Moses and the prophets made a more significant appeal than would the resurrection of one from the dead, even as Elijah found his illumination not in the wind, the earthquake, or the fire, but in the truth conveyed by "a still, small voice."

In his story of the lustful guilt, and tragic end of Sebald and Ottima, Browning has given this irresistible address of truth a most dramatic setting. Recounting their experience in the forest, Ottima says,—

Swift ran the scorching tempest overhead;
And ever and anon some bright white shaft
Burned through the pine-tree, here burned and there,
As if God's Messenger through the close wood-screen
Plunged and replunged his weapon at a venture,
Feeling for guilty thee and me: then broke
The thunder like a whole sea overhead.

Yet were they not awakened to the heinousness of their sin. Later Pippa passes, singing,—

God's in his heaven:
All's right with th^e world,

and then the conscience which had seemed torpid and unmoved amid the frightening thunders of heaven's condemnation, starts up suddenly, and Sebald cries,—

guilt from its success superior
To innocence! That little peasant's voice
Has righted all again. Though I be lost,
I know which is the better,—

and not only does he see and loathe the hatefulness of his sin, but he is ready to die for its expiation.

A clear apprehension that the world is to be won by the simple redemptive word of truth alone, truth which may be voiced by a little child,—this is one of the best things on which to lay hold these New Year days, when a great many good people are wont to think upon the discouraging contrast between their past aspirations and achievements. When one is sure he cannot bring to the future a nobler motive or a more sincere effort than those of the past, he may be tempted to think that he cannot hope for more satisfying results, and he will escape the depressive influence of this logic only as he parts with his sense of self, and enters with abandon into a realization of the glorious power and possibilities of Truth, even though the channels of its human expression be narrow and inadequate.

Many of our Lord's immediate disciples were humble men, and some of them gave surprising illustrations of the dulness and refractoriness of human sense, and yet their acceptance of the authority, the vitality, and the saving power of the word of Truth committed to them, was such that they became great apostles indeed. Honest, aspiring, and sincere, we become true believers as we practically enter into the fact of Truth's dominion,—that it will accomplish that whereunto it is sent. As Christian Scientists, it is possible for every one of us to live a unique and beautiful life this new year,—a life so simple, so unselfish, so loving, so given to the service of humanity in the measure of its need, that we shall be recognized as the ambassadors of Christ, and "separate from the world." This is the supreme privilege and hence the supreme requirement of the hour, and we may be glad in the knowing that while we do thus live, every declaration of truth which we utter counts "for God and humanity." JOHN B. WILLIS.

Gifts from our Leader.

MRS. EDDY's loving regard for the children was shown on Christmas day by a gift from her to every child in the Sunday School of The Mother Church. These gifts were beautiful Christmas cards, each bearing a selection from her published works: The Lord's Prayer and its Spiritual Interpretation (Science and Health, p. 16), Spiritual Interpretation of Psalm 23 (Science and Health, p. 578), A Verse (Miscellaneous Writings, p. 400), and a selection from the poem, "Come Thou" (Miscellaneous Writings, p. 384).

The children were very much pleased to receive this evidence of Mrs. Eddy's regard for them, and expressed their appreciation in a letter which was forwarded to her.

Statistics of the Children's Sunday School of The Mother Church.

NUMBER enrolled June, 1904, 234; number entered since 53; total 287. Number graduated, 7; number left school, 60; total 67. Number enrolled December 18, 1904, 220. Aggregate number in attendance from June, 1903, to December 20, 1903, 2,372; aggregate number in attendance from June, 1904, to December 18, 1904, 2,981. Increase in aggregate attendance in 1904 over corresponding period in 1903, 609. This shows an average increase in attendance of 23 children per Sunday.

The foregoing is the report of the Secretary, Miss Grace E. Nickerson.

Letters to our Leader.

Boston, Mass., December 19, 1904.

Beloved Leader and Teacher:—Thinking that it might interest you to hear something of the exhibit of our Publishing Society at the World's Fair in St. Louis, I venture to write you a few lines in regard to it. While it will undoubtedly be somewhat difficult to trace many direct results to it, the wisdom of having Christian Science properly represented at the Fair was amply demonstrated in the marked interest manifested by the public in the exhibit. Innumerable remarks indicative of a friendly interest in Christian Science and of a spontaneous recognition of Mrs. Eddy as its Founder and Leader were made by passers-by and visitors, while few remarks showing unfriendliness in word or tone were heard. Our textbook, *Science and Health*, was placed open in the front of the case, and hundreds of people stopped and read with evident interest the two pages thus displayed. The exhibit, while relatively small, was dignified and attractive as well as a complete collection of our denominational literature, and just as it stood there, did its own work, reaching many thousands more than could possibly have been reached by any personal efforts, although of course many opportunities were also afforded for personal work in the dissemination of literature and in conversation.

While, like all Christian Scientists, I have always loved our books, yet in thus guarding and associating with them day after day, feeling as I did a sense of individual responsibility for them, I grew to have an indescribably tender feeling for, and loving companionship with them, such as one would have for old and tried friends; indeed, I knew that they were the best friends I had in all that vast multitude, and my heart goes out in gratitude to you, for through your teachings I have been healed and made whole. Previous to knowing of Christian Science I had seldom known a day free from pain or suffering in some form, but through the study of your books and the inspiration of your example, I am to-day, and have been for many years, a perfectly well man. I am profoundly sensible of the privilege which was afforded me of serving our Cause in being permitted to care for your books and the literature of our Publishing Society.

With loving regard, believe me, Your loyal student,
GILBERT D. ROBERTSON.

Boston, Mass., November 20, 1904.

Beloved Leader:—This glad new anniversary of your last class brings a deeper thankfulness for the gift of your teaching. I feel more than ever the responsibility of standing before the world as your student, and this leads me to strive more earnestly to gain the true import of your teaching and then to live it. I want to thank you again for the exceedingly great privilege of my week with you last February. I hope you know what a blessing and help it has been to me, for words cannot express it. Your entire consecration of every moment to God, and your tender love and selflessness are object-lessons never to be forgotten.

You may be interested to know that a week after I saw you, I had the pleasure of giving your bound writings and the *Journal* and *Sentinel* to the library of the New Hampshire Exchange Club of Boston. This club has a large house on Beacon Hill. Its office is to promote the interests of New Hampshire and provide a Boston meeting-place for the people of that state. Its membership is composed largely of prominent New Hampshire men and their families.

May the rich measure of peace, joy, and love which you have brought to others, return to you pressed down and running over. Your loving student,

EMMA C. SHIPMAN.

Testimonies of Healing.

It is over four years since this blessed truth, Christian Science, first came to me. From early childhood I had throat trouble. My father was a physician, and everything that could be done in a medical way was done. After my marriage I lived in a city near my old home, where I was treated by three of the best specialists in that city for a number of years, and finally went through the disagreeable operation of having my tonsils removed by electricity. In spite of all this, however, I continued to have quinsy from two to four times a year. Four years ago last Christmas, I was spending the holidays at my father's, and awakened on Christmas morning with one of my usual sore throats. My father examined my throat and said it was an acute attack, and he did not think anything could prevent it from running its usual length of time, which was ten days to two weeks. He prescribed several remedies and the usual poulticing. I was in despair, because we were having a family gathering and I had planned a very happy time.

I knew absolutely nothing about Christian Science, but my sister-in-law, who had recently become interested in the healing, came to my room, and asked me if I would try it, and said she knew it would help me. My husband and I talked it over and decided that we were willing to try anything. A practitioner was called in the afternoon, and soon after she left I rapidly grew worse, and by midnight I was having some difficulty in breathing. I felt that if I ever needed the practitioner it was then, and she was accordingly sent for. This time, however, she was there only a short time before I was fast asleep. At eight o'clock the next morning I awoke to find every particle of pain gone. The healing had been accomplished and I was well.

Strangely enough I did not feel very grateful. I seemed to take it as a matter of course. All the family rejoiced at my healing, but very little was said about Christian Science having done it. My husband and I, however, gave Science the credit, although we had a very limited sense of what it was. We rejoiced that at last we had found something that could check the disease and prevent it from running its usual course, but we did not have the faintest conception that this same truth could also prevent a recurrence of the malady. We began to plan for the next attack, and felt a reasonable degree of security in the thought that we now had a remedy that was efficacious. In just six weeks the expected attack came, and the practitioner was sent for immediately. I told her I would give her just three days to cure me, and felt that was long enough, since she had cured me before in less than a day. In a most tender and loving way she said, "My dear, if I were you I would not limit God." At the end of three days my condition was not improved and we became discouraged, and dismissed the practitioner, and went back to material remedies, with the result that I had one of my usual attacks of quinsy, which nothing in a medical way had ever stopped. After this experience I hardly knew where I stood. I felt that Christian Science had healed me the first time but had failed the next. Just six weeks later, in the same way, and at my father's, where I had had the other two attacks, another attack came on; but, thank God, when I awoke this time with a sore throat I also awoke to the fact that I wanted Christian Science and nothing else. In forty-eight hours all sense of pain had disappeared like the dew before the morning sun, and I came to realize what our Master meant when he said, "Ye shall know the truth, and the truth shall make you free." Never have I had a return of this trouble, and not one drop of medicine have I taken from that day to this. This is only one of the many blessings I have received through Christian Science.

Words cannot express my gratitude for our dear Leader.

and all the dear ones who have helped me to understand this wonderful truth.

HELEN F. STRICKLER, New York, N. Y.

I wish to express my gratitude for what Christian Science has done for me in regard to the healing of what was pronounced by one of the best physicians in Canada to be a case of incurable ear trouble. I was suddenly stricken with deafness, and immediately consulted him, underwent very severe treatment for several months, only to be told, that I would always have to suffer, with every prospect of becoming permanently deaf. As our best friend and physician, he cited the cases of some of my friends who had spent large sums of money on special operations, with anything but satisfactory results, and explained a course of treatment which he advised me to follow. I therefore made up my mind that what could not be cured must be endured, but what I suffered from the fear and dread of taking cold and having it always settle in my ears, is beyond description. It was fully a year after I had commenced the study of Christian Science before the thought came to me that I could apply it to this trouble. I heard a testimony given at one of our meetings of the overcoming of deafness, the result of measles, and I then thought of applying Science. This ear trouble had been of sixteen years' standing, but I was determined to begin at once, and my beginning was to discard the cotton wool, which I had used as a protection from colds and draughts. I then suffered more than I ever had, and the next day was obliged to go to a practitioner for help. On my return from the first treatment I parted with all the appliances and instruments upon which I had depended for the little surcease from suffering I had had. I read and studied earnestly and continually, and whenever the thought of material remedies, such as hot oil, glycerine, etc., presented itself, I would find in the teaching of Science and Health the true antidote for the error. In two months' time I was perfectly healed.

"Enter into his gates with thanksgiving, and into his courts with praise," is indeed a reality to me. I wish also to say that my love and appreciation of Mrs. Eddy is too deep for words, in giving thanks for this wonderful truth which she has shared so generously with one and all.

MRS. EMMA L. HAMBLY, San Jose, Cal.

It is sixteen years since this sweet message of rest and peace on earth came with its healing touch, lifting me out of hopeless invalidism. For five years I had been an invalid, sometimes better, then down again, and each time worse than before. I have ever held in grateful remembrance the several physicians to whom I appealed for help. They were exceedingly kind, and did all in their power to relieve me, but none of them would say that I could be cured. One physician, of wide experience, said there was no case on record like mine. At times my sufferings were almost unbearable, and I never knew what it was to feel rested. I was constantly thinking and saying, "I am so tired." At one time I was with a friend who was greatly interested in so-called mind cure, and very desirous that I should try it, but it did not appeal to me in the least, and I have since been thankful it did not. I finally returned to the home physician whom I had at first. I was steadily growing worse, nervous prostration was added to my other troubles and a constant fear that I was losing my mind. I said to the doctor one day, "I want to know just what you think about me. Am I ever going to be well enough to do work of any kind, again?" He told me, as gently as possible, that I must give up all thought of it. After leaving me, he said to a member of the family that I could not live over two months at the outside.

At the age of twelve, I had united with a church, and

ever after tried faithfully to live up to its requirements and be a Christian, but there was always a doubt and an unsatisfied longing for something beyond what I found there. In a conversation with my pastor, I asked him why the miracles of Jesus' time could not be performed now, it seemed they were needed as much as then. He replied, "Oh, no, they were intended just for that time, and cannot be expected now." The reply did not satisfy me. Often, while lying on my sick-bed, I would open my Bible and read of Jesus' healing work, and the thought would come that, if I only had faith enough, God would cure me, but my desires and prayers seemed of no avail. As I look back to that time now, I see how I was being led and made ready for the true healing.

Shortly after the doctor had told me that I could never hope for health again, a lady from a distant town came to our home to remain over night. I had heard that she was a Christian Scientist, and gave mental treatment. I desired my friends to ask her to come to my room, and she did so. Almost the first thing I said to her was, "Do you think Christian Science could help me?" I shall never forget her reply, it was so positive and assuring. She said, "Certainly, why not?" talked with me a few moments about it, and went away. But a ray of light and hope had dawned in my consciousness, and a week later, I had dismissed the doctor, placed myself under her care, and absent treatment began. The first day there was this noticeable change,—I lay on my bed quietly and with a rested, peaceful feeling. There were often dark days of suffering after this, but I clung to Christian Science, and in four weeks I was able to take the trip of fifty miles to the Scientist's home, and remained with her two months. It was then that I first saw Science and Health, and the more I read in it, the more I wanted to read, although there was much of it that seemed entirely incomprehensible. Sometimes the Scientist would help me to see some particularly difficult passage in a clear light; then again, she would tell me not to be troubled or anxious over it, but to read the parts that were clearer, that when I was ready to see it, this would be clear too, and through obedience, I found it to be so.

Her neighbors, who saw me when I came to her home, said I would never go away from there alive, but before I left I was taking long walks, riding and driving, running a sewing machine, in fact, doing anything I desired. I was happy in my new-found faith in God, and had a great desire to be able to help others as I had been helped, and thankful to the Scientist whose prayers had availed so much for me. I went directly from her home to a distant city, where I had the privilege of class instruction. What a feast it was, as God, and my true relation to Him, were unfolded from the wonderful "little book," which proved itself indeed a "Key to the Scriptures," making me love my Bible as never before, and enabling me to begin to prove its precious promises.

There have been varied experiences that have tried and tested my faith, deep waters to pass through, but the presence of the Comforter, as revealed through Christian Science, has never failed me. I have seen my hope realized, in bearing this message to others whom it has healed of so-called incurable conditions, acknowledged to be beyond the reach of *materia medica*; and in the overcoming of sinful habits, bringing them into "newness of life," spiritually, mentally, morally, and physically.

For all these blessings, my heart goes out to God in unspeakable thanksgiving for His revelation to this age. Words cannot express my love and gratitude to our beloved Leader. My prayer is, that I may comprehend the height and depth of her mission, become truly grateful, casting out every stumbling-block of erroneous thought, word, or deed that would cause her sorrow or in any way

retard the progress of our Cause, and that each day I may draw a little nearer the reflection of divine Love.

EMMA J. HULL, Cape Vincent, N. Y.

About two weeks ago I had occasion to prove the truth of Christian Science. I was walking with my little boy along one of our avenues in the evening when it was quite dark. The sidewalk was very uneven, and I fell, striking my chest on the stone pavement. My suffering was, to sense, very great, but we both declared the truth, and as I was unable to procure help that evening I worked for myself. The next day I had help from a practitioner, and am now entirely well. Words seem weak when I attempt to voice my gratitude to God who has given us a Leader capable of showing us the way through the wilderness of sorrow and sickness. I am also grateful to my practitioner, who was enabled to realize so effectually God's allness.—ELEANOR S. SMITH, Chicago, Ill.

For eleven years I have been the grateful recipient of manifold blessings through Christian Science. When I had my first treatment and was healed by this wonderful truth, I was an ardent member of a dear old church which I loved, and love still. I thought that its teachings were perfectly satisfactory and did not care to have a better way; indeed, did not think there could be a better way. I thought, however, that I would like this new way for the physical healing, consequently I purchased a copy of Science and Health and quickly read it through. I did not study it, but thought from what little understanding I gleaned from so hurried a reading of it, that it would be an easy religion to live, but that if I gave up my old way of serving God for Christian Science I might lose all, so I laid the book aside, afraid to have anything more to do with it.

For nearly two years I went to church and worshiped in my accustomed way, but I grew seriously ill, and my husband sent for the practitioner again. She came and stayed three weeks, laboring with much patience and earnestness to show me the true way, and I praise God that the scales did fall from my eyes. I saw that the new way was only the same old way, with the overhanging vines, underbrush, and poisonous plants of material sense cleared away by the pruning hook of divine Science, and the path illumined by spiritual understanding.

I then took Science and Health and began to study its great truths and apply them in my daily living for myself and family. Sometimes the problem to be met seems so hard that we have help from our dear, faithful practitioner. I have witnessed error in many forms, both mental and physical, go down under the battle axe of truth, even to the bringing back from the grave, as it seemed, of both my husband and daughter. I have also proved the healing effect of Christian Science over diseases among the stock and poultry on the farm.—poisonous bites, stings, and many other manifestations of error. Surely this new-old way does disclose a "goodly land," a land of peace and joy and gladness, where all is good, pure, beautiful, and true.

It is needless for me to attempt to tell of my heart's deep love and gratitude to God who is supreme and altogether lovely, and to Mrs. Eddy, our faithful Leader, who has made such a loving sacrifice of what the world counts all, that she may lead us as God leads her, into our rightful heritage.—MRS. C. A. KIRKPATRICK, Rosslyn, Ky.

In August, 1900, I turned to Christian Science for physical help and commenced reading Science and Health, although it was like trying to understand a new language. With the counsel of a dear Christian Scientist I received the health sought for. I had previously doctored for some time, and the last doctor to whom I went advised an operation. It was fear of the operation that drove me to Chris-

tian Science. My healing was slow, but I am very glad of it now, for in this way I understood more and more of the divine Principle.

I have conquered in many battles with selfishness and pain through the understanding gained from the Bible and Christian Science literature. I feel very grateful to Mrs. Eddy, and know that I can only express my gratitude by right living.—FANNY GOETCHINS, Spokane, Wash.

I wish to tell of some of the benefits Christian Science has brought to us during the past six years. My husband has been cured of hay fever, asthma, catarrh, and a chronic liver trouble that the physicians relieved, but failed to cure. Croup, chills and fever, and many other ailments peculiar to children, also a severe case of congestion of the lungs, which attacked our baby when only eight months old,—all these had Christian Science treatment and were quickly healed.

I have been healed of sick headaches, which caused me great suffering. I was subject to tonsilitis whenever I contracted a severe cold, and last spring my eyesight failed me so that I was unable to read common print. After two or three weeks' treatment, my eyes were completely restored, and I have since been able to read or sew as well as ever.

The most wonderful demonstration of all, to me, was the freedom from all pain, at the birth of my baby, two years ago last February. I received absent treatments; baby was born quickly, and no suffering followed, and every condition was perfectly normal. I ate whatever I wished and baby had no colic. My health has been better since the birth of this baby than during the same time following the birth of the other children. In June, 1903, my husband, eldest daughter, and myself enjoyed the privilege of attending the Communion at Boston, and the delightful day at Concord, where we saw and heard dear Mrs. Eddy, to whom we owe so much more than words can express.

I am especially grateful to the practitioner who has labored so faithfully in this Field, and through whose clear understanding and patience we have received so much help.—MRS. HARRY GODFREY, Jonesville, Mich.

In the year 1897, like the man going down from Jerusalem to Jericho, I "fell among thieves" (false views of life) who beat me and stripped me of contentment, joy, peace,—all that makes up the happiness of life,—and I was left "half dead" with sin and sorrow. Many, with a faint and waning faith in God,—personal friends, and family,—"passed by on the other side," but the good Samaritan who took compassion on me in that dark and needy hour was Christian Science, as found in its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. It did not find me with bodily injuries, but with the deep and painful wounds of moral disorder and the mental agony which accompanies such conditions. It found all the affairs of my life snarled and twisted by sin, but the healing oil of its glorious gospel was then, and has continued to be, poured daily into those wounds since that hour, and by the light of the truth which says that God is the Life of man, the snarled and twisted places have been straightened out, while the wounds have been healed. By that oil and by that light, I have been enabled to bind up the wounds of many others; and for the encouragement of those in the great world of humanity, so full of sin and suffering, seeking a sure and permanent relief for like conditions, I wish to say that I have seen many varieties of disease and much sin destroyed by the right application of the Christ-cure. I wish to send forth a word of gratitude for every loving effort ever made in my behalf, and for to-day I do not see a better means than by way of this testimony, the motive of which may attract and help some one.—E. A. G., Chicago, Ill.

I write this testimony of my experience in Christian Science with a feeling of gratitude that my life as a Christian Scientist and my business life started together, and that in the past three years I have felt continually the guidance and healing power of divine Love. On my first day of work after graduation from college, I met the man through whom I became interested in Christian Science and who took me to my first Wednesday evening meeting. I found there an atmosphere of peace and outreaching good-will to men such as I had never before experienced. I drank it in greedily and felt at one with the little band of seekers for the pearl of great price, the understanding of God. That meeting showed me how to obtain this understanding. What Truth has done for me it would be impossible for me to tell. I do not know the half of it myself. I was relieved of the necessity of wearing glasses by the demonstration of the one who first brought me to Science. Before this proof of God's government I could not leave them off while at work, without nervous twitchings of the head. The understanding of Truth which I have gained has proved to me conclusively that Christian Science is indeed the revelation of the divine Principle underlying all things,—that it is absolutely true; and that the blessings which follow its practice are in accordance with the law of infinite Love, "Whatsoever a man soweth, that shall he also reap."

I wish to testify to the gratitude which I feel to Mrs. Eddy, through whom this truth has been revealed, and also to my thankfulness that I have been led to follow it.

H. H. T., JR., Wilmington, Del.

I have been greatly benefited in many ways since I accepted this grand truth. I am grateful to our dear Leader, Mrs. Eddy, for revealing this truth to poor, sick humanity. I had been a member of an orthodox church for over twenty years. The last two years I was dissatisfied, I was hungering and thirsting for the truth. I first heard of Christian Science in 1898, when I read a lecture delivered by Mr. Kimball in St. Louis, Mo. It was so uplifting that my first thought was, Lord, "lead me in thy truth." We then moved to Chickasha, and God led me to live in a house where there was a Christian Scientist. I was sick,—had heart trouble, and other ailments, so that I was not able to do my housework or to walk any distance without stopping to rest. I tried several doctors, but they could do nothing for me. I kept getting worse, and then I took treatment from a practitioner for one week. It did me no good, as I still kept my medicine, thinking, that if she did me no good I would then take my medicine. When the week was up I seemed to suffer more than before, so I stopped treatment and went back to medicine. I kept getting worse, so I concluded there was nothing in medicine and I threw it away and was ready for treatment. After I took Christian Science treatment again, I kept improving, but still I would have bad spells. My healing was slow. I took treatment for about three years, and finally got one of Mrs. Eddy's students, who made the demonstration. Since then I can walk anywhere and do anything, and the trouble has never returned. I am thankful for the light I have received, and am still striving for more understanding, and for that Mind which was in Christ. The Bible is now very interesting to me. With the help of Science and Health I love to read it. It is the open door of all wisdom; it gives us joy and peace which passeth all understanding.

I accepted Christian Science four years ago, and had the privilege of receiving class instruction. I am free from sickness and fear, for God is my Life, strength, and source of supply. Before I accepted this truth there was more or less discord in my family, but now all is harmony, for in truth there is no discord.

MRS. TILLIE M. CODE, Chickasha, I. T.

Last November, my little boy, three years old, caught his finger in the cog-wheels of a cream separator. The end of the finger and nail were literally ground off. My husband suggested going to a doctor. I said, No, we don't need to do so. I went for help to a Christian Scientist, who gave treatment at once, and when I got home the child was playing. He called to me as I came in, "My finger is all better, mamma." He had no pain in it afterward, except when he struck it against something. In about three months a new nail had grown out nicely. He had about two weeks' treatment, and I was so thankful we did not go to a surgeon, as Truth did the work perfectly. I have had other demonstrations, for which I am very grateful, both to Mrs. Eddy and to the practitioners who have so kindly helped me.

MRS. WILLIAM A. LAMBIE, Kaukauna, Wis.

As the *Sentinel* with its messages of love came to me this morning, I was reminded of the many blessings I have received and am receiving through Christian Science. First of all, there is the Christian Science literature given us by our beloved Leader, Mrs. Eddy, which, as a golden chain, binds together many happy hearts. My blessings have been many, as Christian Science found me in utter darkness, without hope and, I thought, without God. It was then that this star of divine Love pierced the darkness, my feet were turned heavenward, and I heard and understood these words, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

As I journey along the way, putting off the old man, with self-will, self-justification, self-love, pride, and the myriad beliefs of a self separated from God, then is the new man put on, and I find a love that knows no fear, a joy unspeakable, a peace on earth and good-will to man.

MRS. CORA MURDOCK, Detroit, Mich.

For fifteen years I had been a sufferer from indigestion, to such an extent that it often interfered with my attending to business, and from a constant fear of a complete breakdown, I limited my ability and my efforts in every way. Seven years ago, while in New York in business, I placed myself under treatment which did not prove successful; yet the seed was sown, and two years and a half ago, when my suffering was such that I was almost desperate,—ready to give up my business, and resign myself to being an invalid,—I remembered the ideas I had formed of Christian Science, and believed that I could be healed. I did not know of a practitioner in my home town, or even if there was one, and only knew of one person who was interested in Christian Science. I hunted him up and was directed to a practitioner, and in three days' treatment I was enabled to eat anything I wanted. In three weeks I was a well man and have had no return of this trouble. It is needless to say that I am happy in having found God to be what Mrs. Eddy pictures Him.
